Current Agricultural News

REDUCED R. R. RATES TO DAIRY SHOW

PRE-WAR railroad rates have been granted by the Western Passenger association for the National Dairy Exposition, October 7-14, at the Twin Cities, according to an announcement today by Eben E. MacLeod, chairman of that association. There will be an open rate of one and one-third fares from the northern peninsula of Michigan, Wisconsin, Minnesota, North Dakota, eastern Montana, South Dakota, east of the Missouri and Iowa, on and north of the C. & N. W. Ry., Clinton to Missouri Valley.

Tickets at this rate are to be sold October 5th to 13th, inclusive final return limit October 16th. The minimum excursion fare is one dollar, and half fare applies to children, Mr. MacLeod advised.

From the balance of the United States the association has decided a rate of one and one-half fare on the regular certificate plan authorized for the convenience of the members of the National Dairy Association, International Milk Dealers' Association, American Dairy Science Association, International Association of Dairy and Milk Inspectors, National Creamery Buttermakers' Association, National Cheese Association, National Dairy Council, American Jersey Cattle Club, American Guernsey Cattle Club, Holstein Friesian Association of America, Brown Swiss Cattle Breeders' Association and Ayrshire Breeders' Association.

ILLINOIS "CO-OP" BUTTER TO CUBA

THE Stephenson County Milk Marketing Company, of Freeport, Ill., has extended its business on its special "Vita Gold" brand of butter to Cuba. The first shipment was made last month, packed in tins.

"This is to our knowledge the first shipment of butter made in a co-operative creamery of this country to be exported by farmers," say officials of the company.

OHIO HEADS STATES IN BETTER-STOCK CAMPAIGN

OHIO now heads the list of States taking part in the "Better Sires—Better Stock" campaign being carried on by the United States Department of Agriculture and the States to induce farmers to get rid of all sires except those that are pure bred. In the 3 months ending July 1, of 954 live-stock owners enrolling 537 were Ohioans, bringing that State into the lead in number of farmers having Federal-State certificates, in number of animals and in number of poultry listed. The total of persons in Ohio enrolled is now 1,970. They own 75,025 head of all kinds of farm animals and 185,595 poultry. Virginia is now second after having been in the lead since the campaign for pure-bred sires started in 1919.

SWISS CHEESE COMING BACK

CHEESE is once again forging to the front among Switzerland's industries after such a period of demoralization extending over the four years, 1917 to 1920, as would prove fatal to anything but a cheese. The troublesome food restrictions have been abolished, milk animals have steadily increased, and the main causes of the four-year slump have been almost completely removed, says Vice Consul Wilkinson, Zurich, in a report to the Foodstuffs Division of the Department of Commerce. In fact the cheese industry was one of the very few Swiss industries to show any material improvement in 1921. Exports have increased and the total export for 1922 is estimated at nearly $8,000,000. Last year this country shipped over $60,000 worth of American Swiss cheese to Switzerland but there is no record of any cheese from the United States going into the cheese country at all during 1922.

FARM BUREAU SUPPORT ASKED

CONTINUED support of the state and county farm bureaus by the Michigan Bankers' Association is urged in a bulletin just issued by the agricultural commission of the annual report.

The report embodies the activities of the commission during the past year, as described at the annual meeting in East Lansing in May and also outlines the working program of the organization for the ensuing year.

This program is divided into 10 parts, and according to the bulletin, "careful study . . . . . will no doubt suggest a line of activities which each member can follow out during the year."

The program calls for:

Continued active assistance in boys' and girls' club work.

Co-operation with the Farm Bureau in its program for the betterment of agricultural conditions.

Organization of Federal Farm Loan associations with bank officers in charge of all counties where there is need of long term financing based upon real estate securitiy which the banks are not in position to take care of fully.

Careful study of the needs of each community to the end that all essential requirements for loans shall be anticipated and cared for.

Legislation to safeguard the interests of agriculture.

Consolidated schools.

Better marketing conditions.

Good roads.

FRANCE GOES BACK TO WAR BREAD

POOR wheat crops in France and an estimated shortage in the next wheat harvest of about 2,000,000 tons have resulted in the passage of a law authorizing the baking and sale of "war bread," says Consul Sample B. Forbus, Paris, in a report to the Foodstuffs Division of the Department of Commerce. The law specifying the use of substitutes for wheat flour in bread making was passed July 15.

PRODUCTION OF GRAIN IN ENGLAND AND WALES LESS THAN LAST YEAR

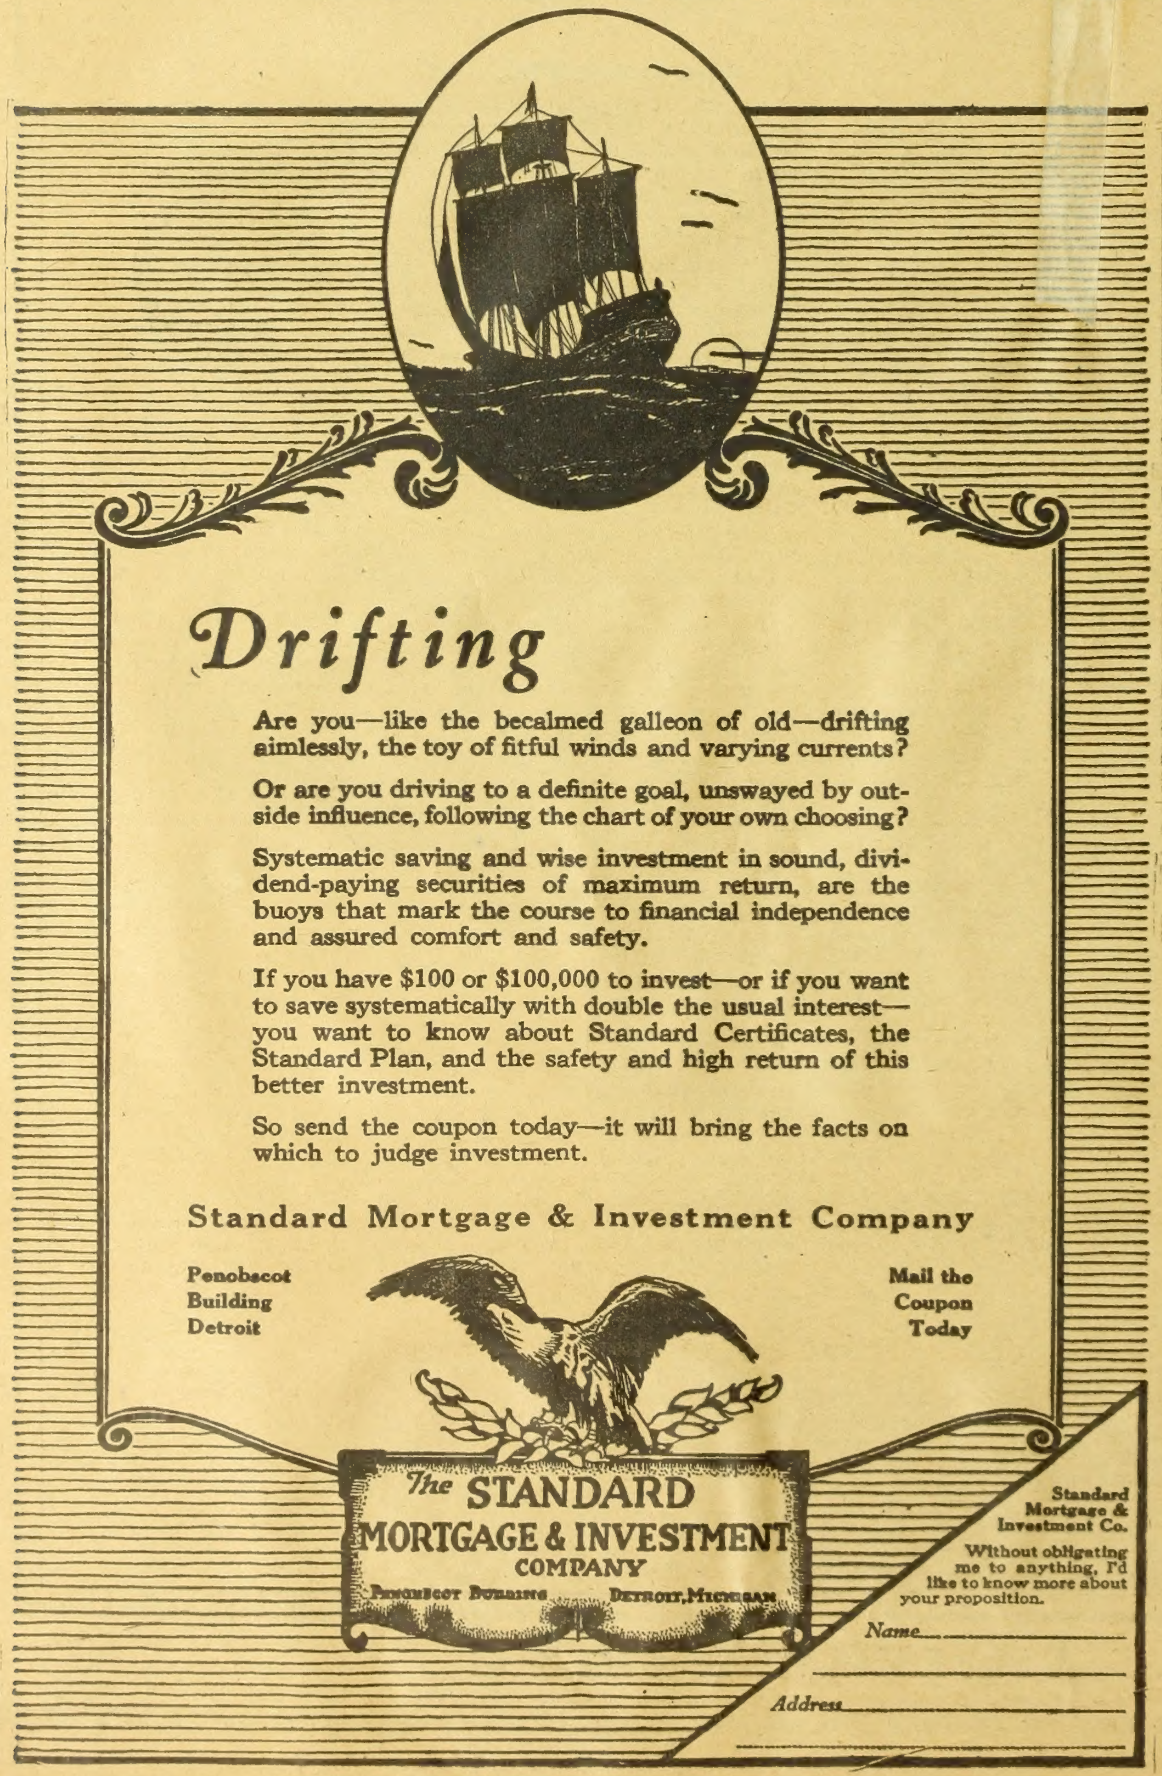
THE production of wheat in England and Wales for 1922 is estimated by the British Ministry of Agriculture to be 63,040,000 bushels from an area of 1,969,000 acres, according to a recent cablegram from the London representative of the United States Department of Agriculture. This estimate is 6,736,000 bushels less than the estimated production last year.

The area sown to barley was reported as 1,362,000 acres and the yield as 40,720,000 bushels, compared with 42,472,000 bushels last year. The oats area was given as 2,161,000 acres and oats production as 74,320,000 bushels, compared with 80,264,000 bushels last year.

IRELAND PREFERS AMERICAN FOODSTUFFS

IRELAND is now endeavoring to import directly through Belfast and other large Irish cities and to encourage the larger consumers to import direct in cargo or part cargo lots, says Vive Consul Barringer, Belfast, in a report to the Foodstuffs Division of the Department of Commerce.

At the present time there is a good market for American flour in Belfast and if the large bakeries can be prevailed upon to import their flour direct from American sources, this market will increase. Some of the flour connections, through middlemen located in Great Britain, extend for a period of more than thirty years and now the Irish wish to do their own buying. The Consul believes that it would "certainly pay for American flour exporters to thoroughly investigate the Belfast field at the present time."



Drifting

Are you—like the becalmed galleon of old—drifting aimlessly, the toy of fitful winds and varying currents?

Or are you driving to a definite goal, unswayed by outside influence, following the chart of your own choosing?

Systematic saving and wise investment in sound, dividend-paying securities of maximum return, are the buoys that mark the course to financial independence and assured comfort and safety.

If you have $100 or $100,000 to invest—or if you want to save systematically with double the usual interest—you want to know about Standard Certificates, the Standard Plan, and the safety and high return of this better investment.

So send the coupon today—it will bring the facts on which to judge investment.

The Hunted Woman

By James Oliver Curwood

Michigan's Own and America's Formost Author of the Great Northwest.

A TALE of the end of the line—that indefinite, evermoving outpost of the railroad far off in the wilderness of Northwestern Canada. It was here in the midst of the "Horde"—the rough lawless band who were joining the end of the last transcontinental line, that Joanne Gray came on her great search and found, not the one she had dreaded, but John Aldous, author and back-woodsman.

The story of Aldous's struggles to save Joanne from Rann and Quade, of their escape from the dynamite tunnel, and the great fight in the "valley of gold" is a tale of quickly mounting climax and excitement.

(Copyright, Doubleday, Page & Co.)

CHAPTER I

IT was all new—most of it singularly dramatic and even appalling to the woman who sat with the pearl-gray veil drawn closely about her face. For eighteen hours she had been a keenly attentive, wide-eyed and partly frightened bit of humanity in this onrush of "the horde." She had heard a voice behind her speak of it as "the horde"—a deep, thick, gruff voice which she knew without looking had filtered its way through a beard. She agreed with the voice. It was the Horde—that horde which has always beaten the trails ahead for civilization and made of its own flesh and blood the foundation of nations. For months it had been pouring steadily into the mountains—always in and never out, a laughing, shouting, singing, blaspheming Horde, every ounce of it toughened sinew and red brawn, except the Straying Angles. One of these sat opposite her, a dark-eyed girl with over-red lips and hollowed cheeks, and she heard the bearded man say something to his companions about "dizzy dolls" and the little angel in the other seat." This same voice, gruffened in its beard, had told her that ten thousand of the Horde had gone up ahead of them. Then it whispered something that made her hands suddenly tighten and a hot flush sweep through her. She lifted her veil and rose slowly from her seat, as if to rearrange her dress. Casually she looked straight into the faces of the bearded man and his companion in the seat behind. They stared. After that she heard nothing more of the Straying Angels, but only a widely mysterious confabulation about "rock hogs," and "coyotes" that blew up whole mountains, and a hundred and one things about the "rail end." She learned that it was taking five hundred steers a week to feed the Horde that lay along the Grand Trunk Pacific between Hogan's Camp and the sea, and that there were two thousand souls at Tete Jaune Cache, which until a few months before had slumbered in a century-old quiet broken only by the Indian and his trade. Then the train stopped in its twisting trail, and the bearded man and his companion left the car. As they passed her they glanced down. Again the veil was drawn close. A shimmering tress of hair had escaped its bondage; that was all they saw.

The veiled woman drew a deeper breath when they were gone. She saw that most of the others were getting off. In her end of the car the hollow-cheeked girl and she were alone. Even in their aloneness these two women had not dared to speak until now. The one raised her veil again, and their eyes met across the aisle. For a moment the big, dark, sick-looking eyes of the "angel" stared. Like the bearded man and his companion, she, too, understood, and an embarrassed flush added to the color of the rouge on her cheeks. The eyes that looked across at her were blue—deep, quiet, beautiful. The lifted veil had disclosed to her a face that she could not associate with the Horde. The lips smiled at her—the wonderful eyes softened with a look of understanding, and then the veil was lowered again. The flush in the girl's cheek died out, and she smiled back.

"You are going to Tete Jaune?" she asked.

Yes. May I sit with you for a few minutes? I want to ask questions—so many!"

The hollow-cheeked girl made room for her at her side.

"You are new?"

"Quite new—to this."

The words, and the manner in which they were spoken, made the other glance quickly at her companion.

"It is a strange place to go—Tete Jaune," she said. "It is a terrible place for a woman."

"And yet you are going?"

"I have friends there. Have you?"

"No."

The girl stared at her in amazement. Her voice and her eyes were bolder now.

"And without friends you are going—there?" she cried. "You have no husband—no brother——"

"What place is this? interrupted the other, raising her veil so that she could look steadily into the other's face. "Would you mind telling me?"

"It is Miette," replied the girl, the flush reddening her cheeks again. "There's one of the big camps of the railroad builders down on the Flats. You can see it through the window. That river is the Athabasca."

"Will the train stop here very long?"

The Little Angel shrugged her thin shoulders despairingly.

"Long enough to get me into The Cache mighty late tonight," she complained. "We won't move for two hours."

"I'd be so glad if you could tell me where I can go for a bath and something to eat. I'm not very hungry—but I'm terribly dusty. I want to change some clothes, too. Is there a hotel here?"

Her companion found the question very funny. She had a giggling fit before she answered.

"You're sure new," she explained. "We don't have hotels up here. We have bed-houses, chuck-tents, and bunk-shacks. You ask for Bill's Shack down there on the Flats. It's pretty good. They'll give you a room, plenty of water, and a looking-glass—an' charge you a dollar. I'd go with you, but I'm expecting a friend a little later, and if I move I may lose him. Anybody will tell you where Bill's place is. It's a red and white striped tent—and it's respectable."

The stranger girl thanked her, and turned for her bag. As she left the car, the Little Angel's eyes followed her with a malicious gleam that gave them the strange glow of candles in a sepulchral cavern. The colors which she unfurled to all seeking eyes were not secret, and yet she was filled with an inward antagonism that this stranger with the wonderful blue eyes had dared to see them and recognize them. She stared after the retreating form—a tall, slim, equisitely poised figure that filled her with envy and a dull sort of hatred. A hand fell familiarly on her shoulder, and a coarse voice laughed something in her ear that made her jump up with an artificial little shriek of pleasure. The man nodded toward the end of the now empty car.

"Who's your new friend?" he asked.

"She's no friend of mine," snapped the girl. "She's another one of them Dolly Dimples come out to save the world. She's that innocent she wonders why Tete Jaune ain't a nice place for ladies without escort. I thought I'd help eggicate her a little an' so I sent her to Bill's place. Oh, my Lord, I told her it was respectable!"

She doubled over in the seat in a fit of merriment, and her companion seized the opportunity to look out of the window.

The tall, blue-eyed stranger had paused for a moment on the last step of the car to pin up her veil, fully revealing her face. Then she stepped lightly to the ground, and found herself facing the sunlight and the mountains. She drew in a slow, deep breath between her parted lips, and turned wonderingly, for a moment forgetful. It was the first time she had left the train since entering the mountains, and she understood now why someone in the coach had spoken of the Miette Plain as Sunshine Pool. Wherever she looked the mountains fronted her, with their splendid green sloopes reaching up to their bald caps of gray shale and reddish rock gleaming summits of snow. Into this "pool"—this pocket in the mountains—the sun descended in a wonderful flood. It stirred her blood like a tonic. She breathed more quickly; a soft glow colored her cheeks; her eyes grew more deeply violet as they caught the reflection of the blue sky. A gentle wind fretted the loose tendrils of brown hair about her face. And the bearded man, staring through the car window, saw her thus, and for an hour after that the hollow-cheeked girl wondered at the strange change in him.

and if you have a spark of red blood in your veins you'll thrill with the unwinding of each chapter. James Oliver Curwood, is the highest paid author in America today, his serial stories are the feature of the best magazines selling for 35c a copy and millions of his bound volumes have been sold during the past ten years.

THIS IS OUR SECOND CURWOOD STORY

and we are proud to be able to offer it to the readers of The Business Farmer, who made friends with Neewa and Miki, in the former story "Nomads of the North," which was by far the most popular serial we ever ran.

DON'T MISS THESE OPENING CHAPTERS

and get other members of your family to read them with you. This is a clean, wholesome, red-blooded story of romance, adventure and the land where men are men!

The train stopped at the edge of the big fill overlooking the Flats. It was a heavy train, and a train that was helping to make history—a combination of freight, passenger, and "cattle." It had averaged eight miles an hour on its climb toward Yellowhead Pass and the end of steel. The "cattle" had already surged from their stifling and foul-smelling cars in a noisy inundation of curiously mixed humanity. They were of a dozen different nationalities, and as the girl looked at them it was not with revulsion or scorn but with a sudden quickening of heart-beat and a little laugh that had in it something both of wonder and pride. This was Horde, that crude, monstrous thing of primitive strength and passions that was overturning mountains in its fight to link the new Grand Trunk Pacific with the seaport of the Pacific. In that Horde, gathered in little groups, shifting, sweeping slowly toward her and past her, she saw something as omnipotent as the mountains themselves. They could not know defeat. She sensed it without ever having seen them before. For her the Horde now had a heart and a soul. These were the builders of empire—the man-beasts who made it possible for Civilization to creep warily and without peril into new places and new worlds. With a curious shock she thought of the half-dozen lonely little wooden crosses she had seen though the car window at odd places along the line of rail.

And now she sought her way back toward the Flats. To do this she had to climb over a track that was waiting for ballast. A car shunted past her, and on its side she saw the big, warning red placards—Dynamite. That one word seemed to breathe to her the spirit of the wonderful energy that was expending itself all about her. From farther on in the mountains came the deep, sullen detonaions of the "little black giant" that had been rumbling past her in the car. It came again and again, like the thunderous voice of the mountains themselves calling out in protest and defiance. And each time she felt a curious thrill under her feet and the palpitant touch of something that was like a gentle breath in her ears. She found another track on her way, and other cars slipped past her crunchingly. Beyond this second track she came to a beaten road that led down into the Flats, and she began to descend.

Tents shone through the trees on the bottom. The rattle of the cars grew more distant, and she heard the hum and laughter of voices and jargon of a phonograph. At the bottom of the slope she stepped aside to allow a team and wagon to pass. The wagon was loaded with boxes that rattled and crashed about as the wheels bumped over stones and roots. The driver of the team did not look at her. He was holding back with his whole weight; his eyes bulged a little; he was sweating, in his face was a comedy of expression that made the girl start in spite of herself. Then she saw one of the bobbing boxes and the smile froze into a look of horror. On it was painted that ominous word—Dynamite!

Two men were coming behind her.

"Six horses, a wagon an' old Fritz—blown to hell 'an not a splinter to tell the story," one of them was saying. "I was there three minutes after the explosion and ther wasn't even a ravelling or a horsehair left. This dynamite's a dam' funny thing.

Elections Strengthen Hands of Farm Bloc

Defeat of Old Guard Candidates Insure Continuance and Increased Power for Group of Farmer Legislators

By O. M. KILE

(Special to the Michigan Business Farmer)

NO matter whether the election returns this fall show up democratic or republican, the farmer will have little to worry about Apparently, the country has gone "Farm Bloc". It was farm bloc principles and farm bloc support that upset the stand-pat reactionaries in Indiana and Pennsylvania, Nebraska, Iowa and other mid-western primaries.

A year ago one of the leading manufacturers and bankers on the Pacific Coast received a letter from a big eastern banking house which read in substance as follows:

"We bankers are getting up a fund to fight the farm 'bloc' which seems to be developing dangerous strength in congress. Please subscribe liberally."

This manufacturer-banker being an independent sort of individual declined in the following language: "I am opposed to 'bloc' movement of all kinds, therefore cannot subscribe to your fund".

This outcry against the farm bloc received strong impetus, however, and for a time even many of its friends had strong misgivings and doubts as to the desirability of such a group in this democratic country. The metropolitan press with but few notable exceptions, vigorously denounced the bloc as a menace to democratic government. President Harding and Secretary Weeks both berated the bloc in no uncertain terms.

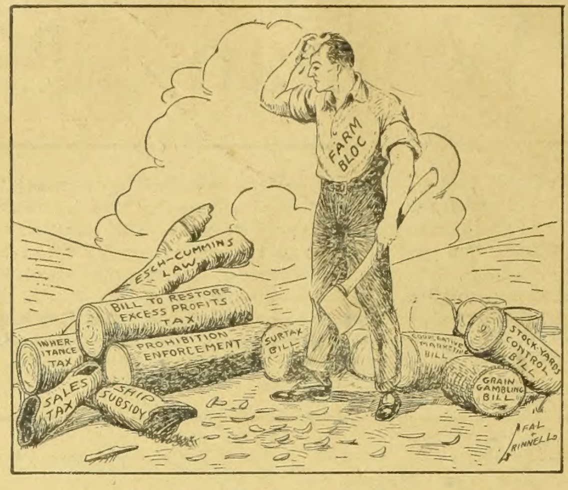
Now one of the biggest financial institutions of the East, comes out with a lengthy statement which amounts to a virtual endorsement of the farm bloc. Their statement says:

"The Farm Bloc is essentially based upon an economic idea. That idea can be simply stated in a few words:

"The farmer believes that he does not receive a large enough price for his products. He insists that what he is compelled to buy has decreased far less in price since the war than the thing he sells. His contention is that he is unable to borrow money as advantageously as those engaged in other great industries—Hence the Farm Bloc in Congress".

It is true that the spokesman for this financial institution goes on to point out the possible evils of group action and he takes particular pains to show that many of the farmer's problems cannot be solved by legislation—all of which is quite true—but he finds nothing to condemn and much to commend in the farm bloc as it exists today.

More and more of the larger newspapers have accepted the bloc as an expression of public opinion rather than as a mere selfish group grab. They now realize that this bloc is something different. It is not seeking to merely put across some special concession or privilege. They may still question whether all the measures proposed by the bloc are sound and give promise of proving effective, but they recognize it as an expression of the desires and needs of a very large number, perhaps a majority, of the people.



More Work Yet To Do.

The fact that this expression may be actually voiced by only a relatively small group of leaders, does not change the situation. If this small group does not correctly interpret the desires of the many they soon cease to be leaders and the program fails. Recent developments indicate that these leaders have properly interpreted the desires and needs of the many.

The particular thing the farm bloc can take most credit for, from the public viewpoint, is the fact that it furnished the rallying point around which other progressive elements could group themselves and force a general progressive movement. Many a member of congress has for years wanted to do just the independent, progressive sort of things he is doing today but he did not dare open his mouth or raise a finger so long as the boss' whip was held over him. But once the break was made by the farm bloc bunch others were anxious to take up the fight. It is the reflection of this spirit of independence that is sweeping the country.

Bernard M. Baruch was one of the first among the big business leaders to recognize the desirability and the true significance of the farm bloc in congress. At the time of the agricultural conference at Washington last February Mr. Branch expressed his approval of this bloc in the following words:

"This is the first time that the farmers have been organized like other pursuits, so that their voice is potent in the houses of congress. The movement is but an emphatic expression of the dire necessities of a third of our population, producing at least a third of our national wealth and creating half of our commerce, and a determined effort to modernize themselves on an equal footing, with other businesses. If legislators friendly to the farmers had not united in the so-called agricultural bloc, how much attention do you think would have been given to the desperate plight of agriculture? The formation of the bloc and its militancy are but an evidence of its necessity. Why not concern ourselves with the necessity, rather than with the manner of its expression?"

During the sixteen months that the agricultural bloc has been in existence, it has won the confidence of the public—the city consumer as well as the farmer producer. The legislative measures proposed have all been in the public interest, when considered from a broad viewpoint, and support or lack of support of the farm bloc has come to be the measure of a man's progressiveness along legislative and business lines.

A mid-western congressman stood up on the floor of the House and said: "I am a member of no bloc." Immediately he was flooded with telegrams and letters from the farmers of his district asking, "Why not?" It took that congressman several months to explain to the satisfaction of his constituents that what he meant was that he didn't believe in blind group action but that he voted regularly with the farm bloc.

A candidate for congress from Kansas wrote in to Washington: "Give me the record of Congressman Blank's vote on all farm bloc questions. I am going to run against him." Congressman Blank, judging from the primary returns, evidently had an interesting time trying to explain to the folks back home just why he failed to work with the farm bloc.

"Is my name written there?" was the question on the lips of a hundred congressmen when it became known, this summer, that the American Farm Bureau Federation was making up a list of those whose records showed them entitled to be considered consistent supporters of agricultural legislation. Some who had been a little late in seeing the light felt nervous until they knew the verdict. And in truth it was a serious matter; it meant either reelection or defeat—without question—in dozens of cases.

The seriousness of the situation placed a special responsibility upon the Farm Bureau in compiling this list and it was decided to make the votes on four bills the test. These four bills were, the stockyards and packer control bill, and the amendment to a bill retaining the fifty per cent surtax on large incomes. These bills were selected because it was on these that special pressure had been exerted by both sides. The man who stuck with the farmers on these bills could be counted on in most any legislative emergency. A few modifications of the list had to be made to take care of special sets of circumstances but the final count showed twenty-three members in the Senate, and in the less definitely organized House, ninety-four men entitled to be called consistent supporters of agricultural legislation. In addition there were sixty-eight members of the House who while not quite solid supporters, could usually be counted on.

Now that the power and (Continued on page 16)

Commissioner of Agriculture Proposes Law to Curb Commission Firms

JOHN A. DOELLE, State Commissioner of Agriculture, has submitted to the Business Farmer the outline of a law which he hopes to have passed by the next legislature which will provide farmers with a greater degree of protection than the present commission license law affords from unscrupulous commission firms.

The state law, as it now stands, provides that every firm or individual doing a commission business in farm produce, shall procure a license which is his authority to conduct such a business. This license may be revoked at any time upon the submission of conclusive evidence that the licensee has been guilty of unfair or dishonest practices. Experience has shown that the law holds no terror for the "fly-by-night" commission firms, who set up in business only long enough to enable them to make a single killing. They rent a "hole in the wall," send out alluring circulars through the mail offering higher prices than the market will stand, receive and sell produce from farmers, and pocket the proceeds.

A lot of farmers under these circumstances write a few threatening letters and then give up in disgust. If there be any who insist on making a fuss the commission firm succeeds in getting out of business before it is caught. Of course, it may lose its license, but what of that? It takes out another license under a new name and starts up again.

But the law which Commissioner Doelle has in mind is based on the principle of locking the barn before the horse is stolen. It is a counterpart of the New York law which compels everyone applying for a license to do a commission business to put up a bond in the sum of $3,000, which remains in the custody of the department of state having jurisdiction over the commission business, and the proceeds of which may be used to indemnify all those who may sustain losses through the dishonesty of the licensee. Here is how it works.

Sammy Sammerstein wants to set up in the commission business. He applies to the State Department of Agriculture for a license. The Department makes an investigation to ascertain, (1) if a money judgment has ever been issued against the applicant and upon which execution has been returned unsatisfied; (2) if false charges have ever been imposed by the applicant for handling or services rendered; (3) if there has been a failure to account promptly and properly or to make settlements; (4) if there have been any false statement or statements as to condition, quality or quantity of goods received or held for sale on commission when the same might be known on reasonable inspection; (5) if there has been any false or misleading statements as to market conditions or service rendered; (6) if the applicant has ever directly or indirectly purchased goods for his own account without prior authority therefor or without notifying consignor thereof.

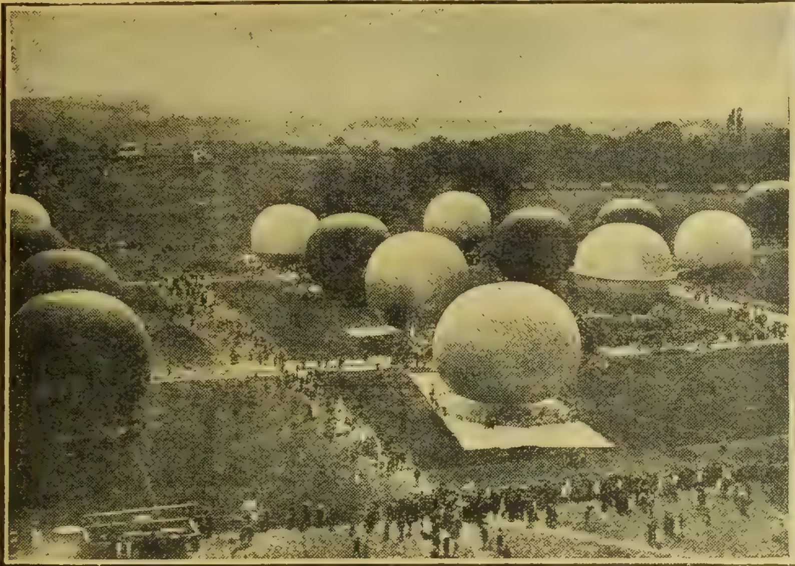
If the investigation discloses that the applicant has been guilty of any of the above transgressions the commissioner may refuse to grant a license. Similarly he may revoke any license for any of the practices stated above.

If the investigation discloses that Sammy is a fit person to engage in the commission business, the commissioner requires that he file a fidelity bond in the sum of $3,000. When the bond is filed, Sammy gets his license and sets up in business.

A few months later Sammy becomes a little hard up for cash and "forgets" to make returns to Farmer Jones on a shipment of poultry. Farmer Jones immediately appeals to the State Department of Agriculture which orders Sammy to appear and show cause why his bond should not be forfeited. If Sammy fails to do so or does not make restitution to the aggrieved farmer, the commissioner executes the bonds and pays over to Farmer Jones and any others who have been defrauded the amounts which are due them, up to the full value of the bond.

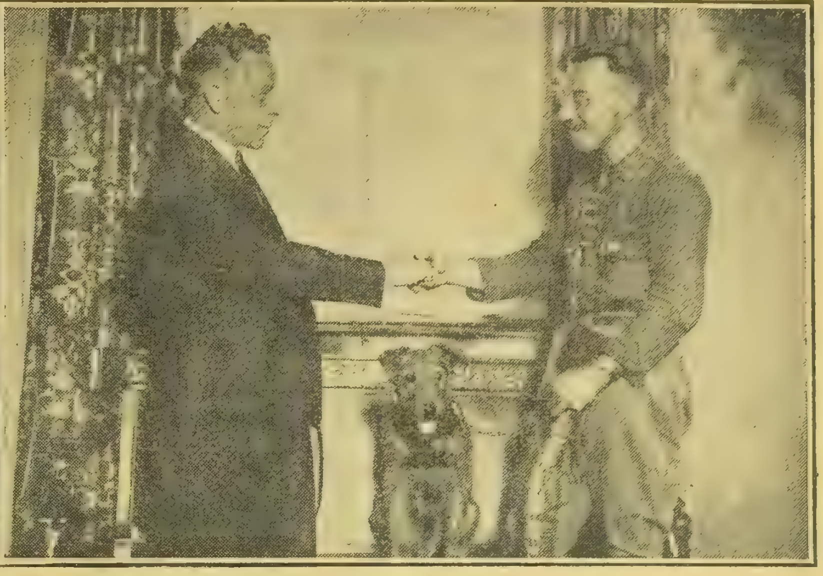
The Business Farmer believes that such a law is needed here in Michigan and would not only save farmers thousands of dollars a year, but would encourage a greater number of farmers to cultivate the city trade. The Business Farmer has pledged Commissioner Doelle its support in securing the adoption of such a law at the next session of the legislature.

PICTURES FROM FAR AND NEAR



GIANT AIR BAGS—BEFORE THEIR FLIGHT—A spectacular view of the start of the Gordon-Bennett Ballon Race, at Switzerland. The result of this race is still hazy, and the winner has not yet been declared, but according to reports, De Muyster, the Belgian balloonist has evidently won, having flown as far as Ocnitza, Roumania, a distance of 1,300 kilometers. His balloon disappeared at this point.

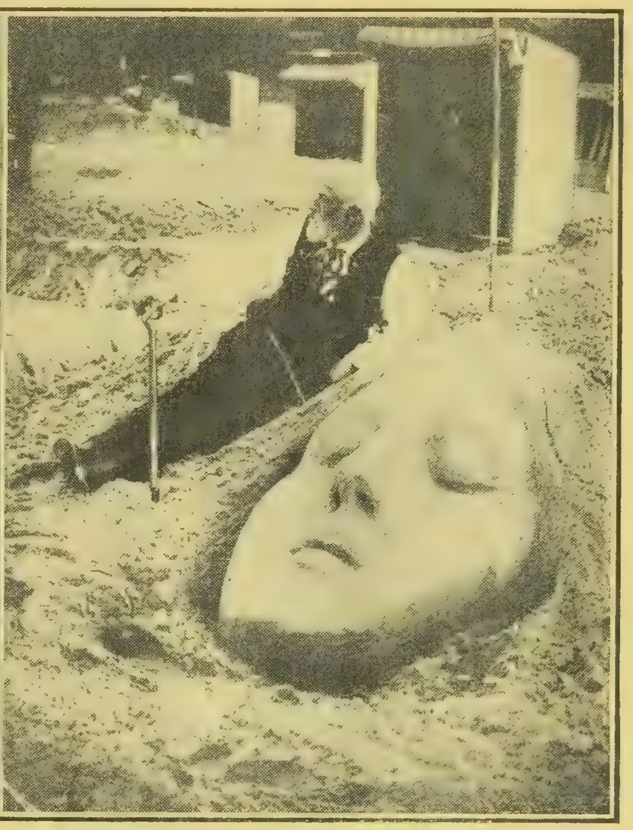
The man who came in second, H. E. Honeywell, representing the American Navy, (shown in foreground) landed at Tapio-Tyortye, Hungary, where his balloon too disappeared. Third comes O. Westover, of the American Army.



COMPLETES HALF OF 10,500 MILE HIKE—Leonard Day (right) of San Francisco, California, being congratulated by A. W. Baylitts, manager of a big New York hotel, on his arrival there after completing 5,250 miles of a 10,500 mile hike, which he has undertaken to prove that a man can travel thruout the United States without a cent in his pocket, and that American generosity and hospitality will carry him thru. So he started out from San Francisco on November 20 last and hiked his way to New York City with his trusty airdale pup "Kenwyn Radio."

RESCUE WORK ON THE WILTSHIRE WRECK—The Federal steamer Wiltshire was stranded on the Great Barrier Island off New Zealand, Australia, and during a storm was broken in half. The wireless apparatus was disabled and the only communication with the rescuers possible was through the semaphore signals. It was forty hours before the entire crew were finally brought ashore.

ENGLAND'S GREATEST WOMAN SWIMMER HERE FOR COMPETION—Miss Hilda James of Garston, Liverpool, champion woman swimmer of Europe snapped in swimming togs aboard the SS. Aquitania.



THE FACE OF HIS OWN TRUE LOVE—At least old Fritz Hankelschmidtz so moulded her face in the sands of Westerland Beach, Germany. But like footprints in the sands of time, the next tide came pounding in and the day-dream of Fritz's handiwork, faded away like her picture in the smoke-rings from his long pipe.

ANNE MORGAN HERSELF GREETS MISS BRONKAN—In a recent contest held in Michigan for the Devastated France Commission of which Miss Anne Morgan, daughter of J. Pierpont Morgan, is the active head, Miss Jean Bronkan, was nominated by the Michigan State Fair and the Gleaners farm organization, as their candidate. She is here shown in the railway station at Paris (second from left) one of the party being greeted by Miss Morgan (under X). Detroit lead every city in America in the amount of money raised for this worthy charity.

RREIA
ESTA
UNIDO

"SAMPIO CORREIA" HOPS OFF FOR BRAZIL—-In this giant seaplane, five men have started for the Centennial Exposition at Rio de Janerio, Brazil, South America. The distance is 8,500 miles, but at a speed in excess of 100 miles per hour, barring mis-hap they may be at the front gate of the exposition before this copy of the Business Farmer reaches your hands. Left to right: J. Thomas Baltzell, George T. Bye, Lt. Walter Hinton, Dr. E. Pinto Martins; John Wilshusen—waving good-bye to crowd watching their departure from the Hudson River.

DON'T
LEAVE
DETROIT
without visitng
Crowley-Milner's

One of the most famous and most talked-of Stores in the Country.

SEE the great millinery department where 4,000 hats are continuously on sale!

SEE the enormous yard goods floor where 3,000,000,000 yards of goods are sold every year!

SEE the NEW Popular priced store where many dresses are sold for less than the cost of the materials—2,000 to choose from!

SEE the huge ten story Store For Homes that oufit homes for the entire South of Michigan—40 weeks to pay—ask about it!

Take your time and go through the entire store—Please consider this your personal invitation.

How to Get Here

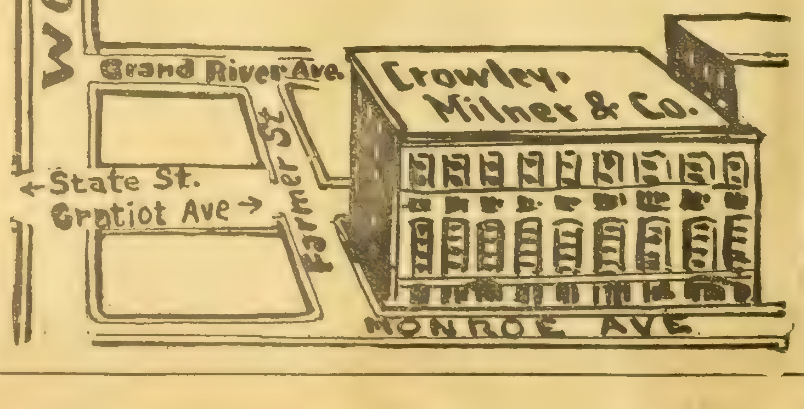
IF YOU'RE DRIVING YOUR OWN CAR—Follow Woodward avenue south clear into the city. Turn left at Grand River, one square, then right two squares, to the store.

IF YOU'RE NOT DRIVING—Board a south bound interurban Detroit Car and get off at State street. Cross Woodward avenue and walk one short block left to store.

You can meet your friends at the Waiting Room and lunch at our Soda Grill.

Crowley, Milner & Co.

Library, Gratiot, Monroe and Farmer Streets. Store Hours 9 to 5.30—Saturday to 6.00.



What the Neighbors Say

SIGN YOUR NAME

THERE are many subscribers to the Business Farmer who have written letters to this department and the letters not appearing in print they have wondered. Undoubted the reason was, they did not sign their names to their letters. If a letter is worth writing it is worth signing. We will withhold your name if you desire but your name and address must be received with your letter. —Editor.

WHO IS THY NEIGHBOR?

ENCLOSED find clippings from one of my last week's papers, which as you will note tells how the farmers down in Texas are sympathizing with the striking union men and are carrying food to their suffering families. I wish to ask which is the best policy, to turn the machine guns on the strikers or do as the farmers did in Texas.

Have not the railroad corporations and coal kings, stript of their sheep's clothing, showed themselves to be raving wolves? Have not the farmers and the laborer produced their ill-gotten millions, and still they are asking for more.

Gov. Blaine of Wisconsin shows in official figures that 25 per cent of Wisconsin's soldier boys are in prison. Why? Have the millionaires achieved their aim? Is autocracy safe at last and democracy destroyed? They agree with Vanderbilt, "the people be damned", and not one for soldier bonus. Gov. Blaine states the general charge against all these soldier boys was stealing something to eat or wear. Must we not feel proud, this richest nation on earth, and our president is determined to veto the bonus bill if it should pass.

Who is to be blamed for all this, the millionaires or the government? Who are the men who yield to the will and wishes of the heartless profiteers? Our representatives who believe in Newberryism and supported Newberry is the only kind which is recognized by Wall Street.

The primary election is at hand. Voters, be sure to register, and be sure to vote for men who condemn Newberryism. Our own good old Michigan will land the Newberry bunch where North Dakota landed McCumber.—C. H. A., Iosco County, Mich.

You've painted the picture a little strong, we think, but conditions are such as to warrant strong thoughts and words. The eyes of the whole nation will be upon Michigan, in the coming primary election. What verdict will the verdict be? Shall Newberryism be vindicated and defended, or shall it be smote "hip and thigh?" The verdict rests with Michigan. —Editor.

MODERN DRESS A SERIOUS SUBJECT

I BEG to disagree with you when you call this discussion of styles quarreling and haggling about the length of woman's dress. It is one of the greatest and most vital questions of the day for it concerns the morals of our women and our men. The present day feminine garb is not conducive to good morals.

The old saying is, "The hand that rocks the cradle rules the world," and tho it is no longer fashionable to rock the cradle, woman, indirectly, rules the world and doubtless always will.

A nation is judged by the dress and mannerisms of its women at home and abroad. There are many dear, good women, and beautiful girls who always modify the fashions to meet good taste and their innate sense of modesty and refinement. All honor to them. And may their number increase. But there are many, many more, thru ignorance, indifference to criticism, indecency and a desire to attract the male sex, who not only follow the extreme fashion but make it more extreme as does the despised woman of the underworld.

Mothers who dress modestly, themselves, allow their daughters to go out upon the streets and to places of public amusement, only half clad. Indeed, they begin the undressing process nowadays, when these girls are mere tots, so that by the time they are sixteen, "modesty" is not in their vocabulary.

Girls do not wander about in the fields holding pieces of embroidery in front of them, it is true, Mrs. Copeland. No doubt if they had to hold the embroidery they'd drop it rather than be hampered. But come down thru old Gratiot—the best place on the globe—and see what you shall see. I think you might wish as I do that some of the commonplace street sights were banished to secluded fields, in other words that some of the girls were turned out to pasture.

Put a rubber draw-string around the "free neck," please, so said neck is not free to the "unrestricted" waist line, and make the skirts long enough to prevent a vulgar display of leg and that part of the anatomy which is uncomely, when these innocents stoop over, go up or down stairs, or sit cross-kneed, or keep them in the back-yard for we all have eyes and can not help seeing what is so obviously intended we should see.

A show was unloading and setting up tents on large grounds near the outskirts of a certain city. People were standing along the fence, also walking about the place watching operations. One girl in modern dress found it convenient to put her foot upon the fence a few inches from the ground, regardless of the fact that the ground had a downward slope, toward the crowd, for a short distance from where she was standing, and the wind was blowing quite hard. Her unmentionables were observed to be short as to length and ample as to breadth—I leave you to imagine the rest, yet to all appearances she was a so-called nice girl; only very, very thoughtless. Better turn her out to pasture.

As for future styles, why let Paris design them? Hasn't America enough brains and ingenuity, artistic taste and common sense, within her borders, to create dresses suitable for her own women? Are not women intelligent and independent enough to modify extremes? Don't bury your talent. Develope it for your own good and for the good of the generations to come.—Mrs. Bessie O. Roberts, Gratiot County.

As people become accustomed to the manner of dress which is criticised so freely today, don't you think, Mrs. Roberts, that the criticism will gradually subside and that people will find they have made much ado about nothing? I am not talking about the extremes of fashion now nor the exceptional cases of misconduct, but of the prevoiling fashions and the general deportment of our girls and women. It is well known to all of us that the extremes of dress in nearly every generation have been the accepted dress in the following. How shocked and horrified many good women were only a few years ago when the high collar was discarded for the moderately low-neck-dress and the long untidy sleeve was succeeded by the elbow-length. Those simple changes were looked upon then as radical departures and the moral break-down of our girls was freely predicted. How many of you mothers who are reading this were guilty of such extremes in dressing? And speaking of "unmentionables," they used to wear 'em to their shoe tops with a few inches exposed. After all, is there actual harm to the morals of youth in present day dress, or do we only think there are?—Editor.

LET THE FARMER THINK FOR HIMSELF

THERE is a general opinion among farmers, and I think with reason, that they are not getting a square deal as compared with other industries. That they get too little for what they sell and pay too much for what they buy and that they bear too large a proportion of the public burden.

This feeling is shown by the advocacy of all kinds of schemers from the inflation of the currency and the enacting of new laws and the repeal of old ones to the starting of all kinds of new activities to which the farmer is expected to subscribe if he is only told it will benefit the farming class.

Conditions in foreign countries to a large extent determine the price we get for our produce such as their competition with us in what we export and their need and ability to buy, but there are conditions in this country that operate to widen the gap between the producer and the consumer.

It behoves every farmer to do some clear thinking along these lines and ask everyone who advances a new scheme just what his personal interest is in it.

In a recent article I said an income tax would do us no good as plans for spending the money would be made before we received anything from the tax. The recent announcement by Prof. Friday that he would ask the legislature for an appropriation of $2,000,000 for research work verifies my statement much sooner than I expected. He says it will only amount to about $10 for each farm, but I wish to point out that the direct tax is only a small part of the tax that the farmer must pay. The retailer must add his part of the tax to the goods he sells and the man who buys and ships your produce must deduct his part of the tax from the price he pays you for what you sell.

The farmer is hit both coming and going.

Cost of transportation is a contributing cause of the wide gap between the producer and the consumer and the farmer who backs the Labor Unions in maintaining wartime wages and unreasonable working rules and tieing up of industry on the slightest pretext must expect to pay in the lessened price for his produce and the increased cost of what he buys. A clause in the Declaration of Independence reads: "He (the King) has erected a multitude of officers, to harass our people and eat out their substance." What we went to war with England for we have imposed on ourselves.

We have much too many officers and are paying them much too high salaries.

If the statement is true that the members of the State Board of Administration are using cars furnished by the State at a cost of $4,000 each, that alone should be sufficient to defeat everyone of them for reelection.

It is estimated we must soon provide $5,000,000 per year to maintain highways and provide for retiring $5,000,000 of road bonds and when the farmers protested such a large road building program they received very scant attention.

I don't wish to be understood as opposed to good roads or good schools or good government but I think all of these activities are much overdone and to the direct deteriment of the farmers.

Retrenchment all along the line should be the demand of the farmer before everything else.

The farmer is the prey of the demogog, the agitator and the visionary on the one hand and the exploiter on the other. It is time he did some thinking for himself.—K. S. Wood, Charlevoix County, Mich.

There's a good deal of sound sense in what you have to say, friend Wood, though I cannot understand why you attack working men wanting decent wages and organizing to get them, and let the profits of industy go free of censure. High wages for honest service rendered do not hurt the farmer. They help him. They increase the buying power of the wage earners. The farmer is never more prosperous than when wages are high and never so poor as when wages are low. Let's not object to a decent wage for an honest day's work, but do let's go after the fellows who are wringing huge profits from the public on watered stock, and charging high prices from unnecessary services.—Editor.

"WE LABOR NOT IN VAIN"

I WANT to add my appreciation of your splendid paper with the thousands who have already expressed themselves. Above all other farm papers I ever saw, I think your greatest merit is your clean advertising. Many farm papers only seem to publish farm news as a means to flaunt impossible advertisements. Every article I find in your paper I am able to believe.

In a recent issue I notice you have told a subscriber you would send him a set of plans for the construction of a poultry house if he would send his name. May I also receive a set of those plans? I intend to build my second poultry house this fall. My first does not seem very convenient. —E. K., Tower, Mich.

That's a pretty fine compliment. Thank you for it. The M. B. F. is not all we would like it to be all we expect it to be some day, but we feel that we are on the right road. The plans have been sent to you under separate cover, thanks to the courtesy of Prof. Foreman of the M. A. C.—Editor

Montgomery Ward & Co.
The Oldest Mail Order House is Today the Most Progressive

1872 GOLDEN JUBILEE 1922
Pioneers Together
—the staunch builders of this great country—and Montgomery Ward & Co., who first supplied their needs by mail.
Fifty years of progress together, and today this great new-old institution of Montgomery Ward & Co. is filled with the same spirit of the Pioneer—always progressing —always leading the way.
We enter our second half-century of service by offering you in this, our Golden Jubilee Catalogue, the fruits of fifty years' experience in making low prices on goods of dependable quality always.
Catalogue Number 97
MONTGOMERY WARD & CO.
Fall & Winter 1922 23

Don't You
Miss this
Money Saving
Opportunity

This Catalogue
is Yours FREE

This Golden Jubilee Catalogue Celebrates Our Fiftieth Anniversary by Offering You Everything for the Home, the Farm and the Family at the Lowest Prices of the Day

TO write today for your free copy of this big Golden Jubilee Catalogue will mean a saving of many dollars to YOU this Fall.

It answers every question about price, establishes for you the right price to pay for everything you buy.

Fifty years' experience in manufacturing—in right buying—has gone into this book. Fifty years' experience in low price making is here at your service.

Write for this Catalogue. Know the right price to pay for everything you buy. Take advantage of the many big bargains it offers—the many, many things offered at less than market prices.

This advertisement is printed to tell you of the saving this book offers you, and to tell you that one copy of this Catalogue is yours—FREE. You need merely write us a postal, or fill in the coupon below, and one copy of our big Golden Jubilee Catalogue will be mailed you FREE.

TO THE WOMAN: This free Catalogue offers you the newest styles, selected in New York by our own Fashion Experts. And all the usual extra "style profit" has been eliminated from our prices.

It offers you everything for the home at a big saving: Rugs, Carpets, Curtains, Furniture, Home Furnishings of all kinds of standard quality at money saving prices

TO THE MAN: Think of an all wool—virgin wool suit for less than $15.00. This is an example of our Golden Jubilee Bargains. Everything a man needs, to wear or to use, is offered at prices that mean many dollars saved

FOR THE FARM: For fifty years the American Farmer and Montgomery Ward & Co. have helped each other. This book outdoes all our past achievement in making low prices for you.

Fencing, roofing, tools, paint, hardware—everything the farmer needs is offered at a saving.

Your Orders Shipped Within 48 Hours

We announce a new perfected service for you.

After a year's work and study, originating and testing new systems, and employing experts, we have perfected a new system that makes certain a very quick and satisfactory service to you.

Practically every order that comes to Montgomery Ward & Co. this season will actually be shipped and on its way to you in less than 48 hours.

Lower prices, better merchandise, and now a new service. True it is indeed that: "Montgomery Ward & Co., the oldest Mail Order House, is Today the Most Progressive."

When You Come
to the Michigan State Fair

This is a wonderful week for the citizens of Michigan. Our State Fair gives us an opportunity to see what our great State has accomplished in the past year.

Also, it gives us all an opportunity to get acquainted with our neighbors and what our neighbors have done toward the common good.

Every Farmer within reach of Detroit should come to the State Fair. And while you are in Detroit, make it a point to—

Visit the Michigan State Automobile School

If possible, we want every Farmer in Michigan to know and appreciate what this institution stands for. It is one of the best friends the farmer boy has. Thousands of boys from the farm have found this school their first and biggest step to Success.

Bring Your Boys

Go through the school with them. See for yourself what we teach—and how. Look into every nook and corner of our great institution and notice the completeness of our equipment; the thoroughness of our instruction. Then notice the type of young men who come here to be helped on the road to Success.

Here we are teaching hundreds upon hundreds of young men how to care for and handle all kinds of mechanical equipment properly—autos, trucks, tractors, lighting plants, gas engines, etc. It is one of the most complete and comprehensive courses of instruction to be found in a trade school.

Come Any Day

School is open to visitors from 8 a. m. to 9 p. m. Class hours are 8:30 to 5:00, also evening classes Monday, Wednesday, Friday, 7:15 to 9:45. Take Woodward Avenue car at Fair Grounds and get off at Parsons Avenue right in front of our School. Interesting booklet free to every visitor from the farm.

Come! It's worth a special trip. And bring the boys. We've helped thousands of them, and we can help yours.

Michigan State Automobile School
A. G. ZELLER, President
2269 Auto Bldg., 3729 Woodward Ave.
Detroit, Mich.

An Invitation

WE respectfully extend an invitation to the business farmers of Michigan, their wives and families, to visit our plant and the departments now in operation during your visit to the

Michigan State Fair
Detroit, Sept. 1st-10th

WE shall look forward to your coming to inspect the results of our sincere efforts to give the livestock growers of Michigan a modern, efficient packing plant equal to the best in the United States.

MICHIGAN CROPS

PLOW AND SEED AT RIGHT TIME; DELAY CUTS CROP

TIME is a bigger element today in farm life than ever before. Few realize its place in the ploying and seeding of crops for the biggest yields. The Central Experimental Farm of the Dominion of Canada, at Ottawa, Canada; and the Oklahoma Experiment Station have both gathered some figures that are startling and conclusive in bringing home to farmers the necessity of being so equipped with power and machinery that the work can be done when it should be done and in the shortest possible space of time. A month's delay will cut the wheat crop over half, while on barley and oats the loss is nearly as great, the Canadian experiments show in the following table:

No. weeks delay in seeding	Wheat decrease	Barley decrease	Oats decrease
One	20%	24%	15%
Two	40%	28%	22%
Three	50%	40%	32%
Four	58%	46%	46%

At the Oklahoma station, plowing was done at three different dates: July 19, when the ground was in the proper state of moisture; August 15 when it was hard and lumpy, and September 11, when it was dry and cloddy. Each plot was seeded September 15. The yields were: July 19 plot, 31.3 bushels of wheat; August 15, 23.5 bushels; September 11, 15.3 bushels. The station concludes that "early plowing for wheat is profitable; and if wheat follows oats, the soil should be plowed immediately after the oat crop is harvested. Generally it is best to work down the soil well as soon as it is plowed, and harrow or drag it after each rain. In this way, weeds may be kept down and the soil moisture conserved."

In other words, the farm needs more than ever a reserve of power that can be thrown into the stubble fields immediately after the grain is off for early plowing and preparation of a seed bed to get a 100 per cent foundation for his fall wheat crop. This kind of work, to bring best results, must be done at a time when the farm labor supply is carrying a "peak load," and when it is the hottest time of the year on the farm. Farmers equipped with tractors are fortunate in being able to meet these "peak demands" of farm work that brings seed-bed preparation close on the heels of small grain harvest.

FIVE IMPORTANT WINTER WHEAT REMINDERS

WHILE the Hessian fly is by no means the only problem in the growing of winter wheat, he is of so much importance that nowadays the entire winter wheat program is mapped out with him especially in mind.

There are five points which require special attention, i. e., early plowing, good seed, a well-prepared seedbed, delayed seeding, liberal fertilization.

Hundreds of farmers follow such a system and find that it is very profitable to do so. Time and time again, it has been demonstrated that early and thorough preparation of the seedbed, alone, is responsible for increases in yields of from five to ten bushels.

When seeding is delayed until after the fly-free date, Hessan fly damage is greatly reduced. The adult fly lives only a few days after it emerges and if it does not find the leaves of the young wheat plants upon which it can lay its eggs, it is unable to propagate the new brood which does the damage to the crop. However, when seeding is delayed, the crop must move along rapidly after seeding, in order that it shall pass through the winter successfully. From two to three hundred pounds of high-analysis fertilizer applied at seeding will insure the crop against injury and give it a good start the following spring.

WHAT GRAINS SHALL I SOW?

I would like your opinion on winter grains, also on what spring grains you think advisable to sow. I was planning on putting in twenty acres of fall wheat. —T. S., Hillsdale, Mich.

The type of soil, crops now on the land, and condition of the land, determine the winter and spring grains which will prove best adapted. On fertile loam, silt loam or clay loam, from which a cultivated crop will be removed before mid-September in southern or central Michigan, or which is now being summer fallowed, or which was in oats and can be plowed and fitted, would prove best adapted to wheat. Light soils and lands which are hard worn, or fields from which a cultivated crop cannot be removed until late September, will do best with rye.

Oats are best adapted to loams, silt loams, and clay soils, commonly called heavy lands, which are well supplied with organic matter and hold moisture throughout the season.

The use of two hundred and fifty pounds of acid phosphate per acre almost invariably pays a good profit with any of the above grain crops. It is also advisable to plant on a clean, well compacted seed bed at the proper date.—J. F. Cox, Professor of Farm Crops, M. A. C.

ALFALFA WITH RYE

We bought a 19-acre farm this spring and found an 8-acre field of rye, or rather there was an 8-acre field of rye last year. It must have been over-ripe when cut last year as there is quite a small crop this year and no one planted it again last fall, so it must be a volunteer crop. It is not worth having harvested. we are told there would be over 50 bushels of rye on the piece and to have it cut and cared for, threshed, hauled to the market, etc., would not be worth while, so our advisors tell us to let it go back this year, drag it thoroughly in and next spring drag it and sow to alfalfa. Cut the rye when ripe and we will have a fine alfalfa field.—A. E. G., Gladwin, Mich.

I do not think it would be advisable to make an alfalfa seeding for the first time on ground which is now in its second year with rye, and which will come into its third year next spring. June or Quack grass cannot help but be taking hold of the ground to a considerable extent on a field which has been allowed to volunteer two years straight with rye. I would suggest planting a cultivated crop such as corn or beans, turning under the rye ground in late April or early May next spring, devoting a season to a cultivated crop in order to clean up the grass and planting alfalfa the following year.

If it does not fit in with the management of your farm to plant a cultivated crop, I would suggest sweet clover as a better crop to plant under the conditions you describe than alfalfa. I would recommend seeding at as early a date as possible in the spring, using twelve pounds per acre of scarified seed, and inoculating seed at time of planting.

Rye must be properly planted at the right time in order to give paying results. Volunteer rye rapidly reverts and will not pay for the handling.—J. F. Cox, Professor of Farm Crops, M. A. C.

FRUIT and ORCHARD
EDITED BY FRANK D. WELLS

UNPROFITABLE APPLE TREES

My apple trees do not bear. They are fifteen years old and healthy, but produce nothing but wood. Can anything be done? This year there were blossoms but no fruit.—B. V., Monroe County.

There are so many reasons for sterility that to answer this question is like shooting in the dark. The soil in Monroe county is mostly good for apples and there are some fine orchards. The unfavorable weather at the time of blossoming is probably responsible for the failure this year, but if the trees are growing too much wood they need treatment to correct this habit, for such it is.

If the orchard is in sod, plow it thoroughly next spring, then work the ground till mid-summer. Prune some, too, which is easy to say but most difficult to instruct definitely. Better prune too little than too much. Consult some neighbor who is an apple grower in regard to the amount of top that should be removed. Such treatment should bring results the following year.

CHERRY LEAF RUST

What causes cherry leaves to turn brown after the fruit is picked?—P. P., Middlepoint, Ohio.

There are several diseases affecting the leaves of cherries, the most common being the shot-hole fungus. But whatever the cause, the treatment is much the same and should be a preventive rather than a cure.

Since the spores of diseases pass the winter on the bark, much good should come from a spray in the fall after the leaves have fallen. This is a treatment which has not received much attention as it should. A weak solution of copper sulphate may then be used, one pound to 50 gallons of water. Use no lime. If left till spring the weather may be unfavorable or the work may be neglected. It may be applied at any time when there is no foliage and the weather is not cold enough to freeze the spray on the trees.

Lime-sulphur, dormant strength, thoroughly applied before the buds begin to open, should control the fungus diseases.

Following this dormant application with the regular sprays as advised for cherries should give the desired results.

RENTING APPLE ORCHARD

What would be a fair share rental for a 10-12 year old apple and cherry orchard, renter to furnish everything except the orchard?—Reader, Eaton County.

The condition of the individual orchard as regards fruitfulness, vigor, varieties, cultural system, etc., the acreage of the orchard and the number and condition of the buildings accompanying the orchard, would have considerable bearing upon the rate of rental. Where there are poor on no buildings and equipment in connection with an orchard and where the orchard is in rather poor condition, it is customary for the owner of the orchard to receive from one-third to two-fifths of the crop. Where the orchard is in good condition and a considerable number of suitable buildings in good repair to go with the orchard, the owner may take one-half the crop.—Roy E. Marshall, Assoc. Professor of Horticulture, M. A. C.

It came hard to lose the cherry crop last year, but some good resulted from it. The insects which have received such a large proportion of the fruit in other years have been scarce this summer. There being so little fruit the adult insects had no place to lay their eggs. So the curcuio crop was very short, likewise the cherry maggot. That beat spraying by many times, but does not make it unnecessary in the future. The insects will come back, but it should be possible to control them by spraying for several years to come.

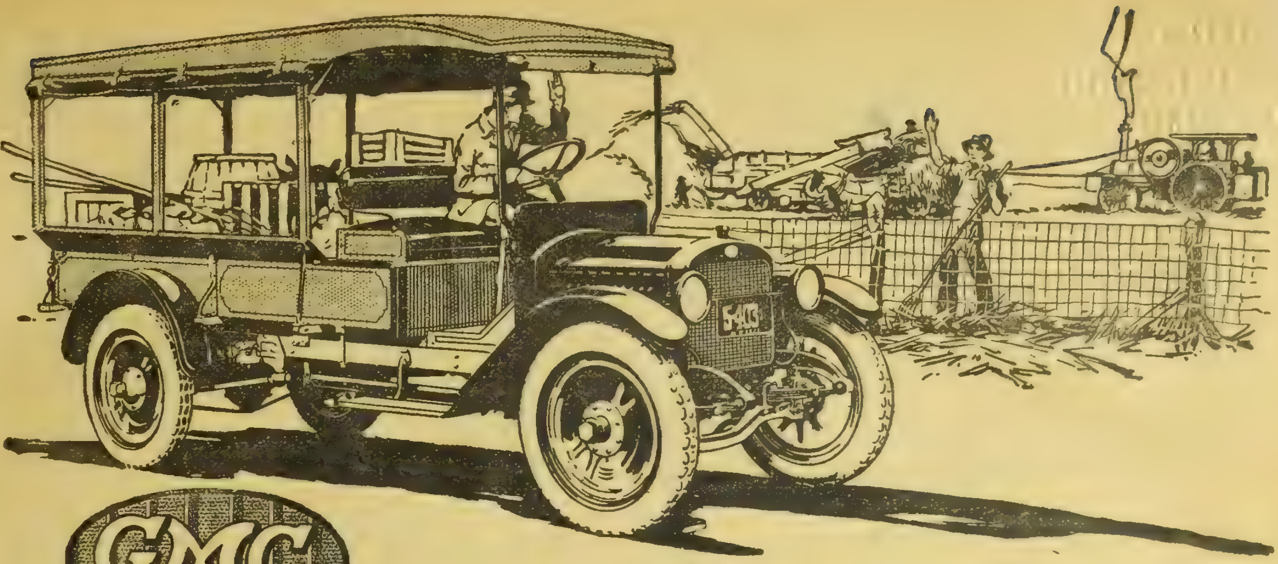
Why is the wild blackberry of better favor than the cultivated varieties? For one reason, the varieties have resulted from a selection of fruit for size and productivity. Go back to the wild plant. Improve it by selecting for quality rather than quantity and the result will soon be evident. Size may be sacrificed, also productivity, but the delicious flavor of the wild berry can be retained, perhaps improved.

HORSESHOE TOURNAMENT

COUNTY CHAMPIONS TO COMPETE IN STATE MEET

THE county horseshoe pitching tournaments which have held throughout Michigan this year in conjunction with farmers' picnics, have proven to be the leading drawing card, to the almost total exclusion in some cases of other events on the programs. It is expected that at least 25 counties will send their champions to Detroit to compete in the state meet, to be held at the Michigan State Fair, beginning Tuesday, Sept. 5th.

Counties which have reported their winners to the Business Farmer are St. Joseph, Hillsdale, Van Buren, Muskegon, Calhoun, Wayne, Macomb, Ottawa. The winner in St. Joseph was Lyle Scott of Centerville, the winning team in Hillsdale were Milton Fisher and Jesse Fenstermaker, of Hillsdale; in Ottawa, Wm. Lowing and C. VanCovering, both of Jenison; in Muskegon, Corniel Oudsema and S. D. McNutt; both of Ravenna; in Calhoun, Carl Boehlke, of Marshall and A. J. Russell, of Battle Creek; in Wayne, Ray McIntyre of Wayne and Ed. Gotts of Plymouth. The three high men in the Van Buren tournament were Ben Seel and A. Elgas of Watervliet and E. C. Virkus of Benton Harbor. The champion team of Macomb comes from Washington and their names are Art Robertoy and Chas. Schocke. It is expected that all of the above champion teams will participate in the state meet.



GMC

"It's a Truck *All* Through"

A "Jim-Dandy" Truck
Model K-16 One Ton
$1295
Chassis Only—At the Factory

Built entirely of truck parts, fast, staunch and enduring, the Model K-16 One Ton GMC truck is always ready to travel.

Every unit in it is of extra size and is designed for truck use only. That is why it lasts indefinitely under the hardest usage.

That is what makes it a "Jim Dandy" for the farm. It has the ruggedness, the power and the simplicity that makes it deliver more continuous haulage than other trucks over the roughest roads and under the severest hauling conditions.

This GMC has a number of exclusive improvements that both increase its operating efficiency and reduce the time and expense of maintenance. Such features as Removable Cylinder Walls, Pressure Lubrication, Removable Valve Lifter Assemblies and Instantaneous Governor Action help to produce a new and better kind of motor truck operation.

It has radius rods—recognized as essential to enduring truck construction—which take the driving thrust and absolutely keep the brake adjustment fixed whether the truck is loaded or empty. It has magneto ignition, recognized as the simplest, most reliable type.

It has both pump and thermo-syphon cooling. It has electric lights and starting equipment—separate from the ignition and wired in metal conduits. It has pressure chassis lubrication, demountable rims, cord tires and every other refinement essential to a high grade, dependable motor truck.

Write for an illustrated booklet "Motor Trucks On the Farm."

GMC Chassis list at factory as follows: One Ton, $1295; Two Ton, $2375; Three and One-half Ton, $3600; Five Ton, $3950; tax to be added

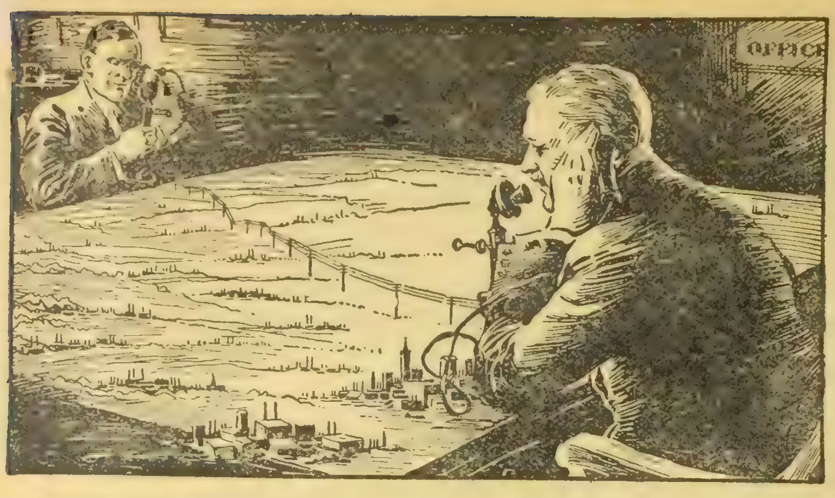
MICHIGAN BUSINESS FARMER
TELL YOUR FRIENDS ABOUT IT



As if across a desk

"New York is calling!" says the operator in San Francisco. And across the continent business is transacted as if across a desk.

Within arm's length of the man with a telephone are seventy thousand cities, towns and villages connected by a single system. Without moving from his chair, without loss of time from his affairs, he may travel an open track to any of those places at any time of day or night.

In the private life of the individual the urgent need of instant and personal long distance communication is an emergency that comes infrequently—but it is imperative when it does come. In the business life of the nation it is a constant necessity. Without telephone service as Americans know it, industry and commerce could not operate on their present scale. Fifty per cent more communications are transmitted by telephone than by mail. This is in spite of the fact that each telephone communication may do the work of several letters.

The pioneers who planned the telephone system realized that the value of a telephone would depend upon the number of other telephones with which it could be connected. They realized that to reach the greatest number of people in the most efficient way a single system and a universal service would be essential.

By enabling a hundred million people to speak to each other at any time and across any distance, the Bell System has added significance to the motto of the nation's founders: "In union there is strength."

WHEN WRITING TO ADVERTISERS PLEASE MENTION THE MICHIGAN BUSINESS FARMER

Farmers Service Bureau

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you. All inquiries must be accompanied by full name and address. Name not used if so requested.)

THAT LINE FENCE

Will you kindly inform me through your valuable paper, which is the lawful line fence and also what part belongs to each farm? I am a renter, and the fence on the right side facing the fence is of woven wire, and the fence on the left side is two strands of barb wire, which allows my neighbors' unruly cattle to destroy my crops. They say the fence on the left belongs to this farm and will not try to keep their cattle off. Have I the right to shut up their stock and hold them for damage to crops?—Mrs. P. S., Middleville, Mich.

Line fences are divided by agreement of owners and may be the right or left half. There is nothing that I can call to mind in the law that designates which part either is to take. If the owners cannot agree they may call in the fence viewers and their determination which part each is to take shall be binding.

If your neighbor's cattle get onto your premises through the fence that is the duty of your neighbor to build or keep in repair then you may shut them up, if you follow the provisions of the law for such purpose, and require him to pay the damage and penalty for the same before delivery back to him. If the cattle get onto your premises through the fence you should build or keep in repair then you would not be justified in shutting them up as you would make yourself liable for the costs of proceedings to retake them. The question may be tested in such a proceeding to determine which should build the fence. The division of the line fence may be agreed upon and filed in the town clerk's office. You may find in his office which one is to build each half of the fence. —Legal Editor.

MUCK SHOES

Will you please inform me where I can buy muck shoes?—C. E. B., Alpena, Mich.

The muck shoes are usually made by a local blacksmith in the muck regions of the state.

A Mr. Brigham of Decatur manufactures muck shoes in small quantities. I do not have at the present time his first initials but I am sure you could get them by writing to Dr. Bope of Decatur. If this does not get results write again and I will make further effort to get in touch with the proper party.—Ezra Levin, Director Bureau of Agricultural Development.

PAYING TUITION

Will you please tell me if I remove from the district I am now residing in during August which district must pay the tuition of a boy attending High School, or must I pay it myself, the said boy being 17 years of age?—Reader, Roscommon, Mich.

The district where the parent or legal guardian resides at the time of making written application, which is on or before the fourth Monday of June, is the district that must pay high school tuition for the school year following, if the child holds a county eighth grade diploma or has completed eight grades in a graded school and the parent or legal guardian has made written application for the payment of tuition on or before said fourth Monday of June. The fact that the parent or legal guardian may move out of the district after filing application does not release the district where the application was filed for the payment of tuition for that year, unless the child becomes a legal resident of a district that maintains a high school and he attends that high school.—W. L. Coffey, Dept. of Public Instruction.

DISPUTE OVER SPRING

A and B own joining land. A has a spring of water about 6 rods from the line between A and B. The water does not flow onto B's land. B's deed calls for the water but A's deed says nothing about it. Can B go on to A's land and build a reservoir and take the water without A's consent.—A. E. S., Lowell, Mich.

If B's deed was from A or from someone who owned the spring then he is entitled to what his deed called for but if B's deed is from someone who had no right to convey any interest in the spring, then the mere fact that he had a deed naming the right to the spring it would give him no right thereto. If B's deed did convey some right to the spring B must exercise that right in accordance with the right as given in the deed. Without it he would have no right to go upon the land of A and by so doing he would become a trespasser.—Legal Editor.

CANNOT KILL QUACK GRASS BY PLOWING DEEP

Is it possible to plow deep enough to bury and kill quack grass on gravelly soil?—C. L., Traverse City, Mich.

It is not possible to plow deep enough to bury and kill quack grass on gravelly soil. Thorough cultivation is the only reliable method for the complete eradication of this pest. Very shallow plowing in the fall or early spring followed by deep plowing and then thorough cultivation will succeed if weather conditions are favorable.—R. S. Hudson, Dept. of Farm and Horses, M. A. C.

DEBT OUTLAWS IN SIX YEARS

Does a debt made for goods of any kind outlaw? If so, how long before it is outlawed?—F. C., St. Charles, Mich.

Just an ordinary debt would outlaw in six years from the date it is due or six years after the last payment thereon. A debt evidenced by a judgment in Justice Court would also be six years but a debt evidenced by a judgment in circuit court would be ten years. There are a large number of cases enumerated in the statute having different times fixed by law as a time when they outlaw.—Legal Editor.

PAGE MRS. RUSSELL!

I have some information for Mrs. Wm. H. Russell or her near relatives. I am sure that her people or herself would be very glad to know. Her father lives around Shytown or a name similar to that. It is around Owosso and Bancroft. Send all information about their address to a friend of her son, George.—Mrs. P. Brown, Rhodes, Mich.

WHERE TO PLACE MAIL BOX

Is there a law compelling one to put their mail box on the right side of the road? We live on a state trunk line 36 and were requested to do so. I wrote the Postmaster General for information some two or three weeks ago and have failed to get a reply. But instead he wrote our postmaster at town and sent him my letter also. Why can't we have R. F. D. now in years to come as in years gone by? A mail carrier is in no more danger on the road than we or our children who go to the box for mail. Thanking you in advance for whatever information you may be able to give me.—Mrs. F. B., Oxford, Mich.

I have to inform you that under the provisions of Section 827, Postal Laws and Regulations, each box on a rural route shall, if practicable, be erected on the righthand side of the road regularly traveled by a rural carrier and in such a position as to be easily and safely accessible for the delivery and collection of mail by the carrier without leaving his conveyance.

It is required by the Department when, because of traffic conditions, to travel from side to side of the road would endanger the life of the carrier and the safety of the mails, or would be in violation of state or local ordinances in respect to the use of the highways, that all boxes be erected on the righthand side of the road as regularly traveled by the carrier.—Fourth Assistant Postmaster General.

SALE OF FARM DOES NOT INVALIDATE LEASE

A farm is rented to three parties: one renting fields, one the orchard and the other the house and garden. The farm is for sale, and if sold could the one renting house and garden be made to move and leave the garden, an acre of potatoes and vegetables, if you have no rent paid in advance?—Mrs. J. C., Orion, Mich.

Each one who rents a piece of land would be entitled to hold according to his lease. The selling of the land does not terminate the lease. If the lease is verbal it can be made only for year or less. Not so with writing unless the right to sell is reserved in the lease the sale does not affect the lease. If one rentd subject to sale and agreed to leave upon sale his renting terminates upon sale. The payment of rent is not an absolute requirement to the validity of a lease. A lease may be made that would be perfectly valid without the payment of any rent in advance.—Legal Editor.

The Collection Box

ONE of the most popular "skin games" of the day is the tire game. It is now possible to make a tire by machinery which to all outward appearances is as good as any tire ever made, and requires an expert to detect its flaws. There have sprung up throughout the country scores of concerns which make this type of tire, and advertise it through the mails, offering to send a set of them as an "introductory" offer, and guaranteeing them to run a far greater number of miles than some of the best makes can do. Their literature is appealing, their argument strong, their price attractive, and their "guarantee" convincing. Farmers are their favorite victims. They "bite" like fish after a summer shower. And usually they get "hooked." The tires never run their guaranteed mileage. Usually they go to pieces within a few hundred miles.

Out of the thousands of claims referred to this department scores are against this type of tire concern, and in the great many cases, we find too late that the crooks have "flown the coop." They have sold enough "introductory" tires to make a "killing," and never expect to receive a repeat order. So they fade away and spring into existence again some other place.

Mr. B., of Jackson county ordered a set of "guaranteed" tires and tubes from the Service Corporation of Kansas City, Mo. He drove them a few thousand miles and they went all to pieces. He wrote the company. The company told him to send them in for readjustment. He did. A month later we wrote to them. The letter came back marked "Service Corporation out of business." And Mr. B. is minus both tires and money.

At that Mr. B fared better than Mr. A. S., of Imlay City who answered an ad of the Webster Tire Corporation which he saw in the Household magazine. With a faith akin to that of a child Mr. S. sent his hard-earned cash to a firm he had never of before advertising in a paper that does not guarantee the reliability of its advertisers. Mr. S. might as well have dropped his money into Lake Huron. He never saw it again and he never received the tires. We wrote the firm for him, but our letter came back. It had pocketed his money and probably the money of thousands of others. And the postal authorities are still looking for the rascals. There is a moral to all these stories. Better learn it and follow it.

VETERANS MUST FILE CLAIMS FIVE YEARS

LITTLE attention has been paid up to the present time to that section of the War Risk Insurance Act (Section 309)which deals with the time limit for making claim for disability incurred in the United States services. Under this Section of the Act it specifically states "That no compensation shall be payable unless a claim therefore be filed, in case of disability, within five (5) years after discharge, or, resignation from the service."

In plain language this means that any man who has a disability which is due to his service in the United States armed forces must file a claim for that disability within five (5) years after date of his discharge. Any man discharged from the service between April 6, 1917 and October 6, 1917, as an optional right, can either apply to the Pension Bureau or to the Veterans' Bureau. Any person discharged after October 6, 1917 must apply to the Veterans' Bureau for his disability claim and must do so within the five years period. An example of this is: A man discharged from the navy December 1, 1917, on a disability discharge, files a claim with the Veterans' Bureau at Chicago District Office on December 10, 1922. His claim must necessarily be disallowed because he has not applied for compensation within the five (5) year period.

All claims and information concerning same may be taken up with the District Office, U. S. Veterans' Bureau, 111 N. Canal street, Chicago, Ill., or with the Sub-District Office of the U. S. Veterans' Bureau at the Krolik Building, Jefferson and Randolph streets, Detroit, Mich.

THE AERMOTOR CO CHICAGO

THE AUTO-OILED AERMOTOR

A Real Self-Oiling Windmill

A year's supply of oil is sent with every Aermotor

Oil an Aermotor once a year and it is always oiled. Every moving part is completely and fully oiled. A constant stream of oil flows on every bearing. The shafts run in oil. The double gears run in oil in a tightly enclosed gear case. Friction and wear are practically eliminated.

Any windmill which does not have the gears running in oil is only half oiled. A modern windmill, like a modern automobile, must have its gears enclosed and run in oil. Dry gears, exposed to dust, wear rapidly. Dry bearings and dry gears cause friction and loss of power. The Aermotor pumps in the lightest breeze because it is correctly designed and well oiled. To get everlasting windmill satisfaction, buy the Aermotor.

"The Farm Paper of Service"

The State Fair Is On

IT is predicted that the State Fair this year will attract the largest number of farmers in it's history. There are several reasons for this. One of them is that the entertainment and the exhibits have been planned to make a special appeal to the farmer. Then, too, the tourist camp will bring many who like to travel by auto and do not care to brave the traffic of Detroit's congested thoroughfares But probably the largest single event which makes a special appeal to the farmers this year is the horseshoe pitching contest which will attract the devotees of the game from all over Michigan. It is understood that delegations of farmers will accompany champions from several counties to witness the big tournament at the Fair.

Every effort has been made to make the farmers and their families feel right at home this year and to provide for their comfort and welfare . The State Fair is on. All roads lead to Detroit.

Bankers Back Farm Bureau

SOME critics will be sure to look askance upon the recent report of the agricultural committee of the Michigan Bankers' Ass'n, asking the continued support of the banks to the Michigan State Farm Bureau program. It is not unreasonable to suppose, of course, that the banking fraternity would like to dominate the policies of the farm bureau and other farm organizations. Indeed, it is heard in some quarters that the banks do now control these policies. To a limited extent and in certain instances this may be true, but we don't believe that the statement applies to the Michigan State Farm Bureau or any of its locals. There was a time when the State Bureau stood in danger of such domination, but it was warned in time and has struck aside the chains of all entangling alliances.

We prefer to believe that the banks of Michigan are actuated by the most honorable motives in pledging its support to the Farm Bureau program. Bankers as a rule are shrewd men. It has not taken them long to learn that their prosperity is indelibly linked up with the farmers' prosperity and that it is to their selfish interest to aid the farmer to carry out his economic program.

Friday Shatters Farmers' Hopes

THE hopes of farmers that prices of farm products are due for a come-back were shattered by Pres. Friday of the M. A. C. in a speech he recently made before the Michigan Potato Growers' Exchange at Cadillac. Dr. Friday has gathered statistics to show that the net value of manufactured and agricultural products have been almost equal for a period extending over 25 years. When the value of one has been greatly inflated the value of the other soon follows suit. He points out that while agricultural prices are still 35 per cent above the pre-war level — prices of manufactured articles are 65 per cent above. In the process of economic readjustment agricultural products must go up or manufactured articles must come down. Because of the world conditions affecting agriculture he does not expect prices of farm products to reach a very much higher level than they are today. Hence — the conclusion is that the prices of other goods must come down. And he says that is what will happen.

We believe Dr. Friday has a correct understanding of the situation. Grain prices will probably be some higher but the general average will not be far out of line the next year or two from what it is today. This is discouraging prophecy, but if it is correct prophecy, it might far better be anticipated now than to have it suddenly realized without any warning.

Dr. Friday makes the very excellent point that in a period of low prices such as the farmers are probably now facing, it is a question of the survival of the fittest. The inefficient farmer cannot survive. And the efficient farmer can only make money by being more efficient than he is today and employing every economy in the production of his crops. "Fewer acres, but more per acre," is Dr. Friday's doctrine, a doctrine which we have been preaching in these columns for some time past.

The ray of hope in the situation at least for the farmer of Michigan is the promise of Dr. Friday that the agricultural college is making a special study of the situation with a view to rendering the farmers assistance that will enable them to produce slightly more economically than the farmers of other states, to produce a higher quality of crops, to pack them a little better and get them to market a little cheaper than the farmers of the other states can do.. It may be that the slight advantage which the college may work out for the farmer in the production and marketing of his crops may mean the difference between success and failure.

Be on your guard. If ever in your life you ought to be a business farmer and practice business methods it is now.

The Profits of Industry

SECRETARY of Agriculture Wallace has made some interesting "discoveries." He has discovered that the wages of coal miners and railway employees are still in excess of the pre-war level as measured by their purchasing power. For instance:

> "In 1913 the average wage received by the coal miner for mining a ton of coal would buy 1.1 bushels of corn in Iowa; in 1921 it would buy 2.5 bushels of corn in Iowa. In 1913 the ton wage would buy .7 of a bushel of wheat in North Dakota; in 1921, .9 of a bushel. In 1913 it would buy 4.7 pounds of cotton in Texas; in 1921, 8.5 pounds. In 1913, 7 pounds of hog in Nebraska; in 1921, 14 pounds. In 1913, .8 of a bushel of potatoes in New York; in 1921, 1.2 bushels. In 1913, 11 pounds of sheep in Wyoming in 1921, 18 pounds. In 1913, 1.6 bushels of oats in Illinois; in 1921, 3.1 bushels. In 1913, 2.4 pounds of butter in Missouri; in 1921, 3.2 pounds."

Interesting, of course, but what do they prove? Secretary Wallace wants us to believe they prove that wages have not been deflated enough. But do they? To our mind they prove that agriculture has been deflated too much. And so as a piece of propaganda put out by the U. S. Department of Agriculture to arouse the farmer against the laboring man the report is a rank failure.

Need we some times wonder why laboring men go to extremes to protect their rights and maintain their wages at a level where they can clothe and feed their families? Isn't it often because they know that every effort is made by those who profit by low wages to deceive the mass of people and make them believe that laboring men are seeking an unreasonable, exorbitant wage? Who wouldn't under such circumstances, with a job that is none too certain and want only a few days away if the job is lost, fight to the last bitter ditch for their bread and butter?

But Secretary Wallace, drawing $18,000 a year isn't worrying about the jobs and the wages of men who are working for 30 cents an hour. Why should he? He is in a position where he can slap the laboring man on the wrist and preach a sermon at the same time.

"Why don't you do as the farmers have done?" asks Mr. Wallace. "Despite their heavy losses they have not struck. They have kept on producing etc. etc. If other groups would do as the farmer has done, our economic troubles would soon be over, etc., etc."

Would the good Secretary make the nation believe that the farmers have accepted the consequences of the Federal Reserve Board's deflation policy because they wanted to? Does he really believe the farmers are as big chumps as that? The farmers took their losses and went on producing because there wasn't anything else for them to do. They wanted to strike, they wanted to protest against the cruelty and injustice of that deflation edict, but they couldn't. They weren't organized enough and besides you can't strike for a few days in the farming business. You've got to strike for a whole year.

These are the hard brutal facts which Secretary Wallace knows as well as any living man. Why paint the farmer in any other colors than he ought to be painted even for the sake of making an invidious comparison with labor. The farmer is human and he has neither forgotten nor forgiven the offense that has been committed against his industry.

If the Secretary of Agriculture is to make a fair comparison between the purchasing powers of different vocations as before and after the war he must include them all. He compares the PROFITS of agriculture with the WAGES of industry instead of with the PROFITS of industry. We are not so greatly alarmed over the efforts of millions of workers to secure a wage that will permit them to buy of the farmer the food to feed their families. Experience has taught us that the farmers prices are never better than when wages are high and never worse than when wages are low.

What we would like to know is what the purchasing power of the PROFITS of industry are as compared to the pre-war days. If Secretary Wallace has any figures along this line we shall be glad to receive them.

To Improve Potato Statistics

A MEETING was held in Buffalo a few weeks ago to discuss methods for improving the crop reporting service of the U. S. Department of Agriculture. As is usually the case with such gatherings the conference was made up of about ten dealers and government officials to one farmer.

Most everyone will agree that the potato estimates of the Department can be improved. And we say this without prejudice. Despite all the alibis that have been put out by the Department to prove the contrary we maintain and so does nearly every spud grower that the government was way off on its estimate last year. A few more errors of that kind and the Department's estimates will be about as worthless as a pair of earmuffs in Honolulu.

We are not unmindful nor ungrateful for the great strides the government has taken along crop reporting lines. Considering the magnitude of the job its estimates on grain are remarkably correct. But it has failed to attain so high a degree of accuracy in its reports on the perishable crops. It should by all means improve its methods of collecting potato statistics or discontinue the service altogether and leave the gathering of crop information to farm organizations where we believe it properly belongs and will some day rest.

NOTICE TO SUBSCRIBERS

Rather than issue incomplete summer numbers, omitting important departments, as most farm papers have been forced to, the past few months, The Business Farmer has preferred to issue a complete number every other Saturday. Each issue thus "missed" has been credited to the expiration date of every subscription, so that in the end, no subscriber will miss a single copy for which he has paid.

What State Dept. of Agriculture Is Doing

By JOHN A. DOELLE, Commissioner

IT has been my thought for some time that the public should be better advised upon the powers and duties of their State Department of Agriculture so that they might avail themselves of the services that the Department is equipped to render.

The Michigan Agricultural College, Agricultural Publications, The State Grange, The Gleaners, The Farm Bureau and the Farmers' Clubs have all rendered valuable services and have been great mediums through which information to the individual has been disseminated. The great work done by the Michigan Agricultural College never has been, and I doubt if it ever will be, fully appreciated due to the fact that but few of the citizens of Michigan realize the splendid service which she has rendered and is rendering to the State and Nation.

The State Department of Agriculture, being somewhat new in its organization, I feel that as a matter of good citizenship it is my duty to inform the public as best I can of the service that this Department can render so that those who contribute to its support can avail themselves of those services.

FOREWORD

THE 1921 legislature created the State Department of Agriculture for the purpose of centralizing all state activities along agricultural lines under a single head. Although this department is supposed to serve the farmers and does, few know the nature of its duties. The following article is one of several to be written by Mr. Doelle, the commissioner, describing the work of the Department, to be published in the M. B. F., and other papers of general circulation. Questions and criticisms concerning the work of the department are invited.—Editor.

IT is well understood that where departments of government are properly organized, they will be clothed with authority and embrace all the activities necessary in order properly to function.

It is also a fact that in order to have an efficient and economical government, there should be no duplication of work or conflict of authority in its different departments.

These facts were recognized by the Legislature of Michigan during its last session. It enacted a law creating the Department of Agriculture, and transferred to this Department matters pertaining to animal industry, the state food and drug commissioner's department, work heretofore performed by the Veterinarian Board and Commissioner of Immigration. It also transferred and placed in this Department the inspection and regulation of orchards, vineyards and nurseries, inspection and regulation of apiaries, testing of agricultural seeds, analyses of commercial stock foods, investigation and improvement of market conditions, and matters pertaining to State and county agricultural fairs.

It is the work of the Commissioner of Agriculture to co-ordinate and correlate the work of all these Bureaus and agencies so as best to serve the agricultural interests of this commonwealth.

In order properly to determine what line of action to pursue, the first thing to do is to ascertain the facts. This is done by gathering statistics in regard to all matters ertaining to Agriculture. Statistics should be obtained by those who understand their value and who know best how to compile them when they are gathered.

Reliable information obtained in regard to conditions affecting one branch of Agriculture often has a bearing upon matters pertaining to other branches of agriculture. By having the different Bureaus in one department, all of the information obtained by them is available for all.

Perhaps one of the most far-reaching provisions in the Act creating this department is the one which provides as follows:

"It shall be the duty of the State Department of Agriculture to foster and promote in every possible way the agricultural interests of the State of Michigan; to cooperate with agricultural agencies in the different counties of the State and of the Federal government; to foster direct trading between the producer and the consumer; and to prevent and assist in preventing by all available means authorized by law, the sale of unimproved lands and lands not suitable for agricultural development within the State by fraud, misrepresentation or deceit and the publication of false or misleading statements or advertising matters designed to effect such sales."

By the authority vested in the Commissioner of Agriculture by the first part of this section, he is able to foster and promote all movements that tend to better agricultural conditions in the State. He is always in a position to extend a helping hand. In short, he is able to "keep the home fires burning" where all those interested in bettering agricultural conditions can gather around and be sure of assistance, encouragement and a welcome. By the authority vested in him by the last part, he is able to put the State stamp of disapproval upon misdirected or injurious activities, and evoke the strong arm of the law where fraud or deceit is practiced.

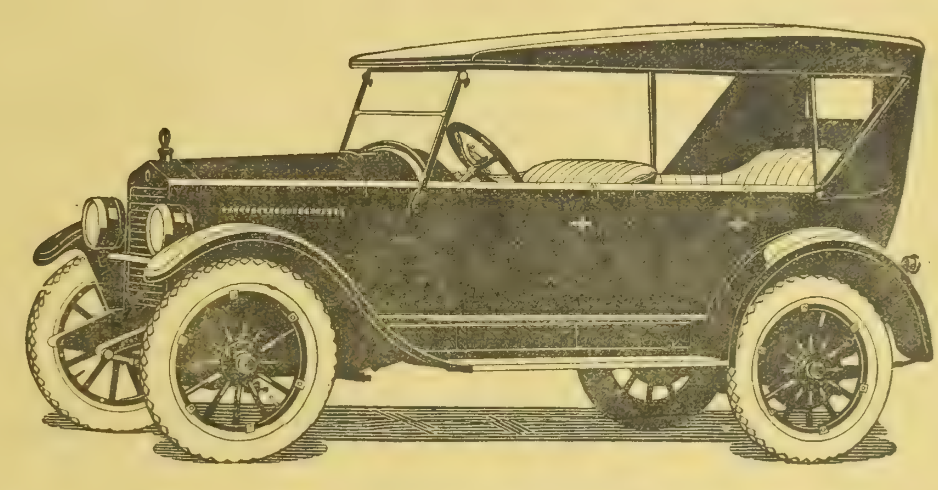
A majority of the activities of this department are of the preventative nature rather than the curative. I think I could safely say that 80 per cent of the activities of this department are along preventative lines and that 90 per cent of the benefits that accrue to the State of Michigan by virtues of the operation of these Bureaus come from the work done along those lines.

The Legislature from time to time has proceeded under their police power to enact laws for the protection and safeguarding of the interest of the individual. Judge Cooley says, the police power of a State "embraces its whole system of internal regulation, by which the State seeks not only to preserve the public order and to prevent offense against the State, but also to establish for the intercourse of citizens with citizens those rules of good manners and good neighborhood which are calculated to prevent a conflict of rights and to insure to each the uninterupted enjoyment of his own so far as is reasonably consistent with a like enjoyment of rights by others. * * * It comprises that portion of the sovereignty of the State which was not surrendered by the terms of the federal constitution to the central government. * * * Finally, it has been said that by means of this power the Legisuature exercises a supervision over matters which involve the common weal, and enforces the observance, by each individual member of society, of the duties which he owes to others and to the community at large."

It is under and by virtue of legislative authority, under the police power of the State, that a great deal of the work of this department is being carrried on. It may be truly said that we are honestly endeavoring "to insure to each, the uninterrupted enjoyment of the rights of others." At the same time, we seek to "enforce the observance by each

(Continued on page 23)

$1095



A New ESSEX

A Roomier Open Car—A Greater Chassis

You have no appreciation of what this price buys until you examine and drive it.

To all that made Essex such a wonderful value in the past are added refinements and comforts never before offered in a car of its price class. Roomier seating, wider doors and greater riding ease, contribute something new in personal comfort.

The Result of Three Years' Experience

Back of the new Essex is all we learned in building 70,000 earlier Essex cars. Finer precision standards have resulted and Essex smoothness is even more pronounced. You will instantly note its greater beauty. Its care and attention are easier, cleaner, more convenient.

It will reveal a charm you never suspected in any except the large costly cars.

It Improves in Service

Old owners tell you of a car so enduringly designed and built that its performance improves for thousands of miles.

But today's Essex combines advantages no earlier owner knows. Go see, and ride in it. It is the best Essex ever built, and at the lowest price.

Wider Seats
Wider Doors
Lubricated with an oil can—no messy grease cups.
Thief-proof Lock, reduces insurance cost 15% to 20%.

Touring, $1095 Cabriolet, $1195 Coach, $1295

Freight and Tax Extra

ESSEX MOTORS, Detroit, Michigan

WOMEN ARE DRY

YOU will be interested to read below a few opinions expressed by prominent women, of the country, on the wet and dry issue. I would be glad to hear from readers of this page on the subject. We need not become excited or angry, in fact, it is the cool head that convinces. We have a right to differ from one another. That is what makes human nature so interesting. If you want my opinion, here it is: I believe we must conform to any plan that brings "The Greatest Good to the Greatest Number."

"Women are dry, and don't you forget," proclaimed Mrs. Harriet Taylor Upton, head of the Republican women. "They will stand united a solid bulwark against attacks on prohibition and will defend the eighteenth amendment with every available resource."

"The mothers of the nation are no more likely to wipe out the eighteenth amendment than they are to demand the cultivation of typhoid germs in the water which science has purified."

Thus Mrs. Maud Wood Parke, president of the National League of Women voters voiced the nation-wide opposition to any relaxation in the prohibition regulations by the women of the country.

Both Republican and Democratic leaders of women stand united on the one issue of prohibition and are constantly urging the women to work for its upholding within their own parties.

"The women vote is becoming more powerful every year. It is already strong enough to be a powerful obstacle to the ambitions of the wet forces. Women have the welfare of the family too much at heart not to realize the speciousness of the arguments advanced by the wets."—Mrs. Newell Blair, Democratic committee women in Washington.

In Missouri, Texas, Ohio and in Utah, the liquor interests are standing with one foot in the grave and the other on a banana peel.

"In England," Mrs. Parke explains, "there is a general feeling that the United States adopted prohibition not out of sentiment nor because of altruistic motives, but out of a shrewd, cold blooded Yankee conviction that a prohibition country will outstrip drinking nations in health, wealth, efficiency and power. My personal opinion is that this is wholly true and that continuance of prohibition is assured because it lays a sound economic foundation on which permanent national well being can be built."

ON FREE SUGAR

(Not a discussion of the tariff)

IN a very interesting article written by Dr. K. R. Gibson, who is director of the Bureau of Dentistry and Oral Hygiene, a new light is thrown upon the use of free sugar in the diet of children. He says, that

"The feeding of sugar is warned against whether cooked in foods or used upon cereals. This will no doubt occasion comment, as many people believe that free sugar is a food and that more or less is necessary to satisfy bodily requirements. Nature has, however, furnished all the sugar that the body needs in foods such as milk, fruits and some of the vegetables, beside providing that foods such as bread, potatoes and rice be changed into sugar in the digestive process.

Aside from free sugar, the frequent eating of fresh white bread, soft crackers and light foods should be avoided. These require very little effort in their mastication and tend to form in sticky particles about the teeth providing the most ideal conditions for the beginning of dental decay. In their place should be substituted the hard whole wheat breads, toast, zwieback and foods, which not only in themselves have a cleansing and massaging effect upon the teeth and gums, but which stimulate the normal development of the jaws and face, at the same time stimulating an active flow of saliva to begin digestion where nature intended—in the mouth.

Calcium salt is the very foundation of tooth structure; whether the enamel of the tooth is to be hard and dense or relatively soft and porous is regulated by the amount of calcium available. During the time of the development of the temporary and permanent teeth special emphasis should be placed upon foods that are high in their calcium content. Some of the more important of these foods are milk, buttermilk, cheese, spinach, string beans, kidney beans, celery, turnips, carrots, cabbage and cauliflower.

That the contagious skin diseases contracted during childhood bear a direct influence upon the enamel of the teeth is not generally known. Such is the case however. The enamel of the teeth and skin are formed from similar cells, any eruption of the skin is likely to affect the formation of the enamel. From the standpoint of sound teeth, if for no other reason, parents should take every measure to prevent the child from contracting measles, chicken pox, scarlet fever, etc., during the enamel forming period of the two sets of teeth—that is from birth to 17 years of age.

The Farm Home
A Department for the Women

Edited by MRS. GRACE NELLIS JENN

Dear Readers—I have an announcement to make today that I know will interest you very much. It is this, we have been able to secure the services of Dr. T. N. Rogers, of this city, who has a hospital here and who is a man of high standing in his profession to answer, without charge to you, all inquiries in regard to any ailment which you or any member of your family may have.

Your letters will receive most considerate attention and I believe you will derive much benefit from the doctor's advice. From letters which I receive constantly I know that this service will fill a long-felt want.

CORRESPONDENTS' COLUMN

Mrs. R. D.—One teaspoonful of Chlorozene powder to a pint of luke warm water makes a strong solution. If the part to be bathed is inflamed or very sensitive use one teaspoonful to one quart of water.

A. B. C.—In canning elderberries use just an ordinary amount of sugar, in other words, sweeten to taste. I have kept elderberries for two years and have simply been careful to have jars, rubbers and tops perfectly clean and to seal them while hot.

Subscriber—I am sorry that we cannot publish "The Raggedy Man" by Riley, it would take up more of our page than we can spare.

A. V. H.—Do not worry at all about the condition you describe, nor take any medicine. Nature will probably take care of the matter in due time, if not, then consult a reputable physician. More harm than good will result from tampering with it yourself.

Lemon Pie Recipe

1 cup of granulated sugar, juice and rind of 1 large lemon, 3 eggs, 2 rounding tablespoons flour, 2-3 cups of water. Beat eggs and sugar and flour together; grate yellow rind of lemon, squeeze juice and pulp, throw away white rind. Mix all together and bake in a nice crust—bake slowly.—Subscriber.

Gertrude's Cream Puffs

1 cup boiling water, 1-2 cup butter, 1 cup flour, 4 eggs. Boil water, add the butter, when it is melted stir in unbeaten eggs. Drop on buttered tins and when done fill with whipped cream or custard.—Mrs. R. H., Kent County.

Experience With Seedling Geranums

I have been a reader of M. B. F. for several years. I have had lots of help from the Farm Home department and am glad to add my mite, as I can send the words to the song "Little Dale." This was an old favorite with my mother and I have always loved it.

Will someone write about what experience they have had with seedling geraniums? I raised four this year, two of which are white and double and one is a beautiful pink. Seed was from a white one.—Subscriber.

Jelly Roll Cake

Not long ago I saw a request in the M. B. F. for a jelly roll cake. I am enclosing my recipe for same, also a recipe for orange marmalade, and too a delicious way to cook chicken.

3 eggs, 1 cupful sugar, 2-3 cupful milk, 1 1-2 cupfuls flour, 2 teaspoonfuls baking powder, 1-4 teaspoonful salt, 1-2 teaspoonful vanilla.

This batter should be quite thin. Bake in a dripping pan in a moderate oven. When done remove from pan onto a dampened towel, spread with jelly and roll carefully by picking up the end of the towel and rolling the cake small at first. After the cake is rolled leave the towel over it a few minutes so it will steam together and stay in place.

Orange Marmalade

Three large thin skin oranges and one lemon sliced crosswise through rind, the juice of another lemon and eleven glasses of water. Let this stand twenty-four hours then boil one hour. Let it stand again twenty-four hours then add four pounds of sugar and boil one and one-fourth hours. Put this in glasses and wax on top the same as jelly. This makes a nice spread and will keep the same as jelly.

A Delicious Way to Cook Chicken

Melt some lard and butter in a pan. Wrap the pieces of chicken in flour, place in the pan and salt and pepper it. Pour over this some water and place in the oven. Bake from two to two and a half hours, browning on one side and then on the other. Remove the chicken and make gravy in the same pan.—Mrs. H. D. M.

A Few Helps

This page I have enjoyed for over two years now and though many times I could have helped some one I always left it to others. When one is so busy and happy they sometimes grow too self centered so if any of the following recipes can be of use to the inquirers they are most welcome.

Has L. M. P. S. tried butter-scotch pie? 1 cup brown sugar, 3 tablespoons water, 3 tablespoons flour, yolks of 2 eggs, 1 1-2 cups sweet milk, vanilla. Fill baked crust.

I never bought beet relish but this is good: 1 quart of cabbage chopped, 2 teacups of sugar, 1 tablespoon salt, 1 teaspoon pepper, 1-4 teaspoon red pepper, or 2 or 3 green peppers, 1 teacup horseradish 1 quart cooked chopped beets, 1 quart vinegar.

And to can pumpkin I slice and peel pumpkins, cut into cubes, pack sterilized cans tight then fill with hot water and process in the boiler 2 hours. Simply pour off water when you use it. I dry it off on the stove when I mash it.

The following is a recipe for peanut butter cookies taken from Rural New Yorker. Perhaps B. V. S. would like to try it:

One-fourth cup peanut butter blended with 1-2 cup melted shortening, 1-4 cup sour milk, 1 cup syrup, 1 small teaspoon soda, about 3 cups flour. Roll thin.

Our recipe for buns is: Save a cup of dough when making bread. About four o'clock add 1-2 cup of sugar, lard size of an egg, 1 cup of warm water and mix into a loaf. Mold into biscuits with plenty of space between, about bedtime. Bake in the morning in a quick oven. Makes about twenty.

Perhaps this is recipes enough for one letter and when I want some help I know where to go for this and Rural New Yorker family are two friendly circles.

Will close, hoping I have helped someone. Yours for a better page.—Mrs. Fred F. Handley.

Magazines to Exchange

I have magazines I would like to exchange for others; have the American, Woman's Home Companion, Youth's Companion, Woman's World. I would especially like back numbers Ladies' Home Journal. I have Ladies' Home Journal up to Dec., 1920. Please write before sending. Hoping this will help some other out for winter's reading as well as myself.—Mrs. S. J. Sumner, Oak Grove, Mich.

Sweet Violet

I am writing this especially to you. To thank you for making our Home Department so interesting. I enjoy it all very much. But most of all, your talk at the head of the page. You always say something good. That makes me feel glad all day.

In compliance with your request I am sending you a little verse of my own composing:

Oh sweet violet perfume,
My allegiance I pledge to you.
Flowers gathered from the mossy dell,
Sparkling with the morning dew.
Oh give me the scent of the violet,
It's the perfume I love the best.
It's a joy to me forever.
My favorite of all the rest.

—Violet Fields, Elm Dale Farm

BETTER HEALTH

Questions answered by

DR. T. N. ROGERS

HIVES

What can one use for hives? They are quite troublesome to my little girl. Can you give me a simple home remedy?—A. R. B.

Always keep in the house Epsom salts, Carbolic acid and tincture of iodine. Apply iodine to cuts, sores and swellings. It also makes a good mouth wash. 10 drops in a glass of water. A good application for hives, bites of insects and flies is one teaspoonful carbolic acid, four tablespoons Epsom salts in one quart of hot water. Use freely.

It is a well-known fact that the right and left sides of our bodies are never exactly the same.

AIDS TO GOOD DRESSING

For Simplicity, Service and Style

Patterns 12c, New Fashion Books 15c: Address orders to Mrs. Jenney, Pattern Dept., M. B. F.

Here we have a group of pretty school dresses for fall and winter wear.

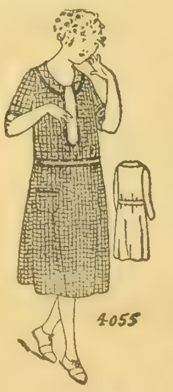
4055 would be a splendid style for heavy wash fabric or warm woolen goods for cold weather use.

4026. Here is a more dressy model nice for party wear or church affairs.

3966. This style is servicable for using up remnants and for making over old dresses.

4057 is a good general model that could be developed in almost any material. These styles are exceptionally good and absolutely up-to-date. Also they are easy to construct. A survey of the shops tells us that lines are to be straight, simple and rather narrow.

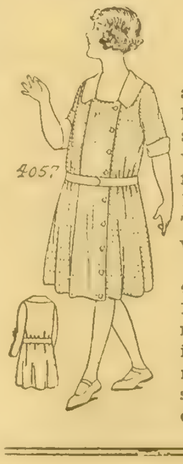
The commercial pattern is another thing that has changed the life and the appearance of the farm woman. You can go into an audience today that is made up of both town and country women and you cannot tell them apart, while twenty years ago you could have very easily told.



A Popular Style

4055. Charming in its simplicity is this one piece model. As here developed gingham and linene are combined with bands of a contrasting color. The sleeve may be finished in wrist or elbow length.

The pattern is cut in 3 sizes: 12, 14 and 16 years. A 14 year size requires 4 yards of 32 inch material. The width of the skirt at the foot is 2 1-4 yards.



A Good School Dress

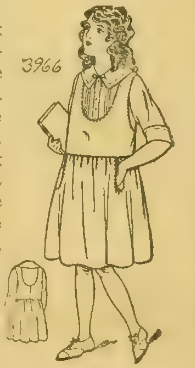
4057. Dotted percale and white linene are here combined. This style is nice for all wash fabrics and also for serge, tricotine, homespun, or taffeta. The sleeve may be in wrist or elbow length.

The pattern is cut in 4 sizes: 8, 10, 12 and 14 years. A 10 year size requires 4 yards of 32 inch material. The dress may be finished in coat style as the closing indicates.

A Good School Dress

3966. Here is a frock with graceful and popular lines. The guimpe is finished separately. A new feature is the style of the pocket. Blue linen with rick rack braid or taffeta with stitching could be used for this dress. The guimpe may be of crepe, batiste or voile.

This pattern is cut in 4 sizes: 6, 8, 10 and 12 years. A 10 year size requires 2 years for the guimpe and 2 3-4 yards for the dress of material 27 inches wide.



A Pretty, Simple Frock

The pattern is cut in 3 sizes: 16, 18 and 20 years. An 18 year size will require 5 1-2 yards of 32 inch material. The width of the skirt at the foot is 2 5-8 yards.

The Children's Hour

DEAR Nieces and Nephews: I had a pleasant vacation but am glad to be back at work. Many times I am so busy and get so tired that I wish I was wealthy and did not have to work but when I take off two or three days I am always ready to return and thankful to know that I am one of the little cogs in the great machinery of the nation, instead of being as sand in its gears. The United States is like a giant beehive and I am glad to be one of the workers instead of a drone. The man without a task to perform can not be as happy as the worker, nor will the future look as bright. I am sure my nieces and nephews are going to be workers instead of drones.

Have you a pet? Will you write and tell us about it, or if you have several write about them all? I have 2 or 3 such letters written by my nieces and nephews, and I am publishing one in this issue. Read this over and see if you can then write a story about your pet or pets.—UNCLE NED.

OUR BOYS AND GIRLS

Dear Uncle Ned—I wish to thank you very much for the needle book you sent me. I am sure it will be a very handy thing to have.—Laura Lake, R. 4, Homer, Mich.

Dear Uncle Ned—Please may I join your merry circle? My father takes the M. B. F. and likes it very well. I enjoy reading it, especially the Children's Hour. I live on a two hundred acre farm of which my father works eighty acres, the rest is rented. I go two miles to school, I will be in the eighth grade this fall. We had about thirty-six scholars on the roll last year. We have a Dodge touring car which my sister and I both drive. I am taking music lesssons this summer. I am nearly through my first book. I have had quite a few instrumental pieces. The one which I have now is "Dance of the Hours." Last fall on my vacation my father drove to West Branch which is two hundred and ten miles from our home. We enjoyed the trip very much. On the way we saw about five acres of sunflowers which looked very curious, farther on we saw a field of corn which the army worms or something had taken all the leaves off and left the bare stalks standing. We had good roads all the way except about 6 miles. We stopped one-half hour in Bay City for our dinner. We left our home at 7:10 a. m. and got to my aunt's south and west of West Branch eight miles, at supper time. We had a lovely time while there. We went fishing on a small lake called Tea Lake. The country is very hilly. After eight days we returned home and found everybody all O. K. This year we are planning on going to Detroit for the fair and from there to Pontiac. I was to Pontiac three weeks ago Sunday. We took my grandmother to my uncle's cottage 10 miles west of Pontiac at Union Lake.

I wish some of the older boys and girls would write to me. I will close, hoping to hear from some of the cousins.—Miss Mattie Erb, Yale, Mich., R. 4.

Our Cat

I am going to write about a handsome tiger cat of which we were the proud owners for about six years.

As a kitten he was the most playful little fellow imaginable. He delighted in hiding and suddenly springing out at the feet of anyone walking past his place of concealment. When we boys were barefooted he made us jump.

He was an exceedingly well behaved cat, never meowing for any reason. He would sit patiently by the door in mute appeal to be let out. In the summer if the screen was not hooked, he would let himself out simply by pushing it open with his head. He would also let himself in by placing his front paws high up on the screen and pulling it outward when he would quickly drop to his feet and dodge in, which was quite a feat on account of the stiff spring.

He never tried to steal any food even when it was left on the table and he was unintentionally shut in the house. At meal time he would sit by my mother's side and watch until impatient for a morsel to be dropped. Then he would place his front paws upon the side of her lap and again wait. If she still took no notice he would reach up and gently touch her arm with one paw.

Sometimes my father, for mischief, would reach across her lap and snap at the cat's nose with his thumb and finger. Teddy resented this and would lay back his ears and cuff at those fingers but always with claws concealed, altho looking very fierce.

When we boys were outside and my mother would call to us Teddy would go to the window and put his paws upon the sill and watch for us.

When we wanted to make a raid on the mice in the granary we took Teddy with us, routed out the rodents and he would do the catching. I have seen him with two in his mouth and one under each front paw.

He often hid some food which he was not ready to eat, covering it up as a dog would. One day a dumpy hen was killed. He ate part of it and dragged the rest across the barn yard to a fence where he covered it with straw. He afterwards uncovered it, ate some more and again carefully covered it.

He was a very affectionate and intelligent pet, a great fighter and a skillful mouser and we were all very sorry when he came up missing one winter day.—Cecil A. Roberts, Breckenridge, Mich., Age 15.

HUDSON'S

41st Anniversary Sale

Begins Tuesday, Sept. 5th

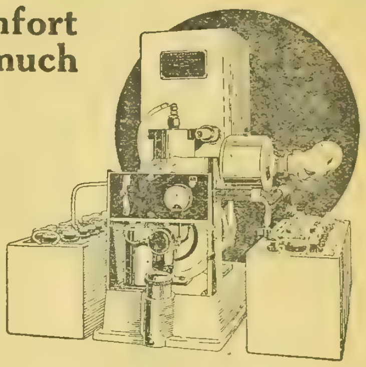
No matter what you need for this fall and winter make preparations now to attend this sale, because in every instance you are assured of Hudson Quality at remarkably low prices.

Hudson's 41st Anniversary Sale, coming at the time of the State Fair, offers double inducement to those who will come to Detroit to see this wonderful agricultural exhibit.

A great store wide event and one of the most important Hudson Sales of the entire year.

Don't miss it!

The J. L. Hudson Co., Detroit



Gives you every comfort and convenience of much higher priced plants

You've been wanting electricity for a long time—but felt that you couldn't afford it. Here, at last, is an efficient, dependable electric light and power plant that you can afford. It is the simplest, lowest priced plant on the market and will give you every comfort and convenience of much higher priced plants.

Made in Detroit—in large quantities—its remarkably low price—and low operating cost—places it within the reach of every farm home in America. Think of it—for only $275 you can have all the clean, safe light you want to use and an abundance of power—for both house and barn, for running household appliances, such as milking machine, cream separator, churn, washing machine, iron, sweeper, and for pumping water, turning grindstone, etc.

Two Models

16-volt, for light only............$225

Lily White

"The Flour the Best Cooks Use"

Is Always Dependable

HOW TO MAKE BAKING POWDER BISCUITS

1 cup Lily White Flour, 2 level teaspoons baking powder, 1 tablespoon fat, 1 teaspoon salt. Sift dry material together. Mix fat into flour with fork or knife. Make into soft dough with sweet milk. Use hand to mould in shape; cut with biscuit cutter or knife and bake in quick oven.

Light, tender biscuits, raised to just the proper height, browned over until they actually invite, are but ordinary products of this superfine flour. The color and the flavor are beyond comparison and the taste—delicious from the first bite to the last.

Reasons why you should use

Lily White

REASON No. 1

Absolute Uniform Granulation Insures Good Baking

LILY WHITE is milled by the six break system. By this extensive and complete process all inferior by-products of the wheat are carried away. Only the choicest portion of the wheat berry enters LILY WHITE. The finest imported bolting cloths are used. The granulation is absolutely uniform, which largely accounts for the excelling baking results obtained with it.

The Famous Windsor Pipeless Furnace

Why pay more for your Pipeless Furnace? The famous Improved Windsor Pipeless Furnace at our price of $69.00 and up—has every modern improvement, will give you as certain satisfaction as any furnace made even at $30 or $40 more than our price.

The Windsor is made to our own specifications. If we could improve it we would improve it. If we could make it better it would be made better. It stands today the best furnace we can have made.

Our Low Price Saves You One-Third

We have thousands of these furnaces made to our order. We sell direct to you. The Saving of one-third is a saving of the extra profits. The difference is wholly in the price you pay.

Easy to Install: With one man to help, you can easily install the Windsor. It is simple and easy. There is no need of paying higher prices just to get the furnace installed. You can do it yourself, in a few hours' time.

A Fuel Saver: The Windsor is an economical furnace to operate. It is designed to save fuel. That is a very important point to consider.

The Windsor is in every way a quality article. Heavy cast iron radiator, the combustion chamber and fire pot of heavy corrugated iron, the grates are the best—in every detail it is a furnace of highest quality.

Write today for your free copy of our Catalogue of Furnaces, Stoves and Heating Equipment. You may just as well save one-third.

BUZZ SAW FRAMES, BLADES, MANDRELS, belting, pullies, wood-working machinery, etc., of every description. Low prices, prompt shipments. Catalogue free. Write GEO. M. WETTSCHURACK, La Fayette, Indiana.

FARM MECHANICS

HARD FACTS ABOUT CONCRETE

DO you know—That no other single factor has so great an effect upon the strength of concrete as has the amount of water used?

Thousands of tests conducted at the Structural Materials Research Laboratory, Lewis Institute, Chicago, prove that a direct relation exists between the quantity of water used in mixing concrete and the strength of the resulting concrete. These tests mean money to the builder because strength is what he is after.

A variation of ten per cent above or below the correct amount of mixing water may reduce the strength of the concrete by thirty per cent or more. The very wet, sloppy mixtures that are sometimes used in building construction result in a loss in many instances of from fifty to sixty per cent of the possible strength of the building.

Within the range of plastic mixtures, the strength falls off rapidly with the addition of a small amount of superfluous water; in a one-bag batch the addition of even one pint of water more than is necessary to give a workable mix results in the same loss of strength as if from two or three pounds of cement were left out of the mixture. That's money out of the pocket for the builder.

The exact amount of water required for any particular mixture of aggregates to obtain the greatest strength in the concrete can be determined, only by actual test. Workability of the mixture is important and must not be sacrificed. As a basis for trial with well-graded aggregates up to 1 1-2 inches in size, and a 1:2:4 mix, use 6 to 6 1-2 gallons of water per sack of cement. For a 1:2:3 mix begin with 5 3-4 to 6 gallons, and for a 1:1 1-2:3 mix, 5 1-2 to 6 gallons. Remember: Use the least amount of water that will give a workable mixture.

THE EXPERIENCE POOL

Bring your everyday problems in and get the experience of other farmers. Questions addressed to this department are published here and answered by you, our readers, who are graduates of the School of Hard Knocks and who have their diplomas from the College of Experience. If you don't want our editor's advice or an expert's advice, but just plain, everyday business farmers' advice, send in your question here. We will publish one each week. If you can answer the other fellow's question, please do so, he may answer one of yours some day! Address Experience Pool, care The Business Farmer, Mt. Clemens, Mich.

HOW I TEMPER A STONE HAMMER

Hello, there, Mr. A. W. R. I see your inquiry about tempering stone hammers in the Business Farmer. Well, here goes. Of course, you dress up the hammer first; get it just as you want it and be sure and not over heat it. Make a good clean fire and heat your hammer slowly and evenly clear through to a good red. Take a tin pail and punch a 3-8 inch hole in bottom, fill with clear cold water. Take your hammer and hold so the stream of water will hit exactly in center of face; hold until cold. Now polish the hardened surface, and heat slowly until it will scorch or turn brown a white piece of paper. Then souse it in cold water until cold. And say you might put in a double handful of salt in the water you use to harden it in. Just try it—F. A. W. Dowagica, Mich.

ELECTIONS STRENGTHEN HANDS OF FARM BLOC

Continued from page 4)

solidity of the farm bloc has become thoroughly recognized the leaders find themselves amazed at the number of unexpected friends the bloc seems to have. All sorts of interests have suddenly discovered very close bonds of friendship and interrelationship with agriculture. Nothing is too good for the farmers' representatives nowadays

The President has them in to lunch, the United States chamber of commerce invites them to speak, the railway presidents ask the privilege of calling a conference to talk matters over with them, the fertilizer manufacturers send emissaries to assure them of their willingness to co-operate, and a hundred and one special groups ask their assistance in furthering some legislation or administrative measure. There is no denying it the farmer is at the top of the heap at Washington these days.

And the farm leaders welcome them all. They have been waiting for this chance for years. They feel that there are a lot of things they could talk over to advantage. And now that these other interests lend an attentive ear, the farmers are able to make them see their side of the case a little clearer. These other interests have had to admit that maybe the grain exchanges and the stockyards did need regulating, and maybe our credit and banking system wasn't suited to the needs of agriculture and possibly there was an inequality in the taxation system and that after all there was no good reason why the anti-trust law should be allowed to stand in the way of cooperative marketing.

And when they have admitted these things one after another, and realize that these are the very things the farmer has been asking to have remedied for years, they begin to see the why and the wherefore of the agricultural bloc and the organization of farmers that stands behind it. They have a new respect for agriculture and for its leaders who have thus arisen and shaken off the shackles that have heretofore held them back.

And all this is going to have another effect too — a far-reaching effect. It is going to cause the keener-visioned business man to see that he must trim his sails and steer his course a little differently from that of the past if he expects to retain the farmers' confidence and business. He must cut out a lot of the inefficiencies of distribution that have grown up in the easy going years of past decades and get his goods to the farmer at less cost. Already a few of the most progressive of the large concerns are putting more direct methods into operation. Some of these inefficiencies can be corrected only by close cooperation on the part of the farmer himself. So there is every reason why the farmer and the business man should get closer together and talk things over to their mutual benefit. But in the future the business man who supplies the farmers' wants must think of himself more nearly as a servant than as an autocratic master, as he has too often been the case in the past.

GUERNSEY BREEDERS TO HOLD SALE

The Michigan Guernsey Breeders' Ass'n will hold a sale of purebred Guernsey heifers and bulls from 4 to 6 months old on September 27 at the Saginaw County Fair Grounds, Saginaw, Mich. Seventy-five head of the finest Guernseys in the state, all tuberculin tested, will go under the hammer at this annual event. The grounds open at 9 a. m. the day of the sale and the first animal will be brought into the ring and bids asked for at 10:30 sharp. Luncheon will be served on the grounds. Further information can be secured by writing Mr. George J. Hicks, chairman sales committee, Saginaw, W. S., Mich.

Wake Up

Nobody ever has any desire to have his nightmares come true.—Louisville Courier-Journal.

NEW LAMP BURNS 94% AIR

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94 per cent air and 6 per cent common kerosene (coal-oil).

The inventor, A. R. Johnson, 609 W. Lake St., Chicago, is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.

THE HUNTED WOMAN

(Continued from page 3)

I wouln't be a rock-hog for a million!"

"I'd rather be a rock-hog than Joe—drivin' down this hill a dozen times a day," replied the other.

The girl had paused again, and the two men stared at her as they were about to pass. The explosion of Joe's dynamite could not have startled them more than the beauty of the face that was turned to them in a quietly appealing inquiry.

"I am looking for a place called —Bill's Shack," she said, speaking the Little Sister's words hesitatingly. "Can you direct me to it, please?"

The younger of the two men looked at his companion without speaking. The other, old enough to regard feminine beauty as a trap and an illusion, turned aside to empty his mouth of a quid of tobacco, bent over, and pointed under the trees.

"Can't miss it—third tent-house on your right, with canvass striped like a barber-pole. That phonnygraff you hear is at Bill's."

"Thank you."

She went on.

Behind her, the two men stood where she had left them. They did not move. The younger man seemed scarcely to breathe.

"Bill's place!" he gasped then. "I've a notion to tell her. I can't believe————"

"Shucks!" interjected the other.

"But I don't. She isn't that sort. She looked like a Madonna—with the heart clean gone. I never saw anything so white an' so beautiful. You call me a fool if you want to—I'm goin' on to Bill's!"

He strode ahead, chivalry in his young and palpitating heart. Quickly the older man was at his side, clutching his arm.

"Come along, you cotton-head!" he cried. "You ain't old enough or big enough in this camp to mix in with Bill. Besides,' he lied, seeing the wavering light in the youth's eyes, "I know her. She's going to the right place."

At Bill's place men were holding their breath and staring. They were not accustomed to women. But such a one as this vision that walked calmly and undisturbed in among them they had never seen. There were half a dozen lounging there, smoking and listening to the phonograph, which some one now stopped that they might hear every word that was spoken. The girl's head was high. She was beginning to understand that it would have been less embarrassing to have gone hungry and dusty. But she had come this far, and she was determined to get what she wanted—if it was to be had. The color shone a little more vividly through the pure whiteness of her skin as she faced Bill, leaning over his little counter. In him she recognized the Brute. It was blazoned in his face, in the hungry, seeking look of his eyes—in the heavy pouches and thick crinkles of his neck and cheeks. For once Bill Quade himself was at a loss.

"I understand that you have rooms for rent," she said unemotionally. "May I hire one until the train leaves for Tete Jaune Cache?"

The listeners behind her stiffened and leaned forward. One of them grinned at Quade. This gave him the confidence he needed to offset the fearless questioning in the blue eyes. None of them noticed a newcomer in the door. Quade stepped from behind his shelter and faced her.

"This way," he said, and turned to the drawn curtains beyond them.

She followed. As the curtains closed after them a chuckling laugh broke the silence of the on-looking group. The newcomer in the doorway emptied the bowl of his pipe, and thrust the pipe into the breast-pocket of his flannel shirt. He was bareheaded. His hair was blond, shot a little with gray. He was perhaps thirty-eight, no taller than the girl herself, slim-waisted, with trim, athletic shoulders. His eyes, as they rested on the still-fluttering curtains, were a cold and steady gray. His face was thin and bronzed, his nose a trifle prominent. He was a man far from handsome, and yet there was something of fascination and strength about him. He did not be-

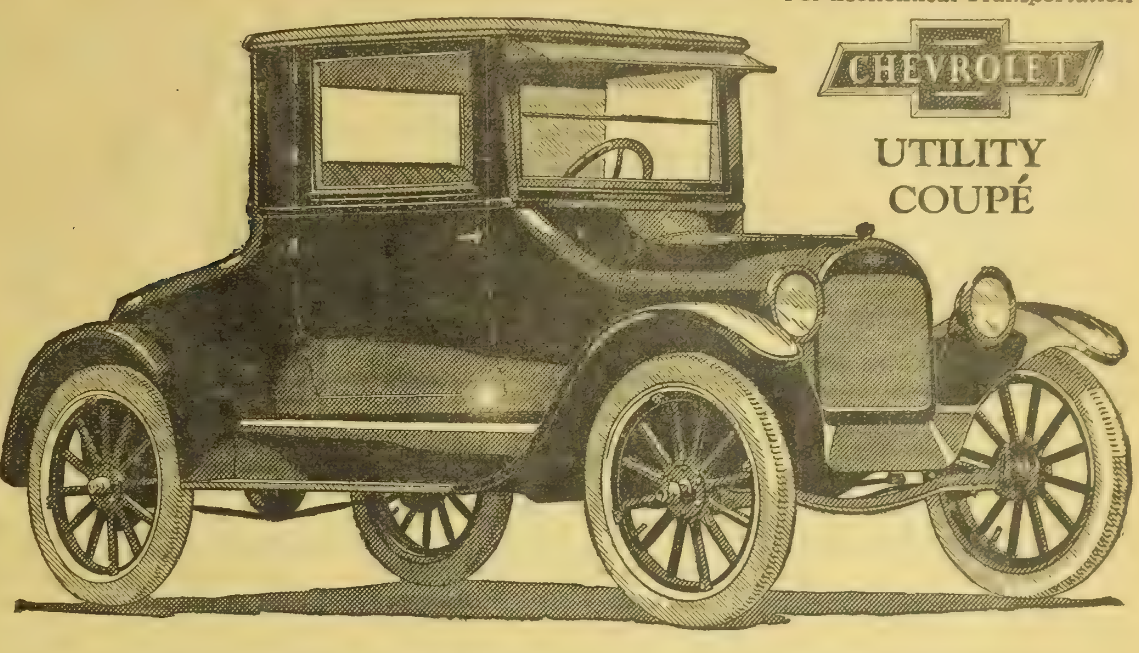
CHEVROLET

UTILITY COUPÉ



The Lowest Priced High Grade Closed Car

$680

f. o. b. Flint, Michigan

This is the car for the country.

No new model Chevrolet has ever met with such quick success with farmers. It is just what they have long wanted—a high-grade closed car at a surprisingly low price.

Like every other Chevrolet model it offers unmatchable VALUE.

The high-grade Fisher Body is practical as well as handsome. The extra large, heavy plate-glass windows afford clear vision on all four sides.

The mammoth rear compartment with locking cover contains 14 cu. ft. of space for luggage, packages, produce and merchandise of all kinds.

The upholstery is in gray whipcord —wide, comfortable, well-sprung seat and back—easily kept clean. Equipment includes standard three speed transmission, vacuum feed, cord tires.

BODY by FISHER

The chassis is the Superior Chevrolet with that celebrated valve-in-head motor, which has been an important factor in giving us first place in sales of standard equipped automobiles.

No matter what car you own or think of buying, you owe it to yourself to see this all-weather Utility Coupé and COMPARE IT for value and low mileage costs.

Farmers know car value. That is why they are buying this model by the thousands.

Chevrolet Motor Company, Detroit, Michigan

Division of General Motors Corporation

World's Largest Manufacturer of Low Priced Fully Equipped Automobiles

5,000 Dealers and Service Stations Throughout the World

Applications will be Considered from High Grade Dealers in Territories not Adequately Covered

DAIRY and LIVESTOCK

COWS THAT FRESHEN IN FALL ARE BEST MILK PRODUCERS

THERE are varying opinions as to the best time to have cows freshen, but after a thorough study of the records of 10,870 cows in 64 testing associations the United States Department of Agriculture has found that cows dropping calves in the fall produce more milk and butterfat. In the 64 associations fall freshening ranked first 29 times in average milk production; winter freshening ranked first 18 times; summer freshening 10 times; and spring freshening 7 times. In butterfat production fall freshening was first 38 times, winter 13 times, summer 8 times, and spring 7 times. The tabulated results and detailed explanations have just been published in Department Bulletin 1071, Influence of season of Freshening on Production and Income from Dairy Cows, by J. C. McDowell.

On an average the cows that freshened in the fall, September, October, and November, produced 6,689 pounds of milk, while those that freshened in the winter, summer, and spring produced 6,439, 5,941, and 5,842 pounds, respectively. These fall cows produced on an average, 268 pounds of butterfat. Those that calved in winter, summer and spring made, in order, 258, 236, and 236 pounds. In spite of higher feed cost, the fall-freshened cows made more income over feed cost. The winter ones were second, spring third, and summer fourth.

On the basis of individual months, the largest income over feed cost was made by cows freshening in December, with October second, November third, and January fourth. The cows calving in October ranked first in both milk and butterfat production.

Although the evidence shows conclusively that fall or early winter freshening is desirable in most parts of the country, there are exceptions to the rule. The dairyman who has a steady market for milk at fair prices during all seasons of the year will usually find it to his advantage to keep the supply fairly uniform from month to month. The percentage of cows that should freshen each month in the year will vary to some extent in different localities and on different farms in the same locality At present in market milk districts there is usually a surplus of milk in the late spring and early summer, and more cows should be allowed to freshen in the fall.

The bulletin should prove to be a valuable guide for solving the freshening problem on any farm. It may be obtained free by addressing the Department of Agriculture, Washington, D. C.

WHOLE MILK AND EARLY MATURITY

A REVOLUTION in feeding methods that involves not only the all important economic problem of early maturity of market poultry and pigs, but even the question of reproduction and prolificacy is indicated in the results of a series of experiments just announced by Prof. T. J. Newbill of the National Dairy Council.

Prof. Newbill's work with pigs, chickens, puppies and rats follows closely the work he has been doing the past few years at Washington State College with the United States Department of Agriculture, and later with Johns Hopkins University in co-operation with Prof. McCollum in their finding of the "vitamins" and their place in nutrition of both animals and man. Not only can such diseases as beri-beri, scurvy, pellegra and opthalmia be done away with in the human race by an understanding of these vitamins and their place in such cheap and available foods as whole milk, fruits, greens and grasses, but the placing of the Sunday chicken dinner within reach of the average family is seen as an immediate and practical result that will quickly be assured by the introduction of whole milk into the cereal diet of chicks.

The results of these experiments begun by the National Dairy Council, in the suburbs of Chicago, last winter, is being shown at the Chicago Pageant of Progress where the growing pigs, chickens, puppies and rats are exhibited in cages to show the differences in growth of animals from the same litters fed under exactly similar conditions, side by side, with and without milk in their diets. Those getting milk are three to four times as big as those receiving milkless rations.

"With chicks," Prof. Newbill explains, "Chicago could have saved and grown to maturity 1,800,000 Sunday chicken dinners out of the 2,000,000 baby chicks bought this past season if they had been fed a small amount of whole milk with their cereal feed. As it was, not a million of these chicks were alive a month after bought. Commercial feed manufacturers have been watching our experiments, and are now beginning to balance up these standard cereal rations somewhat by added tankage and whole milk. This will mean a mature fried chicken fully three weeks earlier with a cheaper growth of said chicken, as these younger gains are put on cheaper."

Director Guy H. Hall of the National Institute of Progressive Farming, who is in close touch with the live stock situation and the feeding experiments carried on by Prof. Newbill, states that the development of earlier maturing pigs for market, especially in the dairy districts is assured. Canny herdsmen of both cattle and hogs have long known the value of whole milk for getting early and quick growth for their show herds, and the use of "nurse cows" in show herds to develop big calves has been a standard practice from time immemorial," he says, "while the feeding of whole milk is not practical in beef production past the weaning stage, it is certain that the findings of Prof. Newbill will stimulate the development of heavier milking strains of even the strictly beef breeds in order to get the earlier development of baby beef for the market.

"Runts in pig families will be eliminated and larger families of pigs developed, thus giving the consumer and producer added gains from these findings," explained Mr. Hall. "When it is understood that the average number of pigs raised per mother hog is less than 5, while many properly fed animals produce and raise 10 or 12, the great possibilities are seen for the balancing of the feed of both mother pig and the little fellows at weaning time. It is the all-corn diet that cuts down the size of litters and brings weak 'runts' into the hog family circle to cut the income per hog in half."

SILAGE SPOILS NEXT TO SILO WALL

We bought a second hand silo and when putting it together we painted all the grooves with tar to seal it and draw it up tight, but when I came to take the silage out there were 8 inches spoiled around the outside. The next year the sam thing occurred. Also the doors are not tight, all there is to hold them is a groove to set in and of course I have a lining for them to lean against. Can you tell me of some way to fasten and draw them up against the silo?—J. F., Traverse City, Mich.

The essential features for a silo to preserve ensilage are: That it be air tight, that the walls be smooth and perpendicular, and that it be strong enough to stand the spreading pressure.

The ensilage spoiling next to the silo wall would indicate that the wall is not air tight. Although you have not stated, I judge that the silo is a wooden one, and it is difficult to advise how to make it air tight without seeing it.

The doors might be made air tight by putting wooden bars across the outside of the door ways and keeping the doors tight to the frame by the use of bolts and thumbnuts. —F. E. Fogle, Assistant Professor of Farm Mechanics, M. A. C.

A New Yorker was spending a night at a "hotel" in a southern town, and told the colored porter that he wanted to be called early.

The porter replied: "Say, boss, I reckon yo' ain't familiar with these heah modern inventions. When yo' wants to be called in de mownin' all yo' has to do is jest to press de button at de head of yo' bed. Den we comes up and calls you."

VETERINARY DEPARTMENT

LEAKS MILK FROM REAR TEATS

I have a cow that leaks milk out of her hind teats, would like to know if there is any way to stop it.—O. F., Coleman, Mich.

If this case is not too bad I would advise you to let well enough alone, however, in extremly bad cases a red hot stillett is inserted in the teat, when the cow is dry. When the wound heals the opening is usually smaller. An old fashioned knitting needle makes a very satisfactory instrument for the operation.

A SERIOUS OPERATION

I have a nice Jersey heifer calf that will be two years old in February. This calf has two teats that are together as per enclosed sketch. Would like to know whether I could cut an incision between the teats and if so, what should I use and how should I go about it? There is no veterinarian in this locality, hence my reason for undertaking it myself. Any information will be appreciated.—E. J. L., Luzerne, Mich.

I would suggest that you do not attempt to perform this operation yourself. It is quite a serious operation and requires the skill of a good veterinarian to perform it successfully.—John P. Hutton, Assoc. Prof. of Surg. and Med., M. A. C.

RUNNING SORE ON JAW

I have a 5-year-old horse that has a running sore on the point of the lower jaw, about half way back. It has been running for 5 months and smells bad. Do you think it is caused from a tooth or broken bone? He can eat corn good.—W. B., Carleton, Mich.

This is due to a bad tooth or injury to periosteum covering the bone. In either case it would be necessary to have a veterinarian examine this horse.

HORSE SWEENEYED

Please advise me in regard to my horse, He was sweeneyed some time ago and I want to know if there is any cure for him. and also how and when to use it.—Subscriber, Alcona county, Mich.

The conditions can be cured in most cases. The treatment, however, would be rather difficult and unsafe for the owner to apply himself. I would suggest that you take your horse to a competent veterinarian for treatment and I believe he will bring the horse out all right for you in the course of two or three months. —John P. Hutton, Assoc. Prof. of Surg. and Med., M. A. C.

NOSE DISCHARGES

My mare is eleven year old, and her nose runs yellow pus. I took her to a veterinary here and he treated her for about six weeks. This didn't seem to do any good, and I used ten drops of carbolic acid to four ounces of water and sprayed her nose with this three times a day for about four weeks, which didn't do any good. Her nose bleeds some after every spraying, otherwise she is in good flesh and has a good appetite. This veterinary says her teeth are in good condition. Will you please tell me what to do for her nose?—B. E. D., Antrim County, Mich.

If the discharge from the nose has an offensive odor and runs from only one nostril, it is very symptomatic of a decayed tooth.

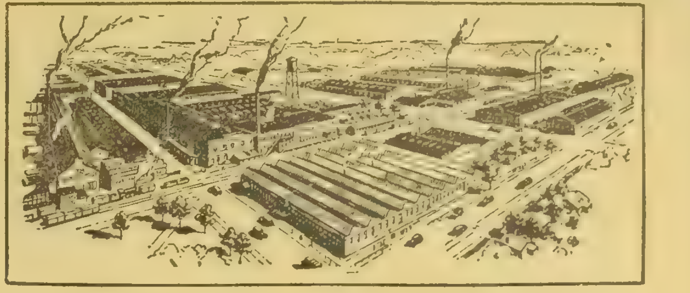
If, on the other hand, the discharge is from both nostrils, it is no doubt caused by catarrhal condition of the muccus membrane, and in this case you will find a very satisfactory treatment, and in fact a permanent cure can usually be accomplished by one dram each of dried sulphate of iron and powdered nux vomica twice daily. This treatment must be continued until results are obtained.

GOVERNMENT BULLETINS OF INTEREST IN SEPTEMBER

A small list of Farmers' Bulletins and Circulars of general interest during September is given below. Copies may be obtained free by addressing the Division of Publications, United States Department of Agriculture, Washington, D. C. Specify number and name and whether Farmers' Bulletin or Department Circular.

Farmers' Bulletin 474, Use of Paint on the Farm; 574, Poultry House Construction; 753, Handling, Grading, and Marketing Potatoes; 872, The Bollworm or Corn Earworm; 889. Backyard Poultry Keeping; 900, Homemade Fruit Butters; 903, Evaporation and Drying of Fruits; 991, Efficient Operation of Threshing Machines; 1046, The European Corn Borer; 1049, Bailing Hay; 1069, Tuberculosis in Live Stock; 1075, Unfermented Grape Juice—How to Make It; 1080, Preparation of Barreled Apples for Market; 1113, Poultry Houses; 1175, Better Seed Corn.

Department Circular 25, Points for Egg Buyers; 74 Points for Egg Breakers: How to Break Eggs for Freezing; 98, The Installation of Dust-Collecting Fans on Thrashing Machines for Prevention of Explosions and Fires and Grain Cleaning.



Forty Acres of Faith and Works

If I could have my wish, every man and woman who is thinking of buying a motor car for use on a farm would spend a day in Jackson seeing how the Earl is *manufactured* in our three great plants.

You would not have to know all about high-grade materials and production methods to see where the Earl gets the endurance, economy, beauty and flexible power which make it the most comfortable, dependable and economical motor car sold at the moderate price of $1095.

From the huge hammers forging crank shafts and forty other units out of five kinds of white-hot steel—through acres of automatic machines—to the paint shop with its sixteen finishing operations—your factory tour would impress Earl quality and craftsmanship on you at every step.

Backing up the car's striking beauty, astonishing road performance and economy, this visible, built-in quality and durability are responsible for the enthusiasm of Earl owners and the overwhelming demand which has kept the factory working three shifts of men in many departments.

The Earl is on display in some near-by city. If you can't come to Jackson, go in and size it up. Ride in it. Take the wheel yourself. I *know* it is the kind of motor car you can afford to own and drive.
Write me for an illustrated catalogue and the name of the nearest Earl dealer.

Cured Her Rheumatism

Knowing from terrible experience the suffering caused by rheumatism, Mrs. J. E. Hurst, who lives at 508 E. Olive St., B-363, Bloomington, Ill., is so thankful at having cured herself that out of pure gratitude she is anxious to tell all other suffers just how to get rid of their torture by a simple way at home.

Mrs. Hurst has nothing to sell. Merely cut out this notice, mail it to her with your own name and address, and she will gladly send you this valuable information entirely free. Write her at once before you forget.

"Open Sesame"

ALI BABA murmured the magic words, the cavern door swung open and costly treasures lay at his feet.

You, too, have an "open sesame" to the treasures of the world. It is advertising.

Read the advertising and you open the door to countless comforts and conveniences you otherwise would miss. For advertising will spread before you the product of fields, looms and factories the world over—things that make life easier, happier, more interesting and more fruitful for you and your family. There is no questioning the real benefits that come from regular and systematic reading of the advertising columns. No other one thing will give you such economy and keen satisfaction in buying. Advertising is far too important to be overlooked.

Read it.

It is a profitable practice.

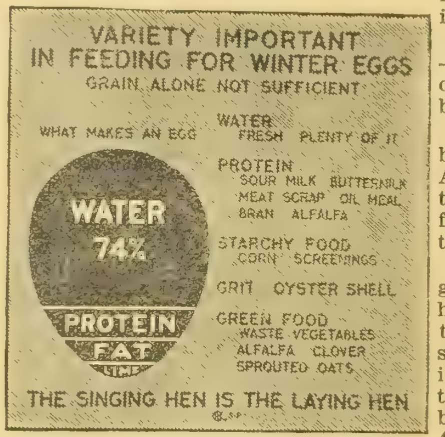
Poultry for Profit

IS THERE MONEY IN HENS?

THE Michigan Business Farmer will pay $1 each for the five best letters in answer to the question, "Is there money in hens?" and the reasons for the answer. Some people make money, or think they do, raising eggs and poultry. Others frankly admit that they either lose money or the profits are too small for the labor involved. What has been YOUR experience? Are you making or losing money in the poultry game, and why. Let's have an exchange of letters on the subject. Who will be the first to tell his or her experience?—Editor.

RATION FOR WINTER EGGS

IF you want winter eggs, duplicate spring conditions. Variety is important in the winter ration. Eggs cannot be produced unless the feed contains the material from which eggs are made. An egg is about 10 per cent fat, 15 per cent protein, 74 per cent water, and 1 per cent ash, chiefly lime.



Grain, especially corn, furnishes the carbon and starch—the heat and fat-making foods; mill feeds, with milk or beef scrap furnish the protein. Some green food is necessary in winter to furnish succulence and bulk.

Give the hens all the water they will drink; warm it, if possible. Furnish grit to grind the food, oyster shell for making the egg shell, and charcoal as an aid to digestion.

Everybody gets eggs in the spring. Why? Because spring is the natural laying season. If we want eggs at other times of the year we must "fool" the hen by duplicating spring conditions as nearly as possible.

Variety Important—Variety is important in the winter ration. A hen craves and seeks different kinds of food. In the spring and summer when she ranges on the farm she when there is no grass or clover, no bugs or worms, when the water is frozen over, when the snow is on the ground so that she cannot pick up bits of gravel and sand, these things must be furnished in her feed.

A hen is different from most animals. She will balance her own ration if given an opportunity. If the following feeds or suitable substitutes are always within reach of your hens, you can rest assured that you are giving them the best possible winter ration:

Grain—Corn is the best poultry feed there is. It is so good that too many feed nothing but corn. That is the trouble. A recent Indiana investigation showed that one-half of the farmers of that state feed corn alone.

About 10 per cent of an egg is fat. Corn contains carbon and starch—the heat and fat-making foods. Feed corn—the hens need it, both for body maintenance and for egg production, but bear in mind that corn alone does not contain all the food elements necessary to produce eggs.

For the sake of variety it is a good plan to feed wheat and oats with the corn—that is, if these grains are not too expensive in your section of the country. Equal parts by measure, of corn, wheat and oats make a good grain mixture.

These grains should be mixed and scattered in a deep litter so that the hens will have to scratch for it. In planning a laying ration, exercise is as important a factor as food. The busy hen is the laying hen.

Don't give too much grain in the morning. Keep the hens hungry—then they will be busy all day. Late in the afternoon give all the grain the hens will eat. A hen's crop should be full when she goes to roost. Eggs cannot be produced unless plenty of feed is given. One hundred and twenty eggs weigh 15 pounds. Considerable raw material must be furnished to make 15 pounds of finished product.

Mill Feed with Milk or Beef Scrap—The winter laying ration should contain mill feed with either milk or beef scrap.

These contain the protein — the bone and tissue building feeds. About 15 per cent of an egg is protein. You can't get eggs unless you furnish in the hen's feed, the materials from which eggs are made.

An experiment at the West Virginia station showed that a flock of hens fed a carbonaceous or corn ration produced only 9,780 eggs in seven months, while an exactly similar flock fed a nitrogenous ration—that is, a ration containing bran with beef scrap or milk—produced 17,459 eggs.

The various mill feeds are rich in protein and are easily digested. Equal parts, by measure, of bran, shorts and corn meal make a good mixture. Put your beef scrap with this, if you are feeding beef scrap instead of milk.

This food group is so important that we discuss it in the chart following.

Green Feed—During the winter the hens need some substitute for the grass and clover and other green food which they get in the summer.

Alfalfa leaves, either dry or steamed, make as good a substitute as you can find. Feed stores catering to commercial poultrymen charge from $18 to $25 for chopped alfalfa. This is not as good as alfalfa leaves alone, for both the stems and leaves are used in making the chop feed.

Clover leaves may take the place of alfalfa. The Ontario Experiment Station says that "One hundred hens will eat from a peck to a bushel of alfalfa or clover leaves a day."

Cabbages, beets, kale or turnips—any of the root stocks—are good green feed for your hens. If you have a surplus of these in the fall, store them, and feed them to your hens in the winter.

Water -About 74 per cent of an egg is water. Often the single fact that your hens do not have enough water in the winter is responsible for your getting no eggs.

It is difficult to furnish plenty of water when the temperature is below freezing. If you give buttermilk, skim milk, or steamed alfalfa or clover hay it will help out on the water proposition. At any rate, some way or other, hens should be provided with all the water they can drink—if it can be warmed a little, so much the better.

Grit, Oyster Shell and Charcoal—Keep a supply of grit, oyster shell and charcoal before the fowls in the winter. The more you can coax your hens to eat and to assimilate, the more material they will have to turn into eggs. If we want our hens to lay, we must not only nourish the body, but they must have enough material left over for egg production.

Grit helps to grind the food; oyster shell furnishes the lime for the egg shells; charcoal furnishes no nourishment but aids digestion and helps keep the bowels in good condition. You feed charcoal to your hogs. Don't forget that a little of it will be good for your hens.

Uncle Rube Spinach Says

WE NEVER BOOST

SAY do you know it sometimes makes me sick, purty nigh, to hear fellers boostin' their home town? Now, I don't b'lieve in that kind of stuff a'tall. Modesty ort to prevail when we speak of our own home town an' with me it always does, 'course I've always known that Battle Creek wuz jest 'bout the best ol' town in the world. I don't ever brag 'bout this though—if I wanted to I could tell a lot of things. I could tell of all our splendid factories, of the fact that durin' the business depression most everybody here had work.

I could tell of our splendid (?) Chamber of Commerce. We don't know what it's for but we've got it, an' our drinkin' water which lots of us use; I could tell of our movin' pictur' shows, an' there ain't any better any place. Our merchants an' everybody are jest the best in the world. Our restaurants, most all run by Greeks, are purty good. Our city, run by Mayor Green an' Police Chief Ralph Day, an' a few politicians seems to be all right; it's a great town an' I could brag 'bout it if I wanted to—fact is, Battle Creek is jest 'bout the best town in the world but I ain't sayin' nothin'. We all know this but we don't ever brag 'bout it. We have the finest men, the nicest lookin' women, of any town in the state. More automobiles are owned by our people, more work is done, there's less crime, more morality, more churches, better citizenship, everything that makes a city great an yet I don't tell nobody 'bout it. I don't have to 'cause the town speaks for itself, an' that in large numbers.

But, folks, ' an I mean OUR folks 'at live near Battle Creek, my farmer friends, I'm talkin' to you, do you know 'at we've got jest 'bout the best farm bureau here in Battle Creek that's ever been known? Now I can't tell you much 'bout this place. Jest wish I could! You know some of us has been wonderin' if we wuzn't payin' these fellers too much money? Well I say we are! Say the feller that runs the business here ain't got a blame thing to do but work?

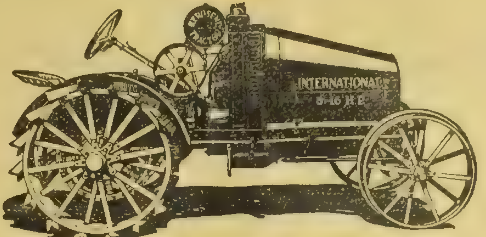
I went in to the place today an' told him I'd like jest a few statistics—he said jest wait a minute. Men kept comin' in, he'd come back an' mebbe say a word or two an' then "jest wait a minute." Why folks he wuz jest 'bout the busiest man I ever knew. I couldn't get nothin' out of him, but I did slip in an' look at their books an' this is what I diskivered: "The Battle Creek Farm Bureau is a purely business affair. Organized by our farmers, financed by farmer members, patronized by most everybody, 'at knows it's here. It's one of the branches of the great state Farm Bureau, but do you know you'd be surprised to learn how many farmers right 'round Battle Creek, don't even know we've got a Farm Bureau?

Why this little, big concern, closed their first year jest last May 31st, with a business to their credit of $147,000. Friends 'at's a lot of money ain't it? Now the farmers right 'round here finance this proposition an' the thing pays. Well last year it paid 7 per cent an' a nice little balance of 1 3-4 per cent to put in your sox.

Now the fellers 'at run the business are elected by the members of the association. 'Course they ain't much to brag 'bout, still they do the work an' here's the names of 'em: W. S. Fruin, president; F. B. Garrat, vice-president, an' H. H. Sanford, secretary-treasurer 'an manager. Now the first two fellers don't git anything for their work. Mr. Sanford gits jest 'bout what a ordinary street sweeper gits an' yet, folks he's done more work 'an a hundred street sweepers. He's the busiest man in Battle Creek today—Mebbe some of the Farm Bureau fellers shirk, but not Mr. Sanford.

Oh, yes! I kinda forgot to say that the Battle Creek Farm Bureau handles most everything 'at us farmers'll ever need.

Now folks is you didn't know that Battle Creek had a Farm Bureau, you know it now. Call an' see 'em. Cordially—UNCLE RUBE.



International 8-16 - - - - - $670
Titan 10-20 - - - - - - - - - $700
With Free P & O Plow
(Tractor and Plow f.o.b.Chicago)

Greatest Farm Power Values—Bar None

REMEMBER that these are not stripped tractors, pared down to make low prices. Titan at $700 and International 8-16 at $670 include all essential equipment—belt pulley, fenders, platform, throttle governor, adjustable drawbar, angle lugs, brakes. This equipment for each is worth more than $100, and is necessary on any tractor to make it serviceable and safe. And above all, the prices include P & O Tractor Plows—2-bottom with the International 8-16 and 3-bottom with the Titan 10-20.

THIS is a time for investment in Titan 10-20 or International 8-16 tractor power. Make your choice and get the complete outfit from the McCormick-Deering dealer. Every day, keep this efficient power at work at your fall plowing and other drawbar work, and tie it up to all sorts of belt machines. By winter time you will be enthusiastic about the all-around usefulness and economy of International Harvester tractors.

These tractors have enormous reserve power, as every owner knows. They pull their plows in all soils with the greatest ease, and they have extra belt power in proportion. They are famous for long life. As the seasons go on you will find them outlasting smaller, inferior tractors, actually by several years. You will find also that they do their best work on kerosene and that the expense of repair and upkeep is remarkably low.

These are the greatest of all power farming values—bar none. Nearly a hundred thousand owners are proving it. Be guided by their judgment. See the McCormick-Deering dealer.

MARKET FLASHES

MARKET SUMMARY

Healthy undertone to wheat market. Corn, oats and rye quiet. Beans steady. Butter firm. Eggs in demand. Poultry unchanged with business fair. Fruit plentiful and market easy. Cattle trade slow to steady. Calves in demand. Hogs and sheep active to higher.

(Note: The above summarized information was received **AFTER** the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press —Editor.)

TRADE AND MARKET REVIEW

THERE is no use concealing the fact that the immediate future looks mighty dark to most people. The partial settlement of the coal difficulties have cleared the atmosphere a little, but the public is to be charged with the consequences of the strike through the increased price of coal, and many industries are threatening to shut down rather than pay the exhorbitant prices which the operators are asking.

The agricultural outlook is equally discouraging. Prices have dropped all along the line the last two weeks, but seemed to have found bottom again. The downward rush of wheat prices which started about three weeks ago seems to have been checked, and the tendency is again upward.

As discussed editorially in this issue, Dr. Friday, M. A. C. president, predicts that farm product prices will stabilize on a somewhat lower level than they are today. The reasons are explained in our editorial on page 12. Farmers have suffered severely already from the lower prices and they don't like to think that the situation will get any worse. When this stabilization is to take place Dr. Friday does not say. It may come about within another few months but on the contrary it may be deferred for another year. Personally we shall be very much surprised if the general level of farm prices is as high three months from now as at present. We think wheat prices will recover at least partially and perhaps wholly from the declines of the past six months. We look for lower corn, cheap pork and certainly very cheap potatoes. Beans will, we think, stay up to pretty close to the September option of $5.75, though they may temporarily drop below that figure for a few weeks immediately following the harvesting of the crop. We believe bean growers should watch their marketing very carefully and avoid over-loading the market. We believe Mr. Drees is entirely correct and sincere in his statement published under the bean market in this issue when he cautions the growers against flooding the market. Sugar prices will, we believe, tend upwards. But whether this will happen in time to benefit the farmer on the sliding scale contract we are not in a position to say. Our guess is that any pronounced increase in sugar prices will take place AFTER the period for which the beet price is determined rather than BEFORE.

The great plentitude of farm crops this year is not, singularly enough, hailed by the financial interests as a forerunner of great prosperity. Ordinarily these interests hail large agricultural production as an insurance of prosperity for the farmer, but they have recently learned the fallacy of this theory. Farmers have seen many worse winters than the coming one is likely to be, but they have also seen some better ones. We think that just a good old-fashioned winter, like we used to have before the war which brought us most of our foolish extravagant notions, is just ahead of us.

WHEAT

Wheat actually touched the dollar mark which we predicted it would several weeks back, but both cash and future grain are up a little from the season's low. This is really the one bright ray in the situation. The crop is all harvested in this country and threshing is about completed. The speculators know approximately what the supply is to be and they must realize that it is none too great for the demand. Any stiffening of wheat prices at this particular time is certainly encouraging. Export demand has taken another slump despite the lower prices, and there is plenty of cash grain on the market. The rail strike is about the only bullish factor in the situation and as long as it remains unsettled prices will stay up and may go higher.

Dealers who have contracted to deliver September grain cannot afford to takes chances of not being able to get it and are consequently on the anxious seat and taking grain rather freely. Mills are also buying actively.

Prices

Detroit—No. 2 red, $1.08; No. 2 white and No. 2 mixed, $1.07.

Chicago—No. 3 red, $1.04@$1.05½.

CORN

During the past fortnight prices in the corn market have advanced and declined but the close of last week found them at the same level at Detroit that they were two weeks previous. At Chicago prices were slightly better than they were on August 12th. The market showed a firm tone much of the time the past couple of weeks and offerings were taken about as fast as the grain was put on the market. Receipts were of fair volume. Reports of crop damage come from the corn belt.

Prices

Detroit—No. 2 yellow, 70c; No. 3 yellow, 69c; No. 4 yellow, 68c.

Chicago—No. 2 yellow, 62 3-4@63 1-2c.

OATS

There is simply nothing to say about the oat market except that prices have taken another drop and September sales at Chicago are being made at about 32 1-2 cents a bushel.

Prices

Detroit—No. 2 white, 36c; No. 3 white, 34c; No. 4 white, 31c.

Chicago—No. 2 white, 34 1-2c.

BEANS

As the new crop period approaches the price of beans begins to sag. Prices have dropped nearly $2 per hundred. in the last sixty days. There are no more beans today than then; the public is eating just as many; and still the price is $2 less. We wonder if this seeming phenomenon would have happened just the same if the bean growers controlled the marketing of their product?

A. B. Cook, master of the State Grange, believes that the bean growers can and should control their crop from the fields to the consumer. He thinks that an organization could be perfected among the growers of the six important states which could legally and justly determine a price year in and year out below which none of them would dispose of their crop. It has been tried before with other crops, but without success. Does human nature present unsurmountable difficulties to such control? Right in this connection, Mr. Frank B. Drees, secretary Michigan Bean Jobbers' Ass'n, writes the editor that he does not altogether agree with a statement recently published in these colunms that the bean jobbers can dictate to a certain extent the price of beans. This letter, which follows, is interesting and contains a good deal of the truth. Read and profit thereby:

"I have read the article on beans in your issue of August 19, with a great deal of interest and the sentence, 'The Michigan Bean Jobbers are in a position this year to dictate within a certain wide range what the price of beans shall be,' leads me to take issue with you on that subject.

"This year the bean growers in Michigan are in better position to influence the price of Michigan beans than for years past. If the growers force beans on the elevators faster than the trade will absorb them, it will undoubtedly result in lower prices than would otherwise be necessary.

"The efforts of the farm organizations to control the price of wheat has been unavailing, but the situation in regard to beans is very different as there are only five or six states which raise beans commercially and from all information we can gather from sixty to sixty-five per cent of all the white beans grown in the United States will come from Michigan this year.

"We firmly believe there will be no over production even with Michigan bumper crop, and if the farmers will distribute deliveries through the year, there is no reason why a fair price should not be maintained.

"I have talked with many leading bean jobbers and elevator managers, and they would prefer to handle the crop all through the year, rather than to have to close their picking rooms during several months in summer.

"The high prices which have ruled during the past five months were brought about strictly through law of supply and demand and in no degree through attempted manipulation. The high prices were unfortunate in that they induced the importation of Manchurian beans, even with a $2.00 tariff in effect.

"Farmers will probably receive for beans in September very near the price named by Mr. Cook in his article in the Grange paper, viz, $5.00 per hundred.

"What the prices may be after that date will depend more upon the farmer than upon the elevators."

We would be curious to know the reasons why September beans will be around $5 as predicted by Mr. Drees, instead of $6 or $6.50, or any other price. Who or what determines the September price of beans? Have the bean jobbers sold September futures at so low a price that they must buy from the farmers for $5 or less in order to make their profit? We would gladly receive and publish a statement from Mr. Drees or any other representative of the bean trade containing the answers to these questions.

Prices

Detroit—C. H. P., $6.50 per cwt.

Chicago—C. H. P., $9@$9.25; red kidney, $8.85 per cwt.

POTATOES

Information comes from Kentucky that the tobacco growers are on a strike against low prices. If potatoes take the course which nearly everyone believes they will take the growers of the leading states may have to pursue some such drastic course to save themselves from ruin. We predicted some few weeks ago that the fall potato market would not open above 75 cents. We do not now see how it can open that high in view of the extremely low prices which the early varieties are now bringing. The Detroit jobbing price on New Jersey potatoes is less than $1 per bushel which means that the New Jersey grower did not receive over 75 to 80 cents. The prospects now are for a larger crop of potatoes than the country can profitably use, but that is no reason for the growers stampeding the market and making a bad situation worse. There will be many potato growers as there always have been who will hold their crop or part of it for later marketing, and if all growers would follow the same rule prices could be stabilized and maintained at a fairly uniform level throughout the season. The best way to insure 25 cent potatoes is for all the farmers to rush their spuds to the market shortly after harvest.

Prices

Detroit—$1.80 per cwt.

Chicago—$1.85 per cwt.

WHAT STATE DEPARTMENT OF AGRICULTURE IS DOING

(Continued from page 13)

individual members of society of the duties which he owes to others and to the community at large."

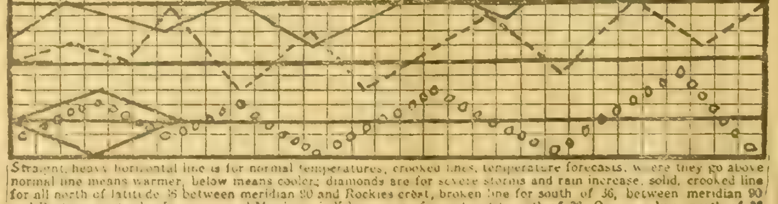
It is only when some individual or corporation violates the law and the department has to go into court in order to protect the rights of the State and the individual, that the general public hears of the work of the department. While this is important, it is but a very small part of our work. For instance, under the law providing for the inspection of commercial fertilizers worth $10.00 or more per ton, and the regulation and sale thereof, we find that when any firm or corporation wishes to dispose of a commercial fertilizer in the State of Michigan, they must first file with this Department the name, brand or trade mark, a certified copy of the analysis, a sealed glass jar containing no less than two pounds of the article thus to be sold or offered for sale, and must then pay a license fee of $20.00.

All commercial fertilizers so registered are sampled once a year or more, to see that they are keeping up to grade, and a copy of the findings is always on file in this department. The samples are taken by the inspector from several different bags and in a manner that will al-

THE WEATHER FOR NEXT WEEK

As Forecasted by W. T. Foster for The Michigan Business Farmer

FOSTER'S WEATHER CHART FOR SEPT. 1922.



Straight, heavy horizontal line is for normal temperatures, crooked lines, temperature forecasts. where they go above normal line means warmer, below means cooler; diamonds are for severe storms and rain increase. solid, crooked line for all north of latitude 36 between meridian 90 and Rockies crest, broken line for south of 36, between meridian 90 and Rockies crest, also Louisiana and Mississippi; X line, east of meridian 90, north of 36. O . . . . line, north of 36 and west of Rockies crest.

WASHINGTON, Sept. 1, 1922—Local forecasts—Lowest temperatures 13 and 18, average below; highest 16 and 20, average normal; total temperatures cooler than usual; highest of the month, 20.

Crop weather of America and Canada will continue near the average of past three months. With few exceptions crop weather will be favorable to sowing winter grain, but this does not indicate what the conditions will be next year. Storms will be moderate for period covered by this bulletin.

WHAT OUR STRAW VOTE SAID

"Straws show which way the wind blows" and if this be true the farmer voters of Michigan are going to vote for Baker by a very large majority, with Kelley as their second choice, Townsend third and Emery fourth. But perhaps, the friends of Kelley, Townsend and Emery will point out that we have received only a small straw vote, compared to the number of farmer voters in Michigan and in this they are quite right. Our business farmer readers are in the midst of harvest, we excuse them for their negligence in voting and present the exact standing of the Straw Vote as at Monday noon, August 28th. which represents the sentiments of a total of 265 votes received:

For United States Senator (Republican Primary)

Baker, 215 Kelley, 21 Emery, 12 Townsend, 17 Total, 265

For Governor State of Michigan

Groesbeck, 143, Fletcher, 55 Joslin, 34 Total, 232

Gasoline Tax

For, 190 Against, 42 Total, 232

Before the September 16th issue of The Business Farmer goes to press the verdict will be rendered and we shall know who probably will represent the state of Michigan in the senate of the United States these coming years. May the man who can serve this state best, win the choice of the people.

Editors Note—The original votes as cast by our readers in this, as in all former "straws" taken by The Business Farmer, will be retained subject to the inspection of any authorized representative of any candidate, until the date of the election, to prove the authenticity of the figures as above published.

MISCELLANEOUS

GENERAL

Please Mention the M. B. F. When writing to Advertisers

low him to get a fair average of the product. If the test is found to be under grade, the matter is taken up with the proper parties, and if a readjustment of prices is not made and a refund to those who have purchased the fertilizer, an embargo is placed upon the product and it is not allowed to be sold in the State.

In the Bureau of Foods and Standards, the Inspectors are continually working to see that the public is not short-weighted, sold goods that are not properly branded or that are injurious to health. While the general public may know or hear little about it, nevertheless their interests are being safe-guarded night and day by their public servants. Figuratively speaking, this department is standing at the gateway of every home in this commonwealth and saying to the dishonest manufacturer and distributor of misbranded, short-weighted or injurious products, "Thou shalt not pass."

THE HUNTED WOMAN

(Continued from page 17)

long to the Horde. Yet he might have been the force behind it, contemptuous of the chuckling group of rough-visaged men, almost arrogant in his posture as he eyed the curtains and waited.

What he expected soon came. It was not the usual giggling, the usual exchange of badinage and coarse jest beyond the closed curtains. Quade did not come out rubbing his huge hands, his face crinkling with a sort of exhultant satisfaction. The girl preceeded him. She flung the curtains aside and stood there for a moment, her face flaming like fire, her blue eyes filled with the flash of lightning. She came down the single step. Quade followed her. He put out a hand.

"Don't take offence, girly," he expostulated. "Look here—ain't it reasonable to s'pose——"

He got no farther. The man in the door had advanced, placing himself at the girl's side. His voice was low and unexcited.

"You have made a mistake?" he said.

She took him in at a glance—his clean-cut strangely attractive face, his slim build, the clear and steady gray of his eyes.

"Yes, I have made a mistake—a terrible mistake!"

"I tell you it ain't fair to take offence," Quade went on. Now look here——"

In his hands was a roll of bills. The girl did not know that a man could strike as quickly and with as terrific effect as the gray-eyed stranger struck then. There was one blow, and Quade went down limply. It was so sudden that he had her outside before she realized what had happened.

"I chanced to see you go in," he explained, without a tremor in his voice. "I thought you were making a mistake. I heard you ask for shelter. If you will come with me I will take you to a friend's"

"If it isn't too much trouble for you, I will go," she said. "And for that—in there—thank you."

(To be continued)

(POLITICAL ADVERTISEMENT)

Stand by the man who has stood by you!

The farmers and farm women can elect H. F. Baker United States Senator. It it to THEIR interest to do so.

DO you want to see a man elected to the United States Senate who is himself a farmer, who knows the problems of farmers, who has fought for twenty years for the farmers, and who can ALWAYS be depended upon to vote and work for measures of benefit to farmers?

DO you want to see a man elected who is pledged to work against the predatory interests which are seeking special favors—and getting them—from the hands of the government, and are trying to shift the burdens of the war from the shoulders of the rich to the backs of the poor?

DO you want to see a man elected who is pledged to work for the reenactment of the excess profits tax which Senator Townsend and Congressman Kelley helped to repeal? **Pres. Friday of the M. A. C. stands with Sen. Baker in his demand for the re-enactment of this law.**

SUCH a man is H. F. Baker—farmer, co-operator, fighter, legislator, statesman, progressive, one of the most ABLE and FEARLESS men who ever sat at Lansing.

THE farmers and the farm women can elect this man. How? First, by VOTING for him; second, by WORKING for him; by helping to FINANCE his campaign.

IT is to YOUR interest and the interests of EVERY farmer that Baker be elected. NO OTHER MAN in the race equals him in character and ability. Better be SAFE than SORRY. Help elect Baker. WILL YOU DO IT?

BAKER is as poor as the people whom he has served these many years. He has no rich friends. He must depend upon his farmer friends to finance the NECESSARY and LEGAL cost of carrying his message to the people. A small sum from every friend of Mr. Baker will meet the expenses of the campaign. Any amount will be appreciated. Send stamps, money order or check.

Stand by the man who has stood by you!

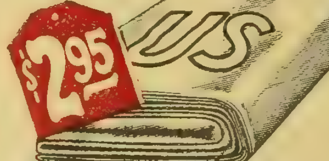
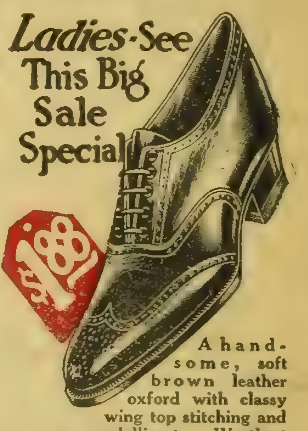
Pay When Goods Arrive



Army Blanket Full Bed Size

Genuine all wool Khaki U. S. Army blanket. Size about 66x84 inches. Each blanket stamped "U. S." Cost government much more than we ask. Order quick—while stock lasts. Order No. M-2005. Send no money. Pay only $2.95 and postage on arrival. Money back if not satisfied.

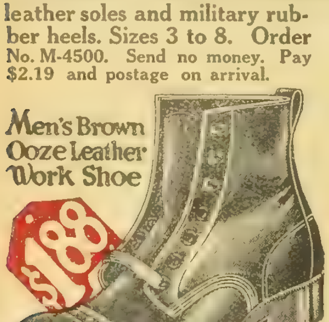
Ladies—See This Big Sale Special



A handsome, soft brown leather oxford with classy wing top stitching and medallion toe. Worth at least $1.00 more than we ask. Firmly soled and rubber military heeled. Roomy last. Sizes 3 to 8.

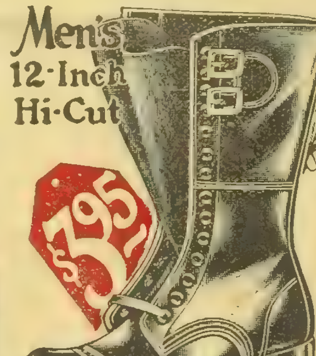
Order No. M-7560. No money now. Pay $1.88 and postage.

Men's Brown Ooze Leather Work Shoe

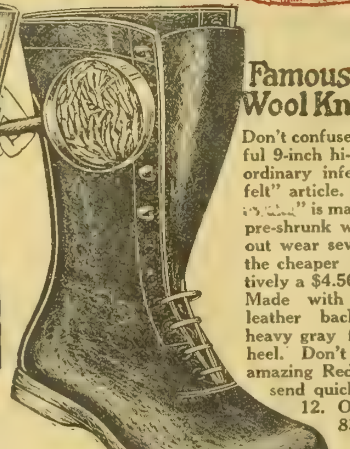


Lowest price in the U. S. for a work shoe of this quality. Round toe Blucher model with sturdiest leather soles and heels. Triple wax thread stitched uppers. Wide roomy last. Sizes 6 to 12. Order No. M-9720. No money now. Pay $1.88 and postage when shoes come. Money back if not satisfied.

Men's 12-Inch Hi-Cut

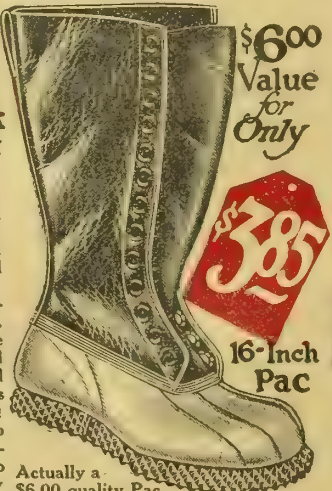


Think of it—only $3.95 for this heavy tan grain leather 12-inch hi-cut! A Chase special for this sale only. Two heavy leather soles; dirt excluding bellows tongue. Sizes 6 to 12. Wide last. Order No. M-9710. No money now. Pay $3.95 and postage on arrival. Money back if not satisfied.



Famous Shrunk Wool Knit Hi-Cut

Don't confuse this wonderful 9-inch hi-cut with the ordinary inferior "pressed felt" article. Our "[illegible]" is made of Knitted pre-shrunk wool that will out wear several pairs of the cheaper grade. Positively a $4.50 retail value. Made with extra wide leather back stay and heavy gray felt sole and heel. Don't pass up this amazing Red Tag special send quick! Sizes 7 to 12. Order No. M-8390. Send no money. Pay only $1.95 and postage Mention size

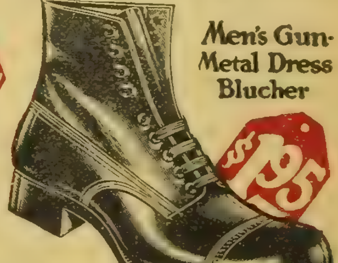


$6.00 Value for Only

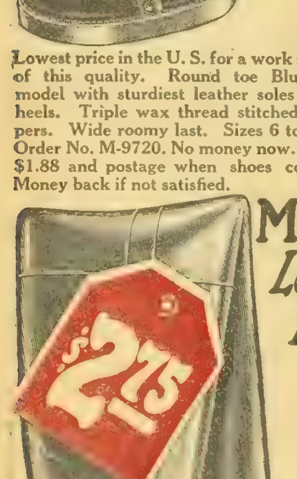
16-Inch Pac

Actually a $6.00 quality Pac reduced just for this sale. Has extra quality special selected full grain leather 16-inch hi-cut uppers. Genuine Gold Seal Brand pure gum ribbed rubber bottoms with rolled soles. Sizes 7 to 11. Order No. M-2420. No money now. Pay $3.85 and postage on arrival. Money back if not satisfied.

Men's Gun-Metal Dress Blucher



You can't beat the Red Tag bargain in a serviceable every day shoe. Durable gun metal uppers. Round toe comfort shape. Good leather sole. Order on approval. Sizes 6 to 11. No. M-600S. Send no money. Pay $1.95 and postage on arrival. Money back if not satisfied.

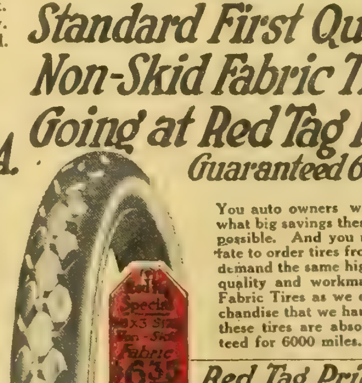


Men—Look Here! Lowest Prices in U.S.A. For Hip Boots

They're pure gum rubber throughout and easily worth $5.50 to $6.00 today. This will give you an idea of the sensational bargain Chase offers you during this great Red Tag Sale event. Our price is unequalled anywhere else in America today—Quality considered. Boots have heavy double soles and are friction lined. Made extra full fitting and guaranteed to withstand hardest wear. Sizes 7 to 11. Let us send them for inspection. No obligation or risk. Order No. M-2750. Don't send one cent. Pay postman only $2.75 and postage when boots arrive. Chase's money back guarantee protects you.

Standard First Quality Non-Skid Fabric Tires Going at Red Tag Prices

Guaranteed 6000 Miles



Red Tag Special 30x3 Size Non-Skid Fabric $6.35
We Do Not Pay Postage on Tires And Tubes

You auto owners will appreciate what big savings these prices make possible. And you need not hesitate to order tires from Chase. We demand the same high standard of quality and workmanship on our Fabric Tires as we do on all merchandise that we handle. Besides, these tires are absolutely guaranteed for 6000 miles. Order quick

Red Tag Price List

Size	Tread	Price	Size	Tread	Price
30x3	non-skid	$6.35	31x4	non-skid	$10.50
30x3½	non-skid	6.98	32x4	non-skid	12.25
32x3½	non-skid	9.45	33x4	non-skid	12.45

SEND FOR OUR PRICES ON CHASE'S HEAVY DUTY INNER TUBES

Our Celebrated $7.00 "Dreadnaught" Model Work Shoe Sacrificed

Sturdy. Comfortable

Here's one of Chase's Red Tag Sale features that has caused a tremendous sensation. "Dreadnaught"—a shoe that will outlast any three ordinary shoes marked actually less than half price. Has soft pliable full grain tan leather uppers. Unlined, with grain leather insoles, 2 full oak leather outsole through to heel and an extra heavy top sole, sewed and nailed. "Iron-clad" heel reinforced with metal ring all around. Brass eyelets. Grain leather dirt excluding tongue. Double reinforced backstay and outside counter pocket. Sewed throughout with extra heavy linen thread. Wide last; Sizes 6 to 12. Order No. M-1005. Send no money. Pay $2.95 and postage on arrival.

Where Farming is a Business

Are you reading "The Hunted Woman," The Business Farmer's new Serial Story?

Current Agricultural News

FARM PRODUCTS GAIN IN VALUE

THIS year's important farm crops will be worth approximately $1,250,000,000 more than their value last year. Production forecasts announced Sept. 8th by the department of agriculture indicate this year's important crops will aggregate approximately $6,600,000,000, calculating their value at September 1 farm prices. Three crops—corn, cotton and hay—will exceed a billion dollars each in value, their aggregate comprising more than one-half of the value of all the important crops.

Present indications are that practically all of this year's crops will be worth more than last year, with the exception of wheat, rye and peanuts. Corn will be worth approximately $496,000,000 more, cotton, $389,000,000; oats, $83,000,000; apples, $64,000,000; hay (tame) $47,000,000 and peaches $36,000,000.

This year's indicated crops will have a value, calculated unofficially and based on September 1 farm prices, as follows:

Wheat, $720,600,000; corn, $1,801,900,000; oats, $404,100,000; barley, $88,500,000; buckwheat, $11,600,000; rye, $50,300,000; potatoes, $385,400,000; sweet potatoes, $116,200,000; hay (tame) $1,037,600,000; hay (wild) $122,600,000; cotton (exclusive of seed) $1,064,400,000; apples, $227,200,000; peaches, $88,100,000; peanuts, $30,400,000; flax seed, $22,100,000 and beans, $49,600,000.

AN ECHO OF THE 1918 WOOL DEAL

DEMURRERS filed by Messrs. Brown & Adams and R. E. Smith, wool dealers of Boston, denying the right of the United States government to collect excess profits on the 1918 wool clip have been overruled by Judge Morton of the United States District Court at Boston. This is the third victory of the government establishing the validity of the 1918 wool regulations. The proceedings instituted against the firm of Brown & Adams involves the collection of nearly $300,000 and the case against R. E. Smith involves the sum of $32,000.

To date the Domestic Wool Section of the Bureau of Agricultural Economics, United States Department of Agriculture, has collected excess profits totalling $620,757.75. Of this amount $327,145.23 has been refunded to wool growers by mailing of 99,446 checks. Of the remaining $845,112 to be collected, 48 cases involving $626,844.16 are in the hands of the Solicitor for the Department for recovery through legal proceedings. It is expected that approximately 10 of these cases will be reached for hearing on demurrer soon after the convening of the fall terms of court in various districts.

BRITISH FOOD MARKETS DEMORALIZED

THE sudden drop in German marks has resulted in flooding the British produce markets with foodstuffs from the Central Empires, according to a report just received by the Bureau of Agricultural Economics, United States Department of Agirculture from its Agricultural Commissioner in London. Despite a large British potato crop, there is an enormous quantity of German potatoes on the London market selling at practically any price buyers care to give. The bottom has fallen out of the price of British potatoes.

Danish butter ships have been deflected from Germany and the Central empires to the British market. Most of this butter, however, is going into cold storage for future use. The butter market at present is considerably demoralized by reason of the unusual supply from Denmark and the increased use of margarine owing to the rise in the price of butter during the past two months.

Apples from Germany, Czecho-Slovakia, Italy, France and Switzerland are coming forward to Great Britain and are expected to break the already overloaded market. There is every indication of a very heavy apple crop in Great Britain this year, although the quality will be decidedly inferior the report states. A shortage of good eating apples in England is in prospect, which will leave the market free for American eating stock as soon as the continental supplies run out.

There is every indication at the present time that all European supplies of any kind whatever will be dumped into the British markets from now on, and American shippers will have to watch carefully for changes in the economic conditions in all European countries as well as in Great Britain.

A noticeable drop in the consumption of all imported foodstuffs in Great Britain is also reported. The long continued hard times, together with heavy taxation and generally unsettled conditions of all Europe, have made English buyers decidedly cautious and the home people are economizing as they have not economized since the war.

WORLD WHEAT PRODUCTION 3,019,526,000 BUSHELS

WORLD production of wheat this year, excluding Russia and Mexico, is estimated by the United States Department of Agriculture at 3,019,526,000 bushels, based on actual estimates from reporting countries and estimates based on condition reports. Production in 1921 was 3,059,596,000 bushels, and for the pre-war 1909-13 average 2,890,353,000 bushels.

Decreases occur in nearly all European countries. Total European production is estimated at 1,100,991,000 bushels, compared with 1,239,256,000 bushels in 1921, and a pre-war 1909-13 average of 1,275,157,000 bushels, British India and Japan will have 392,847,000 bushels, compared with 282,094,000 bushels last year, and 375,827,000 bushels, the pre-war average. Both Canada and the United States show increased production over last year with a combined estimated outturn of 1,125,968,000 bushels, compared with 1,095,751,000 bushels in 1921, and 883,810,000 bushels, the 1909-13 pre-war average.

Russia reports favorable crop conditions, and according to advices from all sources will be able to feed herself this year. Last year Russia imported wheat. Production figures for Mexico are not available, but last year 5,089,000 bushels was produced, according to an unofficial estimate, compared with the 1909-13 average of 9,995,000 bushels. For Africa, a total production of 57,587,000 bushels is estimated, compared with 81,398,000 bushels in 1921, and with the pre-war 1909-13 average of 73,134,000 bushels.

Total production in the Northern Hemisphere, according to actual estimates from reporting countries, will be 2,200,650,000 bushels, compared with 2,143,979,000 bushels in 1921, and with 2,020,276,000 bushels, the pre-war average. Estimates made by the United States Department of Agriculture based on condition reports bring this total up to 2,677,393,000 bushels, compared with 2,697,499,000 bushels in 1921, and with a pre-war average of 2,607,928,000 bushels. Total production in the Southern Hemisphere for the last harvest season is estimated at 342,133,000 bushels, compared with 362,097,000 bushels in 1921, and with 282,425,000 bushels, the 1909-13 pre-war average. The acreage of the growing crop in Argentina is estimated to be larger than that of the crop just harvested.

THE Farmers' Co-operative Creamery recently organized at Fairhope, Ala., by the dairymen of the surrounding territory with the aid of the consumers, is not only giving the people purer and higher test milk than that required by the health department of any large city in the country, but has now entered the ice cream field to use the farmers surplus cream for making a delectable dessert at cost.

Comfort and Competence

The source of comfort and competence lies in sound investments—those which are secure and profitable—giving you all the interest your money earns.

Standard Mortgage & Investment Company Certificates are ideal, for they permit you to share the profits in a business whose assets are based on improved real estate—the safest and best-paying investment available. The earnings of the company come back to you as dividends.

Let us explain the plan to you; let us show you how to get all the interest your money earns. The coupon will bring the facts.

Did Someone Say Farmers Can't Co-operate?

Read What a Philadelphia Bank Has to Say About the Need and Value of Farm Organizations

IF "all dis world am sad and dreary," and you have lost faith in the power of co-operation to solve farmers' problems, read this article. It's one of the best contributions on the subject of co-operation we've read for some time. These are trying times, farmers are discouraged; they can't see any good in co-operation. Some of them even blame the co-operative movement for their troubles, but, of course, they're wrong. Don't let the co-operative movement die; don't let it suffer; stay by it. It will win out in the long run.—Editor.

IN a recent trade letter the Girard Trust Co. of Philadelphia makes the following interesting observations:

"When you buy a carnation to put in your buttonhole, about half the price you pay goes to the man who raised the flower and half to the one who sold it to you. The city cost of distribution seems to equal the greenhouse cost of flower production.

"Northern Pennsylvania farmers who sell milk to New York City firms receive for it no more than a third of the sum which the New York consumer is forced to pay the distributor. To produce milk on a farm, therefore, and to ship it more than 200 miles by rail appear to cost only half as much as to bottle it and deliver it locally."

These instances are representative of many similar situations upon which the Michigan Business Farmer has commented extensively. Financial interests as a rule fight shy of any discussion of the subject for fear of offending their numerous customers engaged in the expensive process of distribution. It is unusual, significant and encouraging to find a great trust company commenting so frankly upon a subject which is a major problem for the farmer and certainly an important one for the consumer.

Formerly little interest was shown by the people of the city in this problem, but now, says the Girard Company, "the whole country has become aroused over this complex question of marketing and distribution. The most vexing economic problem of today is not how to produce more or how to produce at less cost, but how to get what is produced to the man who needs it,for less money.

"The farmer scarcely receives as much for his wheat which goes into a ten cent loaf of bread as the consumer pays simply to get the loaf brought to him after it has left the oven of the big central bakery."

Can anything be done to reduce the high cost of distribution of commodities? After all merchants and small shop keeps are very necessary component parts of any community and they have to make a living like other people.

A start to cheapen distribution has been made in many directions. We see it in the popularizing of chain stores.

It is obvious that 500 grocery stores in one city under one management which can buy in wholesale quantities and distribute systematically can shave down the local charge for getting groceries from the stores to individual kitchens.

So the chain stores as applied to groceries, candy, tobacco and drugs has become a popular trade development in this country.

The five and ten cent store is a branch of the same tree and occupies an important place in our mercantile system.

But the farmers are doing most along the line of more scientific marketing and it must be said also that the farmers as a class had farthest to go in that direction.

As pointed out in the April number of the Girard Letter, the farmer, as a producer, far excels the farmer as a seller. But there are signs that he is becoming aroused and is taking hold of the selling end of agriculture in various parts of the country.

Here is an example. A community of Pennsylvania farmers along the West Branch of the Susquehanna River had been for some years shipping their milk to Brooklyn. Recently the Brooklyn company refused to pay as much as 3½ cents for standard milk and so the farmers built a creamery at Milton.

It is a co-operative affair entirely. The milk is shipped to the creamery and is sold from there in the original shape of milk if possible. What milk cannot be sold in liquid form is converted into butter, cheese or condensed milk.

A farmer who owns a good mixed herd of Holsteins and Jerseys was asked how the new system worked out.

"We expected to lose a little at the start," said he; but we know we are on the right track. Our whole game in future should be to sell and buy at wholesale." What he meant was co-operative plans in selling farm produce and collective buying of what farmers require for their home needs.

* * *

Pennsylvania farmers, however, are still away behind the agriculturists of the Northwest in this new marketing game.

Of Minnesota's 800 creameries, 600 are now co-operative, that is too say creameries owned and operated by the farmers themselves. Moreover, the farmer who once railed at trusts now sees the sense of economy in unity of effort and consolidation of business.

Those 600 Minnesota farmer-owned creameries have been organized into one big association. A soap-box orator would surely call it a creamery trust.

Anyhow, Minnesota farmers are proud of what they have done and they boast more co-operative creameries in that state than in all the other 47 states of the Union combined.

This wholesale method of doing things on the farm set the city people in Minneapolis and St. Paul thinking.

"Why," they asked, "should we not buy our milk wholesale?"

The sequel to that query is a Milk Consumers Association. It buys milk wholesale from the farmers association, and is able to sell it to city consumers for about 9½ cents a quart. That allows for the dividend declared by the Milk Consumers' Association, because it was able to earn a good profit on milk at ten cents.

What also does the consumer get out of this dual milk trust affair? The farmers insist that the quality of their milk has gone up and that Minneapolis gets its milk at the lowest "spread"—which is the difference between the price paid to the farmer and the price paid by the consumer—of any big city in America.

It is a curious fact that the Milk Consumers' Association which works so harmoniously with the Milk Producers' Association was the outcome of a labor union strike. The milk-wagon drivers did it and they are now the very hardest workers in their effort to market the milk of Minnesota at the lowest possible cost.

A great merit of the plan of reducing the selling price of milk to consumers in Minnesota has been a decided increase in the quantity of milk used. That is counted by farmers a great gain.

The official figures show that in eight months, the sale of Minnesota milk in the Twin Cities, due to a decreased price, had risen 60 per cent. Indeed, the farmers have considered an extensive advertising campaign to further still more the consumption of milk.

* * *

Nowhere else has co-operative selling by producers gone farther than in California.

You cannot read any popular magazine today without noticing the advertisements of "Sun-Kissed" or "Sun-Maid" fruits.

Raisin growers, orange growers, walnut growers, lemon, grape fruit and other orchardists are all combined for purposes of salesmanship. They know when it is best to sell and how. Their products are marketed in bulk and not by individuals.

Those California fruit and nut growers have by advertisements popuarized their products and vastly increased their consumption. But they have done most by combining to sell economically what they have produced.

The Fruit Growers' Exchange is almost as much of an institution in California as the Cotton Exchange is in New Orleans.

* * *

There still remains a great new field to be cultivated before we reach a saner state in the matter of city distribution.

Some time in the not remote future you will not see forty different delivery wagons visit a city block in one day, any more than you now see forty different vehicles hauling mail to yourself and your neighbors.

Half a dozen rival bread wagons, as many competing milk wagons; coal wagons, laundry wagons and ice wagons, many of them working at less than capacity, will not pass your door each morning as they likely do today.

The great economic boon which came from railway consolidation was the elimination of duplicate service—covering the same ground two or three times when once is sufficient.

On the original small scale America would now need 10,000 iron and steel mills to supply our demands. What a fearful price the consumer would pay for his steel if we had that vast number of competing little mills doing the work now accomplished by a hundred big ones!

In the matter of production there has been, outside of agriculture, a swift tendency toward bulk in order to obtain economies.

But in the matter of city distribution we are largely today in the primitive state of our great grandfathers except in this—they usually carried home their purchases whereas we now expect ten or a dozen different delivery wagons to fetch them to us.

Our ancestors knew neither the luxury nor the heavy tax entailed when a spool of thread is carried ten miles in a $4,000 delivery truck and placed in the purchaser's hand and probably sent back next day by a similar vehicle and exchanged gratis for another spool of thread.

Cash and carry home is one of the wholesome ways for consumers to reduce their cost of living.

BARUCH ADVISES FARM BLOC ON RURAL FINANCES

"THE most important business before Congress today is to enact legislation that will put the farmers on a acredit equality with other lines of business. It makes little difference what particular rural credit bill you enact to bring that about. Amend it later if need be but enact some credit measure at once that will rescue this fundamental industry before it is too late."

That is the way Bernard M. Baruch concluded his conference last Friday with the finance committee of the Senate farm bloc, which was attended also by a number of other senators. Mr. Baruch was invited to give its members his views regarding rural credits in general, and in particular regarding the Simmons, Norbeck, Capper and Lenroot bills on that subject.

All four of the bills aim at giving agriculture or live stock raising or both access to short time investment funds through the issue of short time notes or debentures with some sort of sanction by the Federal government. The Lenroot bill is supposed to follow the general lines of the recommendation of the Joint Commission on Agricultural Inquiry and provides that the Federal Land Banks shall create commodity loan departments and issue short time debentures to finance its loans. It would appropriate a million dollars for each of the twelve land banks. The Norbeck bill would create a special government corporation with a capital of $200,000,000 to take over the War Finance Corporation. The Simmons Bill would create a similar corporation with a capital of $500,000,000 and the Capper bill would establish livestock loan corporations under the supervision

(Continued on page 19)

Michigan 1922 State Fair Greatest Ever

Ford's $4,000,000 "Evolution of Agriculture" Exhibit and $300,000 Coliseum Among Features Which Drew Fair's Largest Crowd

MORE than 300,000 people thronged the Michigan State Fair grounds September 1-10, and saw what was, without the slightest exaggeration, the greatest exhibition of agricultural and industrial products ever held in Michigan.

In practically every department the exhibits were more numerous and excelled in quality those of other years. Although additional room had been provided for what appeared would be a normal increase in exhibits, even these facilities were taxed to the utmost and necessitated the use of every available foot of space. It was generally predicted that last year's exhibit of livestock, had about reached the limit, both in quantity and quality, but there was an increase in nearly every class of this department this year. Plans that were drawn a few months ago for a new sheep and swine barn must be revised and enlarged providing the number of animals shown this year is any criterion of what may be expected in future years.

As fairs go there is of necessity considerable similarity between one year's exposition and another's. But this year's state fair attracted several remarkable exhibits which had never been shown in Michigan before.

Chief among these was the Henry Ford exhibit showing the "evolution of agriculture," from the stage when much of the farm work was done by hand or with the crudest sort of implements up through the various developments in farm machinery to the efficient, and labor-saving devises of the present age. The Ford exhibit. ccupied several acres of ground and was without doubt the principal feature of the Fair in point of both interest and education.

Entrance to the Ford exhibit was through a higharched portico and passage-way, the walls of which were flanked with paintings done by men employed at the Ford plant and depicting men and women at work in the fields as in the days of long ago when the plough was pulled by oxen and cultivation was done with the hoe, and when grain was cut with a flail. Henry Ford and Geo. W. Dickinson, the Fair manager, threshed out a few grains to show the crowd just how it used to be done.

Chief interest centered about the collection of antique farm implements which was said to be the most complete and valuable collection of its kind in existence. This exhibit contained more than a score of old-fashioned plows, drags, binders, etc. The oldest relic in the group was a mould-board plow built in 1770, and of the type which Geo. Washington undoubtedly used on his Mount Vernon plantation. Other relics included a tread-mill for churning operated by a dog or a horse-driven tread-mill which was used fifty or seventy-five years ago on some farms to create power for divers forms of farm work.

Another interesting display showed the development of the Ford Motor and automobile, including the first machine which Henry Ford ever built that actually ran under its own power. It is a curious-looking vehicle compared with the modern automobile and carries its "one-lung" motor at the rear. Other automobiles were shown which revealed the gradual development of the Ford machine. In connection with this exhibit was the six millionth motor made by the Ford people. Up to Sept. 2nd, 6,479,739 motors had been turned out by this concern.

Scattered about the Ford exhibit were several scores of trucks and tractors performing almost every conceivable kind of labor and a good deal which the average man would never conceive as possible for such machines to perform. Visitors to the exhibit were continually surprised by the new discoveries which a visit to this tent and that revealed in the uses to which a tractor can be put.

Another exhibit in the Ford showing was that of a locomotive which Henry Ford acquired with his purchase of the Detroit, Toledo & Ironton road. This locomotive was rebuilt in the Ford shops at River Rouge and is supposed to be quite the latest in modern locomotives. Visitors were permitted to mount the cab and examine the highly polished mechanism of the giant engine.

Coliseum Wonderful Building

The Coliseum which was built this year at a cost of about a quarter of a million dollars was thrown open to the public on Labor day. The structure has seating capacity for 8,000 people. In the center of the building is a great oval arena which served as the judging stand for the cattle and horses. The annual live-stock parade which was formerly conducted before the grand-stand was put on this year inside the Coliseum and was witnessed by about 5,000 people. Never has the Fair been able to show its live-stock exhibits to such good advantage and the importance of live-stock in the state's agriculture seemed to take on a new significance as the hundreds of prize beauties, were led in single line of march around the arena.

The State Fair Coliseum is one of the finest buildings of its kind in the United States and is certainly a great credit to both the institution and to the state. It is expected that it will be used for all kinds of large gatherings and made entirely self-supporting.

Dairy Exhibits Excel

One of the cleverest pieces of sculptoring ever shown on the Fair grounds was a life-size reproduction of a boy pushing a wheel-barrow, bearing a pumpkin, the entire set done in butter by Sculptor Wallace of Lincoln, Neb. Last year Mr. Wallace's contribution was a life-sized figure of a Jersey cow and milking maid. The cheese exhibit contained 63 specimens of American, Swiss and Italian cheeses, the majority of the offerings being from farm-owned cheese factories in the lower and upper peninsulas. The M. A. C. exhibited one cheese which alone weighed 100 pounds.

Horseshoe Contest

Farmer devotees of horseshoe pitching will be very much chagrined to hear that the Business Farmer cup was won by a city "feller," Mr. L. M. Wilks of Battle Creek. But inasmuch as Mr. Wilks will have to defend his title for three years in succession there is plenty of opportunity for the cup to be wrested from his hands. The State Fair tournament was the first state championship meet to be held in Michigan and was participated in by pitchers from all over Michigan, most of whom were winners in the county farm bureau tournaments. A total of 32, most of them farmers, pitched in the preliminary games. Owing to the lack of facilities on the grounds, it was necessary to hold the tournament on the inside race track which excluded the crowd. Next year, it is announced by the management, a portion of the grounds will be set aside for the horseshoe tournament.

In the finals, Wilks won 19 games and lost one, and Akers duplicated the feat, Wilks winning easily, however, in the play-off between the two. In one game Wilks threw 20 ringers.

Other prize winners in the horseshoe contest were, G. W. Akers, Williamston; Albert DeHaan, Jackson; T. L. Richmond, Detroit; John Howe, Flint; B. D. Tuttle, Walled Lake; Virgil Newman, Leslie; H. L. Opdyke, Royal Oak. Others who took part were: Barney Kortrite, Pontiac; Ben Siel, Watervliet; Walter Marion, North Branch; Mr. Martin, Midland; Ira Knight, Midland; Reuben Lee, Lowell; Royal Ames, Pontiac; W. D. Miner, Battle Creek; Frank Freeman, Lowell; Henry VanKoerering, Jenison; Ed Gotts, Plymouth; R. Molasky, Detroit; Wm. H. Simms, Detroit; Chas. Schweki, Washington; Arthur Robertoy, Washington; Ray Clothier, North Branch; Ed. Coombs, Detroit; Frank Lawcock, Durand; John B. Riegle, Flint; C. Blaser, Lowell; A. V. Blaser, Lowell; Wm. Lowering, Jenison; Ed. Prindle, Redford.

Governor Opens Fair

The State Fair was officially opened by Gov. A. J. Groesbeck who complimented the managements highly upon the excellent exposition and voiced his desire and intention as governor to help make the Michigan State Fair the "greatest in the world". He promised his support to replace the old frame structures on the grounds as time and money permitted with modern buildings, and expressed his belief that other purposes could be discovered for which the grounds and buildings could be used at other times excepting Fair week. In this connection, Mr. Dickinson, secretary-manager, suggests that the fair grounds would make an ideal location for the great zoological park which Wayne County is talking of establishing in that section of the county, and it is entirely likely that some such project will be consummated.

Other speakers at the Fair included Pres. Burton of the U. of M. and Pres. Friday of the M. A. C. In his usual eloquent and convincing style Mr. Burton pleaded for America to forget her "splendid isolation" policy and take her position as a leader in the affairs of the world. Dr. Friday showed why he didn't think prices of farm products would be any higher for a long time to come and expressed his doubt that the middleman was to blame for the farmers' poor returns and the consumers' high prices, which statement precipitated an argument with a farmer in the crowd and enlivened the proceedings somewhat.

Macomb Girl Wins Milking Contest

The milking contest which is always a source of interest and amusement was won by Miss Henrietta Rinke, daughter of Farmer John Rinke, well-known Holstein breeder living near Mount Clemens. Henrietta's sister, Matilda, who is only eleven years old, won the third prize. Miss Henrietta obtained 15.3 lbs. of milk in 7.5 minutes.

The 1922 fair was the second to be conducted under state ownership. The plans for last year's fair were all made before the state assumed control of the institution. Although the fair is under the nominal jurisprudence of the State Department of Agriculture and a board of managers appointed by the governor, active management is still vested in the secretary-treasurer, Geo. W. Dickinson, and much of the credit for the Fair's remarkable success both this and other years should go

(Continued on page 17)

BEST HORSHOE PITCHERS IN MICHIGAN

Left to right—B. D. Tuttle, Walled Lake; A. Robe toy Washington, Mich.; T. L. Richmond, Detroit; L. M. Wilks, Battle Creek, Mich. (the champion); G. W. Akers, Willianmstown, Mich.; V. Newman, Redford; R. H. Clothier, North Branch; Reuben Lee, Lowell; F. Lawcock Durand; Albert DeHaan, Jackson; J. G. Howe, Flint; Roy Ames, Pontiac; I. Knight, Midland; H. L. Opdyke, Royal Oak.

Michigan's Greatest Apple and Potato Show

WHAT will undoubtedly be the greatest apple and potato show ever held in Michigan is being planned under the joint cooperation of the Michigan State Horticultural Society, the Michigan Potato Producers' Association, and the Michigan Potato Exchange, to be held under the auspices of the West Michigan Fair at Grand Rapids, during the week of August 4th.

Cash premiums aggregating nearly $2500 will be offered in the apple show and about $500 in premiums in the potato show. First, second, third and fourth prizes will be offered for the best U. S. standard barrel, best bushel basket, best tray, etc., of each of the following varieties: Duchess, Fameuse, Grimes Greening (Rhode Island), Hyslop, Jonathan, McIntosh, Northern Spy, Steele Red, Wealthy and Wagener. A separate class in each division will be provided for any other variety than above mentioned.

The largest single cash prize in the apple contest will be $200 for the best 50 bushel exhibit, consisting of not less than five nor more than ten bushels of any variety named above.

In the potato contest first, second and third prizes will be offered in the different classes for best exhibits of Russet Rural, Golden Russet, Petoskey Russet, Dibbles Russet, Chief Petoskey, German No. 3, Sir Walter Raleigh, Rural New Yorker No. 2, Million Dollar, Nexall, White Giant, Empire State, German No. 1, Gold Coin, Uncle Sam, State of Maine, White Mountain, Early Dixie, Early Eureka, Early Petoskey, Early Victor, Flour Ball, Potentate, Early Market, Early Six Weeks, Ratekins, Red River Special.

The sweepstakes prize will be $35 to be paid for the best peck of any variety in individual exhibit.

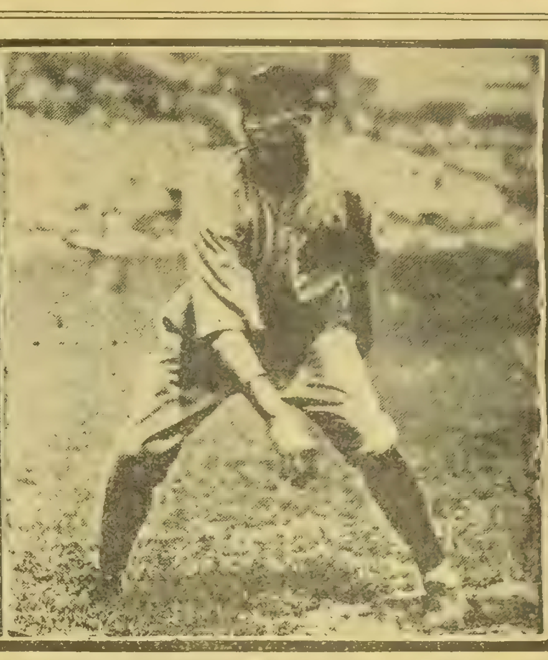
There will be a special class for the exhibits of members of boys' and girls' clubs, with prizes totaling $50.

The usual rules apply to the making of exhibits. No entry fee will be charged, but only members of the Michigan State Horticultural Society can exhibit fruit for competition. Those who desire to exhibit and are not members of the Association should apply for membership at once to Mr. T. A. Farrand, Secretary, East Lansing, Mich.

Exhibitors are requested to send a tentative list of entries to L. A. Lilly, secretary of the show, at once. These entries will not be binding but will be used in determining the amount of space needed.

A complete list of the exhibits and prizes, together with other information will be published in an early issue.

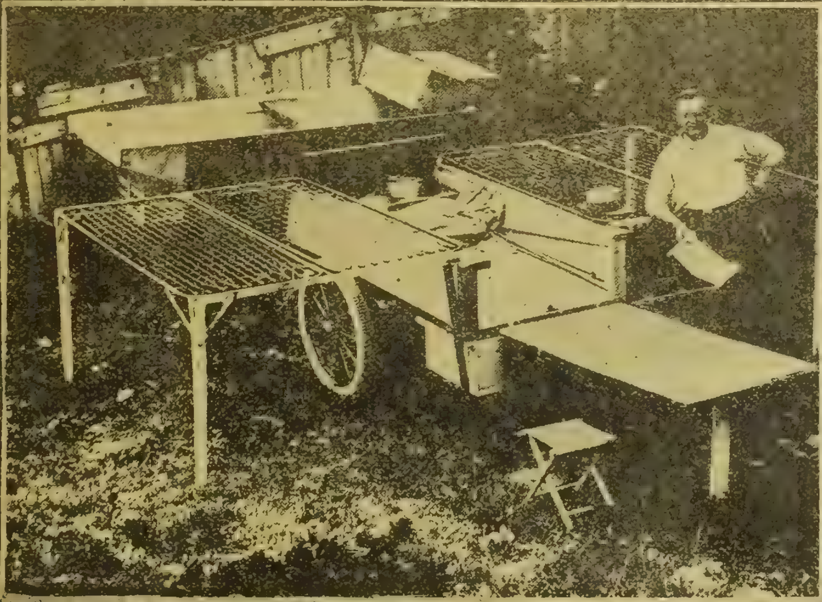
PICTURES FROM FAR AND NEAR



The Old Guard Falters in Washington—The women out in Washington have joined hands with the farmers and labor organizations to defeat Sen. Miles Poindexter and nominate Mrs. Frances Axtell whose picture is shown above. Benjamin C. Marsh, managing director of the Farmers National Council, who was in Michigan last week in behalf of H. F. Baker's candidacy, stumped the state of Washington for Mrs. Axtell.

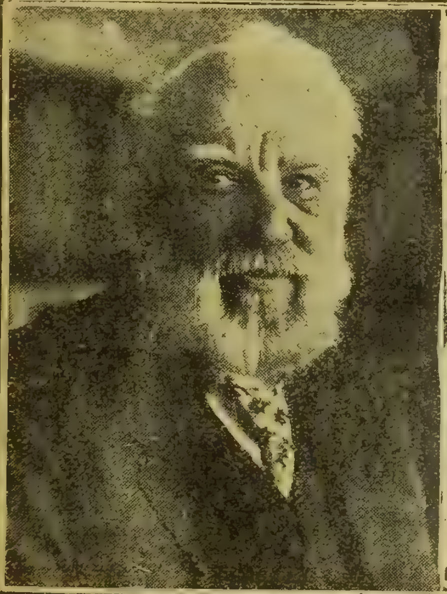
Beauty and the Beef—which do you suppose it was,—the critter or its fair rider which attracted the crowd at the exhibit of the American Meat Packers' Association staged at the Pageant of Progress recently held in Chicago? The young lady is Miss Helen Hartlou. She confessed to her audience that she had never ridden a "cow" before, but said she wasn't a bit afraid, because you see the animal was stuffed!

A "Dark Horse" Comes to Light—Base ball fans will be interested in this snapshot of Herman Pillette in action on Navin Field, Detroit. Ty Cobb considers him one of the greatest twirlers in the game. Like so many other base ball players Pillette leaped into prominence overnight. He was obtained from the Portland, Wash., club in a deal for Johnson for whom Detroit paid a good price. Pillette was as a matter of fact, "thrown in" for good measure.



With this outfit home is wherever Dr. Carroll Behymer of Concinnati builds his camp fire. Sometimes it's beside a rippling brook; sometimes on the crest of a mountain, but wherever the setting may be Dr. Carroll and his family enjoy all the comforts of an apartment house. The trailer is a kitchen, dining room, parlor and bedroom, all in one, and carries chairs, bedding icebox and fireless cooker, to say nothing of a canvas boat with which to navigate the "wet spots".

"No more war" is the clarion cry that has gone 'round the world. Placards inscribed with the slogan in ten different languages were displayed in all the principal cities of the fourteen leading nations a few weeks ago and had their effect in setting people to thinking on the subject as they have never thought before. When men and women in all nations refuse to be driven to war like slaves to the galley and do a little thinking for themselves war may be no more. Let the propaganda against war go on.



Inventor of Telephone dies at Age of 75—Alexander Graham Bell, whose invention of the telephone made him one of the greatest benefactors of the human race, died August 1st, at his home in Baddeck, Cape Breton, Nova Scotia. Mr. Bell's contributions to the field of science and invention were second only to those of Thomas Edison. He was an indefatigable worker and even up to the last few weeks before his death carried on his experiments among the Nova Scotian hills.

They're still in style in Carrara—American farmers delegated the ox-cart to the dump-heap some years ago, but they still use 'em in many parts of Italy and other sections of the old world. This Italian ox driver seems to be a happy-go-lucky sort of fellow. We somtimes wonder if people weren't happier and more contented back in the good old days when life wasn't so swift and one could go to church on an ox-cart without losing his or her social standing in the community. In all old world communities where people still live in blissful ignorance of modern conveniences they go about with a slow, deliberate movement and a plaid countenance which is the envy of the swift and nervous American.

Acclaimed Coney Island's Prettiest Miss—16-year old Elva Lloyd, a dancer at a select New York cabaret, was the winner of the beauty contest staged at Steeplechase Park, Coney Island, New York. She was chosen by the judges in competition with many of the leading stage beauties of the United States, and was awarded a $250 diamond ring by the proprietor of the amusement park. Miss Lloyd has been in the theatrical business since a child of four.

Make $13 More Per Cow

Free Book for Dairy Farmers Tells How to Cut Out Waste; Gives Valuable Building Hints

Do you know that the manure produced by one cow in twelve months contains fertilizing elements valued at $39? And do you know that one-third, or $13 of this amount is lost in the course of a year through improper handling? By providing a simple easy-to-build pit outside the barn, this loss can be prevented.

Write for this Free Book, "Concrete on the Dairy Farm" and see the many money-saving suggestions it gives on the use of concrete in making permanent improvements. Properly housed dairy cattle return greatest profit on the investment. This free book is recognized as a simple guide to 100% efficiency and economy in building on the dairy farm.

Fully illustrated with diagrams and pictures. Shows how to build barns, milk-houses, silos, icehouses, cooling tanks, paved barnyards, manure pits, water supply systems, etc.

The Hunted Woman

By James Oliver Curwood

Michigan's Own and America's Formost Author of the Great Northwest

THE SYNOPSIS

A WOMAN with a pearl-gray veil drawn closely about her face is one of the many passengers on the train that connects "The Horde" with the civilized world. For eighteen hours she has been riding steadily bound for Tete Jaune Cache, the land of "The Horde," where she has no friends and all will be strange to her. The train stops at a town composed of several tents known as Miette and, as many of the passengers get off and walk about, she inquires of a "Straying Angel" how long the train will stop and is advised it will not move for at least two hours. Desiring food and a bath she asks where she can secure them and is directed to "Bill's Shack". Bill's Shack is owned and operated by Bill Quade, leader of the lawless band of the town. When she steps inside the doorway she recognizes him as a brute but as she has entered and is very hungry and dusty she decides to go through with her plan. Quade says he has a room she can rent and asks her to follow him. As they pass out of the room there appears a newcomer in the doorway opening off the street. The newcomer is not of the kind of men lounging about the room but shows in face and in actions that he is of the wholesome living type. He has seen the girl enter this place and believes she has made a mistake and as he stands in the doorway his eyes rest upon the curtain-covered doorway through which the girl and Quade has just passed. In but a moment the girl steps out, her face flaming like fire and eyes filled with the flash of lightning. Quade follows her apologetically. He starts to offer the girl a roll of money but before he can do so the newcomer steps to the girl's side and strikes Quade with terrific force. The Brute goes down in a heap and the newcomer hurries the girl outside and away from the scene. That's the story to date—now go ahead.

CHAPTER II

THEY passed down an aisle through the tall trees, on each side of which faced the varicolored and many-shaped architecture of the little town. It was chiefly of canvas. Now and then a structure of logs added an appearance of solidity to the whole. The girl did not look too closely. She knew that they passed places in which there were long rows of cots, and that others were devoted to trade. She noticed signs which advertised soft drinks and cigars—always "soft drinks," which sometimes came into camp marked as "dynamite," "salt pork" and "flour." She was conscious that every one stared at them as they passed. She heard clearly the expressions of wonder and curiosity of two women and a girl who were spreading out blankets in front of a rooming-tent. She looked at the man at her side. She appreciated his courtesy in not attempting to force an acquaintanceship. In her eyes was a ripple of amusement.

"This is all strange and new to me—and not at all uninteresting," she said. "I came expecting—everything. And I am finding it. Why do they stare at me so? Am I a curiosity?"

"You are," he answered bluntly. "You are the most beautiful woman they have ever seen."

His eyes encountered hers as he spoke. He had answered her question fairly. There was nothing that was audacious in his manner or his look. She had asked for information, and he had given it. In spite of herself the girl's lips trembled. Her color deepened. She smiled.

"Pardon me," she entreated. "I seldom feel like laughing, but I almost do now. I have encountered so many curious people and have heard so many curious things during the past twenty-four hours. You don't believe in concealing your thoughts out here in the wilderness, do you?"

"I haven't expressed my thoughts," he corrected. "I was telling you what they think."

"Oh-h-h—I beg your pardon again!"

"Not at all," he answered lightly, and now his eyes were laughing frankly into her own. "I don't mind informing you," he went on, "that I am the biggest curiosity you will meet between this side of the mountains and the sea. I am not accustomed to championing women. I allow them to pursue their own course without personal interference on my part. But—I suppose it will give you some satisfaction if I confess it — I followed you into Bill's place because you were more than ordinarily beautiful, and because I wanted to see fair play. I knew you were making a mistake. I knew what would happen."

They had passed the end of the street, and entered a little green plain that was soft as velvet underfoot. On the farther side of this, sheltered among the trees, were two or three tents. The man led the way toward these.

"Now, I suppose I've spoiled it all," he went on, a touch of irony in his voice. "It was really quite heroic of me to follow you into Bill's place, don't you think? You probably want to tell me so, but don't quite dare. And I should play up to my part, shouldn't I? But I cannot—not satisfactorily. I'm really a bit disgusted with myself for having taken as much interest in you as I have. I write books for a living. My name is John Aldous."

With a little cry of amazement, his companion stopped. Without knowing it, her hand had gripped his arm.

"You are John Aldous—who wrote 'Fair Play,' and 'Women!' she gasped.

"Yes," he said, amusement in his face.

"I have read those books—and I have read your plays," she breathed, a mysterious tremble in her voice. "You despise women!"

"Devoutly."

She drew a deep breath. Her hand dropped from his arm.

"This is very, very funny," she mused, gazing off to the sun-capped peaks of the mountains. "You have flayed women alive. You have made them want to mob you. And yet——"

"Millions of them read my books," he chuckled.

"Yes—all of them read your books," she replied, looking straight into his face. "And I guess—in many ways—you have pointed out things that are true."

It was his turn to show surprise.

"You believe that?"

"I do. More than that—I have always thought that I knew your secret—the big, hidden thing under your work, the thing which you do not reveal because you know the world would laugh at you. And so—you despise me!"

"Not you."

"I am a woman."

He laughed. The tan in his cheeks burned a deeper red.

"We are wasting time," he warned her. "In Bill's place I heard you say you were going to leave on the Tete Jaune train. I am going to take you to a real dinner. And now—I should let those good people know your name."

A moment—unflinching and steady—she looked into his face.

"It is Joanne, the name you have made famous as the dreadfulest woman in fiction. Joanne Gray."

"I am sorry," he said, and bowed low. "Come. If I am not mistaken I smell new-baked bread."

As they moved on he suddenly touched her arm. She felt for a moment the firm clasp of his fingers. There was a new light in his eyes, a glow of enthusiasm.

"I have it!" he cried. "You have brought it to me—the idea. I have been wanting a name for her—the woman in my new book. She is to be a tremendous surprise. I haven't found a name, until now—one that fits. I shall call her Ladygray!"

He felt the girl flinch. He was surprised at the sudden startled look that shot into her eyes, the swift ebbing of the color from her cheeks. He drew away his hand at the strange change in her. He noticed how quickly she was breathing—that the fingers of her white hands were clasped tensely.

"You object," he said.

"Not enough to keep you from using it," she replied in a low voice. "I owe you a great deal." He noted, too, how quickly she had recovered herself. Her head was a little higher. She looked toward the tents. "You were not mistaken," she added. "I smell new-made bread!"

"And I shall emphasize the first half of it—Ladygray," said John Aldous, as if speaking to himself. "That diminutizes it, you might say—gives it the touch of sentiment I want. You can imagine a lover saying 'Dear little Ladygray, are you warm and comfy? He wouldn't say Ladygray as if she wore a coronet, would he?"

"Smell-o'-bread—fresh bread!" sniffed Joanne Gray, as if she had not heard him. "It's making me hungry. Will you please hurry me to it, John Aldous?"

They were approaching the first of the three tent-houses, over which was a crudely painted sign which read "Otto Brothers, Guides and Outfitters." It was a large, square tent, with weather-faded red and blue stripes, and from it came the cheerful sound of a woman's laughter. Half a dozen trampish-looking Airdale terriers roused themselves languidly as they drew nearer. One of them stood up and snarled.

"They won't hurt you," assured Aldous. "They belong to Jack Bruce and Clossen Otto— the finest bunch of grizzly dogs in the Rockies." Another moment, and a woman had appeared in the door. "And that is Mrs. Jack Otto," he added under his breath. "If all women were like her I wouldn't have written the things you have read!"

He might have added that she was Scotch. But this was not necessary. The laughter was still in her good-humored face. Aldous looked at his companion, and he found her smiling back. The eyes of the two women had already met.

Briefly Aldous explained what had happened at Quade's, and that the young woman was leaving on the Tete Jaune train. The good-humoured smile left Mrs. Ott's face when he mentioned Quade.

"I've told Jack I'd like to poison that man some day," she cried. "You poor dear, come in. I'll get you a cup of tea."

"What always means dinner in the Otto camp," added Aldous.

"I'm not so hungry, but I'm tired—so tired," he heard the girl say as she went in with Mrs. Otto, and there was a new and strangely pathetic note in her voice. "I want to rest—until the train goes."

He followed them in, and stood for a moment near the door.

"There's a room in there, my dear," said the woman, drawing back a curtain. "Make yourself at home, and lie down on the bed until I have the tea ready."

When the curtain had closed behind her, John Aldous spoke in a low voice to the woman.

"Will you see her safely to the train, Mrs. Otto?" he asked. "It leaves at a quarter after two. I must be going."

He felt that he had sufficiently performed his duty. He left the tent, and paused for a moment outside to touzle affectionately the trampish heads of the bear dogs. Then he turned away, whistling. He had gone a dozen steps when a low voice stopped him. He turned. Joanne had come from the door.

For one moment he stared as if something more wonderful than anything he had ever seen had raisen before him. The girl was bareheaded, and she stood in a sun mellowed by a film of cloud. Her head was piled with lustrous coils of gold-brown hair that her hat and veil had hidden. Never had he looked upon such wonderful hair, crushed and crumpled back from her smooth forehead: nor such marvellous whiteness of skin and pure blue depths of eyes! In her he saw now everything that was strong and splendid in woman. She was not girlishly sweet. She was not a girl. She was a woman—glourious to look at, a soul glowing out of her eyes, a strength that thrilled him in the quiet and beautiful mystery of her face.

"You were going without saying

2660b

Successful farming today calls for the same intensive merchandising methods as are necessary in other successful industries. The first essential is modern equipment properly maintained. The first maintenance requirement is correct lubrication.

For the tractor an oil must be used which will so thoroughly lubricate all frictional surfaces as to leave no chance of the machine being out of commission because of scored cylinders or burned-out bearings.

When the tractor is needed, nothing else can take its place. The planting and harvesting seasons are short at best. To insure against costly mid-season mishaps,

Use Polarine

THE PERFECT MOTOR OIL

Made in Four Grades

Seals pistons against loss of power

The Standard Oil Company (Indiana) staff of lubricating engineers recommend it as the correct oil for your tractor. They term Polarine the Perfect Motor Oil, and it is offered to you as such.

It is made in four grades, one of which will correctly lubricate your machine, seal your pistons against loss of power, and enable you to get a maximum of service from your fuel.

To determine which grade to use, consult the chart on the left. It represents the recommendations of the world's best automotive engineers.

Westclox

From six to thirty miles an hour

WHEN going to town meant hitching up the team and jogging along at six miles an hour or less, time wasn't so important. It was most likely an all day trip, anyhow.

But when you can jump in the car, step on the starter, and whiz out the gate at twenty to thirty an hour, you figure closer on the minutes.

That's why more and more folks look for the trade mark Westclox on the face of the timepiece they buy.

There are good clocks and some that are not so good, but folks know Westclox and know they're good.

Alarm clocks from $1.50 to $4.75; watches from $1.50 to $2.50.

MICHIGAN CROPS

WHY WINTER WHEAT IS VALUABLE IN THE ROTATION

CORN, oats or barley, winter wheat, clover! Wherever this rotation is practicable it is the basis of the most successful farming. There is a reason for each crop and for its place in the rotation. The plan is scientifically correct and may be made the foundation of profitable agriculture through generations.

Corn usually makes a first-class crop on good clover sod.

Probably there is no better seedbed for oats, than good corn land. On fall-plowed corn land of about medium fertility, oats yield excellently both as to quantity and quality.

The rotation followed up to this point prepares the land perfectly for winter wheat and the last crop in the rotation—clover—rarely fails where seeded with the wheat. Clover is really the key crop. When it succeeds, the other crops are almost bound to do well. Thus the wheat crop is valuable to the entire rotation because of its direct bearing upon the clover crop.

It has been demonstrated repeatedly that in order to obtain the fullest benefits from fertilizers, a correct and suitable rotation is necessary. It is common experience that on good soil, manure gives best results when applied to corn. On poorer soil, it may be advisable to save some manure, if possible, for the wheat or clover. On wheat, a high-analysis fertilizer is profitable not alone because of the increased yields of wheat, but also because of its excellent residual effect on the following crop.

SWEET CLOVER WITH OATS

Will biennial sweet clover sown with oats in the spring furnish much pasture the following year?—M. J., Pigeon, Mich.

Sweet clover makes an excellent pasture crop the second year. In a test conducted at the Michigan Agricultural Experiment Station the past season, sweet clover pasture carried an average of one cow per acre and the cows on sweet clover pasture produced as much milk on the same grain ration and without insilage as cows on June grass pasture receiving grain and insilage.

Cattle should be turned on sweet clover early in the season and before the plants have made a coarse growth. Some cows refuse to eat sweet clover for a day or so but when they receive no other roughage for a day or two, they soon become accustomed to the taste and no further difficulty is experienced. Some of the cows in the test conducted here the past season ate the sweet clover from the start.

In order to secure a high yield of sweet clover the seed bed should be well firmed, the seed inoculated and the soil should contain plenty of lime.—C. R. Megee, Associate in Farm Crops, M. A. C.

SOWING SUDAN GRASS AND SOY BEANS

Would you please tell me if I can broadcast soy beans and Sudan grass for hay? What time should it be cut?—W. K., Omer, Mich.

Sudan grass and soy beans are sometimes sown together and the mixture used for hay. Experiments indicate that there is not usually much increase in the feeding value of the hay.

The following table shows the proportions of protein and ash in Sudan grass when grown alone and when grown with legumes. This test was conducted by the Office of Forage Crops Investigations, U. S. D. A.

Sudan grass (alone) 6.63 per cent protein, 7.46 per cent ash; Sudan grass with soy beans, 7.30 per cent protein, 10.46 per cent ash; Sudan grass and cowpeas, 6.40 per cent protein, 8.6 per cent ash.

The above table would indicate that there was not a very large difference in the feeding value in the mixture and the Sudan grass alone.

When sowing Sudan grass and soy beans together would suggest using 12 pounds of Sudan grass and from 40 to 60 pounds of soy beans per acre. This mixture could probably be sown to the best advantage by broadcasting.

If a grain drill is used, great caution is required to keep the Sudan grass seed and the soy bean seed thoroughly mixed in the drill box. General experience indicates that it is usually more practical to grow the two crops separately.

Sudan grass should be cut for hay just as it starts to head out, while soy beans should be cut for hay when the seed are well formed in the pod and before the lower leaves turn yellow and drop off. The Sudan grass is likely to reach this stage before the soy beans.—C. R. Megee, Associate in Farm Crops, M. A. C.

WHEAT CANNOT TURN TO CHESS

Will you please notify me as soon as possible if wheat will turn to chess? Many farmers say that it will. Will it do to sow wheat after wheat if the ground is manured and plowed good?—R. D., Oakley, Mich.

It is not possible for wheat to turn to chess as it is commonly supposed since wheat and chess belong to different plant species. When chess comes up in a field of wheat, the seed was either in the ground at the time of planting the wheat crop or was planted with the wheat. Conditions that are unfavorable to wheat often do not injure chess which gives rise to the idea that wheat will turn to chess.

It is not a good practice to sow wheat after wheat even though the ground is well manured and plowed owing chiefly that there is much greater danger of loss from insects and diseases which injure wheat. It would be better to follow with oats, barley or rye seeded with clover.—J. F. Cox, Professor of Farm Crops, M. A. C.

FRUIT and ORCHARD

EDITED BY FRANK D. WELLS

THE OUTLOOK FOR ORCHARDS

SHOULD we plant or should we not? This is the question many are now asking.

The advance in nursery stock during recent years has caused many to hesitate about planting and has been largely responsible for the diminishing orchard area. When peach trees could be bought for 10 cents or less each and other fruits in proportion, the outlay for nursery stock was a small matter. If they lived the outlay was small and if they died the loss was not great. Now it is different. The cost of starting an orchard is something to make the most enthusiastic feel doubtful.

Now should we plant? Well, the old trees are fast dying. The population is on the increase. More fruit is eaten per capita than ever before. Whence will come the supply?

To be sure the area of new orchards is on the increase, but not rapidly enough. This is true especially of peaches. They do not live long usually and are fast weakening. Soon there will be a shortage, unless present indications are much at fault.

The outlook for the apple is somewhat better. A limited number of orchards are being planted even with high-priced stock. But then, again, the demand promises to keep ahead of the supply for some time to come. To be sure there are localities in which apples are a drag, but that is chiefly due to imperfect facilities for transportation.

Plums and cherries are being set more in proportion to the general demand for the fruit than are the peach or apple. There is more danger of a surplus of these fruits than of the others.

All things considered, the prospect is encouraging for those who select their location judiciously and care for the trees properly. But these factors were never so important as now. All locations are not equally good and their merits should be carefully considered. Apple, pear, peach, plum, cherry all differ in their requirements, while the varieties do not always succeed equally well under like conditions.

Ought you to plant an orchard? Yes, if you are the right kind of a man, or woman. You must have the right kind of material in yourself. The owner must be able to like trees, to think of them as friends. If he can consider fruit-growing the best work on earth, so much the better. But first "Be sure you're right, then go ahead"—and stick to it.

A MICHIGAN APRICOT ORCHARD

IT was our privilege recently to recently to visit the apricot orchard of William La Male, Strasburg, Monroe County, Michigan. It is not a large orchard containing about 70 bearing trees, but is worthy of notice as being the only apricot orchard we have thus far been able to locate in this state.

The trees are of half a dozen different varieties and are from three to twenty years old. In the beginning the owner had little to guide him in his selection of suitable varieties, so has tried many kinds and is still looking for more. Nearly every year a few trees are planted. Last spring more than 60 trees were set, which should more than double the production of fruit within a few years.

Mr. La Male has faith in the apricot, "There is no reason," he says, "why it should not have a place among Michigan fruits. The first varieties begin to ripen about the tenth of July, which is long enough before the peach to make sure of a market. But it is no trouble to sell our home-grown fruit when the quality is known. It is not and will not be a substitute for the peach, but will always have a place for itself."

For the benefit of those who are interested in the fruit, Mr. La Male has given us the following points regarding apricot culture:

"A good plum soil is best. The apricot needs more moisture than the peach.

"The culture is similar to that for the peach. The ground in a young orchard should be worked till the middle of July, then a cover crop put in.

"The San Jose scale is not troublesome and there are no insects that do any serious injury to the foliage.

"There is a leaf rust that sometimes affects the trees, but neither that nor any other disease has caused trouble.

"The tree is much hardier than the peach. Our tree on the place was planted in 1898 and still shows no signs of old age. The symmetrical top covers a circle more than 30 feet in diameter.

"Apricots will endure neglect. Tree will stand in sod for years and still produce crops. But good care is advised and the trees respond generously.

"The plum cucules is the worst enemy, but it can be controlled by early and thorough spraying with arsenate of lead.

"There has been no failure in a crop since 1912 and some years the production has been heavy. In this respect it has done better than the peach."

In regard to varieties the owner gives us the following information:

Early Golden: Early, productive,

HEALTH HINTS

OR

HOW TO CURE YOURSELF

BY

DR. T. N. ROGERS

IF you feel you are coming down with a cold or grip or any other old thing, clean up and clean out and keep clean. First take a hot bath and hot drink and go to bed. Take one ounce of castor oil, follow this up with Boneset tea or better still, keep a bottle of the following in the house and use it for many troubles of this nature. Get this at any drug store. Acetanilide 4 drahms, tincture of Aconite 4 drahms, tincture of Gelsiminim 4 drahms, Glycerine 1 ounce, Aqua Camphor to make 4 ounces. Take 1 teaspoonful every half hour for four hours, then every two hours. Keep your head cool and your feet dry and warm and avoil drafts, except bank drafts. Eat little meat, but much fruit, vegetables, cereals and brown or whole wheat bread. Do not drink while eating. Fifty per cent of all sickness should be avoided.

A CO-OPERATIVE FEED BUYING PLAN

The dairyman's biggest expense is his winter feed bill. By organizing a co-operative buying service at this time of the year and finding out what quantities of feed farmers will need this winter, feedstuffs can be bought ahead at favorable prices. Accordingly, we are announcing a

Michigan State Farm Bureau
Co-Operative Feed Buying Service

Whereby farmers may contract now through their local co-operative associtions their winter supply of dairy rations for delivery in equal monthly shipments during the winter at summer feed prices. The Feed Buying Service is on the perfect, 24% protein, open-formula, dairy ration

MICHIGAN FARM BUREAU MILKMAKER

Which is approved by the Michigan Agricultural College Dairy Department. It is one of the best rations for Michigan dairy herds. **Michigan Farm Bureau Milkmaker** is a ration made up entirely from the milk producers' viewpoint—to get the most milk for the least investment in feed and keep the cow in the best of condition.

Public Formula Protects You

Every bag of M. F. B. Milkmaker from the State Farm Bureau's Feed Buying Service will carry on the regular analysis tag the **EXACT** number of pounds of each ingredient in the feed! This is important because it enables you to check up on the price. Here is **EXACTY** what you are paying for in M. F. B. Milkmaker:

ANALYSIS

Protein (minimum)	24%
Fat (minimum)	5%
Carbohydrates (minimum)	45%
Fiber (maximum)	9%

INGREDIENT FORMULA

200 lbs. Corn Distillers' Grains
500 lbs. Gluten Feed
260 lbs. Cottonseed Meal 43%
240 lbs. O. P. Linseed Oil Meal
200 lbs. Standard Wheat Bran
100 lbs. Stadard Wheat Middlings
160 lbs. Yellow Hominy
100 lbs. Ground Oats
100 lbs. Cane Molasses
100 lbs. Peanut Meal 40%
20 lbs. Salt
20 lbs. Calcium Carbonate

2,000 lbs. of M. F. B. MILKMAKER—all honest feed.

Reliable Rations at Lowest Cost

Notice that M. B. F. Milkmaker is innocent of filler. It is highest quality goods at the lowest possible price. It is a most efficient ration for maximum production, for official test work and registered herds. Unrivalled for mixing with home-grown corn, oats chop or ground barley as a general herd ration. Much safer to use than any single high protein concentrate.

What the Farm Bureau's Feed Burying Service Means to You

It is your opportunity to buy your winter supply of dairy rations at summer prices. No cash investment is asked. You contract for a guaranteed feed supply and pay for it monthly as it is delivered. The feed comes fresh and palatable every month. You'll feed your cows this winter one of the very best milk producing ration there is. This better ration will make your milk production more economical. Your milk check will show it.

How to Join the Feed Buying Service

Talk it over with your neighbors and with the manager and directors of your local co-operative association. Arrange with us for a meeting to which we will send our representative to explain all details and to assist you in sharing in the Farm Bureau's Feed Buying Service

Local Co-operative Ass'ns take orders from September 5 to October 20, when Buying Service Closes. Contracts taken for monthly shipments till April 1

This is Farm Bureau Service

THE AERMOTOR CO CHICAGO

THE AUTO-OILED AERMOTOR

A Real Self-Oiling Windmill

A year's supply of oil is sent with every Aermotor

Oil an Aermotor once a year and it is always oiled. Every moving part is completely and fully oiled. A constant stream of oil flows on every bearing. The shafts run in oil. The double gears run in oil in a tightly enclosed gear case. Friction and wear are practically eliminated.

Any windmill which does not have the gears running in oil is only half oiled. A modern windmill, like a modern automobile, must have its gears enclosed and run in oil. Dry gears, exposed to dust, wear rapidly. Dry bearings and dry gears cause friction and loss of power. The Aermotor pumps in the lightest breeze because it is correctly designed and well oiled. To get everlasting windmill satisfaction, buy the Aermotor.

RENTER WANTS TO TERMINATE LEASE

I have rented a farm. Contract calls for three years, to be paid by the year. I gave my note with a backer. Contract reserves the right to work on property for mineral any time. Owner has privilege of selling at any time by paying for my work and at the end of three years I am to leave 20 acres new seeding. Now I want to quit the place this fall. Can I do so without being liable to owner? I have 15 acres new seeding and have done a lot of repairing. I have put up a woven wire fence around the house and garden. Can owner make me leave it as I have it fastened to the line fence or can I take down the fence before my year is up? I have a large quantity of rye, oats and pea straw. Can I sell it before I leave? The contract doesn't mention straw and the man renting before me took it off the place when his year was up. Owner has my note for this year's rent and owes me $20 for labor and board while working on barn built on this place and refuses to pay me. How am I to collect it?—C. H., Iosco County, Mich.

If you contracted to work a farm for three years you would have to do the work according to agreement. If you made any agreement about leaving the premises by giving notice or fixed any way for terminateing the contract you may terminate it by observing the terms of the agreement. Or if you agree with the owner upon the terms of your leaving before the time is up, then this agreement will be binding upon your landlord as well as upon you. If the wire fence was placed on premises for your convenience and you did not make an agreement to build and leave it there then you may take it away if you remove it during the time you are in possession and control of the premises. You have the right to sell any of the products of the farm and rye, oat and pea straw are products of the farm, and can be taken as other products before your time expires unless you make some agreement in the writing with reference to it. You must abide by the agreement if you made one with reference to it. You have the right to deduct from what you owe him the amount he owes you. You better let the note run until after it is due so he can not sell it to an innocent purchaser.—Legal Editor.

CANNOT TAKE DIRT FROM ROAD

Can I take dirt from my neighbor's side of the road and fill in a ditch on my side of the road if the county highway commissioner gives me permission to do it? And if I can't get permission from the county highway commision who has the authority? What is the legal width of a main highway?—S. J., Bronson, Mich.

Please be advised that the property owners would not have a right to remove earth from the highway without the consent of the highway commissioner having jurisdiction over the highway in question as the commissioner is under legal obligation to keep the road in a reasonably safe and fit condition for public travel and should be consulted by an abutting property owner before the removal of earth from the highway as the law also gives the right for taking the material from the highway for making improvements to the same as set forth in Section 19 of Chapter 2 of the General Highway Law.

The above statement also answers your second inquiry. You should get permission from the authorities having jurisdiction over the highway in question. The legal width of a highway in this state is four rods, as specified in Sec. 20, of Chap. 1, of the Highway Law.—State Highway Department.

PRIMARY SCHOOL FUND

Please explain the source of state primary school funds, how obtained, etc. —Miss M., Eaton County, Mich.

The language of the first State Constitution is as follows: "The proceeds of all lands that have been or hereafter may be granted by the United States to this State for the support of schools, which shall hereafter be sold or disposed of, shall be and remain a perpetual fund, the interest of which, together with the rents of all unsold lands, shall be inviolably appropriatetd to the support of schools throughout the State."

The "perpetual" fund above mentioned was later named the Primary School Fund. Later, in 1850, Congress gave hundreds of acres of swamp land to the state and an act passed which placed the swamp land fund upon nearly the same basis as the primary school fund by making the net proceeds of sales a fund upon which the State must pay interest to be used for educational purposes only, the difference being that the fund is not a perpetual one fixed by the Constitution, but a statutory one and may be changed by the legislature.

The State has thus become the debtor to two funds. First—The Primary School Fund, derived from the sale of the sixteenth section in each township, upon which the State pays 7% interest annually, more commonly known as the Seven Per Cent Fund. Second—The Swamp Land Fund derived from a sale of swamp lands, upon which the State pays 5% interest annually, more commonly known as the Five Per Cent Fund.

In addition to these two sources of the Primary School Fund, there is a third that amounts to more than the two together. The Constitution provides that the taxes paid on railroads, telegraph, telephone, and express companies, and a few other corporations, together with the inheritance tax and money received from the interest on escheated estates, shall be used first to pay the interest on educational funds—such as the University, Agricultural College, and Normal School funds—and after these items have been paid, there is still a balance remaining, it is provided that it shall be added to and constitute a part of the primary school interest fund which is distributed annually to the several districts of the State, according to the number of children therein between the ages of five and twenty years, based on the census of the previous year.—Department of Public Instruction, Lansing, Mich.

The one mill tax is obtained by a tax of one mill on the assessable property of the State. Three-eighths of this tax goes to the University of Michigan, one-fifth to the M. A. C. and the rest is expended for local purposes.—Editor.

OWNER'S SHARE OF FARM PROCEEDS

When a farmer rents a large farm to a renter, the renter to furnish everything and give the owner one-third of everything that is sold and one-third of all the increase in stock and the renter sells anything when is the owner's one-third due? Now this man comes on without tools or money and the owner signs with him to get them, can the farmer in any way attach the stuff he has to sell till he makes good to satisfy the signer?—W. H. B., Dansville, Mich.

If the lease does not provide any other time for payment of the owner's third it will be due upon sale of the proceeds. The farmer can arrange with the seller of the goods who holds the notes to put a purchase price lien upon such property as he holds him and take the property to pay the same upon an execution issued upon a judgment for their price.—Legal Editor.

WIDOW'S PENSION

I am a widow. My husband had been sick for a year and eight months and is now dead. I am left with four children, the oldest eight years and the youngest 18 months. I have 60 acres of land and a lot of debts, doctor bills and funeral expenses and so on, and no one to work my farm. Now will you please let me know if I am eligible to a widow's pension and if so, who would be the proper authorities to apply for same?—Reader, Tuscola County, Mich.

Under the circumstances described in your letter you are eligible to draw a mother's pension. Application should be made to the Probate Court of the county of Tuscola, who will cause an investigation to be made, and if he finds that you and your children come within the meaning of the act authoriziing such pension he may declare and fix the amount of money to which he thinks you are entitled in order to properly care for and educate your children.

The court must be satisfied that the mother in the case is a widow, or is unmarried, or has been deserted by her husband or whose husband is in a public institution for the insane, etc., and is too poor to properly care for her children without outside aid before it can authorize the pension. The amount which the court may order paid to said mother will depend upon her needs and the number of children she has. The law says the amount shall not exceed $10 per week, and not less than $2 per week in case the mother has but one child, with an additional sum of $2 per week for each additional child. Additional information will be furnished on request.—Editor.

CAN COLLECT FOR ANIMALS INJURED ON PUBLIC HIGHWAY

If the driver of an automobile runs into a herd of cattle being driven upon the public highway and injures any of the animals, is he liable for the cost of the same?—Reader.

The driver of cattle has the right of passage by his cattle upon the highway as much as the driver of an automobile has the right of passage by auto. If the driver of the auto negligently or carelessly injured cattle being driven on the highway he would be liable for the damage. But if they were injured without the fault of the driver of the auto but by reason of their fright or viciousness then the driver of the auto would not be liable for the damage. —Legal Editor.

MUST PAY TAX ON AMUSEMENTS

Is it compulsary to pay war tax on public dances and if so, why is it not enforced in every county?—B. M., Blanchard, Mich.

The 1921 U. S. Revenue act provides that a tax of 1 cent for each ten cents or fraction thereof of the amount paid for admission to a dance (and certain other places of amusement) shall be paid by the person paying for such admission; but where the amount paid for admission is 10 cents or less no tax shall be imposed. If anyone is conducting a dance hall without collecting and remitting such tax to the government he is violating the law and should be reported to the Internal Revenue office at Detroit. If the proceeds of any such dance or amusement are to be expended wholly for charitable and religious purposes they are exempt from the tax.—Editor.

CUT-OVER LANDS EXEMPT FROM TAXATION

We purchased 80 acres of cut-over land a year ago, moving on about April 1921. Shortly after I saw some articles in the Farmers' Service Bureau Department of your paper, about cut-over land being exempt from taxes. We waited for the supervisor to come to assess but he never came. I have been told he never does as it is rather out of the way, but guesses at the valuation. I wrote to him about getting exempt and he wrote back that I could not be exempt for 1921 taxes as they were turned in on the roll, but to meet the Board next June and he would see what could be done. Now as there is only a branch line running in here and I would have to go out in the afternoon and remain away two nights, with two small children, leaving only a 16-year-old boy and one 11 years at home to milk and care for things, I would like some information if I really have to meet the Board. I gathered from the information in the paper all I would have to do, is speak to the supervisor and he would bring it before the board. We put up a lot of fence, cleared about five acres or more and have a bank barn raised and partly closed in, and some other improvements done this last summer. Hope to do more each year. I would also like to know if there is a certain amount can be taxed on the valuation of property or can they put on what they like. This was valued at $450, and my taxes on it were $32.71. I understand other years they were about $14.—Mrs. E. L., Osier, Mich.

Sec. 4192, of the Compiled Laws, provides for exemption from taxes for 5 years in cut-over lands. It provides that in order to get the exemption application shall be made to the supervisor at the time the assessment is made to be exempt. The supervisor shall put the description on the roll in the usual way and refer the matter to the board of review. If they find all the conditions entitling exemption existing shall write on the roll the proper entry. They shall enter each year the exemption and mark the number of the year that it is exempt. It is not necessary to be present under the law to have a consideration and I think the supervisor might and should have submitted to the board of review upon your written application. They may have marked you exempt and you could find by writing to the supervisor personally or ask some of your neighbors to inquire for you when they get a chance to examine the roll.—Legal Editor.

Pioneers Together
MONTGOMERY WARD & CO.
Catalogue Number 97
Fall & Winter 1922-23

—the staunch builders of this great country—and Montgomery Ward & Co., who first supplied their needs by mail.

Fifty years of progress together, and today this great new-old institution of Montgomery Ward & Co. is filled with the same spirit of the Pioneer—always progressing—always leading the way

We enter our second half-century of service by offering you in this, our Golden Jubilee Catalogue, the fruits of fifty years' experience in making low prices on goods of dependable quality always.

This Catalogue is Yours FREE

Buy from this Book

This Golden Jubilee Catalogue is saving millions of dollars for the American people.

Is it saving Money for *You* and for your family? Are you taking *full advantage* of your opportunity?

Buy from this Book. Fill all your needs from this Book. Consult it daily to find the right price, the *lowest price* for dependable, reliable goods of standard quality.

If you have not a copy of this Catalogue—Fill in the coupon above and receive your copy FREE.

To write today for your free copy of this big Golden Jubilee Catalogue will mean a saving of many dollars to YOU this Fall.

It answers every question about price, establishes for you the right price to pay for everything you buy.

Fifty years' experience in manufacturing—in right buying—has gone into this book. Fifty years' experience in low price making is here at your service.

Write for this Catalogue. Know the right price to pay for everything you buy. Take advantage of the many big bargains it offers—the many, many things offered at less than market prices.

TO THE WOMAN: This free Catalogue offers you the newest styles, selected in New York by our own Fashion Experts. And all the usual extra "style profit" has been eliminated from our prices.

It offers you everything for the home at a big saving: Rugs, Carpets, Curtains, Furniture, Home Furnishings of all kinds of standard quality at money saving prices.

TO THE MAN: Think of an all wool—virgin wool suit for less than $15.00. This is an example of our Golden Jubilee Bargains. Everything a man needs, to wear or to use, is offered at prices that mean many dollars saved.

FOR THE FARM: For fifty years the American Farmer and Montgomery Ward & Co. have helped each other. This book outdoes all our past achievement in making low prices for you.

Fencing, roofing, tools, paint, hardware — everything the farmer needs is offered at a saving.

"The Farm Paper of Service"

There Are Other Worlds Left Yet to Conquer

HAVING subjected all nations within reach of his iron fist, Alexander the Great lamented that there were no more worlds for him to conquer. And ever since men have pined for larger fields of conquest and of service

Men's visions are usually circumscribed by the sky-line which encircles their horizon. Opportunities for service and success lie by the pathways which all men travel, but they do not see them. Occasionally someone stubs his toe and his eye catches an opportunity by the side of the road, which has lain there unnoticed and untouched for generations. Then other men who have passed that way shake their heads and wonder why they too, weren't born lucky.

There are just as many undiscovered opportunities today as ever before in the history of the world. That may sound like an extravagant statement in view of man's magnificent accomplishments up to the present age but when it is remembered that opportunity is largely the result of changing conditions, it will be seen to be true.

Men who live in small towns and rural communities have the notion that opportunity is confined to the larger centers of populations. But it is not so. There are just as many opportunities in the rural community and upon the farm for making money, for achieving distinction, for being a friend to man and for rendering service as there are in the largest city in the world.

We do not believe that there is any field of endeavor in the world which offers such excellent opportunities in the above respects as in the field of farming. Farming next to hunting is the oldest known vocation. But it is only in the twilight of development. The average man's ignorance of the possibilities of farming is appalling. The soil is not yet producing to its maximum capacity. The road to the consumer is altogether too long. It must be shortened. Existing farm credit machinery is still too often an instrument of extortion instead of benefit. In short, farming as a business, isn't much farther advanced than it was a century ago.

Talk about the worlds to conquer! They are lying at our very doorstep. Where are the men of vision and unselfishness to conquer them for humanity?

The League of Nations After Two Years

THE Atlantic Monthly publishes an informative article by Raymond Fosdick on the League of Nations after two years of operation. Here are a few striking paragraphs:

> "To its enemies in the United States the League of Nations must seem an unconscionable time a-dying. For more than two years it has tenaciously clung to life despite repeated prophecies of approaching demise. Occasionally indeed its actual death has been announced,—once by no less a person than the President of the United States,—and preparations have been begun in high places to celebrate the obsequies.
>
> "But somehow the League still lives. More than that it shows a surprising vitality. In spite of hard treatment and some neglect it seems to gain in strength and purpose. Certainly the League today, with all the manifold activities which it is initiating and guiding, is a far different creature from the feeble offspring which the Treaty of Versailles so laboriously brought into the world. For one thing it has more friends. Only a handful of the larger powers stood sponsor for it at its birth. It was eyed with suspicion by the smaller nations. Today these smaller nations are its warmest supporters, and fifty-one countries are now enrolled under its standard, representing more than four-fifths of the world's population, and nearly three-fourths of its area. The list of absentees among the supporters of the League is more easily called than the roll of its membership. Abyssinia, Afghanistan, Ecuador, Germany, Hungary, Iceland, Mexico, Russia, Turkey and the United States."

The account which Mr. Fosdick gives of what the League has actually accomplished is an inspiring example of co-operating and felicity between the member nations. In no instance had the League sought to bring about peaceful relations between warring nations or nations threatening to war that it has not been successful, and even its enemies have been forced to admit that there "might be something after all" to the notions that nations can settle their disputes without fighting.

Unfortunately, the views of the American people are still very much colored by the propaganda they have read against the League in strong anti-League newspapers and magazines. Many newspapers and politicians still believe that the people voted against the League in 1920. Having, as they thought, fooled the people on the League issue, they must yet to save their face, keep 'em fooled, and that's what they're trying to do. It may take another presidential election or two to bring the anti-League press to its sense but that will be accomplished all in good season.

In the meantime, the United States will go its own sweet way while the rest of the nations sit in harmony together discussing and settling to a remarkable extent some of the world's great problems.

The Evolution of Agriculture

HENRY FORD's exhibit at the State Fair, "the evolution of agriculture," might perhaps have been better termed, the "revolution of agriculture." The term evolution is associated with slow-moving changes throughout countless centuries, such as the development of modern man from the stoop-shouldered ape-visaged Neanderthal of a half million years or so ago. But while man's stature and intellect changed very slowly there was an almost immeasureable space of time when the implements with which he tilled the soil changed not at all. It took him several million years to bring forth the crudest kind of a wooden plow; but the steel plow is a product of but a single century and less. For ages men sowed, harvested and threshed their grain by hand. The seeding machine, the reaper and the threshing machine were all brought out less than 75 years ago So that it may truly be said that the last century has seen a veritable revolution in the methods of farming because of the marvelous inventions of farm machinery.

The most recent contribution to power farming is the tractor, which passed the experimental stage a decade ago and is now recognized as a labor and money-saving device upon the average farm. But the tractor has by no means as yet reached the zenith of its development and there are undoubtedly scores of uses for such machines which the average mind has not yet dreamed of, or had not at least until Mr. Ford staged his exhibit.

The wonders shown in the Ford exhibit call to mind Mr. Ford's "synthetic cow" at which the nation has poked a lot of good-natured ridicule But laugh as we may at Mr. Ford's "notions" we are hushed into silence and seriousness when we perceive the "impossible" things he has done. Ford is a century or so ahead of the rest of us, and he is dreaming, dreaming all the time of a day when man shall be emancipated from slavish labor and the work of the field and the factory will be done by machines which can be operated by the mere touch of the hand.

Mr. Ford's exhibit showed that unbelievable strides have already been taken in the development of power farming, but it also gave a promise that things even more improbable and impossible are yet to be discovered.

The Gasoline Tax

THE most important subject which will probably come before the next legislature is that of taxation. There has always been more or less complaint against taxes, but the dissatisfaction this year has become so great and with such good reason that the legislature must act to either lower taxes or distribute them more evenly.

It has been said time and again that state expenses cannot be lowered greatly, and after a careful investigation of the subject we believe the statement is true. There can be some pruning here and some lopping off there but despite the claims of politicians who are out of office and want to get in, the maximum saying which can be made without actually crippling our institutions will be very small compared to the total. Farmers and other taxpayers who delude themselves or have been deluded by others into believing that the state taxes can be cut even a fourth are due for a shock. State taxes for the next five years will not fall far short of an average of $20,000,000 a year, and will exceed that figure providing any appreciable amount is set aside to retire good roads and bonus bonds, as should be done. The taxpayers might better confine their efforts to preventing a further increase in state expenditures instead of trying to decrease them from their present level, and if they succeed in this, then the revenue from new sources of taxation which have been suggested will automatically reduce taxes or real and personal property.

It is generally believed that the income tax amendment will carry at the fall election, and it is almost certain that the legislature will be asked to levy a tax on gasoline. Opinion upon the gasoline tax is very much devided. The automotive industry is supposed to be a unit against this tax and even the farmers themselves are not altogether sure that it would be a good thing. In the Business Farmer's straw ballot 190 farmers expressed themselves in favor of such a tax and 42 against it. The ballot did not disclose what percentage of those voting owned automobiles or were large users of gasoline

Although as stated, the automotive industry is suppossed to be opposed to a gasoline tax, the various manufacturers either are noncommital or else very guarded in their remarks on the subject. A letter dispatched by the Business Farmer to the various manufacturers in this state failed to reveal a single company which was ready to admit publicly its opposition to the tax. Some merely said they did not care to express an opinion; others that the question of financing road building and maintenance was of such magnitude that they had not yet found an answer to it.

The farmers' taxes must be reduced and it will be up to the next legislature to find the way to do it.

What Was It All About?

THE coal strike has been settled,—for the time being,—and the mines are running again to the limit in an endeavor to make up for the precious time which was lost. The average citizen is still pretty much in the dark as to the causes of the strike and also the basis of settlement The miners went back to work at the same old wages, which is a good thing for the farmer and the country. No matter who won the strike we can't forget that thousands of men were out of employment for many months; that their families suffered for the necessaries of life; that the mine owners lost thousands of dollars in profits; that all industry was slowed up because of either an actual shortage of coal or fear of a shortage. The miners suffered; the mine owners suffered; the public suffered. A strike is like a law-suit, —nobody wins.

There is a tendency to go to sleep in political berths.—San Francisco News.

What the Neighbors Say

THINKS U. S. SPUD ESTIMATE TOO HIGH

HAVE just been reading your editorial on the prospects ahead of us for the spud crop.

In our territory it has been dry now for two weeks and part of the time very hot so it has lowered the prospects for spuds a good many points and has shortened up the possible bean yield fully 30% and perhaps more.

If I am any guesser the government report on the spud crop will read altogether different for October and November 1st than their estimate for August 1st did.

There are a good many spots in the late spud crop territory where spuds have been greatly injured since August 1st by dry weather, wet weather, leaf hoppers, late blight and so on.

Am sending you Snow's 1st of August estimate on the spud crop. You will notice there is a big difference between his estimate and that of the government.

I have always found Snow's report to be the most reliable of any crop report. It is always a hundred million miles ahead of the government's.

What I have written here will correct your reader's ideas of the spud crop. Also of beans if you publish it.—A. A. Lambertson, Montcalm County, Mich.

We surely hope, friend Lambertson, that you and Snow are right. But we recall that you aways predict higher potato prices in spring than fall. Sometimes you are right, but often you are wrong. We quite agree that the October and November 1st estimates will probably be lower than the August. They almost always are. Yet potatoes haven't suffered much in Michigan or any other potato state, except Maine, and we don't believe the September estimate will be very far from the August still we repeat we hope we are wrong and you are right.—Editor.

BACK TO NORMALCY

(An Open Letter to Uncle Rube Spinach)

MY Dear Uncle: I note that in a recent issue of the M. B. F., you ask some questions pertinent to the present industrial and political situation in this Land of the Free.

Sustaining as I do, a more or less intimate relation to our government—by reason of paying taxes—I may be able to give you a little first hand information. First off, I advise you to procure a copy of Behind the Mirrors. No doubt you will be able to get it at your library, and should you never read another thing in your life, you will be a pretty well educated man when you have finished the book. This will give you a line on the situation at Washington.

In the first place you ask if our president has or has not power to settle the strikes that now disturb this country. In his speech to Congress Mr. Harding says he has adequate power and authority to settle both the R. R. and coal strike. "But," he adds, "there is no hurry." You must remember that Rome wasn't built in a day, Uncle Rube. And what can you expect in the way of legislation when we pay our president only a beggarly seventy-five thousand a year, and found while our needy and noble Congressmen have to feather their nests like broody hens, to obtain a mere pittance!

As an afterthought Mr. Harding says he will ask for more power, but I suspect he means more power to drive on the "gawf" course.

Another thing, Mr. Harding has pressing personal duties to engage his attention. Do you realize, Uncle Rube, that Warren Gamaliel Harding has the reputation of being the best dressed man in Washington? And even Abraham Lincoln had no such reputation as that. I doubt if Honest Abe were with us today he could get his face stuck so hard and frequent into the movies as does Mr. Harding, permanent smile 'n everything.

You appear to be worried about the coal strike and ask "are we going to freeze this winter?" No man knoweth that, but I'll say this, Dear Uncle, if you should freeze your nose and all of your toes, yes, even the very marrow in your bones you will not present as frost bitten an appearance as will Warren G. Harding along about two years from next March. Life holds its compensations even for the under dog, Uncle Rube, but should you get a wee bit chilly around the edges this coming winter, you will still have your cosy corner in the M. B. F., where we will still have your pleasant smile to beam at us and your homely words strike a responsive chord in our hearts while all that will be left for Warren G. Harding to do as he packs his grip for the last time in the White House and sings in his mellifluous voice: "My Home Town is a One Horse Town But Its Big Enough for Me," will be to purchase a ticket to Marion, if the trains are running then, and when the curtain rings down for the last time on the Four Years' Farce at Washington, he can hit that one horse town and "Wrap the drapery of his couch about him, and lie down to pleasant dreams"—dead to the world. Fraternally yours.—Rhoda.

Dear "Rhoda"—We won't sign your full name altho you showed your good faith by signing the above in full. You seem to think our Uncle Rube is a Republican, while from reading your open letter no one would suspect you of being a Democrat—or are you just a Progressive? In any event, Rhoda, it is your vote and your sisters' votes that have the old-time politicians guessing these days! Come again!—Editor.

CAUSES OF STRIKES

TWELVE years ago the billionaire mine-owning interests of our country had hired gun-men run armored trains at midnight thru the valleys of West Virginia, firing cannon and machine guns into defenseless tents full of sleeping women and children, killing and crippling scores of these foreign people who had been thrown out of the billioniare-owned shacks that day because they could not pay rent with the mines not running because of strikes.

That rich man's wholesale murder was never tried in court, yet we raise the roof, some of us, because the miners "got the drop" on the gunmen at Herrin, Ill., and got even on W. Va.'s killings.

Is it getting so a Rockefeller bunch of outlaws are to go free in America and only little boys are to be whipped in school for bad behavior?

I am a farmer and I blush for my calling when any farmer writes to our papers trying to whitewash high-up railroad and mining millionaires, drawing more than Harding's salary, which they never offer to reduce, no matter how low the farmer's returns get.

Get wise, Bro. Farmers, and instead of knocking the section hand and coal-digger, whose mining neither you nor I would do for the price of two good farms, let us work for laws keeping these rich outlaws salaries at least as low as Hardings'.—C. H. Merrifield, Van Buren County, Mich.

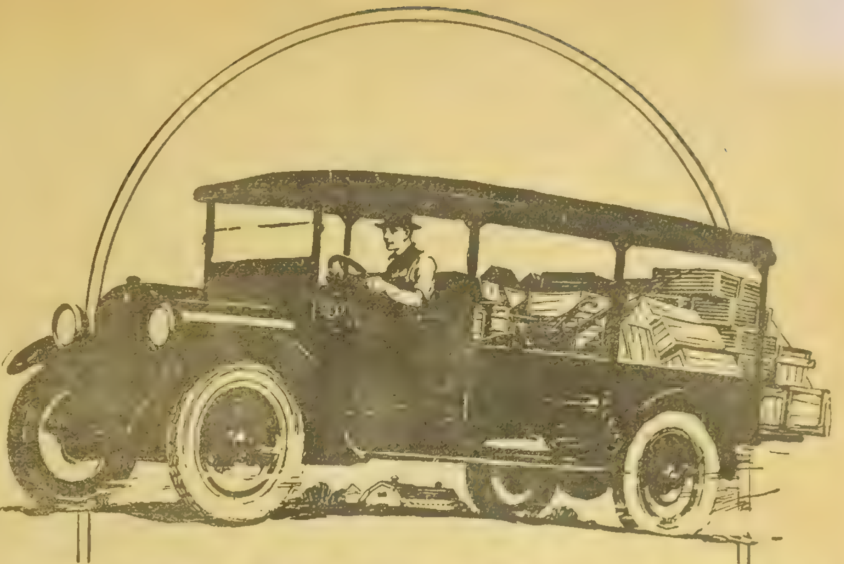
Don't blame farmers for taking the position they do on the strike question. They are the victims of a persistent propaganda the sole purpose of which is to put the employers in a favorable light and the striking employees in an unfavorable light. We cannot countenance all that is done by strikers. Neither should we countenance all that is done by employers. We could judge better the respective positions of the two if the press would give us more facts and less editorial opinion.—Editor.

TIME AIN'T CHANGED MUCH AFTER ALL

DEAR FOLKS—There's been so much in the paper about short skirts and bobbed hair that I jes' sot down and got to thinkin' about it. I 'member when I saw the first one of them short skirts I wuz leetle mite 'sprised and it put me in mind of one time when I wuz a young girl, a show come to our town and the show girls wore bangs an long black ear rings. After they left town Elmiry Smith an' me went to Georgetown and got us some ear rings an cut our hair off in bangs. When we got back home everybody sot up an begin to wag their tongues an' it wasn't no time 'till Elmiry an' me wasn't fit to live.

Then the other girls in town begun to cut off their hair in bangs

(Continued on page 17)



SPEED WAGON

For Every Kind of Hauling

Speed Wagons are today performing every kind of rural hauling and carrying.

Some one of the seven types of bodies that are now standard will do your work.

No matter whether yours be a general, a stock or grain farm; a commercial orchard, truck garden or chicken ranch—no matter where located, or what the nature of roads or loads—

Still a Speed Wagon will do your work quicker and cheaper.

Nearly 80,000 Speed Wagons now in use prove that.

Product of eighteen years of successful building of good motor vehicles, this Speed Wagon is the greatest single achievement of this famous organization.

And remember—"If it isn't a Reo, it isn't a Speed Wagon."

THE FAMOUS
Z
ENGINE

Put a "Z" to Work on Your Farm

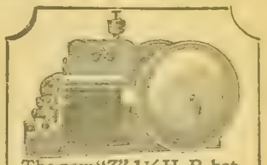
Avoid hours and days of blistering, back-breaking labor. Turn the drudgery jobs over to a simple, sturdy, dependable "Z" Engine. At present low prices, this engine is the cheapest "hired help" you can get anywhere. It is saving time and money on more than 325,000 farms.

The magneto equipt 1½ H. P., 3 H. P. and 6 H. P. are *real* kerosene engines, but operate equally well on gasoline. Simple, high tension oscillating magneto produces hot spark, starting engine quickly. Throttling governor assures steady speed. Prices, F. O. B. Factory:

1½ H. P. $67.00 3 H. P. $100.00 6 H. P. $160.00

Other "Z" Engines up to 20 H. P.

Write for complete details. See the engines at your dealer's.



The new "Z" 1½ H. P. battery equipt uses gasoline alone. Has high tension battery ignition, hit and miss governor and balanced safety fly wheels. Control lever gives six speed changes. Carburetor requires no adjusting. A remarkable value

$44.80 F.O.B. Factory

The Farm Home
A Department for the Women

Edited by MRS. GRACE NELLIS JENNEY

DEAR READERS:—Here is a suggestion. Would it not be a good plan to secure a small blank book and paste in it the remedies suggested by Dr. Rogers? In time the book would become of real value to the family and something that could not be replaced or purchased.

You can have a very real interest in it by being responsible for some home remedy suggested for your own benefit. You know this page stands for Better Health, Better Homes and Greater Happiness, which all means getting into harmony with our conditions and making the best of them.

If we are honest with ourselves we may be surprised to find that we are possessed of a fair amount of all three.

VOX POPULI

ONE may pick up the daily paper any day of the week and read of crime in all its lurid details, in all its various expressions, until one's mind is saturated with the unpleasant, the low and the evil. You turn with disgust from all of it and wonder why it is given big headlines and a place of prominence on the front page. A knowledge of facts whether pleasant or unpleasant is necessary for our protection but a simple statement will do as well in that particular as a lurid story written up in Jesse James style.

The rural and county papers print clean news and put crime and social high-life entirely in the background.

Their editors belong to the great middle class, the plain-living, sober-thinking, hard-working middle class, whose judgment must ever be the balance wheel of our civilization.

Any one of these papers, where honestly edited and not controlled by indifferent capital, may be faithfully called Vox Populi (the voice of the people).

MORE ABOUT THE PRESSURE COOKER

FROM the deluge of inquiries I have received since my article about my pressure cooker was printed, I think the readers of the M. B. F. must be very much interested in the subject. I have sat up nights trying to answer all the letters but thought perhaps a few more items about it might be of interest.

A whole meal can be cooked on one burner of the oil stove, as many different kinds of food as can be packed in the cooker. My husband will not taste of cooked cabbage, but is very fond of peas. A few days ago I put my potatoes in the bottom of the cooker with sufficient water to cover them, then placed the peas in an alumium kettle with a little water, then the cabbage in a small pail set in the kettle of peas, and made a custard and poured it into a pound baking powder can, clamped on the cover of the cooker and processed for ten minutes. The peas nor custard had not the slightest taste of the cabbage. In cooking so many different kinds of food at the same time, each must be put in a dish by itself. Onions can be cooked with other food in the cooker and not have the other food flavored by the onion.

At present we are very busy canning vegetables for ourselves and also for our neighbors. My daughter and I have an acre of garden this year as a financial venture and it promises well.

In cold pack canning peas, string beans or corn, we only process forty minutes after the pressure reaches twenty pounds. Some have asked me how long it takes to run the pressure to twenty pounds. That all depends on how much you are cooking at once and how hot the cooker or water are when the cover is put on, but only a few minutes. I use mine on the range during the winter when I have a fire for heat, but I like the oil stove better, as the heat can be regulated better and more evenly. They save a great deal of fuel. I'll gladly answer any questions anyone wishes to ask, but may not be able to answer all very promptly.—Mrs. Claudia Betts.

ADVICE FOR HEARTBROKEN

THE requests in the M. B. F. of August 5th, interested me. I waited to see if others would respond but am sending my contributions to our popular page.

Enclosed find copy of one of the songs requested and some of the recipes.

I have considered the letter by "Heartbroken" carefully and if I were so situated I think I should weigh carefully whether so brutally frank a man was worth winning but having decided in his favor I should try to build a bond of mutual interests. Taking it for granted that the wife possesses and exercises the qualities of cheerfulness, neatness, thrift and industry, all of which are essential, but alone will not hold two together. I should learn the specials interests and hobbies of this man, inform myself of them, that I might sympathize and converse intelligently about them, and if possible gradually interest him in my special delights, for a common liking for the same things, is the basis of genial comradeship, which I should strive to secure, but it would not pay to stoop to unworthiness to hold or please anyone.

Marriage is made a success by all people by learning to acquire new interests and by sacrificing ones own idiosyncracies in part.

But, having given my best for a reasonable length of time without success, I most certainly should not sacrifice my entire life, the world is too rich in opportunity for usefulness and service in congenial conditions for that.

I do very surely believe that lack of proper knowledge and teachings are the cause of so much martial unhappiness.

Knowledge is power, and girls especially are rushed, or allowed to drift into the crucial and decision-making time of life, ignorant and untaught regarding the vital facts, which are essential to understanding and wise choice, and they pay with broken lives.

Buttermilk Pies

Enough for two pies: 2 cups sugar, 2 tablespoons flour, yolks of 3 eggs. Cream together and add 3 cups buttermilk and 1 tablespoon lemon extract. Bake with one crust, using whites of eggs for meringue.

Vinegar Pie

1 quart boiling water. Mix 2 eggs, 1 cup sugar, 1-2 cup vinegar and 1 teaspoon lemon extract. Stir to a smooth batter, add boiling water, pour in baked crust and frost.

Chocolate Pie

Yolks of 2 eggs, 2-3 cup sugar, butter size of walnut, 2 tablespoons flour, 1-2 teaspoon vanilla, 1 cup milk or water. Frost with whites of eggs.

Molasses Pie

Two pies: 1 cup sugar, 3-4 cup butter, 3 cups flour, crumbed together, 1 cup molasses, 1 cup hot water, 1 teaspoon soda. Put liquor in pies, add crumbs.

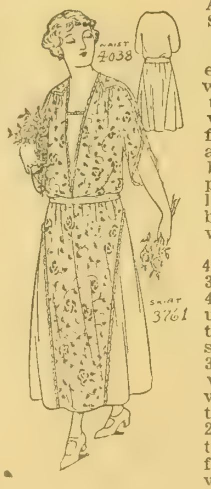
AIDS TO GOOD DRESSING

For Simplicity, Service and Style

FALL FASHIONS

Address Mrs. Jenney—Pattern Department, M. B. F.

Fashion Book Notice—Send 15c in silver or stamps for our up-to-date Fall and Winter 1922-1923 Book of Fashions, showing color plates, and containing 500 designs of Ladies' Misses' and Children's patterns, a Concise and Comprehensive Article on Dressmaking, also some points for the needle (illustrating 30 of the various, simple stitches) all valuable hints to the home dressmaker.



A pleasing Gown for Slender and Mature Figures

4038-3761—Figured and plain foulard with frills of self material or organdy would be attractive for this style. It is also nice for blue or brown moire, with pipings in tan or lighter blue or in black satin with white for trimming.

The Blouse pattern 4038 is cut in 7 sizes: 34, 36, 38, 40, 42 and 46 inches bust measure. The Skirt pattern 3761 is cut in 7 sizes: 24, 26, 28, 30, 32, 34 and 36 inches waist measure. The width of the skirt, at the lower edge is 2 1-2 yards. To make this attractive dress for a medium size will require 4 3-4 yards of figured, and 2 yards of plain material, 32 inches wide.

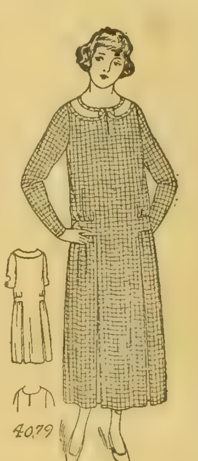
TWO separate patterns mailed to any address on receipt of 10c FOR EACH pattern in silver or stamps.

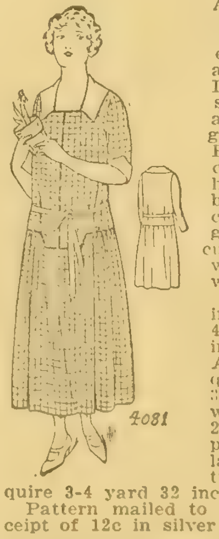
A Youthful Style

4079—Here is a new and very unique version of the one piece dress. Belt portions over which the tab extensions on front and back are fastened hold the fullness gracefully at the sides. Added width is given to the skirt portion by plaits that form a panel over back and front. This is a model for gingham, and also for the new tub silks in check and stripe patterns. Organdy or linen may be seleted for trimming. The sleeve is cool and pretty in the short length, and in wrist length it is the latest style feature.

The pattern is cut in 3 sizes: 16, 18 and 20 years. An 18 year size requires 5 yards of 32 inch material. The width of the dress at the foot with plaits extended is 2 3-4 yards.

Pattern mailed to any address on receipt of 12c in silver or stamps.





A Comfortable House or Home Dress

4081—Long waisted effects still prevail, as this stye shows. It is nice for tub silk, gingham, voile and also for taffeta, garbardine and crepe. Blue and white checked gingham is here portrayed with bandings of blue chambrey and organdy for collar and cuff. The sleeve in wrist length is fitted with a dart.

The pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38 inch size requires 5 3-4 yards of 32 inch material. The width at the foot is 2 5-8 yards with plaits extended. Collar and cuffs of contrasting material require 3-4 yard 32 inches wide.

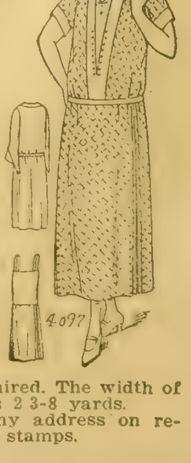
Pattern mailed to any address on receipt of 12c in silver or stamps.

An Up-to-date Attractive Costume

4097—Comfortable and practical is the development of this style. The skirt with its slenderizing plait fullness, is mounted on an underbody The blouse long of line, and with a smart vest finish, may have its sleeve short or in wrist length. This model is excellent for silk, kasha, crepe, and for linen and other wash fabrics.

The pattern is out in 6 sizes: 36, 38, 40, 42, 44 and 46 inches bust measure. A medium size requires 5 1-4 yards of 32 inch material. To make underody, sleeve facings and vest portions of plain material as illustrated 1 1-4 yard 40 inches wide will be required. The width of the skirt at the foot is 2 3-8 yards.

Pattern mailed to any address on receipt of 12c in silver or stamps.



CORRESPONDENCE COLUMN

Mrs. L. J.—There is a preparation on the market called Rust Proof and it is supposed to keep ranges from rusting. If you cannot buy it, send me a stamped, addressed envelope and I will give you the name of the maker, also the name of a firm here who sells candle wicking. The latter I believe you can buy of any hardware dealer.

Mrs. G. M. and Others—There is really no demand for fancy work, crocheted or otherwise. We have letters every week offering such work for sale and there is no market. In the first place that kind of work is not used as much as formerly. Really the necessities of life are in more demand. Most ladies make their own fancy work and do not care to pay someone for it. I wish I could help you. Could you not sell jams and jellies attractively put up?

A subscriber sends us the words to "The Wearing of the Green." I will send them to the person wanting them on receipt of an addressed envelope.

Mrs. H. H.—It will be best to write to Montgomery & Ward about the attachment as they sold you the machine. It will be safe to send the money to the company and if they guarantee the attachment it should be all right. I know that the machines which come on purpose for hemstitching are satisfactory, but quite expensive.

A. L.—The little black ant can be exterminated by sprinkling the powdered root of black flag around the places where ants are seen.

We are in receipt of a number of fine recipes for the buttermilk pie. I appreciate all of them.

MAKING FRIED CAKES

I find so much useful information through the columns of the M. B. F. The recipes have been helpful to many I am sure. I wish to ask some of the farmers' wives who are skilled in making good fried cakes, the reason I cannot always have them smooth instead of cracking open when frying. Occasionally they will be just right. I try not to get them too rich or to mould in too much flour and use plenty of hot lard to fry them in. I will appreciate any suggestion through your column.—K.

When fried cakes crack open and are not smooth it is because the dough was dropped in too hot fat. They cooked on the outside before the inside had a chance to cook. When the heat reached the inside and expanded the dough, it could not expand evenly but cracked the outside crust. The same rule will be found to operate when baking cake or even bread.

DYE FADED GARMENTS

Will you or some of the readers tell me how to dye faded garments succssfully? I have a number of babies' and children's cotton dresses, which are not badly worn but which are too light colored to be serviceable. All that I have ever colored have faded right out.—Mrs. G. C.

There are cotton dyes that are supposed to hold color. The Putnam Dyes for cotton are good. The dye that is sold for wool should not be used for cotton or silk, each has its own peculiar quality. Follow the directions carefully. Rit or Tintex will fade in washing.

DRESS TO THE SHOE TOPS

I will also enlist in Dorothy's company for short skirts. I like them wide enough so one may take an ordinary step comfortably. Not short enough to show the knee, about to the shoe tops is a good length.—Mother of Six.

SPLENDID SPONGE CAKE

Can be made in five minutes. 2 well-eaten eggs, 1 cup of flour, 1 cup of sugar, 1 teaspoon baking powder. Mix, beat well, then 1-2 cup of hot sweet milk. Can be baked for cup cakes if liked.

Johnny Cake

1 cup corn meal, 1 cup flour, 1-2 cup sugar, 2 teaspoons baking powder, a pinch of salt, then add 1 egg, 1 cup of sweet milk, 2 tablespoons melted butter and bake.—W. W. S.

SEEDS APPRECIATED

Will you kindly allow me to thank those who so generously donated the packages of pumpkin seed in response to my request in the M. B. F. of August 19th? Could all who sent them have seen the gladness, mingled with tears in the eyes of the old lady who is eighty years old, they would have been amply repaid. May He who watches over all and rewards, send His blessing to each one whose thoughtfulness helped to place another bright spot in the life of one less fortunate than ourselves.—Lucille Shultz, 1160 Reed Place, Detroit, Mich.

The Children's Hour

Dear Uncle Ned—I thought I would write to you and make a suggestion that I believe would help to make the Children's Hour more interesting to the children who read the Business Farmer.. I suggest that you establish a "Nature Study" department as a part of the Children's Hour. By this I mean a department to which the children may send questions about birds and flowers. There would be a picture and description of one Michigan bird in each issue. I think this would greatly increase interest in the children's department. What do some of the boys and girls think of this plan?—Harold Oatley, Mesick, Mich.

DEAR Nieces and Nephews: What do you think of Harold's suggestion? I think it is very good and would be pleased to follow it were it not for the fact that shortage of space forbids my publishing a picture and description of a Michigan bird in each issue. However, I would be pleased to establish a department to which you could send questions, not only about birds and flowers but about everything, and I would secure answers to them if they were possible to get. There are departments in M. B. F. that your papas and mammas write to when they have questions they wish answered so why shouldn't there be one to which you could send your problems? There should be and as soon as I receive the first question I shall start it. Who will be the first to ask a question?

Harold has given me a new idea for a contest. Here it is. You like birds don't you? Sit down and write to me, putting down the names of all the birds you know, tell which one you like the best and why, describe it, its habits and write anything else about it that you think will be of interest to your cousins and Uncle Ned. There will be two prizes given away. One to a boy and one to a girl. The girl that sends in the longest list of names and most interesting description will receive a needle case containing about 50 needles of various sizes, a very useful article. And the boy sending in the longest list and best description will receive a pencil case containing 4 pencils, a penholder and a pen point. It is just like the ones I gave away in our story contest a couple of months ago and the winners express themselves well pleased so it is worth working for. The contest closes at 12 o'clock noon, September 30, and all letters received after that date will not be counted in the contest.—UNCLE NED.

OUR BOYS AND GIRLS

Dear Uncle Ned:—I am writing this to thank you for the needle case which I received today. It is a nice case and will certainly come in handy. Well, Uncle Ned, what are you doing these hot days? It certainly is nice on the farm now. I live on a farm about 3 1-2 miles from Elsie. I have six brothers and two sisters. Their names are Erma, Blanche, Harold, George, Frank, Earnest, Willis and Kenneth. I am 15 years old and will be a Junior in high school this year. I am taking music lessons now on the piano and am in the fourth grade in music. Thanking you again for the needle case, I am, your loving niece.—Margaret Cook, Elsie, Mich.

Dear Uncle Ned:—I read with interest the story of John O. Roberts' pet crow; had often heard of their antics and wished I had one. Will tell you a few things about my pet pig.

How her name came to be Nathanuel, I just don't remember. About a year ago her mother died and left her one day old. We had a great time learning her to drink milk. She wouldn't drink out of the dish at first, so we would place a little cloth down in the milk. She would suck on that and finally learned to drink. She grew nicely and soon became a real bother around the dooryard. She seemed aways under foot and would come in the house whenever she got half a chance. She was real cute and we all thought so much of her. One day we thought her time had come. She found a crock of milk that my mother had given the chickens and drank so much that she was nearly dead when we found her; she was bloated up and round just about like a ball. My father was away back in the field working, so my mother took a long-necked bottle and put some soda water and peppermint in it and poured it down her throat, and in a few minutes, pig like, was looking for more sour milk. Now although she weighs 260 lbs. and is the proud mother of eight baby pigs, she is no less a pet. Would like to hear from some girl or boy that has tried raising pigs for pets. —Fleeta Burch, age 11, Dryden, Mich.

Dear Boys and Girls:—As I have written before and had you all guess my age and birthday, I thought I would write and tell you, as many did not guess correctly. I am fourteen years old and my birthday is the sixth of December. I also wish to thank the many boys and girls that wrote me such interesting letters. I am sending the names of all who wrote, so look for yours:

Ruth Slack, Madalene Jodloska, Lena Ables, Merril Williams, Carl Arnold, Evelyn Otter, Wilma Olmstead, Eleanor Newman, Helen M. Haviland, Meriam Ross, Herbert Clark, Harry A. Barnes, Frederic Webster, Mrs. Maurice Lenters, Myrtle Bird, Ella Wright, Claude Conklin, Halcetia Currier, Josephine Lednicky, Basil Armstrong, Rose Lorney, Blanche King, Grace L. Fowler, Edna McIntyre, Ruth L. Brown, Berniece Thompson. (I lost your address Berniece and I wish you would send it to me).

Here are the ones that guessed both my age and birthday correct: Frederic Webster, Merril Williams and Claude Conklin. All three will get an individual picture of myself, while the rest will receive one altogether, which I am going to send to Uncle Ned to be put on the Boys' and Girls' page, if he will. I would like to know if Halcetia is still at Algonac. (Please drop me a postal). Everyone may write again, and I am sorry that I could not answer all of those nice letters. I enjoyed them all very much. How many of you passed the eighth grade that took the exams? I did. I have been sick for a couple of weeks, but am feeling fine now. As ever, your friend, Loweta B. Loper, Gregory, Mich., R. R. 1.

Dear Uncle Ned:—May I enter your merry circle? I love to read the letters of the boys and girls of the M. B. F. I like to roam and wander around in the woods and get butterflies and bugs. Did you ever watch the caterpillar make his nest for the winter? It is like a coffin and is called a cocoon. In the spring he comes out a beautiful butterfly or moth. He lives a gay life but only for a few days. Do you boys and girls like to watch nature's wonderful works? How beautiful everything comes out in the spring after its white blanket of snow is laid aside. Fall is very pretty too and I like to watch the leaves change from green to their beautiful colors.

I have lived here in Michigan about four years. I came from the State of Washington, from the wonderful west. We lived about 24 miles from the seashore. It is wonderful to go and see the tide go out and see some of the sunfish that are left behind. They are a very lazy kind of fish. Their mouth grows around to one side because they are too azy to swim straight, and some are left on the shore because they are too lazy to swim out with the tide. There is another kind of fish called Star Fish. It is shaped like a star and its color is brown. It does not look like a fish, you cannot see that they have eyes or a mouth. I cannot explain how they look very well. They can be dried and they will keep a long time. I must close with best wishes for the future success of the M. B. F. Your loving niece. P. S.—I would like to have some of the boys and girls write to me and I will answer all letters I receive.—Ilah Hemminger, Blanchard, Mich., R. 1.

Dear Uncle Ned and Cousins:—May I join your merry circle? I just finished reading the letters from the boys and girls which I like very much. I lived in the State of Washington until about four years ago. The west is a very beautiful country. We lived about a mile from the Skagit River. It is a very large and swift river. It is fed from the mountains and when the Schnook winds blow they melt the snow on the mountains and sometimes cause the river to overflow its banks causing floods that are very destructful to homes. One day we crossed the river on a ferry boat and saw a large kingfisher catching fish. He would fly to a tree with his fish and hit the head of the fish against a knot on the tree to kill it. There are some giant trees there also. Some of the stumps are so large that campers can stay overnight in the ones that have been hollowed out. It is fun to be in a western logging camp and watch the donkey engines pull the big logs to the saw mill. It is fun to go to the beach when the tide is out, and dig clams and find all kinds of curious fish and shells.

There was a mountain near our place that had Washington's hatchet on the very peak. We could see Mt. Baker from where we lived. It had snow on it the year around. It was also a volcanic mountain that smoked most all the time. We had a nice trip coming to Michigan. We crossed the Rocky Mountains, and when we got above the clouds and looked down it looked almost like a lake. There are many wonderful things in Washington but there is just as many wonderful things in Michigan. I could write lots more but I am using so much space. I would like to hear from the boys and girls. I will answer all letters I receive. Your loving niece,—Lelah Bain, Morley, Mich.

Dear Uncle Ned:—I received the prize all O. K. as you promised and I thank you very much. I wish all the other 115 could have received prizes also. I am going to join th next contest. Also I wish to join your merry circle which I have neglected for some time.—Deane Miller, Shepherd, Mich.

Dear Uncle Ned:—May I join your merry circle? I live on a farm of 160 acres. I got through the 8th grade two years ago and all the boys and girls that guess my right age will receive a nice long letter. I must close with love to all. Your loving niece.—Hazel Inman, Fulton, Mich., Route 1.

Dear Uncle Ned:—How are you? I am fine. I am a farmer girl. I went to Sunday school last Sunday. I am eight years old. I have one sister three year's old. With love to Uncle Ned and Cousins.—Leeta Lorne Copeland, Sherwood, Mich.

THE SIGN ROWENA OF QUALITY

Lily White

"The Flour the Best Cooks Use"

Bakes Delicious Breads

HOW TO MAKE MILK BREAD

3 quarts of Lily White Flour, 3 pints of lukewarm milk, 1 cake of Fleischmann's yeast. Set in morning in warm place and rise until light. 3 teaspoons of salt, 1 tablespoon of sugar, 1 tablespoon of melted butter or lard. Mix with Lily White Flour until stiff, or from 20 to 25 minutes. Set in warm place and let rise until light. Make in loaves and work each loaf from six to eight minutes. Set in warm place until light. When light take warm milk and sugar and put over top. Keep good fire and bake slow one hour and when baked wash over again to make nice smooth brown crust.

Look for the ROWENA trade-mark on the sack

All that you hope for in a good flour you will find in Lily White Flour. It bakes delicious bread —bread that is fine of texture, light, very tasty and wholesome.

Bread baked of Lily White Flour is good bread and good to eat.

Reasons why you should use

Lily White

REASON No. 2

Made of America's Finest Wheat

This grain is Michigan Red Winter—the best flavored wheat grown in America—properly blended with the choicest grades of hard. The wheat is thoroughly washed, cleaned five times and scoured three times before going to the rolls for the first break. Thus every particle of dirt is eliminated from the grain and doesn't get into the flour or interfere in any way with the color or flavor of the bread.

One of Our Customers Saved $120.00 On His Windsor Pipeless Furnace

Read this letter from one of the thousands of customers who now have *Windsor Pipeless Furnaces* in their homes:

Improved WINDSOR 69.00 as illustrated

June 11, 1922.

The Windsor Pipeless furnace that I bought of you last December is certainly all you claim for it. In the first place, I saved $120 in price. Second, it gives you all the heat there is in coal. Third, anyone can install it. If I were buying another furnace it would be a Windsor Pipeless. None better that I know of.

I. J. AUGUSTINE,
615 North 17th Street East,
Cedar Rapids, Iowa.

Keep Pace With Evolution

DARWIN declared that the human race was merely an evolution of the monkey tribe. Some people agree with him. Others do not.

But there is no denying that even within the memory of most of us, there has been considerable of an evolution in the human mode of living. And today, this evolution is buzzing along faster than ever.

There has never been a time when conditions changed so rapidly—when live bettered itself so consistently. New comforts and conveniences are coming in all the time. And the rapidity with which they are invented and put before us vitally affects us all.

To take advantage of these things, you must keep yourself informed. You must know not only what they are, but also how much they cost and where and how to get them. The only way you can know this is to be a regular reader of the advertisements.

Advertisements tell of all that the world is doing to make you more comfortable, your work easier, your methods better, your clothing and food problems less irksome. They tell you how you can save time—and effort—and money in the selection of the things that make life worth while.

Advertisements are interesting, instructive and highly profitable to you.

Keep in touch with modern evolution by reading the advertisements.

THE EXPERIENCE POOL

Bring your everyday problems in and get the experience of other farmers. Questions addressed to this department are published here and answered by you, our readers, who are graduates of the School of Hard Knocks and who have their diplomas from the College of Experience. If you don't want our editor's advice or an expert's advice, but just plain, everyday business farmers' advice, send in your question here. We will publish one each week. If you can answer the other fellow's question, please do so, he may answer one of yours some day! Address Experience Pool, care The Business Farmer, Mt. Clemens, Mich.

CURE FOR SWEENEY

MR. Edward Moser of Mt. Clemens read of the account in the last issue, of the subscriber who told of his horse having been sweeneyed and told the editor of a simple cure which, he says, he and his father before him have performed many times with entire success.

To determine whether a horse is so affected let him step over a piece of limb, if he drags or swings a foot instead of lifting it, he is sweeneyed. Then get a whole skein of white floss, procure a steel needle with an eye long enough to receive the whole skein and with a curved point like an upholsterer's needle. Puncture the breasts of the horse about two inches from the center and draw the skein through, draw out the needle and tie the ends. Leave the ends and in time the wounds will close and the silk drop out. It may take several weeks but a complete cure will have been made. He says he has never known it to fail.

VEAL IS CONDEMNED

Would like to have your opinion about the Detroit Beef Co., commission merchants in regards to honesty. Looks to me they were crooked, will state the case to you as clear as I can. I shipped them 3 dressed veal calves, the first one weighed 101 pounds and I received $11.23 and was satisfied. The second one weighed 84 pounds and I received $6.77. The last one weighed 94 pounds. They sent me a slip from the Department of Health stating it was sour. The slip shows it was delivered the next day and I know of three farmers near here that received slips stating their calves were sour. Am sending the papers and a check for 4 cents for the last calf.—W. J. B., Le Roy, Mich.

The company you mention is one of the most reliable commission firms in Detroit. The fact that they sent you the Department of Health's condemnation slip would seem to be a proof of their honesty. The calves might not have been in prime condition when shipped and might have encountered some hot weather before reaching Detroit. You must remember that weather conditions in Detroit are different than they are in Le Roy, and that it might be very hot in Detroit on the same day it was moderately warm in your section.

The Detroit Health Department has issued some regulations to guide farmers in shipping meat carcasses which it will pay all shippers to observe. They are as follows:

"(a) All trucks, wagon beds, containers, receptacles, wagon covers and food products therein shall be kept clean, sanitary and well protected.

"(b) Carcasses of cattle shall be accompanied by the hearts, livers and lungs and tongues with their glands intact and so numbered or arranged that the parts can be identified with the carcass from which the parts have been removed. This pertains to carcasses brought into the city from the country either by the farmer in person or through the Railway Express.

"(c) Sheep carcasses shall be accompanied by the hearts, livers and lungs attached by their natural attachments. The entire pelt of sheep including skin (stockings) on the extremities shall be removed.

"(d) Calf carcasses shall be accompanied by the hearts, livers and lungs attached by their natural attachments or in separate receptacles and so marked or labeled that they may be identified with the carcasses from which they have been removed. The entire intestinal tract shall be removed and the thoracic cavity well drained, with the umbilical cord intact and the skin shall be absolutely clean. This also pertains to carcasses shipped into the city from the country.

"(e) Swine carcasses shall be accompanied by the hearts, livers, lungs and heads attached by their natural attachments or if the carcasses are split the heads shall be so marked as to be identified with the carcass from which same has been removed, if the carcases is unsplit it shall be entirely opened from "hitch bone" to angle of jaws to facilitate inspection, and this opening so arranged as to be maintained after carcass is chilled. The skin shall be free from all hair and scruff.

"This Department requires the incision in the necks be spread at the time of slaughter in order to facilitate the inspection of heads of chilled and frozen carcasses at market points.

"(f) The removal from any carcass or organ, of tissue that may be diseased, such as abscesses, adhesions or other abnormal or diseased conditions for the purpose of deceiving an inspector will be regarded as a misdemeanor under these regulations and will necessitate the confiscation and condemnation of the entire carcass.

"(g) The State Law provides that all calves shall be at least four weeks of age before being slaughtered for food purposes.

"(h) No retail market is permitted to have in their possession or offer for sale any unstamped or uninspested meats."

Meats are condemned which, when offered for sale are unwholesome, diseased, loathsome or otherwise unfit for human food; or are immature or undeveloped, contaminated by an excessive amount of dirt, manure, etc.

The inspector makes a physical examination of all carcasses and if any of the above conditions are found, condemnation of the entire carcass or parts effected is necessary. If the inspector is in doubt regarding a disease condition, the carcass is retained and a pathological examination in the laboratory is then made.—H. H. Sparhawk, Chief Veterinarian.

THINGS TO BE DONE IN SEPTEMBER

Fill the Silo—When two-thirds of the kernels are dented. Tramp well, seal the doors tightly with paper, cover the top with cut straw or stover and wet down. Keep out of a partially filled silo until after the blower has started. The gas caused by fermentation is dangerous. Start feeding silage immediately if pasture is short.

Pick the Seed Corn—Well dented ears from healthful stalks should be selected. Dry them in the shade with good circulation of air.

Hogging Down Corn—Hogs make faster and more efficient gains when turned into a cornfield to harvest the corn than when it is thrown over the fence to them.

Green Feeds Make Milk—Green corn fodder, alfalfa, Sudan grass or other green crops fed to the milk cows daily will do much to prevent the usual decrease in dairy production at this time of the year. Cows that receive a green succulent ration will produce more milk than those kept on dry feed or short pastures. Some farmers make it a practice to sow certain crops in the spring at such times as to give them continuous and liberal supply of green fresh feed from the fields in late summer and early fall. Try the corn cure for short pastures.

Every man suspects that he can have as much pleasure talking about owning an automobile as having one, and after buying one he knows he has more.—Toledo Bade.

NEW LAMP BURNS 94% AIR

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94 per cent air and 6 per cent common kerosene (coal-oil).

The inventor, A. R. Johnson, 609 W. Lake St., Chicago, is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month. (Adv.)

MICHIGAN 1922 STATE FAIR GREATEST EVER

(Continued from page 4)

to him. At the same time the state's sponsorship undoubtedly had an effect in advertising the fair and perhaps adding to its popularity among certain classes of people. Fears that were expressed in some quarters that state control would encourage reckless spending and result in an additional burden upon the taxpayers have been quieted. In spite of a reduction of one-third in the price of admission the net profits of the 1922 fair exceed those of 1921 by several thousand dollars, so that instead of being a financial burden to the state the Fair is more likely to prove a financial asset.

State Fair Awards

Judging in the livestock divisions presented a good many difficulties because of the number and excellence of the exhibits. Among the prize winners in the Holstein Frisian classes we note such well-known names as John A. Rinke of Warren; John C. Buth, of Grand Rapids; John H. Winn, of Rochester; Loeb Farms, of Charlevoix; Peter Bogart & Sons, of Munger; W. M. Schoof, Washington; A. R. Black & Sons, Lansing; B. S. Gier, Lansing; Lakefield Farms, Clarkston; E. M. Bayne, and others. The Lenawee county boys' and girls' club and the Milford and Hillsdale calf club ran away with some of the prizes in this division.

In the fat steer division which was added last year and in which Mr. E. A. Beamer of Blissfield took most of the prizes, W. E. Scripps took first prize for fat steer over one year and under two, and the Sanders farm at Eaton Rapids took first on fat steer over six months and under one year. R. Bimber & Co., of Battle Creek was awarded first prize for its carload of 15 steers; Lenawee county boys' and girls' clubs were second; E. R. Porter, Blissfield, third; fourth, Beamer & Porter, Blissfield, T. F. B. Sotham & Sons, St. Clair, fifth.

In the Percheron Horse class we find the first, second and third prize winners to contain the names of Chas. Bray, Okemos; Loeb Farms, Charlevoix; Michigan Agricultural College, Maryvale Farms, Youngstown, O., and Highland Farms, Greensburg, Pa., and Woodside Farms, Sandusky, O., with most of the first and second honors going to the out of staters.

In the Belgian class the Owosso Sugar Company and W. E. Scripps had everything about their own way. The Owosso firm has exhibited thoroughbred Belgians at the State Fair for a number of years and always took away a goodly share of the money. Following last year's show Mr. Scripps went in pretty heavily for Belgians and this is the first year he has shown at the State Fair. Scripps and the Owosso firm just about divided first and second honors in this class, with Loeb Farms at Charlevoix and the M. A. C. dividing third honors.

In the Shropshire sheep contest Armstrong Bros., of Fowlerville, Mich., Herbert E. Powell & Son of Ionia, Mich.; C. Middleton of Clayton, Mich.; O. W. Soper, of Fowlerville and Hamer & Lockwood of Lewiston, O., were the principal contenders with Middleton and Powell taking most of the first and second awards.

In the Hampshire division A. R. Hamilton, of Johnstown, Pa., took nearly all the first prizes and J. B. Welch of Ionia, Mich., and C. L. Mitchell of Lucas, the principal recipients divided the rest of the honors with L. C. Kelley, of Plymouth.

In the American Merino class the out of the state exhibitors had a little stiffer competition from such Michigan breeders as Calhoon Bros., of Bronson; E. E. Nye, of Jonesville, Carl Moeckel, of Munith.

A MICHIGAN APRICOT ORCHARD

(Continued from page 9)

quality good, a favorite for canning, but not large.

Early Montgomery: Large, fine quality, tree ungainly unless carefully and constantly pruned, A showy fruit, desirable for dessert.

Alexis: Similar to Alexander.

Roal: Vigorous, productive tree. The fruit has a delicate skin, should be picked before fully ripe. Good flavor.

Peach: Very large and showy, but sour.

White Beauty: Light colored, flesh and skin nearly white, sweet, best for dessert fruit.

These varieties begin to bear when from five to seven years old, except the Alexander, which waits till about 12. This is the one serious objection to the Alexander, but it is then so productive that it is well worth waiting the extra years.

Mr. La Male's experience has gone far to prove that the apricot can be grown profitably in Monroe County. He has the trees, he has had the fruit and has excellent prospects for the future. The conditions with which he has had to deal are not exceptionally good. Many localities are better protected against late spring frosts and have a soil as well fitted for the purpose.

While this is the only orchard we have found, an occassionally tree is not uncommon. On our farm in Oakland county there are six which have stood for more than 30 years and are still bearing. They are on a hill, when the atmospheric drainage is good. The soil is a heavy clay. These trees the owner says, bear annually, while one season in three there is a heavy crop. Generally, the tree seems to be long-lived and fairly productive if set in the proper kind of a place.

To be sure the wise ones shake their heads and say the apricot is not suited to our climate, but that has happened before. Granted that the tree be too tender for the climate. If it is thirty or forty years in dying and all the time bearing fruit, what more should it do?

Apple maggots or railroad worms are a serious pest in New England. They are not yet common in Michigan, though reported at several places in the state. It tunnels about in the flesh of the fruit, ruining it for food, except for those who can stand it to eat worms and all. The insect stays in the apple till it falls then crawls out and into the ground, when it propates and remains till the following summer. Spraying does no good. The best remedy is to destroy the pest before it has left the fruit, preferably by feeding to animals. Fortunately, it is not easily distributed. It may be limited for years to one tree in an orchard.

TIME AIN'T CHANGED MUCH AFTER ALL

(Continued from page 13)

an wear ear rings an' the gossips begun to wag their tongues harder an say "The gals wasn't so brassy when we wuz young, what's the world comin' to?"

Once in a while some one would remark that girls are about the same from one generation to another but the talk kept right on.

An' then Elmiry an' me got to thinkin'. The ones that had the most to say about bangs an' ear rings had such scraggly hair they couldn't wear bangs 'er else their ears was so big they couldn't wear ear rings. An' if you'll notice it's the same way with short skirts. Them that has the most to say has bow legs or skinny legs an' they have to cover 'em up or git laughed at. An so they watch the pretty young girls with short skirts an' bobbed hair an' they turn green with envy an then they sit down an' write to Mr. Editor about the shameless short skirts. It's like fly time, the buzz don't amount to much if you can keep away from the dirt.

And our girls will keep on wearin' short skirts and bobbin their hair an the ugly flies will keep on buzzin, but I thank goodness most of our girls will be as sweet an good as ever when the flies have winter killed. Love from—Aunt Betsy, St. Louis, Mich.

The Grange Patron republished a cartoon in its last issue from a Chicago paper which well illustrates the point you have made. It showed the daughter of a home being fitted with a new gown, the neck of which reveals a shameless display of the young lady's neck almost as far down as the adam's apple. The other members of the family stand around viewing the dress with critical eyes and commenting upon the neck display. Mother is of the opinion that the neck is too low but the young miss remonstrates, and says that all the girls of her Endeavor class are wearing 'em even lower. And, of course, daughter's argument prevails and thus another step is taken in the evolution of the modern dress.—Editor.

A Partner for the Boys, the Women, and for the Man Who Calls Himself Head of the House

INTERNATIONAL—the popular kerosene engine, is as faithful and willing a helper as you can find in a life-time of searching. One that neither grumbles nor shirks but just chugs away all day and night, if need be, and doesn't ask for over-time pay.

An engine that pleases the boy and the hired man because it does the pumping and keeps the tank filled with clean, fresh water when the weather is hottest and the stock most in need of water.

An engine that pleases the women folks—by taking the hard work out of wash day and by running the churn, cream separator, etc.

An engine that the family likes because it saws wood, grinds feed, shells corn, runs the fanning mill, and handles a dozen other jobs. It does these easier, faster, and better than you can do them by hand.

The smaller sizes, the powerful 1½ and 3-horse power engines, are the most popular for many of these jobs. If you need more power, the International 6 or 10 horse power sizes will supply plenty of it.

"The Farm Paper of Service"
Tell Your Friends About It

BOOTH TARKINGTON'S FAMOUS $1,000 PRIZE STORY FOR ONLY 15 CENTS

You will wonder how even so brilliant a writer as Booth Tarkington could put the joy, the pathos, the tears, the emotion or develop the startling situations, the surprising truths, the romance, the scintillating repartee, the exciting scenes that made hundreds of thousands of people pay $2 a copy for his famous $1,000 Pulitzer prize story "Alice Adams." The PATHFINDER, America's fastest growing illustrated news and story weekly for the whole family, will publish this wonderful story of present day American life complete in 13 issues, beginning Sept. 23. The PATHFINDER gives each week an unequaled digest of the world's doings, including affairs at Washington. It is chuck full of just the kind of reading you want. Best serial and short stories you can find anywhere. Stunts, tricks and amusements for the children. You can get this splendid paper on trial 13 weeks, including the "Alice Adams" story complete, for 15 cents in coin or stamps. You can also order for your friends at 15 cents each; but send at once so as not to miss the start of the story. THE PATHFINDER, 465 Langdon Sta., Washington, D. C.

BREEDERS DIRECTORY

(SPECIAL ADVERTISING RATES under this heading to honest breeders of live stock and poultry will be sent on request. Better still write out what you have to offer, let us put it in type, show you a proof and tell you what it will cost for 13, 26 or 52 times. You can change size of ad. or copy as often as you wish. Copy or changes must be received one week before date of issue. Breeders' Auction Sales advertised here at special low rates: ask for them. Write today!) AN AD IN THE M. B. F. WILL
DO IT

DAIRY and LIVESTOCK

HAVE YOU A SILO?

THE above question, of course, is addressed to the stock-keeper. If given in the negative his answer would show reasons as varied as the country is wide.

There are in round numbers five hundred thousand silos on farms in the United States. They are found in every state in the Union and in nearly every country. This proves that the silo can be used successfully in practically all parts of the country. The man who is keeping live stock can well afford to devote some thought and study to this silo question.

The silo is most numerous in the leading dairy states, but many states and communities are backward in taking advantage of this economic means of feeding cattle. Wisconsin ranks first as a silo state with close to eighty-five thousand on one hundred and ninety thousand farms. New York is second with fifty thousand on about the same number of farms. Still those familiar with conditions in Wisconsin and New York admit that they are less than half supplied, and that even three times more silos could be put into valuable and economic use. Great dairy states like Minnesota, Iowa and Ohio are very short of silos compared with Wisconsin and New York. Then there are many other states east and west, north and south that do not have one where they really need ten.

Silage has been so thoroly tested out from an economic feeding standpoint that most of our Experiment Stations have considered it a closed question. There are few states in the Union that have not printed bulletins and feeding tests all of which show that silage is an economic feed for milk, beef and mutton. As to the amount it saves the feeder, no definite figures can be given, for prices of feed, labor and commodities vary with each year and in every state. It is safe, however, to conclude from the tests that have been made that at least ten cents can be saved on a pound of butter, forty cents on one hundred pounds of milk and one dollar on one hundred pounds of beef. With such a saving surely this subject is a live one for every stock-keeper in this country.

Silage for young stock and growing animals is quite as valuable and important as it is for those that are producing milk or beef. Horses at rest, brood mares, colts and mules can be fed silage with economy. The five hundred thousand silo users of this country are perhaps the best experiment relating to the value and economy of the silo, for they have tested out its worth and know of its value and advantages on the average farm. The dairy industry has prospered during the past few years, and many farmers are increasing their herds. They will find the most expensive part of the business is that invested in the feed bill; in other words, to feed a cow is the most expensive item connected with the business and the silo is one of the first matters to consider for economical production and to give a succulent nutritious ration that can be drawn upon any time during the year.

The silo plays an important part in the process of turning the cheap forages of the farm into condensed marketable produce; and especially at this time of high transportation costs we will do well to engage in a line of farming that will condense our raw materials. We are especially interested in shipping a finished product, especially if the market demand is favorable. The silo has come and is still coming to the farmer who aims to utilize his products to the best advantage, who wishes to get the most from his acres and prevent a waste of roughage which has been so expensive in past years.

The silo is answering the pasture problem, for silage is the cheapest source of pasture. It is a labor-saving device, for it offers at all seasons a supply of forage close at hand. It can be easily and quickly transported to bunk or manger, and is relished by practically all classes of stock. It is rich in carbo-hydrates, it is succulent, and makes a balance for high protein feeds or fodder.

The stock-keeper will do well to figure carefully the answer of the question "Have you a silo?" He can secure plenty of information from silo owners. Our Experiment Stations can furnish him volumes of data, and there are many other sources from which to draw reliable figures. Too often the man who is considering this subject listens to the man who does not own a silo. From an investment standpoint it will figure out close to a hundred per cent under many farm conditions. Even if it figured ten would it not be a wise move?—A. L. Haecker.

VETERINARY DEPARTMENT

COW LEAKS MILK

We have a cow that leaks milk from all teats long before milking time, especially when she walks. She can only hold about five quarts in her udder. Is there anything we can do for her to stop this? —F. W. W., Charlevoix, Mich.

It may be advisable to milk the cow three times a day if the quantity of milk that she gives will pay to do this. On the other hand, the matter can be helped considerably by applying a drop of collodion to the tip of each teat after milking. This forms a skin like clot over the end of the teat and will help to hold the milk in the cow's udder. Collodion may be purchased at any drug store.—J. E. Burnett, Associate Professor of Dairy Husbandry, M. A. C.

CALL VETERINARIAN

I have a Holstein cow four and one-half years old that has a cluster of warts on one of her teats, and it started small about the size of a nickle, when we purchased her about five months ago, and now it is the size of a silver dollar and seems to keep her from giving much milk out of the same teat. Also notice a ring of single warts coming around her neck and in line down her back.—R. C. D., Rose City, Mich.

I cannot prescribe a treatment for the above case without seeing the animal and making a thorough examination. I would advise that you call a competent veterinarian to make a diagnosis and take charge of the case.—Edw. K. Sales, Asst. Prof. of Surg. and Med., M. A. C.

RECTUM TROUBLE

I have a three-month-old sow pig which has a portion of the rectum protruding about 2 inches. What may I do to remedy this condition? For some time I have noticed that this pig had considerable difficulty in stooling but gave the matter no serious attention. Have been feeding her plenty of swill with lots of middlings added. The rectum protruding looks very similar to cases of piles in the human where the same symptoms are present. The pig has only been in this condition for four or five days now. Hot weather with flies present are liable to bring infection unless something can be done to return the rectum to its proper place. It is now quite irritated. Am trying to keep pig in a very clean place so as to prevent infection. May I have your advice as to best method of treatment at a very early date?—H. D. G., Burlington, Mich.

This is a very troublesome condition, in recent cases, before the mucous membrane of the gut has become riable and easily torn. The parts should be bathed freely with hot water to which may be added some antiseptic such as Creolin or Chinosel or if exceedingly congested, they may be sprayed with a solution of adrenalin chlorid, one to ten thousand. The gut is then cautiously manipulated with the fingers and the prolapsed portion replaced, the rectum being smoothed out into its normal position with the middle finger. A stitch or two should then be placed across the anus to retain the bowel, or a purse-string suture inserted for the same object. Prolapse of the rectum is very prone to recurrence, and if the above treatment fails, amputation by a qualified veterinary will very likely be necessary to obtain permanent relief.

DRYING MILK CANS STOPS GROWTH OF BACTERIA

BECAUSE bacteria increase in numbers at such an astonishing rate when conditions are favorable, it is necessary not only to kill as many of them as possible in order to keep dairy utensils clean and insure a good product; but utensils must be kept dry, so that the few organisms that are left after sterilization will not multiply greatly. In addition to the proper temperature it is necessary that moisture be present for these germs to grow, but only a very thin film of water is needed.

It is particularly important that milk cans be thoroughly dried and kept dry until used again, says the United States Department of Agriculture. In addition, they must be protected from contamination with dust, other dirt, and flies. Experiments carried on by the department show that in milk cans which were covered before being dried the number of bacteria increased 700 times in 24 hours.

To secure rapid drying the cans must be sterilized with steam or boiling water. If a sterilizer is used the cans may be left in it until time for them to be used again, but there must be some means of ventilation to carry off the moisture. Cans may be set on a rack to dry, but they should be protected from flies and dust, preferably in a well screened milk house.

WHY FOLKS PREFER CLOSED CARS

"THE old De Witt Clinton railroad train had open cars, but who would think of traveling on today's railroads in open cars," according to Colin Campbell, General Sales Manager, Chevrolet Motor Company.

"Closed automobiles are instantly adaptable to changes in weather or to the comfort of the passengers. They are cleaner, have a home-like atmosphere, finer appearance, and in general make the most practical means for passenger transportation.

"Confident that the correction of the price differential would produce the volume to justify it, Chevrolet Motor Company priced its 1922 line accordingly. The results have proved the wisdom of this policy. The proportion of our closed car business to our total sales has been increasing so rapidly, that we anticipate it will represent more than fifty percent within a year."

BARUCH ADVISES FARM BLOC ON RURAL FINANCES

(Continued from page 3)

of the Federal Farm Loan Board to finance cattle feeding and marketing, and all the bills would amend the Federal Reserve Act so that that system would co-operate with the new instrumentality.

Mr. Baruch gave it as his opinion that any of the four bills would give a substantial measure of relief, but was of the opinion that the measure finally decided upon should provide three sorts of loans and correspondingly three sorts of short time debentures from the sale of which would be obtained the funds for carrying the loans, which might amount to a great many times the capital of the proposed institution) viz: (1) Loans for facilitating the marketing of agricultural products in an orderly manner and at discretion, (2) livestock loans, and (3) loans for production purposes. The last, he thought, should be based on the united credit of local associations of farmers, so that all the members of the group would indorse the notes of each. He was confident that there would be a wide and ready market for debentures or notes running from six months to three years because the security would be unsurpassed. Not only would the money centers readily absorb such instruments but he was convinced that there would be a wide market for them in the rural communities themselves. Regarding the proposed Federal Reserve Act amendments Mr. Baruch while favoring some of them said he thought it would be unwise to give farm paper a longer maturity period than six months which is the present limit. Accommodations beyond six months could come from debenture funds.

The trouble with agricultural financing at present, Mr. Baruch told the committee, was that it was so precarious and short-timed that it left the farmer entirely at the mercy of the money lender or credit giver and deprived him of freedom of action in marketing his crops in an orderly and sagacious manner. Adequate storage facilities and impartial grading and inspection were important adjuncts to a suitable credit system; and storage could be provided by public agencies if private agencies did not come forward, which they likely would do once credit was provided. Mr. Baruch also reminded the committee that it was not proposed to do away with any of the present factors in rural financing but merely to create a supplemental financial agency which would assist them to function efficiently and might possibly so influence existing facilities that they would be found sufficient to provide the farmer with ample working capital at reasonable rates of interest and for suitable terms without much activity by the proposed governmental agency. But the main thing was to create some such agency and do it at once.

Roy Snyder, Studebaker Sales Agent,

Exonerated by Coroner's Jury for Death of Mary June Reed

Roy Snyder, Studebaker Sales Agent of Howell, Michigan, in coming from South Bend with a new car, came through Battle Creek on Thursday, August 10. He was meeting a street car on Maple avenue when Mary June Reed, seven years of age, ran back of the street car directly in the path of the Snyder automobile. He turned his car quickly to the right but as the child was only a foot and a half from the automobile he could not avoid running over her. She lived half an hour without regaining consciousness.

Mr. Snyder went to the police department and asked for an investigation and notified the Howell Insurance Company who had a representative in Battle Creek before eight o'clock. Witnesses were interviewed and the facts presented to the police department so they released Mr. Snyder.

However, an attorney started suit for $25,000 but they did not get service upon Mr. Snyder. The evidence brought was so clear that Mr. Robb and Mr. Howlett concluded that Mr. Snyder was not needed at the inquest and by staying outside of the county he would avoid the service of the summons. On Tuesday, August 15, after listening to seven disinterested witnesses in which it appeared that Roy Snyder was traveling at about eight miles an hour and the child ran in front of his car only about a foot and a half away, the coroner's verdict was an unavoidable accident.

Mr. Snyder was greatly relieved at this verdict and he has expressed his appreciation for the service received from the insurance company. Under the present conditions no one can tell when he will have an accident and even though one is innocent of any blame it requires an investigation and much expense. The insurance company has an organization to assist its policy holders and to give them service that is appreciated when those serious accidents occur.

The regular policy covers not only fire and theft to the value of the car not exceeding $1,000, but it also covers liability, damages not exceeding $5,000. By liability is meant the damage that you do to the property of other people, like running into another automobile or buggy, or breaking a plate glass window, or the injuries that you do to other people, by running them down with your automobile, causing personal injury or death.

Up to date every case that the Howell Company has been interested in has been settled for less than $5,000. All of its agents, adjusters and attorneys are at your command in case of serious accident.

Poultry for Profit

IMPROVED METHOD OF PACKING EGGS

A SAVING of from 50 to 75 per cent in damage to eggs in transit amounts to a very large sum in one season, particularly if several hundred cars are involved. When this saving can be created at an additional expense of only a few cents to the case, entirely by proper packing, the egg producers of the country should immediately be interested. Damage to egg shipments is preventable to such a large extent under the best modern conditions that experiment stations, the great shipping companies everywhere and the farmers generally are co-operating with the railroads in a nation-wide effort to shut off the losses which have been a source of so much expense and irritation in the past.

The American Railway Association through its freight claim prevention department believes that the answer to the egg breakage problem has been found in the excelsior pad. This is not a trade name. The pad, as its name indicates, is made of ordinary excelsior but in such a way that it is very nearly perfect in preventing damage as contrasted with loose excelsior. Egg damage and subsequent claims for losses have grown to such proportions that specialists were assigned to provide a remedy. It was determined that the chief cause of breakage of eggs in transit was the loose pack which allowed the fillers to shift and shuffle about in the case, then bending or breaking the tips of the fillers and permitting the eggs to come in contact with the sides and ends of the case. Experiments have shown that six pads used in each case, three in each of the two compartments, produced just enough pressure to hold the eggs firmly in place and relieve the pressure on the filler tips. One produce company in Michigan reports that its damage claims in 1920, while loose excelsior was used for packing, amounted to $600, while in 1921, when the pads were used, these claims were reduced to $23.40.

The excelsior pads cost the shipper about one cent a piece or six cents to the case. Produce companies in all parts of the country are reporting a saving from 25 to 80 and even 100 per cent when the six excelsior pads are used, one at the bottom, one at the top and one under the top layer in each side of the case. Some shippers report handling from one to two hundred cars of eggs without any damage whatever under this system of packing.

To insure against the breakage of eggs in transit the American Express Company and the American Railway Association recommend these simple rules:

(1) Use only new standard fillers. A filler is strong enough for one trip only, hence there is no such thing as a "good" second-hand filler. The use of second-hand fillers is prohibited by both the freight and express regulations.

(2) Use 6 four-ounce excelsior pads to the case, one on top, one on bottom and one under top layer of each side. Best results are obtained by not inserting a flat where a pad is used. Do not use loose excelsior in cushioning eggs. More damage occurs in eggs packed with loose excelsior than with any other method of packing. Six pads give much greater protection than four pads, because the latter do not hold fillers firmly in place.

(3) Use only standard cases (preferably new), making sure center board is exactly in center, and see that cases are carefully nailed in accordance with the requirements.

(4) If eggs are shipped in carloads, baled hay, straw or excelsior should be used as buffing to prevent shifting of cases in transit. If dimensions of car permit, the empty space should be equally divided between ends and center of car, and the buffing material rammed in as tight as possible, just as taken from the machine-pressed bale, and such spaces should be completely filled. This cannot be done satisfactorily after the loading has been finished; the buffing should be applied as the loading progresses.

The railway and express authorities say that the extensive adoption of these methods by farmers and carlot shippers throughout the country is reflected in a reduction of about 50 per cent in claims filed this year, compared with last year, when they exceeded a million dollars.

DAIRY CATTLE AND POULTRY IN DUAL EXPOSITION

ON the steady march toward national prosperity two farm animals are making the journey together.

They are the dairy cow and the hen.

On the small farms the casual rural visitor cannot help but see that the major part of the income supporting the average family comes from the barnyard flocks and a few good dairy cows.

Although profits from dairying are much larger with respect to land, labor, feed and year round production as compared to the farm flock, yet as an incidental farm operation, producing a good return, poultry keeping has become prominent in all sections.

When the National Dairy Exposition opens its gates Oct. 7th on the Minnesota State Fair Grounds, the first National Poultry Exposition will be held at the same time, under the management of the National Dairy Association, with Geo. W. Hackett as managing director.

Poultry fanciers and dairymen will join in a common effort to bring before the American public the message of well bred poultry and dairy cattle at this dual exposition. Hens with high egg production records are being entered from all parts of the United States and Canada. Separate classes are arranged for the principal breeds. More than 3,000 birds will be on display.

The decision to hold this poultry show and make it international in scope was reached after many conferences were held in the Twin Cities between poultry leaders of the industry centering in the Northwest.

Agitation for an international show has been evident for a year, but definite action to unite the different poultry interests of the Northwest remained dormant until the possibility of holding a show in connection with the Dairy Exposition became imminent. After that the great dairy institution was returned to the Twin Cities for 1922.

Boys' and girls' club work will receive special attention under the direction of Prof. T. A. Erickson, Minnesota State club leader, who will have junior club teams demonstrating various phases of their work daily.

The Minnesota State Fair board has placed at the disposal of the National Dairy Association the Agricultural Building on the fair grounds for poultry exhibits. The same low fifty cent admission price will hold for both expositions and in addition will admit visitors to "Healthland," the $10,000 health exhibit occupying one entire building, which is being arranged by the National Dairy Association and the National Dairy Council in co-operation with 12 other national health organizations and government boards.

TO SELL FINE HERD OF HOLSTEINS.

One of the best sales of the season here in Michigan will be held at Birmingham on October 18th when Mr. Alexander W. Copland will disperse his entire herd of over fifty head of pure-bred Holsteins at his farm some three miles north and east of the village.

This herd has been built up with great care and expense by Mr. Copland

PLYMOUTH ROCK

BUFF ROCKS—Bronze Turkeys—For 20 years, by J C Clipp & Sons, Bx. M, Saltillo, Ind.

during the past few years and I think it will be agreed by those in attendance at this event that he has been eminently successful in bringing together an exceptionally well bred and good individual lot of cattle.

One of the outstanding features of this offering is twenty-one daughters of King Korndyke Echo Sylvia whose sire is Avon Pontiac Echo, whose performance through his daughters needs no repetition to readers, and whose dam is a ir three year old daughter of Pontiac Korndyke Het Loo, one of the most famous sons of his wonderful sire, Pontiac Korndyke. These heifers are from dams with records up to 28 lbs. from well over 600 lbs. milk and are exceptional in their dairy quality.

Included in the breeding females are daughters of such sires as Pontiac Korndyke Het Loo, King Mengerveld Palmyra Fayne, Crown Pontiac Korndyke (with 26 lbs.) Aristocrat Pontiac and Spring Farm King Pontiac 6th with dams up to 32 lbs butter and over 700 lbs. milk. The females are bred to King Korndyke Echo Sylvia described above, to a son of Sadie Gerben Hengerveld DeKol, the first cow to make 40 lbs under the new rules, that took Grand Championship in the 1921 Brentwood Show, or to a son of King Hengerveld Palmyra Fayne from a 31.80 lb. dam that milked 742 lbs. and 3046 lbs. in 30 days.

These cattle which are under State and Federal supervision will be sold with the usual breeders guarantee and with a 60 to 90 day retest privilege as well as with terms suitable to the purchaser, the terms to be arranged before the sale. Anyone desirous of adding to their herd by introducing the best of blood lines and choice individuals is afforded the opportunity of a lifetime in this sale.

THE HUNTED WOMAN

(Continued from page 6)

good-bye," she said. "Won't you let me thank you—a last time?"

Her voice brought him to himself again. A moment he bent over her hand. A moment he felt its warm, firm pressure in his own. The smile that flashed to his lips was hidden from her as he bowed his blond-gray head.

"Pardon me for the omission," he apologized. "Good-bye—and may luck go with you!"

Their eyes met once more. With another bow he had turned, and was continuing his way. At the door Joanne Gray looked back. He was whistling again. His careless, easy stride was filled with a freedom that seemed to come to her in the breath of the mountains. And then she, too, smiled strangely as she re-entered the tent.

CHAPTER III

IF JOHN ALDOUS had betrayed no visible sign of inward vanquishment he at least was feeling its effect. For years his writings had made him the target for a world of women, and many men. The men he had regarded with indifferent toleration. The women were his life—the "frail and ineffective creatures" who gave spice to his great adventure, and made his days anything but monotonous. He was not unchivalrous. Deep down in his heart—and this was his own secret—he did not even despise women. But he had seen their weaknesses and their frailties as perhaps no other man had ever seen them, and he had written of them as no other man had ever written. This had brought him the condemnation of the host, the admiration of the few. His own personal veneer of antagonism against woman was purely artificial, and yet only a few had guessed it. He had built it up about him as a sort of protection. He called himself "an adventurer in the mysteries of feminism," and to be this successfully he had argued that he must destroy in himself the usual heart-emotions of the sex-man and the animal.

How far he had succeeded in this he himself did not know—until these last moments when he had bid good-bye to Joanne Gray. He confessed that she had found a cleft in his armour, and there was an uneasy thrill in his blood. It was not her beauty alone that had affected him. He had trained himself to look at a beautiful woman as he might have looked at a beautiful flower, confident that if he went beyond the mere admiration of it he would find only burned-out ashes. But in her he had seen something that was more than beauty, something that for a flashing moment had set stirring every molecule in his being. He had felt the desire to rest his hand upon her shining hair!

He turned off into a winding path that led into the thick poplars, restraining an inclination to look back in the direction of the Otto camp. He pulled out the pipe he had dropped into his shirt pocket, filled it with fresh tobacco, and began smoking. As he smoked, his lips wore a quizzical smile, for he was honest enough to give Joanne Gray credit for her triumph. She had awakened a new kind of interest in him—only a passing interest, to be sure—but a new kind for all that. The fact amused him. In a large way he was a humourist—few guessing it, and he fully appreciated the humor of the present situation—that he, John Aldous, touted the world over as a woman-hater, wanted to peer out through the poplar foliage and see that wonderful gold-brown head shining in the sun once more!

He wandered more slowly on his way, wondering with fresh interest what his friends, the women, would say when they read his new book. His title for it was "Mothers." It was to be a tremendous surprise.

Suddenly his face became serious. He faced the sound of a distant phonograph. It was not the phonograph in Quade's place, but that of a rival dealer in soft drinks at the end of the "street." For a moment Aldous hesitated. Then he turned in the direction of the camp.

Quade was bolstered up on a stool, his back against the thin partition, when John Aldous sauntered in. There was still a groggy look in his mottled face. His thick bulk hung a bit limply. In his heavy-lidded eyes, under-hung by watery pouches of sin and dissipation, there was a vengeful and beastlike glare. He was surrounded by his friends. One of them was taking a wet cloth from his head. There were a dozen in the canvas-walled room, all with their backs to the door, their eyes upon their fallen and dishonored chief. For a moment John Aldous paused in the door. The cool and insolent smile hovered about his lips again, and little crinkles had gathered at the corners of his eyes.

"Did I hit you pretty hard, Bill?" he asked.

Every head was turned toward him. Bill Quade stared, his mouth open. He staggered to his feet, and stood dizzily.

"You—damn you!" he cried huskily.

Three or four of the men had already begun to move toward the stranger. Their hands were knotted, their faces murderously dark.

"Wait a minute, boys," warned Aldous coolly. "I've got something to say to you—and Bill. Then eat me alive if you want to. Do you want to be square enough to give me a word?"

Quade had settled back sickly on his stool. The others had stooped, waiting. The quiet and insolently confident smile had not left Aldous' lips.

"You'll feel better in a few minutes, Bill," he consoled. "A hard blow on the jaw always makes you sick at the pit of the stomach. That dizziness will pass away shortly. Meanwhile, I'm going to give you and your pals a little verbal and visual demonstration of what you're up against, and warn you to bait no traps for a certain young woman whom you've lately seen. She's going on to Tete Jaune. And I know how your partner plays his game up there. I'm not particularly anxious to butt into your affairs and the business of this pretty bunch that's gathered about you, but I've come to give you a friendly warning for all that. If this young woman is embarrassed up at Tete Jaune you're going to settle with me."

Aldous had spoken without a tremor of excitement in his voice. Not one of the men noticed his speaking lips, his slim hands, or his careless posture as he leaned in the door. They were looking straight into his eyes, strangely scintillating and deadly earnest. In such a man mere bulk did not count.

"That much—for words," he went on. "Now I'm going to give you the visual demonstration. I know your game, Bill. You're already planning what you're going to do. You don't fight fair—because you never have. You've already decided that some morning I'll turn up missing, or be dug out from under a fall of rock, or go peacefully floating down the Athabasca. See! There's nothing in that hand, is there?"

He stretched out an empty hand toward them, palm up.

"And now!"

(To be continued)

MARKET FLASHES

MARKET SUMMARY

All grains are quiet. Rye advances on Detroit market. Supplies of butter and eggs not sufficient to care for demand. Potatoes in liberal supply and market easy. Poultry inactive. All live stock markets active and prices higher.

(Note: The above summarized information was received **AFTER** the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press —Editor.)

WHEAT

There is very little in the present wheat situation except the lowness of the price to warrant a belief in higher values. The government's last estimate is distinctly bearish, showing as it does that the total world crop is only slightly less than one year ago but still far above th pre-war average. Earlier estimates by both government and private report much larger production, and it begins to look as if someone had undershot the mark by a good many thousand bushels. But now we are suddenly advised that the world's exportable surplus is probably larger than the world's estimated needs. Is there any wonder that farmers are beginning to question all crop estimates? Inasmuch as nearly every estimate issued the last few months has seemed to bring into question the accuracy of the preceeding estimate we know of no reason why the one recently issued should be accepted as correct. Whether or no the crop is too large one thing is perfectly obvious to all, the price is too low, and will cause great financial loss to farmers and everybody concerned. The financial interests and the speculators seem to realize this, and that is one of the reasons why we do not expect to see wheat values drop much further.

Prices

Detroit—No. 2 red, $1.08; No. 2 white and No. 2 mixed, $1.06.

Chicago—No. 3 red, $1.04.

New York—No. 2 red, $1.14½.

Prices one year ago—Detroit, No. 2 red, $1.32; No. 2 white and No. 2 mixed, $1.29.

CORN

In the last issue of the Business Farmer we reported corn quiet and by the time that issue was off the press the market turned weak and prices took a slump. At Detroit the decline amounted to 2 cents but before the week closed the market was back to 68 cents for No. 2 yellow. On the opening day of the week ending Saurday, September 9, corn took the leadership in the grain markets and trading was active with higher prices prevailing. Crop damage complaints stimulated the buying side of the market. Serious losses are reported in many sections of the corn belt due to the hot and dry weather.

Complaints of poorly filled ears and of barren stalks came from most sections and the trade has come to the conclusion that the crop wil be materially lighter than last year. Reports indicated that that best prospects are in Iowa, but even that state will not raise as much corn as last year. There has been heavy consumption of corn in the past year and for this reason the amount carried over at the close of the season will be less than last November. Many of the bulls figure that the amount of corn available at the start of next season, old and new crops, will be at least 400,000,000 bushels smaller than a year ago. The market closed last week at Detroit just one cent below what it was two weeks before and the tone of the market was quiet. At Chicago prices were from 1c to 1¼c higher than two weeks previous and the market was steady.

Prices

Detroit—No. 2 yellow, 68c; No. 3 yellow, 67c; No. 4 yellow, 66c.

Chicago—No. 2 yellow, 64@64½c.

New York—No. 2 yellow and No. 2 white, 83¼c.

Prices one year ago—Detroit No. 2 yellow, 60c; No. 3 yellow, 59c; No. 4 yellow, 56c.

OATS

Oats are behaving a little better than they were and prices are up a few cents from the low of two weeks ago. However, in view of the continued lifelessness in wheat we must adhere to our previous opinion that oat prices will not be materially higher.

Prices

Detroit—No. 2 white, 39c for new, 41c for old; No. 3 white, 37c for new; No. 4 white, 34c for new.

Chicago—No. 2 white, 36½38½c; No. 3 white, 35½@37½c.

New York—No. 2 white, 46½c.

Prices one year ago—Detroit, No. 2 white, 42½c; No. 3 white, 40c; No. 4 white, 37c.

RYE

The rye market was active last week at Detroit and the price of No. 2 went to 74 cents, an advance of 2½ cents for the week. The price on the Chicago market ranged about the same being slightly higher at times.

POTATOES

We may yet expect some surprises in the potato deal before it is over. Our optimistic friend, Mr. A. A. Lambertson of Kent county, says the government is all off on its potato estimate, and while we have expressed our disagreement with him elsewhere in this issue, at this particular writing it begins to appear that he may not be altogether wrong. Reports received by the Business Farmer within just the last few days indicate that the crop has suffered severely in Maine, Minnesota and Colorado. A Minnesota correspondent avers that the crop in the northwest has been over-estimated by 20,000,000 bushels, while a Colorado writer says the crop in many sections will not be one-half of what it was last year. Add to these statements the fact that the far western states are virtually shut out from the big eastern markets by reason of the low prevailing prices and the high freight rates, and the Michigan shipper may yet be able to find some gleam of comfort in the situation. The rate on potatoes from Idaho to Chicago is $1.12 per cwt. The Chicago market closed last week around $1.10 per cwt., or two cents less than the freight. When you add to this cost of bags, handling, etc., it is plain to be seen that the Idaho shipper isn't making any money, or not much, anyway. You cannot exclude the millions of bushels of western potatoes from the eastern markets for a very long period of time without a local shortage developing. For this reason, if no other, we expect to see the potato market stiffen up a bit before very long. Buying of the late varieties has begun in many parts of the state, but the prices offered are ridiculously low. Because of the low opening market it is unlikely that there will be any drastic declines when the bulk of the crop is harvested, which fact, we believe warrants the grower in biding his time and wait for the developments which will take place the next sixty days.

Prices

Detroit—$1.42 per cwt.

Chicago—$1.20 per cwt.

New York—$1.33 per cwt.

Prices one year ago—Detroit, $1.00 per cwt.

BEANS

We would like an intelligent answer to this question:

"Why have beans dropped $4 a hundred in the last sixty days when there hasn't been an increase of a single bean in the supply and the consumption if anything has been larger?" Oh, we know, there is that "prospect" of a fair sized crop, but the prospect isn't any bigger if it is as big as it was 60 days ago. Does anyone thing for a moment that there would have been any such drastic declines in prices if the farmers had control of the marketing of the crop? There was a reason why the bean market should have slumped some from the high of July, and there would be a reason if it should slump a bit at harvest time, especially if the farmers were eager to sell. But there is no sound, legitimate reason why the price should have tumbled 50 per cent nearly 30 days before the threshing of the crop. Isn't the time here, right now, bean growers of Michigan, for a national bean-growers association through which the new crop soon to be harvested can be marketed without let or hindrance from the speculators. The bugaboo of foreign competition has been removed and every Michigan bean should find a market this year at no less than six cents per pound.

Prices

Detroit—C. H. P., $4.75 per cwt.

Chicago—C. H. P., $5.75@$6 per cwt.

Price one year ago—Detroit, C. H. P., $4.75 per cwt.

HAY

Hay markets in general are weak with receipts equal to and in many cases exceeding the demand. Buying seems to be limited to immediate needs. Country offerings are reported to be light but daily offerings are more than the market consumes readily and as a result the market is in a receptive mood to lower prices. Good quality of hay, however, is meeting with a fair demand.

Prices

Detroit—Standard timothy and light clover mixed, $16@$16.50; No. 1 clover, $14@$15 per ton.

Chicago—No. 2 timothy, $14@17; No. 1 light clover mixed, $16@$18; No. 1 clover, $13@$15 per ton.

New York—No. 2 timothy and light clover mixed, $21@$12 per ton.

Prices one year ago—Standard timothy, and No. 1 light clover mixed, $19½$20; No. 1 clover, $14@$15 per ton.

EAST BUFFALO LIVE STOCK MARKET

The receipts of cattle Sept. 11 were 100 cars, including 8 cars left from last week's trade. The market opened 15 to 25c higher on good to choice medium weight and weighty steer cattle, which were in very light supply; good butcher steer and handy weight steers were in very light supply, sold 15 to 25c higher; common, fair and medium butcher steers, were in heavy supply, sold 25c lower; heifers were in good supply, sold steady; bulls were in light supply, sold 15 to 25c higher; fair to medium and good cows sold 25c lower; canners sold 25c higher. There were no shipping cattle on the market. Top was $11.10 for two loads of choice angus long yearling steers, averaging 982 pounds.

Receipts of hogs totaled 11.200. The market opened 15 to 25c lower on the handy weight grades; heavy hogs sold steady. Yorkers, mixed and pigs sold from $10.00 to $10.10; hogs weighing around 250 pounds sold at $9.75; heavy hogs, $9.25; roughs, $7.00; stags, $4.00 to $4.50, with a few light stags up to $5.00.

Receipts of sheep and lambs were 7.400. Choice lambs sold at $14.25, which is 25c higher than last week's close. There was a very strong demand here today. Cull lambs sold from $9.50 to $10.50, which is 50c higher; yearlings, $9.00 to $10.00; wethers, $7.00 to $7.50; ewes, $5.50 to $6.00, with some handy weight western ewes up to $6.50; heavy ewes sold a little better, selling from $3.50 to $4.50. Dealers look for a good trade the balance of the week.

The receipts of calves were 1.600. Choice calves sold from $13.50 to $14.00, which was steady; throwouts, 120 to 140 lbs., $10.00 to $11.00; heavy throwouts, 160 to 190 lbs., $8.00 to $9.00; heavy fat veal calves, $8.00 to $10.00, as to weight and quality. Buyers are discriminating very bitterly against weighty fat and rough calves and this kind is very hard to dispose of at satisfactory prices.

MISCELLANEOUS MARKET QUOTATIONS

Detroit, September 12th

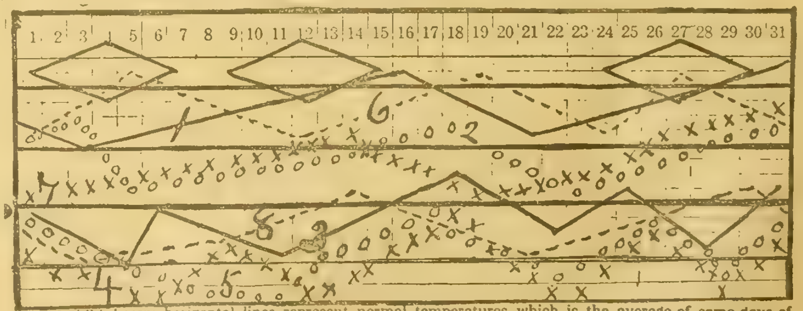
Butter—Best creamery, in tubs, 34@34½c per lb.

Eggs—Fresh current receipts, 29

THE WEATHER FOR NEXT WEEK

As forecasted by W. T. Foster for The Michigan Business Farmer

FOSTER'S WEATHER CHART FOR OCT. 1922



Straight, heavy, horizontal lines represent normal temperatures, which is the average of same days of the year for forty years. Crooked lines above normal lines mean warmer; below, cooler; that marked 1 is for section 1, north of latitude 47, between meridian 90 and Rockies crest—2 for section 2 on my section map is for east of meridian 90, north of latitude 47—3, between latitudes 39 and 47 and between meridian 90 and Rockies crest—4, east of meridian 90, between latitudes 39 and 47—5, south of latitude 39, between meridian 90 and Rockies crest—6, east of meridian 90, south of latitude 39—7, north of latitude 43½, west of Rockies crest—8, south of latitude 43½ to Mexican line and west of Rockies crest.

WASHINGTON, Sept. 14, 1922.—October will be one of the most rainy, disagreeable months of the 12 of which the 16th day will be their center. Temperatures will go to such extremes that the three great cold waves of the last three weeks of that month will demand heat in residences and offices three weeks earlier than usual. That means that heat will be in demand along and north of latitude 40 near and after October 6, and that frosts will be two weeks earlier than usual. The principal reason that three severe storm periods, centering on October 3, 12 and 27, will constantly keep the atmosphere stirred and prevent warm air from accumulating, the results being the reverse of the early September warm wave. But the humidity—moisture in the atmosphere—will continue great east of Rockies; better weather will prevail west of Rockies. October rains are the principal hope for putting the soil in good condition for sowing winter grain, but in large sections it will be cheaper to buy grain now than to produce it in 1923. Hurricane southwest of Liberia near October 20, will drift westward, but I cannot locate its movements.

Forecasts for Michigan.—Lowest temperatures, 23 and 29; highest, 20 and 26; average, warmer than usual; severe storms and increased rains, with lower temperatures first week in October.

@30c; fresh candled and graded, 32 @34c; refrigerator firsts, 27@28c per doz.

Plums—$1@$1.50 per bu.

Grapes—Michigan, 23@25c per 4-quart basket.

Apples—New, $1@$1.50 per bu.

Peaches—Western Michigan Elbertas, $1.50@$2; island peaches, fancy $1.75@$2; AA $1.50@$1.75; A $1.25@$1.50; B75c@$1 per bu.

Pears—Barteletts, $1.25@$1.75 per bu.; Flemish Beauty, $1@$1.50 per bu.

Celery—Michigan, 25@40c per doz.

Honey—Comb, 18@20c lb.

Cabbage—Home-grown, 50@75c per bu.

Popcorn—4½@5c; Little Buster, 7½@8c per lb.

Onions—$2.25@2.75 per sack of 100 lbs.

Tomatoes—Home-grown, 75@$1 per bu.

Dressed Calves—Choice, 15@17c medium, 13@14c; large coarse, 8@11c per lb.

Melons—Watermelons, 40@50c; each; Colorado pink meats, 1.50@$2 per flat; Osage, $1@$2 per bu.; honeydew, $2.50@2.75.

Live Poultry—Best springs, 22@23c; medium springs, 22@23c; leghorns, 18@20c; large fat hens, 24c; medium hens, 22c; small hens, 18c; old roosters, 15c; geese, 13c; large ducks, 22@23c; small ducks, 18@20c; turkeys, 25c per lb.

FEEDING CATTLE

Don't buy too many stock cattle this fall, in other words, do not bite off more than you can masticate. This maxim is worthy of Confusius himself. A year ago it was possible to buy cattle blind without the least danger of losing a dime; two years ago purchase made loss inevitable.

This is a season for caution.

Above all things give heavy cattle a wide berth, as they are a gambling proposition at the best, and the average farmer-feeder cannot afford to gamble with cattle. It is less laborious to speculate on the board of trade. More money has been lost during the past ten years feeding heavy cattle than would have been possible had the same operators speculated in corn.

Buy light cattle and get a growth on them. Calves are a safe proposition if you know how to handle them, but remember they are babies and must be treated in the same manner as a yearling.

Cattle feeding as a speculation is notoriously dangerous, but as a means of converting roughage and corn into marketable product. Buy light cattle, increase the weight 30 to 40 per cent while in your pasture with as little outlay for commercial feeds as possible and give them credit for the manure, always, that beef-making is no short-cut to wealth.—The Round-up.

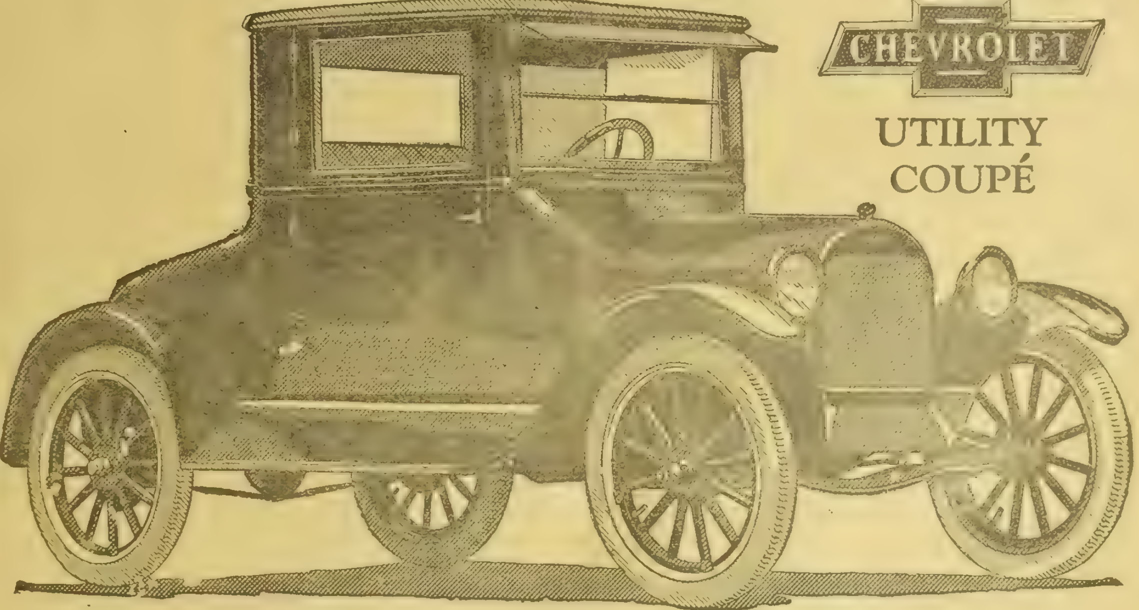
CORN SUPPLY

United States Supply of Corn for the 1922-23 season will be about 400,000,000 bushels less than the previous year based on private estimates as to the crop. The average of the Snow and Goodman estimates is around 2,830,000,000 bushels or 187,000,000 bushels less than the Government August figures. Total crop and carryover last year was 3,381,000,000 bushels, an average carryover being around 100,000,000 bushels. Corn, when everything is considered, cannot be regarded as high. In the first place there is about 15 per cent more hogs to feed than last year and latest Government reports show 6 per cent more cattle on farms on July 1 than was the case on January 1. In addition corn prices with the known certainty of a shortage in supplies as compared with last year, are practically the same as in 1921, so that there is every incentive to feed heavily. We have seen the largest supply in history disappear in the most astonishing manner and this year's supply wil also find a ready demand. The Government September report should confirm the private estimates as they were made up about a week ahead of the Government's data and the latter should show more damage in parts of Kansas, Oklahoma and Nebraska than either Snow or Goodman, which may be offset by improvement in other states where rain fell. The official returns on Indiana claim that a good deal of the late corn in that state will not make grain, and in the past few days sample of corn from some of the best corn districts in Illinois show that the ears there failed to fill properly. In fact, corn cutting is already under way in Illinois for grain purposes. Husking returns alone will reveal the actual crop. Government October par yield per than the September par, the reduction coming mainly in Ohio and Indiana. I find a strong undercurrent of bullish sentiment regarding the future course of the corn market with the disposition to buy on all the breaks. Oats are so low that it seems almost impossible for them to get much lower and about all a buyer at prevailing levels can lose is the carrying charge. During the past 20 years there have been only a few times where May oats bought on breaks during the month of September could not be sold out in the following May at a fair to good profit. Investment buying is being attracted to the oats market.—The Round-up.

What Prompted Him?

One P. M. a gentleman friend was taking supper with us. My small nephew, aged two, was seated in his high chair on the opposite side of the table from our guest.

Nephew regarded him very closely and very solemnly for a few moments. Then to our amazement the child picked up a warm biscuit from the plate close to him and raised his hand high in the air, threw it directly at our friend, hitting him on the chest. It happened so quickly and so unexpectedly we were quite stunned. We never could account for his doing it as he was a very well behaved little chap who had never tried such a stunt before and never did again.—B. R., Breckenridge, Mich.



For Economical Transportation

CHEVROLET

UTILITY COUPÉ

The Lowest Priced
High Grade Closed Car

$680
f. o. b. Flint, Michigan

This is the car for the country.

No new model Chevrolet has ever met with such quick success with farmers. It is just what they have long wanted—a high-grade closed car at a surprisingly low price.

Like every other Chevrolet model it offers unmatchable VALUE.

The high-grade Fisher Body is practical as well as handsome. The extra large, heavy plate-glass windows afford clear vision on all four sides.

The mammoth rear compartment with locking cover contains 14 cu. ft. of space for luggage, packages, produce and merchandise of all kinds.

The upholstery is in gray whipcord—wide, comfortable, well-sprung seat and back—easily kept clean. Equipment includes standard three speed transmission, vacuum feed, cord tires.

BODY BY FISHER

The chassis is the Superior Chevrolet with that celebrated valve-in-head motor, which has been an important factor in giving us first place in sales of standard equipped automobiles.

No matter what car you own or think of buying, you owe it to yourself to see this all-weather Utility Coupé and COMPARE IT for value and low mileage costs.

Farmers know car value. That is why they are buying this model by the thousands.

Chevrolet Motor Company, Detroit, Michigan
Division of General Motors Corporation

World's Largest Manufacturer of Low Priced Fully Equipped Automobiles

5,000 Dealers and Service Stations Throughout the World

Applications will be Considered from High Grade Dealers in Territories not Adequately Covered

Lifetime Buildings that Cost Less

Before you plan your next building, write us for estimates on Kalamazoo Tile construction. The first cost is the only cost—need no paint; will not burn or decay; warm in winter; cool in summer; storm and vermin proof.

Kalamazoo GLAZED TILE SILOS AND BUILDINGS make beautiful, modern structures, easily erected, increase the value and appearance of your farm and solve your building problems permanently. Write for interesting booklet on Kalamazoo Glazed Building Tile.

How Your Choice Means Loss or Gain

THE life of your automobile engine depends to an extraordinary extent upon your choice of lubricating oil. Upon how you choose depends whether you lose or gain:

power
economy (in repairs and operation)
saving in fuel

If you needed expert legal advice, and at the same price could choose between the most famous jurist in the United States and an untrained, untried advocate, which would you take? Identical reasoning applies to the choice of a lubricating oil for your car. Hundreds of untested lubricants beg for your attention. For the same or less money you may have the knowledge, experience, and expert attention of the staff of lubricating engineers of the Standard Oil Company (Indiana).

Use Polarine

THE PERFECT MOTOR OIL

Made in Four Grades

Seals Pistons Against Loss of Power

The grade indicated in the chart to the left as correct for your car has been created especially to meet the working temperature of the bearing surfaces of your particular engine. It has been evolved with reference to the clearance between those particular surfaces to the speed at which the bearing surfaces move, and to the weight of the moving body.

The Standard Oil Company (Indiana) leads the world in its research into the vitally important question of petroleum lubrication. Correct lubrication means life—vastly increased life to all machinery. A great laboratory for improved lubrication is one of the important contributions of the Standard Oil Company (Indiana) to this industrial era in which we live.

Surface Indications Are No Sign of Oil Pools

Don't Let "Wild-catters" Trick You Into Drilling for Oil Where There is None—State Geological Survey Will Gladly Give Facts

Could you inform me whether land that there is oil on, shows any signs of oil on water in ditches, creeks and springs before wells are driven.—W. R. R., Edmore, Mich.

EVERY year the Geological Survey Division of the Department of Conservation receives many reports and samples of "oil." The samples are generally wet sand or bad smelling water, black or reddish mud, and often oil from some discarded bottle of chilblain or dandruff remedy. Unfortunately the inquiring public is not always judicious or particular in its choice of containers for samples, but those retaining pleasant (?) odors are in favor. Prince Albert and Lucky Strike are competitors for first place. The odor of petroleum is pronounced and distinctive, but the smell from some of the bottles puts it beyond the powers of the human nose.

Seepages of oil and gas are the most common signs in Michigan. They are very numerous in the southeastern and northern parts of the Southern Peninsula, where the surface deposits are directly underlain by the oil and gas rocks. Seepages are most common around springs and in water wells. Gas has been struck in a large number of wells in the region northwest of Detroit and around Portage Lake, Manistee county. Many of the farmers in the vicinity of Royal Oak and Warren, Oakland and Macomb counties, have used the gas for heating and lighting their homes. The wells are generally small, but some of them last several years. Others last only a few days or months. Recently a farmer near Warren drilling for water, struck gas, which caught fire and burned up his home. So much gas was struck near Portage Lake that it blew nearly 200 feet of drill rods out of the well and scattered them around in the trees.

Large gas springs occur near Kilmaster, Alcona county, and near Atlanta, Montmorency county. It is said that the Atlanta gas spring, when lighted, would burn indefinitely if it were not blown out by heavy winds.

These are belts of leakage rather than accumulation. Several wells have been drilled on the basis of these seepages but without success. The little oil found in Michigan was in regions where signs were few or absent. Had the promoters known the facts they would not have been so enthusiastic in spending their money.

"Marsh gas," commonly observed in wet, swampy places, is often mistaken for seepages of rock gas. Marsh gas is formed from the decay of plant material in the swamp, consequently it is of no significance. Often films showing rainbow colors occur around springs and in wet or swampy places. Generally these are due to iron oxide and not oil. Most of the samples of water sent to the Survey contain a sediment chiefly of iron oxide and dark organic matter—tell-tale of iron bearing water and a spring. Such waters are abundant in many parts of the state, especially in Jackson and Calhoun counties where there is much iron carbonate in the surface deposits and the underlying rock beds.

A simple test is to stir the water. If the film breaks up and collects in irregular patches which do not spread again after the water is quiet, it is probably iron oxide. If the film streams around on the water and shows a play of rainbow colors it is oil.

Many "wild-catters" of little experience lay great stress on another so-called indication—the "lay of the land." In some states this may be of some importance, but nearly everywhere in Michigan the "lay of the land" is about as useful as the stars for locating oil pools. Some of the old time Pennsylvania wild-catters set great store on the "Forty-five." In Pennsylvania the folds, and likewise the pools, extend in a northesat-southwest direction, or at an angle of 45 degrees from a north-south direction. When these prospectors come into Michigan they look for a valley ridge or stream northeast and southwest. The folding in the two states is entirely different, consequently the "Forty-five" is of no value in Michigan.

There is, however, one sign of importance. That is a fold or anticline in the rock beds. Nearly everywhere the rocks are burried by surface deposits, therefore folds are rarely seen in Michigan. They are more often found by comparing records of deep wells.

Most of the pools of oil and gas in this country are connected with folds of "structures" in the rock beds. This fact makes the discovery of a fold of great importance to an intelligent and experienced oil man. Given a "structure" and a possible oil bearing bed, an oil man considers he has sufficient grounds for a wild-cat test. Numerous wildcat wells have been drilled for oil in Michigan during the past two years. The newspaper accounts of these have contained more or less meaningless jargon about "surface signs," "lay of the land," "structures," and "anticlines." Even some of the standard oil journals have been guilty of repeating some of the nonsense.

In summary, one may say that aside from rock structures, surface signs in Michigan appear to be of little or no importance so far as indicating the presence or absence of oil at a given pace. The Geological Survey Division of the Department of Conservation has a large amount of information concerning surface indications, deep borings, and geological formations, oil structures and possibilities, in the state. Information on any particular locality will be gladly furnished on request to the Department at Lansing.

CLUB WORK TAKES ROOT IN UPPER PENINSULA

SUCCESS attended the Farmers' Round-up which was held at Chatham the middle part of August, under the auspices of the M. A. C. experiment station at that point. Particular interest was shown in the boys' and girls' club camp which had double the enrollment of any previous camp, and the judging contests between the boys and girls. Upper peninsula folks feel that the work which is being done among the farm boys and girls means a great deal to the future of the peninsula's agriculture.

Another feature of the round-up was the huge blasting demonstration when two acres of stumps were shot simultaneously, Pres. Friday of the M. A. C. turning on the switch that did the business. A number of other demonstrations, all under the supervision of M. A. C. department heads, made the ocassion one of considerable instruction as well as entertainment to the more than 2,000 people in attendance.

The M. A. C. as well as Mr. D. L. McMillan, who has charge of the upper peninsula station are to be complimented on what they are doing for the farmers of that region. Agriculture pursuits have been neglected across the straits because farmers have not had a true appreciation of the value of the section as a producer of crops. But the agricultural authorities of the state are demonstrating that the upper peninsula is an extremely valuable field for agricultural exploitation and we may some day look for it to rank among the richest farming sections of the state.

GRADES FOR GRAPES PROMULGATED IN MICHIGAN

STATE grades for grapes have been promulgated by the Michigan Department of Agriculture, Lansing, Mich., under date of September 13, 1922. The rules and regulations governing the packing, branding, and sale of grapes were established in order to encourage the improvement in the quality of grapes sent to market. The grades are known as "Table Grapes," "No. 1 Grapes," and "Unclassified." Table Grapes shall be packed in closed containers of 16 pounds or more capacity. They shall be mature and of one variety. The individual bunches shall be compact, free from immature berries and from damaged fruit. A tolerance of five per cent by weight is allowed in this grade.

No. 1 grapes shall conform to the standard for Table grapes, except for an allowance for less compact bunches, and shall be packed in closed containers of 15 pounds or more capacity. A tolerance, other than compactness of bunches, of ten per cent by weight is allowed.

Unclassified grapes are those packed in closed containers of 16 pounds or larger, which do not comply with either of the foregoing grades and which consist of vineyard run, marketable fruit. This grade allows a tolerance of twenty per cent by weight. All grades must be marked and the containers must also show the name and address of the person or firm under whose authority the grapes are packed, sold, or offered for sale.

Inspectors will be placed at five important shipping points in the State, who, under the direct supervision of the inspector of fruit of the State Bureau of Foods and Standards, will carefully inspect all shipments of grapes. Through this service the growers hope to improve the quality of their pack, and also to educate the buyers in the various markets that Michigan grapes can be depended upon as to quality.

One association of Michigan grape growers is conducting an extensive consumer advertising campaign. Daily papers and posters are being used to educate the public to ask for its brand of grapes.

FARMERS' CLUBS GET BUSY

THE Board of Directors of the State Association of Farmers' Clubs met at the Hotel Wentworth, Lansing, Monday, September 11.

The object of this meeting was to outline a program for the regular annual meeting which will be held in Lansing the first week of December.

Various Farmers' Clubs in the state all co-operate closely with the forces generally for better country life. They meet regularly to study and improve local and general conditions in Agriculture.

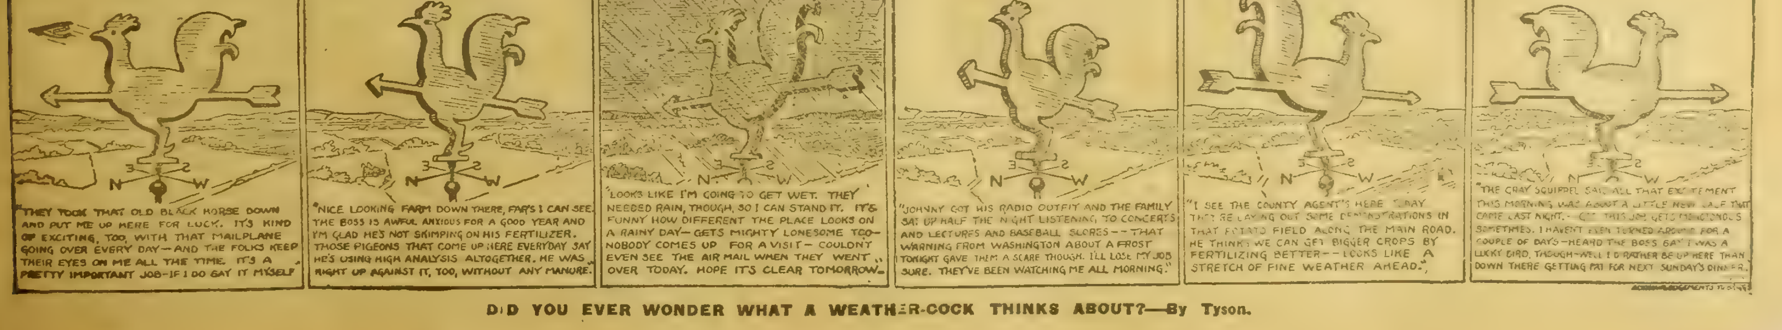
The Directors note that many clubs still have not federated with the State Association. Organization is power.

They propose a policy for the clubs next year that should enlist every progressixe club in the state.

The key to country life now rests in organization and education. The farmer is just the sort of collective being that conditions of late have make agriculture prosperous. A best mind of our day.

The Clubs' great opportunity is an educational campaign for the better things of country life—better business, better homes, and better communities. The farmer alone can make Agriculture prosperous. A fair share of the consumer's dollar is the first essential. With efficient production and other rural conditions to match, agriculture becomes the best business on earth.

In general this is the type of program outlined for the next year. In it they have the co-operation of all forces that stand for American democracy. May the program succeed in this day of crisis agriculture.
—Lee S. Noble, President, Oxford, Mich.



"THEY TOOK THAT OLD BLACK HORSE DOWN AND PUT ME UP HERE FOR LUCK. IT'S KIND OF EXCITING, TOO, WITH THAT MAILPLANE GOING OVER EVERY DAY—AND THE FOLKS KEEP THEIR EYES ON ME ALL THE TIME. IT'S A PRETTY IMPORTANT JOB—IF I DO SAY IT MYSELF"
"NICE LOOKING FARM DOWN THERE, FAR'S I CAN SEE. THE BOSS IS AWFUL ANXIOUS FOR A GOOD YEAR AND I'M GLAD HE'S NOT SKIMPING ON HIS FERTILIZER. THOSE PIGEONS THAT COME UP HERE EVERYDAY SAY HE'S USING HIGH ANALYSIS ALTOGETHER. HE WAS RIGHT UP AGAINST IT, TOO, WITHOUT ANY MANURE."
"LOOKS LIKE I'M GOING TO GET WET. THEY NEEDED RAIN, THOUGH, SO I CAN STAND IT. IT'S FUNNY HOW DIFFERENT THE PLACE LOOKS ON A RAINY DAY—GETS MIGHTY LONESOME TOO—NOBODY COMES UP FOR A VISIT—COULDN'T EVEN SEE THE AIR MAIL WHEN THEY WENT OVER TODAY. HOPE IT'S CLEAR TOMORROW."
"JOHNNY GOT HIS RADIO OUTFIT AND THE FAMILY SAT UP HALF THE NIGHT LISTENING TO CONCERTS AND LECTURES AND BASEBALL SCORES—THAT WARNING FROM WASHINGTON ABOUT A FROST TONIGHT GAVE THEM A SCARE THOUGH. I'LL LOSE MY JOB SURE. THEY'VE BEEN WATCHING ME ALL MORNING."
"I SEE THE COUNTY AGENT'S HERE TODAY THEY'RE LAYING OUT SOME DEMONSTRATIONS IN THAT POTATO FIELD ALONG THE MAIN ROAD. HE THINKS WE CAN GET BIGGER CROPS BY FERTILIZING BETTER—LOOKS LIKE A STRETCH OF FINE WEATHER AHEAD."
"THE GRAY SQUIRREL SAID ALL THAT EXCITEMENT THIS MORNING WAS ABOUT A LITTLE NEW CALF THAT CAME LAST NIGHT.— THIS JOB GETS MONOTONOUS SOMETIMES. I HAVEN'T EVEN TURNED AROUND FOR A COUPLE OF DAYS—HEARD THE BOSS SAY I WAS A LUCKY BIRD, THOUGH—WELL I'D RATHER BE UP HERE THAN DOWN THERE GETTING FAT FOR NEXT SUNDAY'S DINNER.

Fox Farming Profitable Side Line

Many Business Farmers Making Small Fortunes in Breeding of Black Foxes

A healthy litter of Silver Black Fox Puppies on the Hendricks Fox Farm

MONEY IN FOXES

ABOUT three years ago the Business Farmer received a letter from Mr. Richard Hendricks of Flint, Mich., asking for information on the breeding and raising of silver black foxes. We sent Mr. Hendricks a number of government bulletins containing complete information on the subject, and gave him the names of reliable breeders from whom he could buy foundation stock. Mr. Hendricks started with three pair of foxes on his 210-acre farm in the fall of 1919, carrying on the business as a side line to his farming. He now has 74 foxes, worth upwards of $50,000, and has rented his farm to devote his entire time to the far more profitable enterprise of fox farming. Mr. Hendricks' success with black foxes reads like a fairy tale but it is no different than the success which hundreds of others have attained in this industry. Given a few thousand dollars to start with, a suitable location, an average knowledge of the habits of foxes which are very similar to those of well-bred dogs, and a little patience and perseverance and an farmer can duplicate what Mr. Hendricks has done. His story, told herewith for the benefit of Business Farmer readers is very interesting. Read it, and learn how you may take up the profitable and facinating side line of breeding fur bearing animals. If you haven't the money to start with foxes, try skunks. Thousands of farmers and farmer boys are making good money raising these much despised and misunderstood little animals. Further information on the raising of foxes and skunks cheerfully given on request.—Editor.

THE Hendricks Silver Fox Farm was started three years ago in the fall of 1919 with three pairs of the highest grade Silver Black Foxes on a 210-acre Farm near Flint, Michigan. The Fox Farm was successfully operated as a side line in connection with the farm until this fall when we rented the farm to enable us to take up the business in better shape.

We now have on our Ranch 74 beautiful black Foxes with a sprinkle of nice clear silver so much in demand now-days, which if figured at the same price the original was bought for, the ranch would be paying over 800 per cent at the end of the breeding season.

Five animals have been added to the ranch so as to imbreed and a number of males have been exchanged with the ranchers. Out of the 41 pups secured this spring we have raised all but one.— This pup got through the fence when very young.

We have had no difficulty in raising these animals. The young, if properly cared for grow very rapidly. We have puppies on our ranch less than five months old that are now larger than their mothers. They usually have a litter when they are a year old, the number ranging from one to nine. Our litters this year range from two to six with an average of four or a little better.

Mating season takes place in February or March and the young are born about 52 days later. Great care must be taken at that time of the season not to get the mother fox frightened as in this case they will often destroy their young by carrying them around hours at a time, and sometimes when they become real nervous they bury them alive. Ranches are generally closed from Jan. Ist. to July Ist. During this time no visitors are allowed in the ranch, and no one except the caretaker is admitted, for they readily look for him when feeding time comes.

Their principal food for summer is cereals of different kinds, bread made of entire wheat, dog biscuits, milk and in fact most anything that a dog will eat. We also feed a small amount of meat during the Summer months. Beef hearts make a good Summer meat. These are bought at wholesale prices at 5c a pound. Owing to extreme high price of the animal the small amount it cost to feed them is hardly recognized. In the winter time a large portion of their diet is horse meat. Old horses that are too old to work bu otherwise sound and healthy are properly slaughtered and fed during the winter months with very good results. Every farmer is glad to get rid of them which makes fox farming still more profitable.

The demand for live foxes is gradually increasing year after year and there is a ready demand for good animals. One can readily understand with the few fur bearing animals that are left in the wild state today it is plainly feasible to take this step and those who will take it in time will reap a large harvest.

I can remember the time when muskrats were selling at 8c to 10c. each. Two years ago when I attended the St. Louis Auction Fur Sales I saw muskrat skins selling as high as $6. This, of course, was the highest price on record paid for furs, when all other things were up in proportion and have since then taken quite a drop with everything else. But prices are gradually pressing back to the higher mark.

Remember that once every lake and pond was covered with Muskrat and our streams lined with mink, otter and beaver, when one could take out the old coon dogs and tree from four to half a dozen before midnight, when foxes were so thick in the woods they would destroy our lambs and pigs and about all the chickens one could raise. But they are gone now, never to come back unless they are raised on fur farms. Our timber has been cut off, our swamps have been dried up by ditching and dredging and their hiding places have been destroyed. The great Hudson Bay Fur Co. who used to ship loads of furs to London are out of existence and trappers are going out to the extreme northern sections and will soon be to the end of the rope.

The United States government has been urging the people of the United States to engage in the new fur farming industry and I want to state right here that the farmer is the man who is adapted to the business as he has had all kinds of experience raising live stock, and furthermore he is situated where he can raise them.

It requires about an acre and a half to ranch fifty pairs of foxes thus allowing you to build the pens about 25 ft. square which we find in our experience is plenty large enough. Fifty pairs of foxes can easily be handled by one caretaker and with ordinary success should produce 150 puppies annually, which if sold as live stock at a very low figure would net $100,000 per year. This may sound too good to be true, never the less such a ranch could be started with a few pairs as a sideline on any farm.

You do not necessarily have to have $1,500 per pair for Foxes which is a very reasonable price, one could raise them at $100 per pair and make money. I never expect to see the time in my days when good silvers will not bring that price.

Every farmer knows that it takes three years to raise a cow and if at that age she is worth $100 she must be a good one and if her board bill was taken out there would be a very small fraction left for the farmer.

The mother fox produces a litter of four on an average every year which are full matured at the age of seven or eight months. She will raise three litters up to maturity while the cow grows up which at the present price of foxes would be worth from $8,000 to $12,000 we can cut this figure in two and then cut in two again and yet have a handsome profit left.

Again, fox farming in a fine job for a retired farmer who does not care to move to town and wishes to have something to drive at for exercise and at the same time lay up more cash than he had been able to dig out of the farm by hard labor in the past 40 years. Having been a farmer myself for the last 30 years, farmed in three different states, fed all kinds of live stock, milked as high as 25 cows, sold the milk at a little less than it cost to produce it, I think I am well able to make this statement.

Panoramic View of the Hendricks Farm near Flint, showing the Method of Housing the Silver Black Foxes

Why Do Not Michigan Potato Growers Raise More to the Acre?

HOW DID YOU DO IT?

AS mentioned in the accompanying article, the average yield per acre of potatoes in certain Michigan counties is less than 100 bushels, while in Aroostook county, Maine, it is 252 bushels. Of course, we know there are lots of farmers in Michigan who are raising more than 100 bushels of potatoes to the acre. But we don't know who they are or where they live. But we would like to know. If you or your neighbor secures an extra big yield of spuds this year we'd like to have you tell us about it, and we'll gladly publish the story, together with a picture of the grower and his potatoes. Help us to find the man who grew the largest number of bushels from a single acre. We'll all be mightily interested in knowing how he did it.—Editor.

THE farmers of Aroostook County raised an average of 252.1 bushels of potatoes to the acre in 1919. Their total production was 21,331,934 bushels, in a single county. That's considerably over one-half as many potatoes as all the farmers of Michigan raise in a normal year.

In the same year the farmers of Montcalm county, which is the leading potato county of Michigan and ranks ninth among all the United States in the number of acres planted to potatoes, produced an average of only 92.8 bushels to the acre, or a total of 1,745,998 bushels.

In the same year the farmers of Kent county which ranks second in Michigan in point of acreage, produced an average yield of 80.7 (or less than a third of the Aroostook yield), and a total of 944,683 bushels from a total acreage of 11,712.

Oakland farmers in the same year produced 1,037,021 bushels from only 11,144 acres.

But Osceola county farmers had an average yield in 1919 of 120.4 bushels to the acre and grew 1,002,240 bushels from 8,321 acres.

Why the Difference?

Why all this discrepency? Why can the farmers of Aroostook, Maine, in the same year and under practically the same conditions, produce over three times as many potatoes to the acre as the farmers of Kent county, Michigan.

Again, why can the farmers of Oakland county, also in the same year and under the same conditions, produce 90,000 MORE potatoes from 600 LESS acres than the farmers of Kent county, a hundred miles away.

Still again, why can the farmers of Osceola county raise nearly 100.-000 MORE potatoes from 3,000 LESS acres than the farmers of Kent who are just a stone's throw away?

And why, instead of Kent farmers producing but 80 bushels to the acre, and Oakland farmers but 93 and Montcalm farmers but 92 and Grand Traverse farmers but 101, aren't they all growing twice as many to the acre?

One more question, "how can the farmers of Michigan, with an average yield of less than 100 bushels to the acre, compete with the farmers of Maine with an average of nearly 200 bushels, when the total crop is big and prices are low like they are this year?"

Maine's Huge Advantage

The average value per acre of the Aroostook county crop in 1919 was $517; the average of the Montcalm county crop was $190; of the Grand Traverse, $209 and of the Osceola, $247.

It is to be presumed that it cost the Maine farmer a little more to raise $517 worth of potatoes than it did the Montcalm farmer to raise $190 worth. But could the extra cost have possibly amounted to the difference between the two or $327 to the acre, or to even one-half the difference between the two?

Let us assume that is costs the

The Hunted Woman

By James Oliver Curwood

Michigan's Own and America's Formost Author of the Great Northwest

THE SYNOPSIS

A WOMAN with a pearl-gray veil drawn closely about her face is one of the many passengers on the train that connects "The Horde" with the civilized world. For eighteen hours she has been riding steadily bound for Tete Jaune Cache, the land of "The Horde," where she has no friends and all will be strange to her. The train stops at a town composed of several tents known as Miette and, as many of the passengers get off and walk about, she inquires of a "Straying Angel" how long the train will stop and is advised it will not move for at least two hours. Desiring food and a bath she asks where she can secure them and is directed to "Bill's Shack". Bill's Shack is owned and operated by Bill Quade, leader of the lawless band of the town. When she steps inside the doorway she recognizes him as a brute but as she has entered and is very hungry and dusty she decides to go through with her plan. Quade says he has a room she can rent and asks her to follow him. As they pass out of the room there appears a newcomer in the doorway opening off the street. The newcomer is not of the kind of men lounging about the room but shows in face and in actions that he is of the wholesome living type. He has seen the girl enter this place and believes she has made a mistake and as he stands in the doorway his eyes rest upon the curtain-covered doorway through which the girl and Quade has just passed. In but a moment the girl steps out, her face flaming like fire and eyes filled with the flash of lightning. Quade follows her apologetically. He starts to offer the girl a roll of money but before he can do so the newcomer steps to the girl's side and strikes Quade with terrific force. The Brute goes down in a heap and the newcomer hurries the girl outside and away from the scene. The newcomer, who is John Aldous a novelist and known as a woman hater, learns from the girl that her name is Joanne Gray. He takes her to the home of a friend and returns to Bill's Shack warning Quade to leave the girl alone. That brings the story up to our present installment.

(Continued From Last Issue)

A twist of the wrist so swift their eyes could not follow, a metallic click, and the startled group were staring into the black muzzle of a menacing little automatic.

"That's known as the sleeve trick, boys," explained Aldous with his imperturbable smile. "It's a relic of the old gun-fighting days when the best man was quickest. From now on, especially at night, I shall carry this little friend of mine just inside my wristband. There are eleven shots in it, and I shoot fairly straight. Good-day!"

Before they had recovered from their astonishment he was gone.

He did not follow the road along which Joanne had come a short time before, but turned again into the winding trail that led riverward through the poplars. Where before he had been a little amused at himself, he was now more seriously disgusted. He was not afraid of Quade, who was perhaps the most dangerous man along the line of trail. Neither was he afraid of the lawless men who worked his ends. But he knew that he had made powerful enemies, and all because of an unknown woman whom he had never seen until half an hour before. It was this that disturbed his equanimity—the woman of it, and the knowledge that his interference had been unsolicited and probably unnnecessary. And now that he had gone this far he found it not easy to recover his balance. Who was this Joanne Gray? he asked himself. She was not ordinary — like the hundred other women who had gone on ahead of her to Tete Jaune Cache. If she had been that, he would soon have been in his little shack on the shore of the river, hard at work. He had planned work for himself that afternoon, and he was nettled to discover that his enthusiasm for the grand finale of a certain situation in his novel was gone. Yet for this he did not blame her. He was the fool. Quade and his friends would make him feel that sooner or later.

His trail led him to a partly dry muskeg bottom. Beyond this was a thicker growth of timber, mostly spruce and cedar, from behind which came the rushing sound of water. A few moments more and he stood with the wide tumult of the Athabasca at his feet. He had chosen this spot for his little cabin because the river ran wild here among the rocks, and because pack-outfits going into the southward mountains could not disturb him by fording at this point. Across the river rose the steep embankments that shut in Buffalo Prairie, and still beyond that the mountains, thick with timber rising billow on billow until trees looked like twigs, with gray rock and glistening snow shouldering the clouds above the last purple line. The cabin in which he had lived and worked for many weeks faced the river and the distant Saw Tooth Range, and was partly hidden in a clump of jack-pines. He opened the door and entered. Though the window to the south and west he could see the white face of Mount Geikie, and forty miles away in that wilderness of peaks, the sombre frown of Hardesty; through it the sun came now, flooding his work as he had left it. The last page of manuscript on which he had been working was in his typewriter. He sat down to begin where he had left off in that pivotal situation in his masterpiece.

He read and re-read the last two or three pages of the manuscript, struggling to pick up the threads where he had dropped them. With each reading he became more convinced that his work for that afternoon was spoiled. And by whom? By what? A little fiercely he packed his pipe with fresh tobacco. Then he leaned back, lighted it, and laughed. More and more as the minutes passed he permitted himself to think of the strange young woman whose beauty and personality had literally projected themselves into his workshop. He marvelled at the crudity of the questions which he asked himself, and yet he persisted in asking them. Who was she? What could be her mission at Tete Jaune Cache? She had repeated to him what she had said to the girl in the coach—that at Tete Jaune she had no friends. Beyond that, and her name, she had offered no enlightenment.

In the brief space that he had been with her he had mentally tabulated her age as twenty-eight—no older. Her beauty alone, the purity of her eyes, the freshness of her lips, and the slender girlishness of her figure, might have made him say twenty, but with those things he had found the maturer poise of the woman. It had been a flashlight picture, but one that he was sure of.

Several times during the next hour he turned to his work, and at last gave up his efforts entirely. From a peg in the wall he took down a little rifle. He had found it convenient to do much of his own cooking, and he had broken a few laws The partridges were out of season, but temptingly fat and tender. With a brace of young broilers in mind for supper, he left the cabin and followed the narrow foot-trail up the river. He hunted for half an hour before he stirred a covey of birds. Two of these he shot. Concealing his meat and his gun near the trail he continued toward the ford half a mile farther up, wondering if Stevens, who was due to cross that day, had got his outfit over. Not until then did he look at his watch. He was surprised to find that the Tete Jaune train had been gone three-quarters of an hour. For some unaccountable reason he felt easier. He went on, whistling.

At the ford he found Stevens standing close to the river's edge, twisting one of his long red moustaches in doubt and vexation.

"Damn this river," he growled, as Aldous came up. "You never can tell what it's going to do overnight. Look there! Would you try to cross?"

"I wouldn't," replied Aldous. "It's a foot higher than yesterday. I wouldn't take the chance."

"Not with two guides, a cook, and a horse-wrangler on your pay-roll—and a hospital bill as big as Geikie staring you in the face?" argued Stevens, who had been sick for three months. "I guess you'd pretty near take a chance. I've a notion to."

"I wouldn't," repeated Aldous.

"But I've lost two days already, and I'm taking that bunch of sightseers out for a lump sum, guaranteeing 'em so many days on the trail. This ain't what you might call on the trail. They don't expect to pay for this delay, and that outfit back in the bush is costing me thirty dollars a day. We can get the dunnage and ourselves over in the flat-boat. It'll make our arms crack—but we can do it. I've got twenty-seven horses. I've a notion to chase 'em in. The river won't be any lower tomorrow."

"But you may be a few horses ahead."

Stevens bit off a chunk of tobacco and sat down. For a few moments he looked at the muddy flood with an ugly eye. Then he chuckled and grinned.

"Came through the camp half an hour ago," he said. "Heard you cleaned up on Bill Quade."

"A bit," said Aldous.

Stevens rolled his quid and spat into the water slushing at his feet.

Guess I saw the woman when she got off the train," he went on. "She dropped something. I picked it up, but she was so darned pretty as she stood there looking about I didn't dare go up an' give it to her. If it had been worth anything I'd screwed up my courage. But it wasn't—so I just gawped like the others. It was a piece of paper. Mebby you'd like it as a souvenir, seein' as you laid out Quade for her."

As he spoke, Stevens fished a Aldous had sat down beside him. He pocket and gave it to his companion. crumpled bit of paper from his smoothed the page out on his knee. There was no writing on it, but it was crowded thick wth figures, as if the maker of the numereals had been doing some problem in mathematics. The chief thing that interested him was that wherever monetary symbols were used it was the "'pound" and not the "dollar" sign." The totals of certain columns were rather startling.

"Guess she's a millionaire if that's her own money she's been figgering," said Stevens. "Notice that figger there!" He pointed with a stubby forefinger. "Pretty near a billion, ain't it?"

"Seen hundred and fifty thousand," said Aldous.

He was thinking of the "pound" sign. She had not looked like the folded the slip of paper and put it in his pocket.

Stevens eyed him seriously.

"I was coming over to give you a bit of advice before I left for the Maligne Lake country," he said. "You'd better move. Quade won't want you around after this Besides———"

"What?"

"My kid heard something," continued the packer, edging nearer "You was mighty good to the kid when I was down an' out, Aldous. I ought to tell you. It wasn't an hour ago the kid was behind the tent an' he heard Quade and Slim Barker talking. So far as I can find from the kid, Quade has gone nutty over her. He's ravin'. He told Slim that he'd give ten thousand dollars to get her in his hands. What sent the boy down to me was Quade tellin' Slim that he'd get you first. He told Slim to go on to Tete Jaune—follow the girl!"

"The deuce you say!" cried Aldous, clutching the other's arm suddenly. "He's done that?"

"That's what the kid says."

Aldous rose to his feet slowly. The careless smile was playing about his mouth again. A few men had learned that in those moments John Aldous was dangerous.

"The kid is undoubtedly right," he said, looking down at Stevens. "But I am quite sure the young woman is capable of taking care of herself. Quade has a tremendous amount of nerve, setting Slim to follow her, hasn't he? Slim may run up against a husband or a brother."

Stevens haunched his shoulders.

"It's not the woman I'm thinking about. It's you. I'd sure change my location."

"Why wouldn't it be just as well if I told the police of his threat?" asked Aldous, looking across the river with a glimmer of humour in his eyes

"Oh. well!" was the packer's rejoinder.

Slowly he unwound his long legs and rose to his feet.

"Take my advice—move!" he said, "As for me, I'm going to cross that cussed river this afternoon or know the reason why."

He stalked away in the direction of his outfit, chewing viciously at his quid. For a few moments Aldous stood undecided. He would liked to have joined the half-dozen men he saw lounging restfully a distance beyond the grazing ponies. But Stevens had made him acutely aware of a new danger. He was thinking of his cabin—and the priceless achievement of his last months of work, his manuscript. If Quade should destroy that———

He clenched his hands and walked swiftly towad his camp. To "bun cut" an enemy was one of Quade's favorite methods of retaliation. He had this. He also knew that Quade's work was done so cleverly that the police had been unable to call him to account.

Quade's status had interested Aldous from the beginning. He had discovered that Quade and Culver Rann, his patner at Tete Jaune, were forces to be reckoned with even by the "powers" along the line of rail. They were the two chiefs of the "underground", the men who controlled the most dangerous element from Miette to Fort George. He had once seen Culver Rann, a quiet, keen-eyed emmaclately groomed man of forty—the cleverest scoundrel that had ever drifted into the Canadian west. He had been told that Rann was deally the brain of the combination, and that the two picked up a quarter of a million in various ways. But it was Quade with whom he had to deal now, and he began to thank Stevens for his warning. He was filled with a sense of relief when he reached his cabin and found it as he had left it. He always made a carbon of his work. This copy he now put into a waterproof tin box, and the box he concealed under a log a short distance back in the bush.

"Now go ahead, Quade," he laughed to himself, a curious, almost exultant ring in his voice. "I haven't had real excitement for so long I can't remember, and if you start the fun there's going to be fun!"

He returned to his birds, perched himself behind a bush at the river's edge, and began skinning them. He had almost finished when he heard hoarse shouts from up the river. From his position he could see the stream a hundred yards below the ford. Stevens had driven in his horses. He could see them breasting the first sweep of the current, their heads held high, struggling for the opposite shore. He rose, dropped his birds, and stared.

"Good God, what a fool!" he gasped.

He saw the tragedy almost before it had begun. Still three hundred yards below the swimming horses was the gravelly bar which they must reach on the opposite side. He noted the grayish strip of smooth water that marked the end of the dead-line. Three or four of the stronger animals were forging steadily toward this. The others grouped close together, almost motionless in their last tremendous fight, were left farther and farther behind. Then came the break. A mare and her yearling colt had gone in with the bunch. Aldous saw the colt, with its small head and shoulders high out of the water, sweep down like a chip with the current. A cold chill ran through him as he heard the whinneying scream of the mother—a warning cry that held for him the pathos and the despair of a creature that was human. He knew what it meant. "Wait—I'm coming—I'm coming!" was in that cry. He saw the mare give up and follow resistlessly with the deadly current, her eyes upon her colt. The heads behind her wavered, then turned, and in another moment the herd was sweeping down to its destruction.

Aldous felt like turning his head. But the spectacle fascinated him, and he looked. He did not thing of Stevens and his loss as the first herd plunged in among the rocks. He stood with white face and clenched hands, leaning over the water boiling at his feet, cursing softly in his helplessness. To him came the last terrible cries of the perishing animals. He saw head after head go under. Out of the white spume of a great rock against which the flood split itself with the force of an avalanche he saw one horse pitched bodily, as if thrown from a huge catapaultt. The last animal had disappeared when chance turned his eyes upstream and close in to shore. There flowed a steady current free of rock and down this—head and shoulders still high out of the water—came the colt! What miracle had saved the little fellow thus far Aldous did not stop to ask. Fifty yards below it would meet the fate of the others. Half that distance in the direction of the maelstrom below was the dead trunk of a fallen spruce overhanging the water for fifteen or twenty feet. In a flash Aldous was racing toward it. He climbed out on it, leaned far over, and reached down. His hand touched the water. In the grim excitement of rescue he forgot his own peril. There was one chance in twenty that the colt would come within his reach, and it did. He made a single lunge and caught it by the ear. For a moment after that his heart turned sick. Under the added strain the dead spruce sagged down with a warning crack. But it held, and Aldous hung to his grip on the ear. Foot by foot he worked his way back, until at last he had dragged the little animal ashore.

And then a voice spoke behind him, a voice that he would have recognized among ten thousand, low, sweet, thrilling.

"That was splendid, John Aldous!" it said. "If I were a man I would like to be a man like you!"

He turned. A few steps from him stood Joanne Gray. Her face was as white as the bit of lace at her throat. Her lips were colourless, and her bosom rose and fell swiftly. He knew that she, too, had witnessed the tragedy. And the eyes that looked at him were glorious.

CHAPTER IV

TO JOHN ALDOUS Joanne's appearance at this moment was like an anti-climax. It plunged him headlong for a single moment into what he believed to be the absurdity of a situation. He had a quick mental picture of himself out on the dead spruce, performing a bit of mock-heriosm by dragging in a half-drowned colt by one ear. In another instant this had passed, and he was wondering why Joanne was not on her way to Tete Jaune.

"It was splendid!" she was saying again, her eyes glowing at him. "I know men who would not have risked that for a human!"

"Perhaps they would have been showing good judgment," replied Aldous.

He noticed now that she was holding with one hand the end of a long slender sapling which a week or two before he had cut and trimmed for a fish -pole. He nodded toward it, a half-cynical smile on his lips.

"Were you going to fish me out—or the colt?" he asked.

"You," she replied. "I thought you were in danger." And then she added, "I suppose you are deeply grateful that fate did not compel you to be saved by a woman."

"Not at all. If the spruce had snapped, I would have caught at the end of your sapling like any drowning rat—or man. Allow me to thank you."

She had stepped down to the level strip of sand on which the colt was weakly struggling to rise to its feet. She was breathing quickly. Her face was still pale. She was without a hat, and as she bent for moment over the colt Aldous felt his eyes drawn irresistibly to the soft thick coils of her hair, a glory of color that made him think of the lustrous brown of a ripe wintelberry. She looked

THE AUTO-OILED AERMOTOR

A Real Self-Oiling Windmill

Oil an Aermotor once a year and it is always oiled. Every moving part is completely and fully oiled. A constant stream of oil flows on every bearing. The shafts run in oil. The double gears run in oil in a tightly enclosed gear case. Friction and wear are practically eliminated.

Any windmill which does not have the gears running in oil is only half oiled. A modern windmill, like a modern automobile, must have its gears enclosed and run in oil. Dry gears, exposed to dust, wear rapidly. Dry bearings and dry gears cause friction and loss of power. The Aermotor pumps in the lightest breeze because it is correctly designed and well oiled. To get everlasting windmill satisfaction, buy the Aermotor.

A year's supply of oil is sent with every Aermotor

MICHIGAN CROPS

DEAL WHEAT

I would like to ask where I could get some Deal wheat for seed.—R. M., Rose City, Mich.

Very likely the Deal Mediterranean wheat is desired I know of no definite source of Deal wheat in Michigan. This wheat has in the past been listed with the S. M. Isbell Company, of Jackson, and I would suggest them as the best possible source. —J. F. Cox, Professor of Farm Crops, M. A. C.

GUMBO SOIL

I am interested in a farm that I am told has Gumbo in one field. Can Gumbo be put to any use? How would you work it and what crops would you put in, if any?—W. V., Climax, Mich.

Gumbo soil can be used for agricultural purposes if it is well drained. Usually corn is one of the best crops to grow on this type of soil. Special care must be exercised in tilling operations on gumbo land or else it will soon become puddled and practically worthless for agricultural purposes.—George M. Grantham, Research Associate, Dept. of Soils, M. A. C.

RED AND ALSIKE CLOVER SEED CROPS LARGER THAN LAST YEAR

THE 1922 crop of red clover seed is estimated to be about one-third larger and the alsike clover seed crop one-sixth larger than last year, according to data obtained by the United States Department of Agriculture. The increased production is due both to a larger acreage and better yield per acre in most of the heavy-producing sections. The weather prior to and at harvest time was generally favorable, but in some regions recent hot, dry weather, sim?ilar to that of last year, has reduced yields considerably.

Prices offered to growers on August 28 for red and alsike clover were $2.80 and $1.65 per 100 pounds, respectively,than on the same date last year and about one-half as much as were paid two years ago.

Almost every important producing section, except southern Wisconsin and southern Minnesota, indicate an increased acreage of red clover ranging from 9 per cent to 61 per cent and almost all sections indicated larger yields per acre. In most sections the spring rains gave the hay crop an excellent start and it was cut early. Rains continued long enough after the hay crop had been removed to give the seed crop a good start. Dry weather at the time the seed was getting further aided in increasing the yield over that of last year. Very little winterkilling was reported except in southeastern Wisconsin, where it was fairly serious, while last year a number of important sections reported varying degrees of damage from that cause.

Harvesting of the crop began in Indiana, Ohio, and Illinois (second crop) about August 20-30, and in Minnesota, Michigan, and Wisconsin, August 25, September 5. Threshing began in scattered localities in each of the sections a week or 10 days after harvest, but the bulk of the crop probably will not be threshed before October 15 or later, depending largely upon the activity of buyers.

Prices paid to growers for country-run seed on August 28, in the most important sections, ranged from $10.25 per 100 pounds in northeastern Missouri to $13.25 in southern Wisconsin and averaged for all sections about $12.20, compared with $15 n the same date last year and $23.65, two years ago. Prices for reclaimed seed, or "basis clean seed," averaged about $1 per 100 pounds more than for country-run seed.

The acreage and yield per acre of alsike clover seed in most sections were larger than last year, but the increases were not so large as in the case of red clover. Increases in acreage over that of last year range from 2 per cent in northern Indiana to 27 per cent in central Illinois; increases in yield per acre range from 3 per cent in northern Indiana to 22 per cent in southeast Iowa. The spring rains helped alsike clover and the crop in most sections made a better growth than last year, when drought and hot weather reduced the yield considerably.

The harvesting of the alsike crop was later in most sections than last year. In Illinois, Indiana, and Ohio harvesting began July 1-15 and followed shortly afterwards in Wisconsin, Minnesota, and Michigan.

Prices paid to growers for country-run alsike seed on August 28 ranged from $10.75 per 100 pounds in northeast Wisconsin to $12.50 in northern Indiana and averaged about $11.40, compared with $13, last year, and $24, two years ago. Prices for reclened seed averaged about $1.40 per 100 pounds more than for country-run seed.

FRUIT and ORCHARD

EDITED BY FRANK D. WELLS

DEVELOPMENT OF THE STRAWBERRY

IT is safe to say that no fruit has been developed during the past 25 years as much as the strawberry. At the beginning of the century the everbearing strawberry was looked upon as a curiosity, or a freak. That it could be made of commercial importance was scarcily thought possible. Now it has a recognized place in the fruit market and its importance is increasing.

The first varieties introduced were shy bearers and made few plants, while the quality of the fruit was inferior, but these defects seem to have been changed for the better. Some of the kinds now grown bear abundantly, make many plants and have a sprightliness that matches that of the spring fruit.

One of the latest varieties has come from a cross with a wild berry as one of the parents. The result is a berry with the much desired 'wild' flavor, the absence of which in cultivated strawberries is so often deplored. Besides this, the fruit is larger than the well-known Progressive, making it a heavy cropper. The plant is vigorous and throws out a plantiful supply of runners. To make it still more attractive, it bears in both spring and fall.

The variety is not yet being distributed and may not be within reach of planters for a season or two more, but when it becomes available it promises to surprise berry growers, unless it develop some weakness not in evidence. Anyhow, if this variety should fail in the final test, which seems improbable, it is a prediction of what may be expected within the near future.

NOTES

Give grape vines room. Plant them in rows eight or ten feet apart. Set them ten or twelve feet apart in the row.

Japanese walnuts are not uncommon and are listed by many nurserymen. The tree is a wonderfully rapid grower, and early and abundant bearer, when planted in a moist place. But the nut is inferior to the common black walnut, both in size and quality. In shape it is midway between the black walnut and the butternut, while the tree looks somewhat like the latter. Some of the claims for it have been rather extravagant, as is always to be expected with anything new. However, it is a valuable tree for those who want something that will begin bearing by the time American walnuts have nicely started at growing.

The Cuthbert is still the queen among raspberries. Miller's red is earlied and better looking, so sells better, but is inferior in flavor. It is grown for market, but the Cuthbert is wanted at home.

The gooseberry has been highly developed in England, while in this country it has been negelected. As a result the fruit there has an important place in the market, while here it is of comparatively small importance. Yet the ripe berry has a pleasing flavor and if it were large might be served more often than it is as a dessert fruit. Here is an opportunity for somebody to do good work by developing a large berry, suitable for serving ripe. The English varieties do not thrive well, our hot summers being unsuited to them. Are any of our readers growing them? If so, what have they found the best method for controlling the blight, mildew and other ailments of the bush?

ANY ONE CAN WIN THE $500 FIRST PRIZE

Read all about our Second big Puzzle Contest, a friendly game for readers of The Business Farmer, on page 11, of this issue.

Farmers Service Bureau

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you. All inquiries must be accompanied by full name and address. Name not used if so requested.)

QUALIFICATIONS OF HIGHWAY OVERSEER

Would like to know if any but taxpayers can vote lawfully for a roadmaster. We have a farmer in our district who gets into that office by bringing in the workers from the plaster mills to vote for him.—A Reader, Grand Rapids, Mich.

Concerning the election of a "road master," which I presume is meant for an Overseer, I would call your attention to Sec. 6, Chapter 13 of the General Highway Law, which provides that any resident of the district, who is an elector or any elector of the township having taxable property in the district (but who is not a resident of the district), may vote for such overseer.

If the township in question is operated under the provisions of Chapter 25, of the General Highway Law, the same provisions apply, i. e., any elector may vote for an overseer in his district.—Harry H. Partlow, Legal Adviser, State Highway Department.

THAT ETERNAL LINE FENCE QUESTION

A and B have a dispute over a line between farms. A certain maple tree, the center of which the line was supposed to be by both parties until A claimed the line was over on B, thirty feet south of the maple tree. B suggested they employ a surveyor, which A agreed to; each to pay half of same. When the surveyor arrived, A refused to pay a rent, but agreed before three witnesses if B paid surveying charges, he would accept the established line. One survey was made, the surveyor was unable to set the corner on the east end, on account of lack of time that day, but returned in a few weeks, with new evidence, surveyed same again and established a corner about 18 feet north of said maple. During B's absence A erects a woven wire fence, supposing he has run same on the line B once had a fence, but which B built with his own material and labor for his own benefit, but setting same over on B's own side, also on south side of maple, making A's fence at present about two or three feet on B's side. There never has been any fence on this land before only what B constructed for his own use, but not building same for a line fence or claiming any as sucn.

Can B have sufficient evidence to warrant action in the courts to compel A to remove his fence. A claimed before two or three people the line was 30 feet on B. The surveyor located the witness trees by his field notes to a dot?

Please advise regarding procdure of same and all information you may be able to get on same. Also can B compel A to keep his chickens from trespassing on B's land?

The controversy started in this case was by A wanting to cut the maple tree which was until then supposed to be the line.—S. R., Three Rivers, Mich.

Under the statement I would be of the opinion that B could maintain a right to the land established by the surveyor as the proper line between the two properties. Old fences are good evidence of where the true line is. A very old fence undisputed may be the best evidence of where a true line is but if a fence has not been there in such a way as to establish by agreement where the true line is then I would be of the opinion that the survey would control as to the place the true line should be located.

A verbal contract as to some subjects may be as good as a written one and it may be void and no good as to other subjects—Legal Editor.

THE DIFFICULTIES OF LAW ENFORCEMENT

Would you please tell me the law in regard to arrests for stilling moonshine. Two men went to a place where thy found two other men in a house with a still. They went and tried to get the prosecutor and sheriff but the phone lines were not in order so they then went to a justice of the peace and asked for a search warrant to be served by the deputy sheriff. The justice said he would not have any authority in that case. It had to be done by the sheriff and prosecutors but the deputy sheriff proposed to go anyway, so the three then went. They found one man on guard outside and he got away but there was one man in the house. The still was on the stove, a good hot fire and a can set to catch the liquor. There was about a gallon and three barrels of mash. They took the still and man before the prosecutor and he let him go because the deputy had no search warrant. How with all of this evidence can't there be anything done, or has this got to be let go in this manner because people will not act who have the authority.—L. F., Clare County, Mich.

The difficulties which followed from the state of facts presented in your letter had their first inception in the error committed by the Justice in declining to issue a search warrant when asked for by the Deputy Sheriff. The Deputy Sheriff should have secured a search warrant either from this Justice or some other Justice, or upon order from the Prosecutor, as he certainly under this state of facts was entitled to a search warrant. However, failing to secure a search warrant for the reasons assigned by him did not justify him in making an entry of the premises and a search and seizure of the incriminating evidence. We do not think that the evidence taken under these circumstances could be used in a prosecution. However, we do not see that this would necessarily prevent a prosecution for the manufacture of liquor, for, if the officer, and others, were in the home and saw the still in actual operation and could tell from the odor, or otherwise, that the product was liquor, a prosecution could be sustained upon this evidence without the necessity of using the still or the liquor itself, and we would recommend that the case be presented to the Prosecuting Attorney from that viewpoint.—A. B. Daugherty, Deputy Attorney General.

ANIMAL MISREPRESENTED

I purchased what was supposed to be a three-year old gelding. He proved to be an original as soon as I got him home. I complained to original owners and they said that they knew nothing of it. I can furnish proof that they did know it. Are they liable for return of purchase price?—O. F., Pavilion, Mich.

The return of the animal or damages in the sale will depend upon the warranty made at the sale. If no warranty or representations were made at the sale you will be without any right of action for damages. The seller is only liable for some kind of a warranty or the failure to make some disclosure that he was in duty bound to disclose.—Legal Editor.

SEEDING ROLLING LAWN

We have a rolling lawn and it is sandy soil. What kind of grass would you seed it down with?—Mrs. J. D. L., Pentwater, Mich.

We would recommend a mixture of the following grasses: Chewing's Red Fescue Rhode Island Bent grass and Red Top, mixed in about equal proportions.—C. P. Halligan, M. A. C.

SCHOOL BOARD CANNOT SELL FURNACE

I would like to know if a school board has any right to dispose of a furnace that had been in use two years because one member of the board did not want it and then buy a stove and use it one winter and then it got newsed around that the furnace was gone and up comes a man with a big stick in his hand and says "put back that furnace," and so they did, so the shift has cost the district about 150.00. Can the school board be made to refund this money? The director of the same board could have hired a teacher for $70.00 per month but the teacher would not board with the director so they went and paid $80.00 in order to get the teacher to board there.—H. H., Davison, Mich.

School officers cannot dispose of any school property without a vote of the people.

In regard to buying a stove and using it one winter, we would say that no heating plant can be installed in any school building without the approval of the Superintendent of Public Instructian and a stove without a ventilating system in connection would not be approved by the Department.

I do not understand your reference to a "big stick" nor to the board putting back that furnace, "that furnace" probably being the one referred to above as disposed of by the board, but in answer to your question as to whether the board can install a furnace will say as above, that if the furnace meets the approval of the Superintendent of Public Instruction the board has a right to put it in and spend whatever money is necessary for it.

You ask if the board can be made to refund this money. I would say yes.

You state that the director of the

SCIENTIFIC REFINING
MOTOR OIL

The Oil of a Million Tests

Are you willing to serve yourself and save $17.50 on every 50 gallons of oil you buy, or are you going to continue to pay the "long" price by buying in small quantities?

Think of it! You can now buy this high grade, scientifically refined En-ar-co Motor Oil—the oil that is known to, and used by thousands of farmers everywhere, and endorsed and recommended by prominent tractor, automobile and motor manufacturers, at the big cash saving of 35 cents per gallon, or $17.50 when you buy it by the iron drum—by having it handy—by employing self-service.

This big saving is made possible only by getting En-ar-co to you in quantity lots at the lowest possible expense. You know it costs less to handle fifty gallons of En-ar-co Motor Oil in one iron drum than fifty single gallons in fifty different packages. The difference in cost is 35c per gallon or $17.50 per iron drum—and this big cash saving is yours if you order En-ar-co Motor Oil by the iron drum.

You know the National Refining Company. It has been serving the public for forty years and has the reputation among everyone of making the highest quality Petroleum Products on the market. Nobody has ever made any better, and your farm paper or your neighbor will tell you of the high standing of the Company, and the scientifically refined quality of the goods that we sell.

Act Now! Order your drum of En-ar-co Motor Oil today. Advise what tractor, truck, automobile or light plant you want to use it for—we will send you the proper grade and guarantee immediate delivery.

Rheumatism

A Remarkable Home Treatment Given by One Who Had It

In the year 1893 I was attacked by Muscular and Sub-Acute Rheumatism. I suffered as only those who are thus afflicted know for over three years. I tried remedy after remedy, but such relief as I obtained was only temporary. Finally, I found a treatment that cured me completely and such a pitiful condition has never returned. I have given it to a number who were terribly afflicted, even bedridden, some of them seventy to eighty years old, and the results were the same as in my own case.

I want every sufferer from any form of muscular and sub-acute (swelling at the joints) rheumatism to try the great value of my improved "Home Treatment" for its remarkable healing power. Don't send a cent; simply mail your name and address, and I will send it free to try. After you have used it, and it has proven itself to be that long-looked for means of getting rid of such forms of rheumatism, you may send the price of it, One Dollar, but understand I do not want your money unless you are perfectly satisfied to send it. Isn't that fair? Why suffer any longer, when relief is thus offered you free. Don't delay. Write today.

MICHIGAN BUSINESS FARMER
"The Farm Paper of Service"
Tell your friends about it

The Children's Hour

DEAR Nieces and Nephews: In my letter in the last issue where I announced the new contest regarding birds I neglected to mention two important things. They were: first, your list of names should contain only the names of Michigan birds and second, you must compose this list without the assistance of any book. Just notice on your way to and from school how many different birds you see and write the names of them down and then in the evening sit down with your notes and write your letter to me.

Because of my error I will not close the contest until midnight, October 7th, so all of you have plenty of time to write if you have not already done so, and if you have you may send another letter and I will count that instead of your first one.

Look on the next page and read about the great contest the Business Farmer is starting. The first prize is $500.00 and you can win it and stand just as good a chance of winning it as anyone. One of the winners in the picture puzzle contest put on by M. B. F. last year was only eleven years old, so you see age doesn't count. Just think what you could do with that much money. And the best part of it all is that it does not cost one cent for you to try. If you do not win first prize remember there are 14 others and M. B. F. is going to give them all away to its friends, and you could use some of the money I know.

Last year you had to find the words beginning with the letter "S" while this time it is the words that begin with "B." But before you start at work be sure to read the directions over carefully and if there is anything you do not understand ask your mothers or fathers to explain it to you. Or you can write direct to the Contest Manager. He will be pleased to answer your questions. Now one thing more: be sure to clip the puzzle picture and send it to the Contest Manager when you send your list of words to him. How many of my nieces and nephews are going to win some of this money, or how many are at least going to try to win some of it? — UNCLE NED.

OUR BOYS AND GIRLS

Dear Uncle Ned — Here are the following birds that I know:

Sparrow, robin, bluebird, blackbird, kingfisher, condor, catbird, thrush, wren, quail, bobolink, bluejay, meadowlark, swallows, parrots, chickadee, stork, hummingbird, canary, snow bird, killdeer, pheobe, doves, pigeon, hawk, crow, owl, yellowbird, kingbird, crane, ground bird, graybird, brown thresher, mudhen, aimless robin, skunk bird, chippy bird, ostrich, woodpecker, vultures, bittern, high holder, mourning dove, nightingale, whip-poor-will, snipe, bat.

The bird that I like best is the robin. It has a red breast and its back is a dark brown. It is about three inches high and about 4 1-2 inches long. It will come early in the spring and build its nest in a barn or apple tree. When it has its nest built it will lay three or four eggs of a pale blue color. Then it will set until their eggs are hatched. We should never harm the robin or any other birds. — Miss Carmen Shook, Reese, Mich., age 12.

Dear Uncle Ned:—Here are the names of birds and the description of the ones I like the best:

Brown thresher, mockingbird, tufted titmouse, golden-crown kinglet, bluejay, blue grosbeak, catbird, snowbird, ruby-throated hummingbird, loggerhead shrike, sparrow, woodpecker, kingfisher, canary, red-winged blackbird, crow, owl, crane, wren, meadowlark, killdeer, eagle, parrot, bluebird, blackbird, condor, oriole, snow bunting, vermillion flycatcher, golden-winged warbler, bullocks oriole, blackburian warbler, myrtle warbler, horned lark, yellow-throated vireo, American crossbill, cedar waxwing, yellow-breasted chat, yellow-bellied sapsucker, redpoll, purple finch, robin.

I like the canary the best because you can have it for a pet and it has a sweet voice. And its sweet voice may make happy hours out of lonely ones. The canary I had was yellow on the back and breast and the head. The wings have a little black on them. Its legs are yellow. The canary will take a bath and it eats seed.—Marian Wyckoff, Sheridan, Mich., R. No. I, Box 13.

Dear Uncle Ned:—I am only 9 years of age and in the sixth grade but I thought I would try to get the prize anyway.

Robin, bluebird, hummingbird, killdeer, pheobe, pigeon, dove, blue heron, kingfisher, blackbird, canary, woodpecker, quail, wren, green heron, crow, hawk, eagle, catbird, mourning dove, owl, sparrow, swallow, lark, parrot, redbird, bluejay, oriole, partridge, peacock, haring gull, sea gull, magpie, thrush, whip-poor-will, stork, marsh hen, cowbird.

The quail is not a very handsome or attractive bird but to me it is a very nice bird. I do not live in the city so I can hear the quails sing. Almost every day I can hear their shrill voices calling out, "Bob white, bob white." I have become so attached to their pretty songs. They build their nests of fine things such as horse hairs. They build them on the ground. The bird is a brownish color. Their eggs are pure white. They are quite large for a bird's egg. The young quails run around soon after they are hatched.—Lois Rensberry, Fenton, Mich., R. F. D. No. 2.

Dear Uncle Ned—I am a girl 10 years old and in the 4th grade. My father takes the M. B. F. and I read the Children's Hour. We live on a 160-acre farm and I like the farm better than the city. We have a dog, four old cats and three little kittens. We have about 100 chickens, 9 pigs, 12 cows, 22 young cattle and 6 horses. I will tell you about my trip to Chicago.

We went on a boat named "Alabama" and it was rough the entire trip. We started from Muskegon, my grandpa, mother, sister, brother and I. There were many animals on board the boat and there was a hospital on the boat for them. There is so much to tell about about Chicago that I cannot tell it all. Write to me.—Ruth C. Nelson, R. 2, Grant, Mich.

Dear Uncle Ned—Here is a poem I composed:

The Three Happy Maids

I'll tell you a story that I'm sure
You'll like quite well,
It's about three maids
Whose names I will not tell.

Their home is the prettiest ever seen,
With a back-ground, oh! so lovely and green,
The porch is covered with roses so bright
It is just a beautiful sight.

The words break forth
From their lips so soft,
And the wonderful voices
Are heard far off.

Early in the morning
They're often seen
Strolling along
The meadows so green.

They've nothing to do
But work and play,
This is the reason
They're happy and gay.

Their love for each other
Can never be told,
It's always increasing
Though they're getting old.

The moon shines down
On the maids so fair,
While their voices softly float
On the evening air.

So now you see
My story's told
And hope you'll like it
As good as gold.
—Iris Arnold, Mt. Clemens, Mich., R4.

"WHAT I THINK OF CALF CLUB WORK"

I RECEIVED my inspiration in become a club member at a mass meeting conducted at the Rogers School, by Mr. George E. Bishop, now Secretary of the Upper Peninsula Development Bureau, and Miss Mary V. Hall, Iron County Club Agent. I was interester in purebred stock so I joined the club. On April 28th, 1921 we held a meeting and organized the Cloverland Calf club. We have had about ten regular meetings and six meetings for preliminary judging, all of which I attended and enjoyed, and can say that there was not a meeting held but that I learned something new. At these meetings we had speakers who taught us how to judge, and how to carry on our club work successfully. Mr. Geerge E. Bishop soon after organization, left for Wisconsin to purchase the pure bred calves for the members of the club. I had chosen the Guernsey type because of the permanent yellow color of its cream, which brings a high market price and because of its hardiness and gentleness and its remarkable dairy qualities. The following week I received word that the calves were to arrive on the 4th day of May. I went to the station to get the calf. Ding! Dong! The train was coming. The train came into the station and switched the stock car to a sidetrack to be unloaded. The calves were carried onto the platform in their crates and were distributed to club members by lot. They were all Guernseys but two which were Holsteins. My calf was small, in fact, one of the smallest of the group, but now she compares favorably with some of those that at first were larger and is gaining in weight wonderfully.

I have fed my calf milk since the day I bought her, and have also fed her grain. She does not care for oil meal alone, but when mixed with ground feed she eats it readily. My calf has not had any sickness, and is strong and healthy. It follows me around and comes readily when called. One day I went across the road to a neighbor and the calf followed me as far as the gate and waited until I came back and then followed me to the house. Every month I lead her one mile to be weighed, and I also led her three miles to the fair at Iron River without much trouble. I am more pleased with my calf now than the day she arrived. My grandfather did not think much of it either at first, but he also has changed his mind.

I am taking as good care of my calf as I know how, brushing and cleaning it every night and when I exhibited her at the county fair as did other members of the club I thought she must be the best calf of the group. The judge, however, decided differently, explaining to us in what respects other calves were superior, and awarded my calf second place out of fifteen exhibited that day, much to my satisfaction. Most of the calves exhibited belonged to club members and I learned that some of the members did not take care of their calf as well as others. We also judged stock that day and three of our members took prizes winning trips to the Livestock Exposition at Chicago. I am planning to take up this work again next year, and am aiming to win first place at the fair this fall instead of second.

More than half of the members of the Cloverland Club attended the Upper Peninsula Club at Chatham and in the stock judging we carried off several prizes. Russell Hartley, Iver Peterson and I won free trips to the State Fair at Detroit while Russell Hartley won in addition a pure bred Holstein calf, and Iver Peterson a pure bred Duroc-Jersey hog.

I believe that the Cloverland Calf Club has made a very creditable record and I hope that more such clubs may be organized. This kind of work should be carried on. The club work has been of great value to me. The project work has given me experience in making records in a business-like way; has taught me to judge with a fair degree of accuracy the various types of cows, sheep and hogs, and has enabled me to learn by practical experience the proper care of calves. But its greatest value probably lies in the fact that it is interesting many boys in agriculture from which will come our future farmers, club leaders or agricultural agents.—Andrew Waite, State Champion, Iron River, Mich.

YOU WIN $500!

FUN FOR THE WHOLE FAMILY

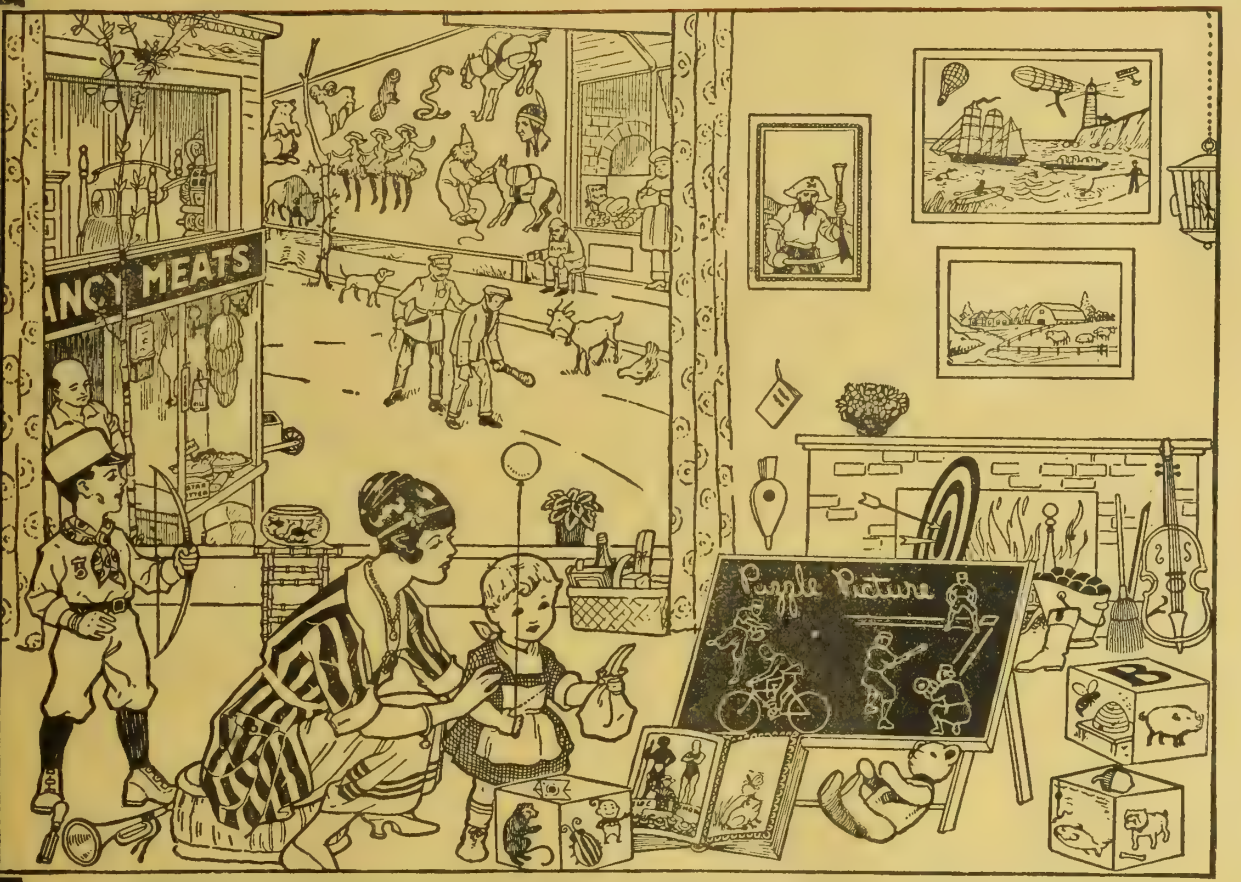
The Michigan Business Farmer's Great $500 Puzzle

COSTS NOTHING TO TRY

"Young folks, old folks, everybody come, join the Business Farmer's Contest, You'll have a lot of fun!"

THE MICHIGAN BUSINESS FARMER is going to give every man, woman and child the chance to have lots of fun at the same time the chance to win any one of fifteen big cash prizes. The whole family can take part in this simple yet amusing fun game. Every object has been drawn plainly so everybody can recognize it. There are no hidden objects. Every one of them is as plain as the nose on your face. You don't have to turn the picture upside down or sideways. Just look at the picture and name the objects, that's all. The person who sends us the largest and most correct list will be awarded First Prize, second largest list Second Prize, and so on. But don't wait to send in your list. Get it in early. We will furnish additional proofs of this Puzzle Picture free. Ask for them.

How Many Objects Can You Find in this Simple Picture that Begin With "B"?



HOW MANY OBJECTS CAN YOU FIND IN THIS PICTURE THAT BEGIN WITH "B"?

Here are a few of the words: BOOK, BEAR, BALL, BEADS, BADGE, etc. Just pick out the words and write them down. We are running the "B" Puzzle Picture to increase the poularity of this paper. It is not a subscription contest and you do not have to send in a single subscription to win a prize. If the judges award your answer the First Prize, you win $20.00; Second Prize, $10.00, etc. But if you want to win more than this, we make you the following offer:

You Can Win $500

If the judges award you First Prize and you have sent in two $1 subscriptions to the Michigan Business Farmer, you will receive $300 instead of $20.00; Second Prize, $150, etc. (See second column of figures in prize list.) But, if you are awarded First Prize and have sent in five $1 subscriptions to the Michigan Business Farmer you will receive $500 instead of $20; Second Prize $250, etc. (See third column of figures in prize list.) It is easy to get subscriptions for the Michigan Business Farmer, all of your friends and neighbors want it; they are only waiting to be asked to subscribe or renew at $1 a year. **Your own subscription or renewal will count for one** and all you have to do is to get the additional new or renewal subscriptions. The subscriptions can start at any time. When sending subscriptions, write order, names and addresses on a separate sheet from your puzzle answer.

SUBSCRIPTION RATES
$1.00 PER YEAR
PAYABLE IN ADVANCE

JUDGES: Ex-Governor Fred M. Warner, A. B. Cook, Pres. Michigan State Grange and G. W. Dickinson, Sec'y-Mgr.. Michigan State Fair, have been asked to act as judges and decide the winners.

Rules of the Contest--Observe Them

1. Any man, woman, boy or girl who is not an employee of the Michigan Business Farmer or a member of employees family, may submit an answer. It costs nothing to try.

2. All answers must be mailed by November 25th., 1922, and sent to the Michigan Business Farmer.

3. All lists of names should be written on one side of the paper only and numbered consecutively, 1, 2, 3, etc. Write your full name, and address on each page in the upper right-hand corner. Do not write subscriber's name or anything else on the same paper with list of words; use separate sheet.

4. Only words found in the Webster's Unabridged Dictionary will be counted. Do not use obsolete words. Use either the singular or plural, but where the plural is used the singular can not be counted, and vice versa. Do not use hyphenated, or compound words, where each word in itself is a separate object. When an object can be correctly called by two or more names, any one of such names will be counted as a word.

5. Words of the same spelling can be used only once, even though used to designate different objects. An object can be named only once; however, any part of the object may also be named.

6. In making the awards each list will be considered solely upon its merits. Every incorrect word counts against the contestant just as much as a correct word counts in the contestant's favor. Therefore it is very important that no incorrect words are included in a list.

7. The answer having the largest and nearest correct list of names of visible objects shown in the picture that begin with the letter "B" will be awarded First Prize etc. Neatness, style, handwriting or the matter of subscriptions sent in have no bearing upon deciding the winners.

8. Candidates may co-operate in answering the puzzle, but only one prize will be awarded to any one household; nor will prizes be awarded to more than one of any group outside of the family where two or more have been working together.

9. In the event of a tie for any prizes offered, the full amount of such prize will be paid to each tied participant.

10. All answers will receive the same consideration regardless of whether or not subscriptions for the Business Farmer are sent in.

11. Ex-Govenor Fred M. Warner, A. B. Cook, Pres. Michigan State Grange and G. W. Dickinson, Secy-Mgr. Michigan State Fair, have been asked to act as judges and decide the winners. They will use Webster's Unabridged Dictionary as reference and participants agree to accept the decision of the judges as final and conclusive.

12. The judges will meet directly following close of the contest and announcement and correct list of words will be published in the Michigan Business Farmer as quickly thereafter as possible.

The Prizes:

Winning Answers Will Receive Cash Prizes as Follows:

15 Grand Prizes	Prizes given if NO Subscriptions are sent	Prizes given if TWO $1 Subscriptions are sent	Prizes given if FIVE $1 Subscriptions are sent
1st Prize	$20.00	$300.00	$500.00
2nd Prize	10.00	150.00	250.00
3rd Prize	5.00	75.00	125.00
4th Prize	5.00	50.00	75.00
5th Prize	5.00	30.00	50.00
6th Prize	3.00	20.00	40.00
7th Prize	3.00	15.00	30.00
8th Prize	3.00	10.00	20.00
9th Prize	2.00	10.00	20.00
10th to 15th	2.00	10.00	15.00

Live Stock and Auction Sale Advertising: We offer special low rates to reputable breeders of live stock and poultry; write us.

RELIABLE ADVERTISERS

We will not knowingly accept the advertising of any person or firm who we do not believe to be thoroughly honest and reliable. Should any reader have any cause for complaint against any advertiser in these columns, the publisher would appreciate an immediate letter bringing all facts to light. In every case when writing say: "I saw your advertisement in The Michigan Business Farmer!" It will guarantee honest dealing.

Entered as second-class matter, at post-office, Mt. Clemens, Mich.

"The Farm Paper of Service"

The Farmers Right To Strike

ECONOMISTS hold up their hands in horror at the very idea of the coming to pass by some miracle a "farmers' strike." No one has yet prophesied how it could be brought about, but Secretary Wallace, in his very able talk before the Farm Bureau at Leesburg, Va., brought out the facts comparing farm and labor wages, which are timely in view of the recent upheavals He said in part:

"Take the average wage received by the coal miner for mining a ton of coal. In 1913 the wage per ton would buy 1.1 bushels of corn in Iowa; in 1921 it would buy 2.5 bushels of corn in Iowa. In 1913 the ton wage would buy .7 of a bushel of wheat in North Dakota; in 1921, .9 of a bushel. In 1913 it would buy 4.7 lbs of cotton in Texas; in 1921, 8.5 lbs. In 1913, 7 lbs. of hogs in Nebraska; in 1921, 14 lbs. In 1913, .8 of a bushel of potatoes in New York; in 1921, 1.2 bushels. In 1913, 11 lbs. of sheep in Wyoming; in 1921, 18 lbs. In 1913, 1.6 bushels of oats in Illinois; in 1921, 3.1 bushels. In 1913, 2.4 lbs. of butter in Missouri; in 1921, 3.2 lbs.

"Taking the average yearly earnings of railroad employes, we find that in 1913 the yearly wage would buy 1,492 bushels of corn in Iowa, and in 1921, 4,112 bushels. It would buy 1,028 bushels of wheat in North Dakota in 1913; in 1921, 1,466 bushels. In 1913 it would buy 6,449 lbs. of cotton in Texas, and in 1921, 13,934 lbs. It would buy in 1913, 102 cwt. of hogs in Nebraska, and in 1921, 237 cwt. It would buy 148 cwt. of sheep in Wyoming in 1913, and in 1921, 296 cwt. In 1913 it would buy 1,087 bushels of potatoes in New York; in 1921, 1,916 bushels. In 1913, 2,174 bushels of oats in Illinois; in 1921, 5,109 bushels. In 1913, 3,309 lbs. of butter in Missouri, in 1921, 5,285 lbs.

"The purchasing power of the wages of the railway employe in 1921 was 51 per cent greater than in 1913. The purchasing power of the wages of the coal miner in 1921 was 30 per cent greater than in 1913. The purchasing power of the farm hand who works for wages in 1921 was 4 per cent less than 1913, while the purchasing power of the farmer himself was, on an average, from 25 to 45 per cent less than in 1913.

"In short, the farmers of the country, numbering almost one-third of our entire population, have borne altogether the heaviest burden of deflation. They have endeavored to get relief by all lawful means. They have apealed to the Administration, to Congress and to every other agency which they thought might be able to help them, but while making these efforts to avoid their heavy losses they have not struck. They have not created disorders. They have kept on producing and in the face of extraordinarily low prices have this year grown one of the largest crops in our entire history. The farmer believes in law and order. He believes in government. He believes in fairness in working hard and producing efficiently."

it is strange that labor-leaders cannot see what is plain to all men, that wages cannot rise, while the greater producers of America, the farmers, are forced to accept lowered "wages" in the price paid for the products of their toil. Practically, the farmers of America cannot strike, but it is highly doubtful, if though the way were opened to them, they would. Farmers as a whole are thinkers, they will not be lead far by false prophets and they prefer to believe, as we do, that "right will, in the end triumph."

The State Fair Midway

WHEN Commissioner of Agriculture Doelle sent Ezra Levin, an employee of his own department, to investigate the Michigan State Fair and report personally his own opinion of it, we doubt if Mr. Doelle had in mind that the report would be so pointedly critical or that it would so quickly find first page position in the daily press as an "attack on the fair management".

We cannot view it as such, because Mr. Levins report was really an attack on the "midway", which has always, and will always, be a source of lively discussion, just as placing bets on the horse-races was, until it was permanently abolished from the fair grounds.

In defense of Mr. Dickinson's able management of the fair, it is readily apparent that the "midway" is a source of revenue of first importance. Particularly is this true of the Michigan fair, because of its proximity to Detroit, the fourth largest city in America. No other state fair in the United States is situated so near a city of half Detroit's population. City folks are accustomed to spending their money on "shows", so the question of how greatly the abolition of the "midway" would effect the gate receipts of the fair is one that the fair management will find hard to answer.

If the midway with all its freaks, cheap-shows and games of chance, has been the contributing factor to provide in a large measure, the profit at the close of each fair which has made possible the new Coliseum, the concrete barns and the hundred and one educational improvements which are each year added to the fair, then here indeed is a problem of morality versus finances.

This criticism of the midway and the kindred concessions on the Michigan State Fair grounds is not original with Mr. Levin, we have heard it from visitors often, usually qualified however by some remark regarding the "suckers who wouldn't be satisfied unless they squandered some money at the fair." But there are we believe several successful state fairs in this country where no midway is tolerated, it ought to be easy for Mr. Dickinson to get the facts regarding their experience.

We want to see the Michigan State Fair live up to its opportunities, we want to see it continue under the management of Mr. Dickinson and we cannot believe but what the airing of this midway matter, with the hope of bringing fourth the facts even though they establish its necessity as a profit-producer, will be of genuine benefit.

Alcohol from Potatoes

THE Washtenaw Post says the Business Farmer is mistaken when it claims there are too many potatoes. The problem is not one of regulation, but of utilization, says our critic. "The real fact is," claims the Post writer, "there hasn't been a single potato more raised than could be profitably used if the farmers knew their business, which consists not only in producing potatoes, but in selling them. Not selling them in the form of potatoes, but in the form of alcohol. * * * No, there are not too many potatoes; there is only an absence of common sense on the part of the farmers, in dealing with the problem of an over-supply but which really does not exist."

This editor has suggested nothing new. As a matter of fact the United States government and many individuals—including Henry Ford, have conducted numerous experiments in the hopes of demonstrating that alcohol can be profitably extracted from potatoes. There has never been any question about the possibility of getting alcohol from potatoes, but there has been and still is a good deal of question about the practicability of the operation. For unless it can be done at a profit the scheme is valueless. One might as well suggest that the surplus be sold to the inhabitants of Mars. It is one thing to suggest what the farmers ought to do and another how to do it .

NOTICE TO SUBSCRIBERS.

Rather than curtail departments and print incomplete issues, as some farm papers have been forced to do, we have preferred to issue The Michigan Business Farmer, every-other-week temporarily.

Each issue missed has been credited to the subscriber, so that in the end no one will lose a single issue for which he has paid. We respectfully ask your patience and thank you for your loyalty to

"The Only Farm Weekly Owned and Edited in Michigan!"

At the present value of fuel alcohol not more than 10 or 15 cents can be paid for a bushel of potatoes to be thus utilized. In fact experiments conducted to date give us no reason to expect that the common table variety of potato will ever prove a profitable source of commercial alcohol. Several years ago,—it is said, Henry Ford imported from Germany a larger and coarser variety of potato from which he hoped to secure alcohol in paying quantities. but his failure to do so up to the present time is impressive testimony of the difficulties to be overcome.

It is entirely possible that the United States may some day consume in one form or another all the potatoes which the farmers can raise but that time is not yet. If the farmers are due for any criticism it is because they were so short sighted as to plant so many potatoes and not because they do not know how to market the crop at a profit.

The Tariff is in Effect

THE Fordney-McCumber tariff bill has been signed by the President and is this minute in effect, whether or not you have as yet felt its effect in bringing you greater profits on what you sell or making what you buy cost more. The tariff bill, altho avowedly a Republican measure, was attacked by many progressive members of that party who might have hailed it a few years ago as a "bulwork af protection for our infant industries." But in the year of Our Lord nineteen hundred and twenty-two it praises have a hollow sound.

The infant industries of a few years back are some of the mightiest trusts of the present day. They need the protection of the government about as badly as a pugilist needs a nursing bottle. Anyway, the Fordney-McCumber bill adds a few more tiers to the wall of protection around them to make sure that no competing Europeean product may ever clmb over to the American consumer.

Much has been said of the "recognition" which the bill gives to agriculture but as was pointed out in these columns when the bill was first under discussion, this recognition is more apparent than real. During the few months that have elapsed since the introduction of the bill the thinking men in the agricultural field have come to realize that except in a very few cases the tariff on agricultural products will prove of no value whatever to the farmer. No less a person than Dr. Friday of the M. A. C., speaking before the potato growers at Cadillac, pointed out the fallacy of expecting a benefit from a tariff on products of which the United State produce a surplus.

Michigan Crops In Lead

IT is encouraging to note how the condition of Michigan crops has surpassed those of nearly all other states for every month of the year. The September crop report shows Michigan outdistanced by only four states, two only of which may rightly be termed agricultural. Farmers can stand poor crops when prices are high, but poor crops and poor prices are a combination which will put a mortgage on most any farm. With good crops and in easy reach of the big consuming centers the farmers of Michigan are better able to withstand an era of low prices than are the farmers of almost any other state.

How About The Wood Lot?

POLITICS may be uncertain, but the high coal prices we predicted when the miners of the country were fishing this summer, are here. Sometime ago we conducted a survey among the readers of this weekly, which disclosed the fact that 82 per cent of our readers have wood-lots, averaging 27 acres in size.

What the Neighbors Say

WALL STREET AND THE FARMER

IN an article recently published in the Dearborn Independent, a writer says: "The business farmer is the backbone of civilization."

Gideon was thrashing near the wine press in the vineyard to keep the grain hid from the Midenites who lay in the valley to pounce upon any grain harvested by the Isrealites.

The present day farmer has no hiding place. He threshes his grain. The stock exchange fixes the price and it is "take or leave it," and in too many instances he has to "take it" for he has immediate obligations to meet.

There is a bird known as the "Boob" that is an industrious fisher, there is another bird, the frigate, that is a pirate, who never fishes, but when the "boob" comes in with his pouch loaded with fish the frigate bird pounces upon him and makes him disgorge and he returns home as empty as he went out.

Likewise the farmer produces his grain and the pirates in Wall Street and elsewhere pounce upon him and "eat 'em up" and he frequently comes out at the end of the horn as empty as when he started out at the first of the season.

What's the remedy? Destroy the power of the pirate by letting the government own and control the currency. By some people it may be denied that we have a private owned and controlled currency but the fact remains.

There are some signs of a breaking up along political lines. The nominations that have been made to date. The fusion of parties in New York and other surface indications. Labor is a sleeping giant that may roll over, rub its eyes, shake itself and set up and take notice or cause the candidates to take notice.

Ford has opened the eyes of the industrial and railroad world and demonstrated that labor can be paid living wages.

The chief trouble with corporations is that the "overhead" absorbs the earnings and if there is anything left labor can have it.—T. E. T., Oakland County, Mich.

STRIKES AS THE FARMER STRIKES THEM

THE farmer is more of a laborer than a capitalist, so he does not look at strikes with the eye of a capitalist. He believes in the organization of the laborers in a common cause. He has some organizations himself and is now trying to perfect others. He believes that an important effort of class organization should be to get fair pay for the labor of its members, but he does not believe that should be the only effort. An organization in the eyes of the farmer is not a success unless it makes of its members better workers and better citizens, as well as gets more money for them. The canning club emblem suits him and his organizations. He would have his farmers' club, Farm Bureau or other farm organization train the head, the heart and the hand. He would organize to eliminate waste and in that way would help the consumer as well as himself.

When it comes to the walk-out the farmers emphatically does not believe in that. He believes in planting the crop to fit the market, but not in starving a world to get exorbitant prices. He accents his task as the producer of food and would not organize to stop production to force his point on the rest of the country. He will try the best he can to sell what he grows at a profit, but he who has not the heart to let the old cast-off horse starve or to shoot him and end the feed bill will not use the throttle hold to gain his point. He will not try to get what he thinks he ought to have from the consumer by stopping production and causing misery and starvation among women and children.

Of course he will plan, organize, and try as best he can by up-to-date methods to better his conditions. He believes that he is working his way to a fairer equalization of the burden of feeding the world. He has done it at too great a sacrifice to himself and family, but he will not walk out nor make threats to gain his point. Education and the elimination of unnecessary cost of delivering farm products to consumers are the main lines of action. Of course, planning the crop of the country to fit the probable demand and systematic marketing will enter in, but this will hurt the food speculator and not the consumer.

He does not intend to strike and believes that no body of workers have the moral right to walk out and bring suffering on a whole people. He has no thought of affiliating with the labor organizations and recent actions of some of the unions force the conviction that his ideals and the ideals of the members and leaders of those unions are very far apart.—L. R. Neel, Tennesee.

DOES TARIFF INCREASE CLOTHING COST?

EDITOR:—Well, the tariff has been passed, signed and now the great American people can shoulder their load. Did you read what the head of the wool growers said? Listen:—

"The charge that the proposed duty will add $5 to the retail cost of a suit of clothes is absurd. In the first place, the duty will apply to considerably less than half of the domestic consumption of clothing wools, for in 1921, 262,000,000 pounds were imported as compared with a domestic production of 302,000,000 pounds. Furthermore, in practice the price of domestic wool is never equal to the price of the foreign wools plus the fundamental duty.

Secondly, the average amount of grease wool in a suit of clothes is only 8 pounds. Taking an average and fair general estimate of a 50 per cent shrinkage of the wool, the average suit of clothes contains only about four pounds of wool, which at the duty of 33 cents, would add an outside maximum of $1.33 to the suit of clothes. The fairer figure which we are willing to admit would be possibly as much as $1 a suit that might be added to the retail cost of a suit of clothes by the wool tariff."

Now, watch carefully and you will see the clothing merchants start pulling the $5 out of the "dere publik" all right. How much advantage will the wool growers of Michigan actually get. We shall see what we shall see.—E. B. K., Montcalm County.

SHOULD MAKE IT UP TO SOLDIERS

All our soldiers should have full compensation for their time and risk in the World War. Those who were disabled should have a substantial pension for life. Thousands of the boys came home believing their jobs were waiting for them as had been promised. Only a very few found it so.

Why don't America citizens stand together for the betterment of home and nation and quit whining about the folks across the pond.—W. C. Anderson, Green Forest.

WHEAT PRICES AND MILL PRODUCTS

Who gets the cream? I sold my wheat for $1.03 a bushel I am paying $2 a hundred pounds for shorts, $1.85 a hundred pounds for bran and $1.10 for 24 pounds of flour, grown and milled right here. Is that not as much of a crime as bootlegging?

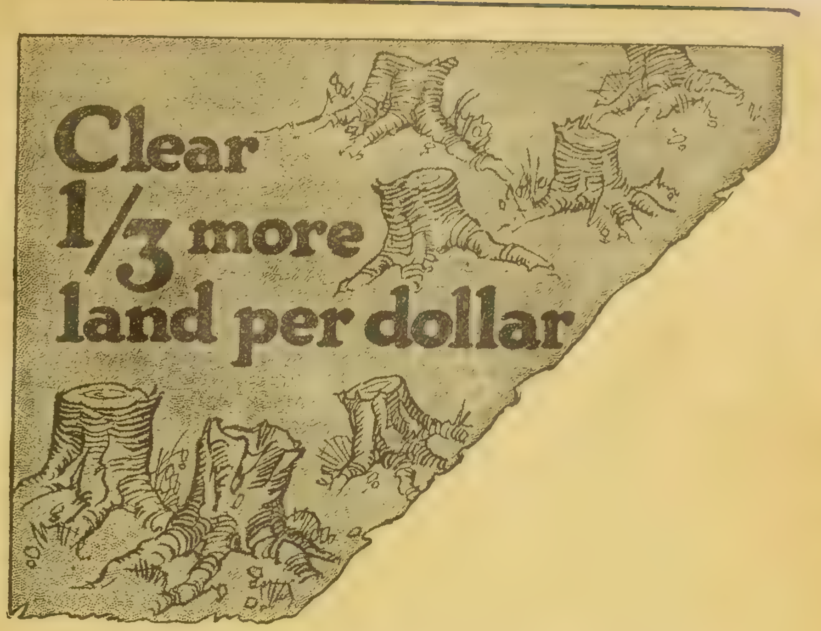
We are paying our attorneys big salaries. They run their legs off after bootleggers, yet leave the big corporations unmolested.— H. G. Myers, Morehouse, Mich.

SOMETHING WORSE

Once a friend of Mark Twain's was conversing with him regarding a terrible affliction of a person known to them both. The friend said,

"Can you imagine anything worse than having diphtheria and scarlet fever at the same time?"

"Yes," replied Mark; "I can easily imagine some things worse than that —for instance, rheumatism and St. Vitus dance."—Everybody's Magazine.



Clear 1/3 more land per dollar

DUMORITE is the *cheapest* of all farm dynamites—it does not give you a headache from handling it......*and,* in addition, it is non-freezing. You can use it right on into winter-time.

Dumorite has approximately the same strength as 40% dynamite, stick for stick, and shoots with the slow heaving action of 20%. A box of 135 to 140 sticks of Dumorite costs the same as 100 sticks of 40%—one-third more dynamite per dollar.

Send for 105-page Farmers' Handbook of Explosives. It's free and gives complete instructions for using dynamite on the farm.

E. I. DU PONT DE NEMOURS & CO., Inc.

McCormick Bldg.,
Chicago, Ill.

Hartley Bldg.,
Duluth, Minn.

SELF-MASTERY

SELF Mastery, thus auto-suggestion, by Emile Cone, it tells how to cure yourself by calling in the sub-conscious mind as the doctor. The cure-all is very simple, it is just this formula, repeated twenty times each night, aloud as you are drifting off to sleep. "Every day in every way, I am getting better and better," or "Every day in every way, thru God's help, I am getting better."

It is his theory that the sub-conscious mind which governs all our organs, processes of digestion, respiration and circulation, which go on while we sleep, can cure us of almost any ill if we direct it to do so.

We have to admit that our other self manages us in many ways and so relieves our conscious self from much detail, for we say, "I will wake up at a quarter to six to-morrow morning," and at that time we wake from a sound slumber, look at the time, it is a quarter to six. Our sub-conscious mind has taken care of the matter for us and is apt to be very accurate. This happened to me just last week. I made up my mind to waken at just seven o'clock on the following morning, when I wakened I looked at my watch and it read, 7:15! "What, now I said you have played me false"! Just then the seven o'clock whistle blew and I found my watch was fifteen minutes fast but my sub-conscious mind registered central standard exactly. In our waking hours our conscious controls our conscious acts but during sleep control is given over to the sub-conscious. On this principle Dr. Cone's plan works, he puts the sub-conscious mind at the business of repair not only of our physical selves but mental and moral as well.

Dr. Cone is a Frenchman and holds his clinics at Nancy, France, where its is said he makes some wonderful cures. This is somewhat along the line of Christian Science and New Thought and is interesting at least. The air is full today of the general principle that we have powers within ourselves that we little dream of. It is well to keep an open mind. You remember we have many miracles before us continually. Radio is just one of a dozen things we would have called impossible a few years ago. I am often reminded of this saying by Charles Austin Bates.—"It is generally the man who doesn't know better who does the things that can't be done. The fool doesn't know that it can't be done, so be goes ahead and does it."

If that is so any one of us may be glad to be in the fool class.

WHO NEXT?

"If a woman will, she will
You may depend on't.
If she won't she won't
And there's an end on't.

I am another farm woman that will not wear long skirts again and several of my friends say the same. I am going to make mine either six, seven or eight inches from the floor, it depends upon the kind of dress. —Miss Althea L. Masters.

A PATRIOTIC DUTY

IF we do not take the time to get out to the poles and vote at the November elections then we are neglecting to perform a very reasonable duty to our Commonwealth and have no right to complain when public matters are not managed to our liking.

Unless you believe (which you will never admit) that you have not good judgement, then go to the polls and use your vote for the best interests of your country which in the end is nothing more nor less than your own selfish interest. Do not think that how you vote does not matter. It does matter, your vote counts just as much as that of the President himself.

"The man or woman who fails to vote this autumn ought to have a white feather pinned on," says Mrs. Maud Wood Park, president of the National League of Women Voters. "Such a man, such a woman, is a slacker. In time of war there are several ways of betraying the country; in time of peace there is one—failure to cast a conscientious vote. Men and women who will not vote are doing all they can do to destroy democracy for no country in which elections are decided by the votes of the minority, no country with a great body of voters too lazy of mind to take part in elections, is anything but a despotism, the rule of the indifferent many by the selfish few.

CARE FOR THE EARS

IT is extremely dangerous for a mother to use any hard object with which to clean children's ears, such as a tooth-pick or hair-pin. To remove wax use a little warm water and wash the ears very gently. It may not be generally known that any heavy oil as hen's or goose oil is not safe, for it mats the fine hairs which are in the ears for a good purpose and makes them ineffective. A little glycerine may be used for it can be washed out with warm water. Specialists say that the ears are more difficult to treat than almost any organ of the body, even than the eyes, so it behooves us to be careful. Deafness is easy to attain and very hard to cure.

CORRESPONDENCE COLUMN

Any reader having cuttings or combings to be made up into switches may write direct to our subscriber, Mrs. Oscar Adrian Standish, Mich. Rt. 2.

CAN YOU ASSIST?

I am a reader of M. B. F. and like it fine. I have never yet asked the readers for any help, but am now about to do so. Have any of you evso, how were they made? I would be very thankful to any one, that has made them with success, if she would er tried making perfumed beads or any other kind for pin money? If answer through the paper or write me.

In the summer time I raise chickens and garden for pin money, but in the winter time, when one has the most time, I'm undecided what to start at. Some of the readers must have some good pin money ideas for winter, and here's hopeing I hear from some of you please.—Mrs. M. Edict, Norway, Mich.

FRIED CAKES

This fried cake recipe has been taken from the Bakers recipe for a smaller batch. It makes between four and five dozens. They are just fine. The secret of good fried cakes is to have your grease real hot so the dough will not soak the grease.

1 cup sugar, 2 eggs, 1 teaspoon butter, 1-2 teaspoon salt, 2 tps. baking powder, 3 cups flour. Milk enough to wet the dough, about 2 cups, nutmeg seasoning.

CANNING TOMATOES

Since I am a farmer's wife and enjoy the farm paper, I will send in a recipe for canning tomatoes when ripe.

As a rule they are hard to keep for—usually they turn, sour even if they do not work. Canned in my way they will be as nice as if they have been scalded, peeled and cut in were bought at the store. This recipe is tried and true.

Take enough tomatoes so there will be about six quarts after they two. Put on stove and add 1 tps. of baking-soda, this will raise a skum, skim it off and boil until they become clear and the skum does not raise. Then can while boiling, use new rubbers and caps, let them stand a while and tighten the caps, doing this several times while they are still hot. Hoping this will be of help to some one who likes tomatoes as well as I do.—M. T. S., Onaway, Mich.

HELP. PLEASE

I have an oxadized brass bed. It has become tarnished and I wish to ask through your Column where I can get it refinished, or if there is a way I can clean it myself.—Mrs. John R. Kissinger.

RECEIPE WANTED

Will some one please send me, through the columns of the Michigan Business Farmer a recipe for a plain old fashioned English boiled pudding?—L. M. S., Charlevoix County.

DUTCH CAKE

When Mrs. K. B. asked for a recipe for Dutch Cake (Apfel Kuchen), I thought I would send my recipe at once but I neglected to do so, until now. I see three sisters have contributed, but I believe they will relish the flavor of the apples. If I am not too late, enclosed you will find the recipe as follows:

Take 1 pint of bread sponge, add a quarter of a teaspoon of salt, Have 1-4 cup butter and 1-2 cup sugar creamed, add to sponge. Then add 1 well beaten egg, flour, to make soft dough. Knead lightly, let rise. When light roll 1-2 inch thick and place in two well greased shallow pans. Brush with butter, sprinkle with sugar. Pare apples and cut into eighths (if apples are too large, cut smaller) and press into the dough, sprinkle with cinnamon. Cover and let rise about 1-2 hour. Bake 20 minutes. Keep covered with pan first 10 or 15 minutes, in order that the apples may be thoroughly cooked.

I prefer the Northern Spy apple, but any tart apple will do.—Mrs. Stanley Green.

JELLEY-ROLLS

I am a reader of the Michigan Business Farmer and like it very well, I also like the Woman's Page. I noticed that one of the readers wanted a recipe for a jelly-roll, so I will send mine.

3 eggs, 1 cup sugar, 1tbls. water; 1 rounding tps. baking powder, 1 tbls. melted butter, 1 pinch salt. Separate eggs. Beat whites until stiff. Add the sugar to the yolks and butter and beat light then add the hot water and one full cup of flour add whites last, spread a cloth with powdered sugar and salt.

Filling

One cup of raisins ground. Boil one cup of sugar with a little water to make a syrup, add raisins and beat in white of one egg, add pinch of salt.

When cold potatoes boiled with jackets on are hard to peel add boiling water to them.

Vaseline applied every night to corns will cure them.— P. Y. K., Harbor Beach, Mich.

HOME-SPUN

A little turpentine added to starch will prevent the iron from sticking to the clothes.

Scorched spots on clothing may be removed by applying a thick paste made of ordinary starch. Let the paste dry on. More than one application may be necessary.

Turpentine will remove paint stains.

Cold water removes tea-stains but use boiling water for coffee stains.

Rust stains may be removed by soaking in boiling rhubard juice.

For iron rust: Apply salt and lemon juice to the spots and leave in the sunshine until the rust disappears. In obstinate cases two or three such treatments are necessary.

Peach stains: Rub glycerine over the spots two or three days before laundering and they will disappear in the wash.

Most fruit stains: Stretch the material over a bowl with the spot

IF I CAN BE BY HER

I D-D-D-Don't c-c-c-are how the r-r-r-obin sings
[illegible] how the r-r-r-ooster f-f-flaps his wings,
Er whether 't sh-sh-shines, er whether 't pours,
Er how high up the eagle s-s-soars,
If I can b-b-b-be by her.

I don't care if the p-p-p-people s-say,
'At I'm weak-minded every w-way,
An' n-n-never had no cuh-common sense,
I'd c-c-cuh-climb the highest p-picket fence,
If I could b-b-b-be by her.

If I can be by h-h-her, I'll s-s-swim
The r-r-rest of life thro th-th-thick and thin:
I'll throw my overcoat away,
An' s-s-s-stand pat on the c-c-c-coldest day,
If I can b-b-b-be by her.

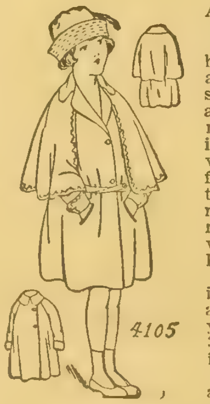
You s-s-see sh-sh-she weighs an awful pile,
B-b-b-but I d-d-d-don't care—
sh-she's just my style,
An' any f-f-fool could p-p-p-plainly see
She'd look well b-b-b-by the side of me;
If I could b-b-b-be by her.

I b-b-b-braced right up, and had the s-s-s-sand
To ask 'er f-f-father f-f-for 'er hand;
He said: "Wh-Wh-What p-p-prospects have you got?"
I said: I gu-gu-guess I've got a lot,
If I can b-b-b-ee by her."

It's all arranged f-f-for Christmas Day,
Fer then we're going to r-r-r-run away,
An then s-s-some th-th-thing that cu-cu-couldn't be
At all b-b-before will then, you s-s-see,
B-b-b-because I'll b-b-b-be by her.

AIDS TO GOOD DRESSING

For Simplicity, Service and Style

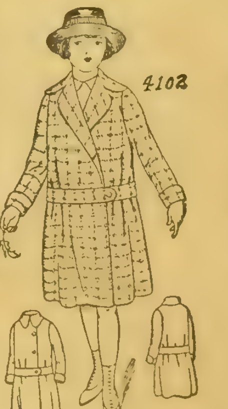


A Stylish Coat for the Growing Girl

4105. Broad cloth, homespun, velours, and duvetyn also silk and pile fabrics are suitable for this model. The sleeve, in raglan style, is very comfortable.The fronts may be buttoned close to the neck with collar rolled high, or, open with the collar rolled low.

The Pattern is cut in 4 Sizes: 6, 8. 10, and 12 years. A 10 year size requires 3 3-4 yards of 44 inch material.

Pattern mailed to any address on receipt of 12c in silver or stamps.

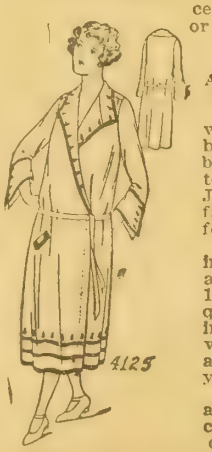


A Comfortable Coat

4102. A Good feature of this style is the convertible collar. It may be rolled high with the coat buttoned close to the neck, or rolled low with the coat fronts open. This is a very popular model, good for all cloakings.

The Pattern is cut in 5 Sizes: 6, 8, 10, 12, and 14 years. A 10 year size requires 4 yards of 44 inch material.

Pattern mailed to any address on receipt of 12c in silver or stamps.

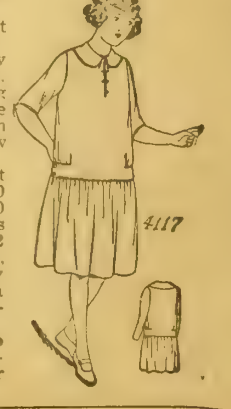


A Splendid Model in Wrap Style

4125. Stylish and very attractive in blue serge with black braid and buttons for trimming. Jersey and knitted fabrics are good also for this design.

The Pattern is cut in 3 Sizes: 16, 18 and 20 years. An 18 year size requires 4 yards of 54 inch material. The width of the dress at the foot is 2 3-8 yards.

Pattern mailed to any adress on receipt of 12c in silver or stamps.



A Simple Frock for a Young Miss

4117. Smart belt extensions on dress, effected by slashes at the sides, and an outstanding style feature. The sleeve may be in wrist or elbow length.

The Pattern is cut in 4 Sizes: 6, 8, 10 and 12 years. A 10 year size requires 3 1-2 yards of 32 inch material. Serge, crepe knit and jersey weaves, also taffeta are attractive materials for this style.

Pattern mailed to any address on receipt of 12c in silver or stamps.

in the center. Pour boiling water through the stain.

Fleas: If a room becomes infested with fleas, the carpet or rugs should be taken out of doors, cleaned; and sprayed with benzine or gasoline. The floor should be washed with soapsuds, secial attention being given to cracks between boards and along baseboards, and rubbed or sprayed with gasoline, benzine, or kerosene.

Ink sots: Remove from white goods by immersing in eroxide, then rinsing three or more times in clear water before drying. The chemical action of soap on the peroxide will eatholes through the fabric.

These spots on colored goods will yield to an application of equal parts of citric acid and cream of tartar melted on a plate. Mix well, rub over the spots and wash the goods thoroughly after they disappear.

Mildew: Rub common soap on the spots, then work in all the starch the soap will absorb.

Blood stains: Soap at once in cold water; the stains will come out in the washing and drying in the sunshine.

Grass stains: Touch the spots with alcohol before washing.

Pitch stains: Grease with lard then use soap and cold water. Turpentine is also good for these.

Wagon or automobile grease stains: Wash the spots well with kerosene before laundering, the sooner this is applied to fresh spots the quicker it works.

Cocoa stains: Wash in cold water first, then pour boiling water through the spots.

FORGET-ME-NOT EDGING

This is a very pretty trimming for curtains, dresser scarfs, pillow slips, runners and table linen of all kinds. Number 30 hard twist crochet cotton worked with a steel hook No. 9 looks especially well.

For the flower, chain (ch) 4, make 2 double trebles (dt) in first stitch and draw out the loop on the hook a little longer because the next ch forms the center of the flower. Ch 4, (4dt, ch 3, (4 dt, ch 3, st st) in center, repeat from * once, then ch 3, 2 dt in center, sl st in starting point to complete flower. For each following flower: * ch 16, 2 dt in 4th ch from hoop (center for new flower) ch 7, take hook from the work and insert in fourth petal of flower just made, draw dropped stitch through, ch 7, sl st in top of last dt, ch 3, sl st) in center, finish flower as before and repeat from * until the desired length has been reached. After the last flower ch 1, 14 d over each chain.

HEALTH HINTS

OR

HOW TO CURE YOURSELF

BY

DR. T. N. ROGERS

HAIR UNDER ARMS

What will remove hair from the arms?—Reader, Merrill, Mich.

Is this a general covering of hair all over the arms or the apilla? Peroxide applied freely is a safe appication. It bleaches the hair and in time destroys the roots.

BED WETTING

Please give remedy to cure a child of bed wetting.—"Mother"

Pin worms often causes it. Treatment: Give very little if anything to drink in the evening. Elevate the foot of the bed after the children go to sleep. Putting it on a chair will do. Give one teaspoonful of the following mixture. Get from your druggist Tinct. Belladonna,, one teaspoonful; Tinct. Rhus. Tox., one teaspoonful; Listria Hydrangae, four ounces. Impress upon the child this will cure and that they will not wet the bet but will wake up. Suggestion counts.

WORMS

What will cure a child of worms?—Subscriber.

Pin worms look like small pieces of white thread and some times are very troublesome. Give turpentine as for round worms and inject into the bowels soapsuds with turpentine, two teaspoonsful to a quart Better inject about 3 teaspoonfuls and have it retained for half an hour 3 times a day. Infusion of quassia chips will answer the same purpose.

CORRECTION FROM LAST ISSUE

Acetanilide 4 drams should read drams 10.

Uncle Rube Spinach SayS

THANKS RHODA

MY dear Rhoda:—Your recent letter in M. B. T. was sure a ripsnorter an' I want to thank you for the suggestions—No I ain't read "Behind the Mirror"—in fact I've never read much of any thing, you see I've been pretty busy most of the time an' most of my knowledge I've got in barber shops, pool rooms an' blind pigs. Wuz you ever in a blind pig or a barber shop Rhoda? You know the knowledge dispensed there is just wonderful! 'Course I've read some books an' the works of great writers—for instance Hosttetters almanac an' Lydia E. Pinkham's complete works an' so you see my dear Rhoda I know there's somethin' wrong with our government but I cant b'lieve its our pres'dent—my shucks isn't he doin' 'bout all any man can do? Gawf is the great National game an' ain't he doin' his best? An' jest think how many times our pres'dent has to change his pants so's to have 'em white an' nice for the next pic'tur, an' then there's Laddie Boy—don't you see Rhoda how he must be looked after 'cause his own pict'ur has to be took every few days so's the papers can let the dear people know how President Harding an' Laddie Boy looks like. Mr. Pres'dent Harding would like more power—really an' truly he needs it Rhoda. You see the Mayflowers or whatever his yachts name is don't go fast enough to take him as far away from his job as he wants to go so he's goin' to ask for more power so's he can get away from all the trouble an' turmoil of his terrible position.

There's lots of things Rhoda in our political atmosphere that any pres'dent wants to get away from. 'Course Pres'dent Harding could prob'ly have settled things up long ago but what wuz the hurry? It wuz warm an' comfortable when the miners wuz out—nobody really needed coal there an' the gawfin wuz real good an' out on the gawf grounds a president's picture looks purty scrumptious an' so he let the strike an' the strikers bother him not, at all. Hostetters wonderful book of knowledge sez—least I've seen an' heard it some where—"work for the man that gives you a job." My dear Rhoda, if, as it has been openly intimated, Wall street gave Warren Gamalier Harding his job why shouldn't the said W. G. H. work for Wall street.

For the nice things you said about me Rhoda I thank you. I am glad there is someone that seems willin' to set me right any ol' time. I ain't goin' to freeze 'cause I ain't a married man any more an' I don't have to buy coal nor worry', bout it—I'm free from that kind of worry an' that's why I talk about our national gawf player. Nero, we're told, fiddled while Rome burned, well our pres'dent with a freshly laundered conscience, plays gawf while the profiteers, operators an' labor combinations fight about—well nobody seems to know what. Any way, my dear Rhoda you must admit that President Harding plays a nice game of gawf an' this bein' true what else matters? Cordially Yours,—UNCLE RUBE.

OUR NEXT SENATOR'S AGE

Will you please tell me the difference in ages between Mr. Townsend and Mr. Ferris? I have heard it argued that Woodbridge N. Ferris is too old to serve out his term as Senator, if elected.—J. U. H., Huron Co.

Senator Charles E. Townsend was born August, 15, 1856 and would therefore be 66 years old. Ex-Governor Woodbridge N. Ferris was born January 6, 1853 and is therefore 69 years old. Neither of these gentlemen are too old to serve their state actively until the end of their six year term as there are several members of the senate near or past eighty years of age, some of whom, are running for re-election on both party tickets this fall.—Editor.

THE SIGN ROWENA OF QUALITY

Lily White

"The Flour the Best Cooks Use"

HOW TO MAKE PARKER HOUSE ROLLS

2 cups scalded milk, 3 tablespoons butter, 2 tablespoons sugar, 1 teaspoon salt, 1 yeast cake dissolved in ¼ cup lukewarm water, Lily White Flour. Add butter, sugar, and salt to milk; when lukewarm, add dissolved yeast cake and three cups of flour. Beat thoroughly, cover, and let rise until light; cut down, and add enough flour to knead (it will take about two and one-half cups). Let rise again, toss on slightly floured board, knead, pat, and roll out to one-third inch thickness. Shape with biscuit-cutter, first dipped in flour. Dip the handle of a case knife in flour, and with it make a crease through the middle of each piece; brush over one-half of each piece with melted butter, fold, and press edges together. Place in greased pan, one inch apart, cover, let rise, and bake in hot oven twelve to fifteen minutes.

Look for the ROWENA trade-mark on the sack

Is Guaranteed To You

So sure are we that LILY WHITE is the best flour you can buy for all around baking that we guarantee every sack to be the best flour you ever used.

LILY WHITE has been used constantly for over three generations, and has never been surpassed for baking wonderful breads. Order a guaranteed sack today.

Why you should use Lily White

REASON No. 3

Because Your Baking Triumphs Will Surprise and Delight You.

Good cooks know LILY WHITE FLOUR is dependable. Even the less experienced soon learn to give LILY WHITE due credit for their baking triumphs. LILY WHITE has the right color and an excellent flavor, good balance and volume, and the uniform granulation insures good-looking baking.

Please Mention the M. B. F.

SAVE MONEY

By Renewing ALL of your Reading Matter through M.B.F.

WE give here a splendid list of papers and magazines at low rates if taken with the M. B. F. All prices shown include One Years' (new or renewal) subscription to The Michigan Business Farmer. For a longer subscription add $1 for 3 years, or $2 for 5 years. If more than one paper is desired with the M. B. F., deduct $1—The M. B. F. price—from the rate quoted opposite the other paper desired and add the difference to the combination already selected. For example—the combination to include the M. B. F. and the Detroit News is $4.50. If you desire the New York Tri-Weekly World deduct $1.00 from $1.65 quoted opposite "New York World" and add the difference, 65c to $4.50 which makes the price for M. B. F., Detroit News and New York World, $5.15. In this way as many papers and magazines as desired can be ordered, provided they are for the same family and ordered at the same time.

subscribers living where they cannot be served by news dealers, or in towns where the paper has no dealer.

Write us for rates on other publications not included in this list.

(We are not responsible for increases in rates made by other publications.)

THE EXPERIENCE POOL

Bring your everyday problems in and get the experience of other farmers. Questions addressed to this department are published here and answered by you, our readers, who are graduates of the School of Hard Knocks and who have their diplomas from the College of Experience. If you don't want our editor's advice or an expert's advice, but just plain, everyday business farmers' advice, send in your question here. We will publish one each week. If you can answer the other follow's question, please do so, he may answer one of yours some day! Address Experience Pool, care The Business Farmer, Mt. Clemens, Mich.

CEMENT FENCE POSTS

What experience has some of the subscribers in making cement fence posts?—W. E. S., Michigan.

THRUSH IN FOOT

Clean horse's hoofs. Take one pint of salt, cover with kerosene and then put on horse's hoofs twice daily until cured. —H. S. P.

GETTING RID OF THE PINE STUMPS

The appeal from Mr. B. C., of Kingsley, published in a recent issue, for information on the best and cheapest ways of getting rid of pine stumps on cut-over land had brought forth several interesting replies. Let's have some more of them for cur Experience Pool.—Editor.

TO FRIEND B. O. C.

I HAVE rid some 40 a. g. pine stumps with dynamite but think that where the stumps are thick the Stilyard stump puller is a cheaper way unless you can purchase T. N. T. cheaper than 25c lb. I had good results on clay soil with dynamite but not on sand as it takes nearly twice as much and some times a piece of stump did not come out. Any questions answered cheerfully. —Jas. Dexton, Isabella county.

ANSWERING THE MAIL OF THE STUMP FARMER

I HAVE just been reading in the M. B. F. the wail of the "Stump" farmer and I think he will realize it is some job on 480 acres of land, if they are thick on the land at all. Still if he goes at it right it's not so bad as some jobs after all.

In 1908 I removed on to 80 acres of wild land, not a brush cut on it. I bought one of the best cable stump machines on the market and with the help of one man went to work to clearing the land.

It was in the month of June, we moved on and we did not get any crop in that year, but did raise our potatoes and some corn the second year. It was pretty slow business for a few years trying to stump the land and putting up all buildings one has to have on a farm.

I also worked for neighbors with my stump machine and would get helpback sometimes money which all helped. Now I have my farm all or nearly all stumped. There are not many farmers in this section of the country that are stumped. Have a good 8 room house, barn and feed mill, do custom grinding, sheds and necessary out buildings. If B. O. C., Kingsley, Mich., will write to me I will give him more information.—Frank Seldon.

HOW I RID MY FARM OF STUMPS

I have just read in the M. B. F. what B. O. C. Kingsley, Mich. writes about his troubles with the big pine stumps in his land. Now I have used one of the one-man stump pullers for two years pulling pine and other stumps for other farmers for day wages. I had the K hand power stump puller, manufactured in San Francisco, Cal. I will mention a few advantages of the hand puller, ad if Mr. B. O. C. will send me his full name and a 2 cent stamp I will answer any question he may ask.

The hand power Stump puller can be placed where no horse puller can be worked, because it requires but very little room and it can be worked in wet ground where no horses could work. and can be worked in any position upright and side ways and even upside down where the cable spans over a Slew. I and my boy 16 years of age have pulled pine stump measuring 3 ft. across the top, the machine has power enough to break a 7-8 inch steel cable, but I think it is best to use some dynamite to split the big stumps and then pull the pieces for it is very hard to handle the big stumps after they are pulled. One man can work the puller but two man can do a lot more work. We have pulled from 10 to 25 big stumps a day and smaller ones as many as 50 and over. The stumps pulled were in Oscoda county.—P. B. Movice, Mich.

WHY NOT GROW MORE POTATOES TO THE ACRE?

(Continued from page 4)

Maine grower twice as much to grow potatoes as it does the Michigan grower, although we all know that it doesn't. Let us assume that it cost the Montcalm county grower $46 per acre to raise 92 bushels of potatoes. With potatoes at 80 cents a bushel he breaks even. But if it costs the Aroostook grower twice as much or $92 to grow an acre of potatoes and he raises 252 bushels at 50 cents a bushel he receives 34 cents a bushel more than it cost him to grow them. Therefore, he is making money and as long as he can raise 252 bushels to the acre he will continue to make money with potatoes at 550 cents a bushel, and the Montcalm grower will have to increase his acre-yield or turn to other crops.

There is not a single good reason why the farmers of any of the Michigan counties mentioned or of most of the other counties cannot increase their acre-yield. As a matter of hard fact, they must increase it or go out of the potato game. All indications point to a long era of low potato prices and farmers who cannot raise more than 90 bushels to the acre will have to quit.

At one time the farmers of Montcalm and of Kent counties raised as many bushels to the acre as the farmers of Osecola and Grand Traverse. But that was when their land was newer. The day is coming, unless more scientific methods are adopted, when the farmers of Osceola, Grand Traverse and others of the more northerly counties will drop back into the Montcalm and Kent class and the farmers of these counties will be producing even less than they are today.

Many years ago the farmers of Maine learned the lesson which the farmers of Michigan must some day learn. They exhausted the fertility of the soil just as our farmers in Michigan are doing, and grim necessity forced them to replace some of the fertility which they had taken from the soil. And today, by following scientific methods of conserving and rstoring fertility to the soil, they are prducing far more potatoes to the acre than when their land was virgin.

AS THE JAPANESE DO IT

Listed below are a few of the Japanese sign painters' attempts to solve advertising English. In the Japanese signs are the most sought for virtues of an advertisement—they they attract attention.

"Best resistant wet coat."

"Trunks and bugs."

"Oil for hair and cooking."

"Bes stealing knife."

"Hen and beef met."

"Oxen sold and retailed here."

"Respectable ladies take fits upstairs." (Tailor shop.)

"Kids for brightening the home more than untold gold." (Doll shop.)

"Whale and all his relatives sold here."—Indianapolis News.

NEW LAMP BURNS 94% AIR

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94 per cent air and 6 per cent common kerosene (coal-oil).

The inventor, A. R. Johnson, 609 W. Lake St., Chicago, is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month. (Adv.)

Current Agricultural News

M. S. F. B. BUYS FEED FOR MEMBERS

MICHIGAN State Farm Bureau members are buying their winter supply of dairy rations through a Co-operative Feed Buying Service organized by the Farm Bureau and which is taking orders through local co-operative associations from September 5 to October 20. The Bureau is purchasing feedstuffs at favorable prices and will deliver them ready mixed in equal monthly shipments during the winter. Members contracting feed are not investing any cash, according to local co-operative associations, but will pay for the feed as it is delivered.

The Farm Bureau Service is on a 25% protein public formula dairy ration developed by the Farm Bureau and called Michigan Farm Bureau Milkmaker. The ration is made up entirely from the milk producers' viewpoint—to get the most money for the least investment in feed. The ration has the approval of the Michigan Agricultural College Dairy Department.

The Farm Bureau's public formula is a new idea in feed marketing. Every bag of the Farm Bureau's feed carries on the regular analysis tag the exact number of pounds of the milk producing ingredients in the feed and shows that the ration carries no filler. This enables the dairyman to tell exactly what he is paying for, says the Farm Bureau.

The Farm Bureau is buying M. F. B. Milkmaker ingredients in quantity at times of low seasonal prices as determined by records of previous years and when in the opinion of the best postetd experts the markets look right.

The State Farm Bureau is offering feed buying service to members on the basis that farmers and their co-operative associations will form local Feed Buying Service Units on their winter dairy feed needs and will sign contracts to buy definite quantities of the Farm Bureeau feed for monthly shipment from October 20 to the following March 20.

Headquarters of Feed Buying Service are at the State Farm Bureau at Lansing. The local Feed Buying service campaign opened September 5 and closes October 20.

SPUD GROWERS WANT LOWER CATTLE FREIGHT RATES

CONTINUATION of efforts to obtain lower freight rates on potatoes to Cincinnati and other points in that territory was discussed at the annual meeting of the Michigan Potato Shippers' association, Sept. 23rd.

Accordng to shippers, Wisconsin has an advantage of five cents in freight rates for a longer haul and this results in keeping Michigan potatoes out of those markets in a considerable degree.

The new tariff, it was stated, adds one cent per 100 yards to cost of sacking material, which ultimately will be absorbed by the farmer. The matter of the freight rates was heard at an interstate Commerce Commission hearing here last February but potato shippers said that while a decision favorable to Michigan was intimated, no action has yet been taken to their knowledge.

NORWEGIAN CO-OPERATORS REPORT REMARKABLE PROGRESS

DESPITE the severe industrial depressions in Northern Europe, the achievements of the Norwegian Cooperative movement during the past year, reported at its recent National Cooperative Congress, indicate a remarkable expansion both of cooperative banking and consumers' cooperative stores.

The two national cooperative bodies in Norway, the Samvirkecentralen, composed of agricultural cooperatives, and the Norges Kooperative Landsforening, founded by the city workers and consumers, now cover over 3,000 local cooperatives with a membership in excess of 130,000 heads of families, reaching nearly half the entire population of the country.

The financial report of the Norwegian Cooperative Union's Wholesale Society shows annual business in excess of 21,000,000 crowns, backed by a reserve fund of half a million crowns and a banking department with deposits in excess of 3,000,000 crowns.

In addition to this large wholesale business, the Norwegian cooperators' retail societies report an annual turnover of 110,000,000 crowns, on which a saving of 12,000,000 crowns, or 11.37 per cent was made for the cooperators.

In addition to their stores and banks, the Norsk cooperators conduct a thriving insurance company, Samvirke, founded in January, 1922. It writes fire, marinefi burglary and liability insurance, and has opened agencies in connection with the cooperative banks throughout Norway. The cooperators also own 71 factories, making their own boots and shoes, meat products, flour, butter, clothing, and knit goods.

Cooperation is a business proposition, but it is something more,—it is a moral ideal asserting the brother hood of man and daring to make a practical application of this ideal in the business world.

CREAMERY MANAGERS ARRESTED FOR LAW VIOLATIONS

WE wonder how many farmers know that there is a law on the Michigan statute books which requires all creameries to pasturize all the skim milk and other milk products sent back to the farmers to be fed to stock. Well, there is. And recently the managers of three Ottawa county creameries were hauled into court for failing to conform to the statute. All three admitted the offense and two of them paid fines and costs, but the third appealed. He based his appeal on the argument that the law is a discrimanation between the creameries that fail to paseutrize their milk and the indvidual who separates his own milk and feeds it to his own cattle. The latter is not required to pasteurize the skim milk and the creamery manager thinks that is discrimination and will test out the law. The creamery manager furthemore claims that pasteurized skim milk rots and that it poisons the cattle.

The purpose of the law? Presumably to help curb the spread of tuberculosis among Michigan cattle. If you have a grievance against your local creamery manager and he's selling skim milk without being pasteurized, here's a way to get even. Have him arrested.

WATER SUPPLY FOR THE KITCHEN

AT a cost of a very few dollars an ingenious arrangement for furnishing running water to the kitchen of the most humble home, may be provided. Three feet above the floor, on the outside of the building, erect a platform against the wall, and on this set a large barrel. It is best to place the barrel where rain water from the down spout can be turned into it. In addition to this supply, provision should be made for filling the barrel by means of a hose attached to the pump spout, if the well is near the house. To insure a plentiful supply it will be found desirable to have two or more barrels, connected by short pieces of pipe near the bottom. These may be set on one long scaffold extending along the outside of the house. It will be necessary to provide the inlet and outlet for only one of the barrels. Pumping the barrel full at one time instead of going to the well for water as it is needed, will usually be found to be a saving of time. The barrels should be kept covered to keep out dust and trash. A short piece of pipe with faucet at the end extends through the wall above the sink.

WHAT WOULD YOU DO WITH $500

There's a chance for you to win it as First Prize in our Second Puzzle Contest announced on page 11 of this issue. Last year we paid our readers who joined this game $931.

MULE-HIDE SHINGLES
THE LEHON COMPANY
MULE HIDE ROOFING SHINGLES
MULE-HIDE Cor-du-roy Panel Strip Shingle

New—Good—Different

LONG wear and good looks combined in a four-unit asphalt shingle, which will put life into the appearance of any roof, and add refinement and dignity to any structure.

So made that they will lie flat on the roof.

Ask a Mule-Hide dealer to show you samples and quote prices.

One Farm Engine Does it All

Write now for facts about this wonder engine. Gasoline or kerosene. No cranking. Portable, light, durable Only one size, adjusts from 1½ to 6 horsepower. Pumps, saws, grinds, does all chores. Plenty of power for every purpose. Easy to operate.

Price Now Lower Than Pre-War

Tremendous value. Money-back guarantee. Write at once for catalog and special offer.

THE EDWARDS MOTOR CO., 234 Main St., Springfield, O

THE GREAT BELL OF ATRI

THE village of Atri had a great bell that was rung only in time of need. For years it had been unused, for Atri was prosperous and content. Its rope, covered with green vines, trailed to the ground. One day a starving horse turned out to shift for himself seized the green tendrils in his teeth. The bell above him began to ring, attention was called to the predicament of the poor beast, and he became a well-fed ward of the town.

FOR SALE—YEARLING JERSEY BULLS Shopie 19th Tormentor breeding.
J. E. MORRIS, Farmington, Mich.

DAIRY and LIVESTOCK

WILD CARROTS NOT POISONOUS

Will you please inform me if wild carrots will hurt cows or sheep in hay after it is cured? I have heard say they will while green. — Reader, Petoskey, Mich.

Wild corrots in hay are not poisonous to either cattle or sheep. There are same plants closely resembling the wild carrot which will prove poisonous. If you have much of this material in your hay and are not absolutely sure that it is the wild carrot it would be best for you to send a few samples of the material to Dr. E. A. Bessey of the Botanical Department, Michigan Agricultural College, who will identify the weed present and inform you as to whether or not they are dangerous.—Geo. A. Brown, Prof. of Animal Husbandry, M. A. C.

CARROTS IN SILO

Is it advisable for me to put carrots with my corn fodder in silo, the corn having two ears on a stalk. Would rather put the carrots in the silo than pit them as I am short of cellar room.—G. B., Luzerne, Mich.

Carrots could be preserved by adding them to the corn silage As it is run into the silo only a small proportion should be used, however, as they contain too much moisture to make a good quality of silage. It would also be necessary to exercise considerable care in cleaning the carrots so that there would not be too much dirt get into the silage along with corn, you should have at least three times as much corn, as you have carrots and the carrots should be well distributed through the corn silage. It would not be well to runin alternating loads as in this way the carrots and corn would not be well mixed.—Geo. A. Brown, Prof, of Animal Husbandry, M. A. C.

GRADE COWS TO BE SHOWN AT NATIONAL EXPOSITION

EVIDENCE in the flesh that good cows pay will be the keynote of the National Dairy Exposition to be held at the Twin Cities, October 7-14. Proving the slogan, "Prosperity Follows The Dairy Cow," a score of cow testing associations and scores of individual farmers wll exhibit at the Exposition grade cows with established production records.

For the first time in the history of the National Dairy Exposition, the bars have been let down and grades, if sired by thoroughbred animals will be admitted to the exhibit and the prizes offered will be similar, class by class, to those offered for purebreds. Several of the exhibits will be sold at auction after they are judged.

This innovation, it is pointed out by Col. W. E. Skinner, Secretary and general Manager of the Exposition, "is fundamentally in accord with the high purpose of the Dairy Exposition in attempting to show that profits increase in proportion to the breeding.

"We have been encouraged to do grade cattle among the farmers of the Northwest, following the National Dairy Exposition of 1921, held at St. Paul and Minneapolis. Anticipating an even livelier demand following the 1922 shows some provision must be made so that Show visitors are enabled to see for themselves some of the results obtained from grade cows and thereby be able to judge what they are getting when they buy animals for their own farms."

Wisconsin, Iowa, Minnesota, Michigan and North Dakota already are represented in the exhibitors of grade cattle. The new classification of the Dairy Association provides that all such cows must have cow testing association records and must be sired by pure bred bulls. In the first class will be cows having production records of 500 pounds or more of butter fat a year the second class taking in cows whose records are 350 to 500 pounds.

The third class comprises groups of five cows each, the quintette coming from a single testing association; the fourth includes groups of four cows sired by one registered bull and the award in the fifth class will be made to the champion producing grade cow sired by a thoroughbred and an association test record. Among the Association exhibits sent by the various states will be one consisting of fifty grade cows from Wisconsin demonstrating how the production of doughters over dams have been increased by purebred sires. The Wisconsin exhibit is being arranged by Prof. K. L. Hatch of the University of Wisconsin and will be limited to cows with records of 360 pounds of butterfat produced in one year.

Exhibits from Minnesota will include a dozen grade cows sired by purebred Jerseys, built up on a foundation of ordinary scrub cows by George Christianson of Plainview. The exhibit represents several generations and as the herd has been part of the Plainview Elgin Cow Testing Association for some years, it is accompanied by definite figures on what various animals have earned, together with the cost of production.

This is all in keeping with the efforts now being made by the Northwest to establish itself on a permanent, sound agricultural basis with the dairy cow as the basic unit. Last year, the National Dairy Exposition was taken to the Northwest at the solicitation of agricultural leaders, farmers and business men who believed that it could be made the symbol of renaissance of agriculture in that section of the country. According to members of the various committes on promotion, with headquarters in the Twin Cities, the recognition of the part the grade cow must play in the movement will mean new inspiration to the farmers of the whole territory.

SILO ON THE LIST

PROGRESSIVE farmers who are planning improvements for the coming year will have a silo on the list. We are much behind in our building program both in the city and on the farm, and equipment of all kinds is greatly needed to facilitate proper and economic production.

The stock-keeper, especially the dairyman, has proven again that his business is economic and sure of a profit. He has demonstrated repeatedly that to market grain and forage thru the cow is not only a saving but gives the largest returns for his acres. This has stimulated the silo business, and also supplies for the industry will be in good demand.

In a recent investigation by the Department of Agriculture it was found that the prosperity of a community could largely be determined by the number of cows that they kept. Comparing crop farming sections with dairy communities it was found the bank deposits per capita of the dairy section were nearly twice those of the crop growing. In communities where dairy farming is the leading industry there is little concern over the hard times. People generally have good bank accounts, there is plenty of money for those who wish to borrow, and as the result of a cash paying plan a prosperous condition prevails.

The silo is going to be one of the first buildings considered, for it no longer is an experiment, but has been paying big dividends these many years. The silo comes nearer paying 100 per cent than any other structure on the farm. Many reliable figures are shown where it has paid for itself in a single season, and the experienced feeder would count it a calamity to give up his silo.

So many experiments have been conducted by our stations and colleges that it seems almost useless to quote them, for practically all of them have demonstrated the economy of the silo in all sections of the country. Summing up these experiments, concusions point to the fact that a silo will save a dairy farmer ten cents or more on every pound of butterfat produced and forty cents on one hundred pounds of milk, one dollar on a hundred pounds of beef and one dollar and fifty cents on a hundred pounds of mutton. For growing stock and dry animals the saving will run from five to ten dollars per head per year on the feed bill. It would not be difficult for a stock-keeper to figure what he is losing by delaying the building of a silo.

Many farmers are taking advantage of the War Finance Corporation and securing loans with which they hope to equip their farms so they can derive an income and handle the work in the most economic and productive way. The silo can most wisely be added to their list of improvements, and the more this subject is investigated the more firmly they will be convinced that the silo should head the list.—A. L. Hacker.

VETERINARY DEPARTMENT

NO SUCH DISEASE

Does a cow get hollow-horn? If so, what is the cause, the symptoms, and what should I do to cure it? —C. H. E., Fremont, Mich.

There is no such disease as hollow-horn.—John P. Hotton, Associate Prof. of Surg. and Med., M. A. C.

SORES ON AND BETWEEN TEATS

We have a cow that has sores on teats and between them, especially the two next to you when you are milking. Have been there for over a month, solid scab on two, have to use a milking tube, bleeds when milking. Sometimes milk seems gargelty a little and won't go through tube. Don't see why it doesn't heal. We have put on iodine diluted, a little lard and carbolic acid and peroxide.—Mrs. P. D., Deckerville, Mich.

The cow in question I think is suffering from cow pox. The medicine you have been using, iodine and carbolic acid, is too irritating and no doubt is keeping the wounds from healing. I would suggest that you try sulphur ointment. —John P. Hutton, Assoc. Prof. of Surg. and Med., M. A. C.

PIGS LAME

I have two pigs about 4 months old that have become lame. Their joints are swollen almost like knobs on the first leg joints and these joints seem awful sore. They have dry quarters to sleep in and run in. Would like to know what can be done for them and what the trouble is and cause.—S. L., Bear Lake, Mich.

The pigs may be suffering from rickets or they may have articular rheumatism. From the symptoms you give in your letter it would be almost impossible to tell which they have. I would therefore suggest that if possible you consult your veterinarian and let him see the pigs. It is hard to make a diagnosis of cases of this kind without having an opportunity to examine the patient. —John P. Hutton, Associate Professor of Surg. and Med., M. A. C.

SCHOOL BOARD CANNOT SELL FURNACE

(Continued from page 9)

same board could have hired a teacher for $70.00 per month but the teacher would not board with the director so they went and paid $80.00 in order to get the teacher to board there. A teacher can be legally hired only by a majority of the members of the board at a legal board meeting. If any person in the district believes that any action of the board was fraudulent they should make complaint to the commissioner of schools or prosecuting attorney.—C. A. Rinehart, Division Rural Education, Dept. Public Instruction.

BLACK STINK BUG ON SQUASH PLANTS

Will you please at your earliest possible convenience tell me, if you can, what to do with our squash plants? They have become large, thrifty plants with the squash set, now are being ruined with hundred of black peculiar shaped bugs that eat the stalks and leaves bugs." We have tried almost everything but have not struck the proper thing yet. Will you please reply as soon as you can as I am afraid they will do the same as last year.—O. T. B., Paw Paw, Mich.

The large black stink bug which you describe is not to be controlled by sprays in the ordinary way. The creature sucks its food from beneath the surface and no sprays yet devised seem to be able to kill the adults without injuring the plants.

We, therefore, take advantage of the habit of hiding away and advise the placing of small pieces of board in the vicinity of the vines for the bugs to crawl under for shelter during the cool nights. These bits of board need not be more than a foot square and should simply be thrown on the soil so that there will be space underneath for the reception of the bugs, then early in the morning the trapboard should be examined and the bugs destroyed. The easiest way to do this is to pick up the boards carefully, early before the air warms up, and jar them on the edge of a bucket containing a little water and kerosene. The kerosene will float on the surface of the water and the bugs on being jarred in the bucket will touch the oil and be killed.

Now, the young bugs are more apt to stay around the roots and on the plants themselves. It is possible to kill the young bugs by sprinkling on a coarse spray of nicotine sulphate and soap suds, wetting them down whenever they are found among the roots of the vine. Use 40 per cent nicotine sulphate, one brand of which is black leaf 40, at the rate of one ounce to six gallons of soap suds. —R .H. Pettit, Professor of Entomology, M. A. C.

HUSBAND MAY DEED PROPERTY

Husband and wife own real estate property. This property was clear of debts. There was no will. Deed was in husband's name, and upon his wife's death does he become the sole survivor of the property? Can he deed, will or sell this property without the consent of his heirs? Three heirs were under age at the time of the wife's death. I am a paid-up subscriber of the M. B. F. and like your paper very well.—S. D., Hale, Mich.

If the real estate was in the husband's name at the time of the wife's death the husband's title is complete and he may dispose of it as he pleases. Upon the death of the mother the children do not acquire any title or interest in the real estate of the father during his life. He can deed it, will it or mortgage it at pleasure.—Legal Editor.

NOT OBLIGED TO BUILD BRIDGE

Would you kindly give me some information as to the right of a county drain commissioner? A ditch running through my farm taken over by county drain commissioner made deeper and wider to the extent of 2 feet wide about 18 to 20 feet deep Is the commissioner not supposed to give me a bridge? About 120 rods of fence was taken down, are they not supposed to put the fence back and level off the banks as they are on places 8 to 10 feet high, or is it all left to the farmer to do?—H. K., St. Johns. Mich

There is nothing in the drain law which provides for the construction of a bridge across a drain unless the drain is along the highway adjacent to the property owner's premises. There is nothing to indicate that the drain in question is within the limits of the highway, hence the property owner would have no right to exact a bridge. The Drain Commissioner does not have to level the embankment made by the excavation.— Harry H. Partlow, legal adviser, State Highway Dept.

HEREFORDS AVERAGE NEARLY $200 PER HEAD

The Hereford auction held on September 1st at the fair grounds, Bad Axe, Michigan, under the auspices of T. F. B. Sotham & Sons proved to be very successful in spite of the fact that it began to rain early in the morning and continued throughout the sale. The crowd was large and apparently most of those to attend were there to buy as the bidding was lively and animals were quickly taken up. The average made on the females was nearly $200 with the top sale at $250. Mr. Lee Soper of Bad Axe purchased Berna Fairfax, No. 739798BC, for $250 and later paid the same amount for Star Beauty, No. 643524HC. The bulls sold for from $105 to $155.

EVERY FAMILY MUST JOIN THIS GAME

The Second Annual $500 Puzzle Contest conducted by The Business Farmer is announced on page 11 of this issue. Last year we distributed $931 in cash among our readers who entered the friendly game. All of the family can help find the objects in the picture that begin with "B", but the list must be sent in by one person. You do not need to send in one penny to win a first prize, but if you want to increase your winning, your renewal can count as one subscription.

OCT. 19th — Thursday, Oct. 19th, — OCT. 19th
At Ten O'clock

Poultry for Profit

POULTRY TOUR CONDUCTED THIS WEEK

WITH "Buy Michigan Chicks" as their slogan the Michigan Chick Hatcher's Association puts on its first annual tour of southwestern Michigan starting September 27th finishing up on September 29th. The tour starts from the Michigan Agricultural College at East Lansing at noon Wednesday, September 27 and ends at Lakewood Farm, Ottawa County, where the Association holds a meeting and entertainment. The party will visit the largest and best poultry farms and hatcheires in that section.

The members assemble at the College Wednesday at 10:30 where short talks are given by Pres. Friday, Dean Shaw and R. J. Baldwin after which they immediately leave for Charlotte, Battle Creek and Kalamazoo. Three stops are made between East Lansing and Kalamazoo and it is at the later place where the tourists spend the night. They leave Kalamazoo at 7:00 in the morning going to Bangor and after several stops enroute to visit farms they arrive at there in time for dinner. From there they go to South Haven where they spend Thursday night. Friday morning the party starts at 7:00 a. m. on the last day of their tour. On this day their visits cover farms and hatcheries around Jamestown, Zeeland and Holland. As a special feature for those who desire to attend on Saturday morning, September 23, at 9 o'clock Prof. Foreman of the M. A. C. will conduct a poultry culling school at the city hall in Zeeland. This will be done so that each hatchery man can get points on culling so that each can go out and cull the flocks from which eggs are bought. Mr. C. J. DeKoster of Zeeland who is secretary of the Ass'n expects the tour to be a big success in every way. And Mr. DeKoster being the proprietor of one of the largest, poultry farms and hatcheries in this state is in a position to know. A complete report of the tour will be given in our next issue.

DO NOT GRIND WHEAT HALF CHAFF

I have a chance to buy wheat that is half chest Is there any food value in it if ground for poultry? —J.B. L., Davison, Mich.

We would not advise the grinding of wheat that is carrying 50 per cent chaff. While it will have considerable feeding value the high percentage of indigestible fibre would greatly lower the feeding value, decrease the palatability and cause too much bulkiness. If this subscriber desires to use the wheat and chaff as an ingredient in the dry mash I would suggest reducing the bran content and also the ground oats because otherwise the poultry would not relish the mash that is so fibrous. In adding the ground wheat and chaff it would be advisable to mix with corn meal, middlings and meat scraps, equal parts by weight. Grain, however, is so reasonable now that it would be a wiser method to have this wheat sifted.—E. C. Foreman, Associate Professor of Poultry Husbandry. M. A. C.

INCREASING EGG PRODUCTION IN GENERAL-PURPOSE BREEDS

THE best mash for stimulating egg production in hens of general-purpose breeds, such as the Plymouth Rocks and Wyandottes, according to experiments carried on by the United States Department of Agriculture, is one that is not so rich in corn meal and meat scrap as those frequently fed to Leghorns. On the department's poultry farm at Beltsville, Md., the best results with general-purpose hens were obtained with a mash containing only 18 per cent of meat scrap with considerable ground oats and wheat bran. The entire mixture is made up in the proportion of 3 parts of corn meal, 1 part of bran, 1 1-2 parts of meat scrap, 1 part of middlings, 2 parts of ground oats, and 5 per cent of linseed meal. As a result of using this feed the hens produced a good yield of eggs, but did not become overfat and were in good breeding condition.

Leghorns and other breeds of the same type can use a heavier and more stimulating ration without endangering their physical condition and the hatching quality of the eggs. The mash that has been giving the best results with the department's Leghorn flock is made up of 4 parts bran, 4 parts middlings, 66 parts corn meal, and 26 parts of meat scrap. Barred Plymouth Rock pullets fed on this heavy mash laid a few more eggs than pullets of the same breed fed on the first mash, but they suffered in health and their eggs were lower in fertility.

Among the vegetable proteins fed to poultry the department has found that gluten meal seems to be the best, although cotton seed and peanut meal are very satisfactory if supplemented with animal protein in the form of meat scrap, tankage, fish meal, or milk, and with mineral salts. For good results the vegetable proteins should not exceed 10 per cent of the total mash Tests have shown that a good grade of fish meal is practically as good as meat scrap or high-grade tankage.

TURKEY BREEDS

THIRTY-TWO years after Columbus discovered America our native wild turkey was imported into Europe. There it was domesticated, and thence has come our domestic turkey. Wild turkeys are still found in our southern swamps and in Mexico. They are still crossed with domestic stock to restore vigor to the later.

The Bronze turkey is the largest, as well as the most popular, of all breds., and most nearly resembles the wild turkey. The standard adult cock weighs 36 pounds; the young cockerel, 25; the hen, 20; the pullet, 16. Showier specimens far exceed these weights.

The male of this breed should be richly, brilliant, golden bronze as to neck, back, breast and wing surfaces. Wing flights when spread are black, with white barring across each feather, most regular in the better birds. The tail is black, with parallel brown transversing lines, each feathered with white, not with red or rusty tips in the better birds. The hen is like the male in color except for white or gray edging on each feather of the breast, body, wings and back.

The White Holland turkey is a "sport" from the bronze. The cock of standard size weighs 28 pounds; the cockerel, 20; the hen, 18; the pullet, 14. They are reputed the best layers among turkeys, the most docile, and less roving than the bronze, better suited to limited range than that variety. All their plumage is white except the black beard of the male.

Bourbon Reds are a breed of turkeys first noted as wild birds. They are dark red in their upper parts, bordering on brown, with white wings and tails; their under parts are of buff, running out to nearly white. The feathers have a blue sheen when shifted in the sunlight. The standard cock weighs 30 pounds; the cockerel, 22; the hen, 18; the pullet, 14. They are said to be a very hardy breed.

Female turkeys reach full growth at 2 years of age; males at 3. Hens from 2 to 5 years old should be bred to toms from 2 to 3 years of age. Never breed related birds, for the death rate among the pullets will be high. For market birds breed from medium-sized birds, plump but not fat, fine in bone, active, vigorous. For exhibition stock breed from the birds of largest frame. From 10 to 15 hens may be mated to a male.—Washington Farmer.

MARY BEACOM, R. 4, Marlette, Mich.

THE HUNTED WOMAN

(Continued from page 7)

up suddenly and caught his eyes upon her.

"I came quite by accident," she explained quickly. "I wanted to be alone, and Mrs. Otto said this path would lead to the river. When I saw you I was about to turn back. And then I saw the other—the horses coming down the stream It was terrible. Are they all drowned?"

"All that you saw It wasn't a pretty sight, was it?" There was a suggestive inquiry in his voice as he added, "If you had gone to Tete Jaune you would have missed the unpleasantness of the spectacle."

"I would have gone, but something happened. They say it was a cave-in, a slide—something like that. The train cannot go on until to-morrow."

"And you are to stay with the Ottos?'

She nodded.

Quick as a flash she had seemed to read his thoughts.

"I am sorry," she added, before he could speak. "I can see that I have annoyed you. I have literally projected myself into your work, and I am afraid that I have caused you trouble. Mrs. Otto has told me of this man they call Quade. She says he is dangerous. And I have made him your enemy."

"I am not afraid of Quade. The incident was nothing more than an agreeable interruption to what was becoming a rather monotonous existence up here. I have always believed, you know, that a certain amount of physical excitement is good oil for our mental machinery. That, perhaps, was why you caught me hauling at His Soltship's ear."

He had spoken stiffly. There was a hard ote in his voice a suggestion of something that was displeasing in his forced laugh. He knew that in these moments he was fighting against his inner self—against his desire to tell her how glad he was that something had held back the Tete Jaune train and how wonderful her hair looked in the afternoon sun. He was struggling to keep himself behind the barriers he had built up and so long maintained in his writings. And yet, as he looked, he felt something crumbling into ruins. He knew that he had hurt her. The hardness of his words, the coldness of his smile, his apparently utter indifference to her had sent something that was almost like a quick, physical pain into her eyes. He drew a step nearer, so that he caught the soft contour of her cheek. Joanne Gray heard him, and lowered her head slightly, so that he could not see. She was a moment too late. On her check Aldous saw a single creeping drop—a tear.

In an instant he was at her side. with a quick movement she brushed the tear away before she faced him.

"I've hurt you, and God knows I'm a brute for doing it. I've treated you as badly as Quade—only in a different way. I know how I've made you feel—that you've been a nuisance, and have got me into trouble, and that I don't want to have anything more to do with you. Have I made you feel that?"

"I am afraid—you have."

He reached out a hand, and almost involuntarily her own came to it. She saw the change in his face, regret, pain, and then that slow-coming, wonderful laughter in his eyes.

"That's just how I set out to make you feel," he confessed, the warmth of her hand sending a thrill through him. "I might as well be frank, don't you think? Until you come I had but one desire, and that was to finish my book. I had planned great work for to-day. And you spoiled it. I couldn't get you out of my mind. And it made me—ugly."

"And that was—all?" she whispered, a tense waiting in her eyes. "You didn't think—"

"What Quade thought," he bit in sharply. The grip of his fingers hurt her hand. "No, not that. My God, I didn't make you think that?"

"I'm a stranger—and they say women don't go to Tete Jaune alone," she answered doubtfully.

"That's true, they don't—not as a general rule. Especially women like you. You're alone, a stranger, and too beautiful. I don't say that to flatter you. You are beautiful, and you undoubtedly know it. To let you go on alone and unprotected among three or four thousand men like most of those up there would be a crime. And the women, too—the Little Sisters. They'd blast you. If you had had a husband, a brother or a father waiting for you it would be different. But you've told me you haven't. You have made me change my mind about my book. You are of more interest to me just now than that. Will you believe me? Will you let me be a friend, if you need a friend?"

To Aldous it seemed that she drew herself up a little proudly. For a moment she seemed taller. A rose-flush of colour spread over her cheeks. She drew her hand from him. And yet, as she looked at him, he could see that she was glad.

"Yes, I believe you," she said. "But I must not accept your offer of friendship. You have done more for me now than I can ever repay. Friendship means service, and to serve me would spoil your plans, for you are in great haste to complete your book."

"If you mean that you need my assistance, the book can wait."

"I shouldn't have said," she cut in quickly, her lips tightening slightly. "It was utterly absurd of me to hint that I might require assistance—that I cannot take care of myself. But I shall be proud of the friendship of John Aldhous."

"Yes, you can take care of yourself, Ladygray," said Aldous softly, looking into her eyes and yet speaking as if to himself. "That is why you have broken so curiously into my life. If that—and not your beauty. I have known beautiful women before. But they were—just women, frail things that might snap under stress. I have always thought there is only one woman in ten thousand who believe you are that one in ten thousand. You can go on to Tete Jaune alone. You can go anywhere alone—and care for yourself."

He was looking at her so strangely that she held her breath, her lips parted, the flush in her cheeks deepening.

"And the strangest part of it all is that I have always known you away back in my imagination," he went on. "You have lived there, and have troubled me. I could not construct you perfectly. It is almost inconceivable that you should have borne the same name—Joanne. Joanne, of 'Fair Play.' "

She gave a little gasp.

"Joanne was — terrible," she cried. "She was bad—bad to the heart and soul of her!"

"She was splendid," replied Aldous, without a change in his quiet voice. "She was splendid—but bad. I racked myself to find a soul for her, and I failed. And yet she was splendid. It was my crime—not hers—that she lacked a soul. She would have been my ideal, but I spoiled her. And by spoiling her I sold half million copies of the book. I did not do it purposely. I would have given her a soul if I could have found one. She went her way."

"And you compare me to—her?"

(To be continued)

DID YOU GET YOUR SHARE LAST YEAR ?

Last year in a contest identical to the one announced on page 11 of this issue, we sent checks to the winners totaling $931. If you did not receive your share last year, don't miss sending in your list of objects this year. Contest closes last week in November.

BOOK FREE TO LAND OWNERS

Have you a copy of Ropp's New Calculator, Mr. Farmer? If you haven't you have heard about it and I'll wager that many times you have thought about it and wished you had one. Maybe your neighbor wanted to buy what there was left in your crib of last year's corn and when you come to measure the crib and the depth of the corn and figure up how much corn the crib contained your neighbor got one answer and you got another. Or maybe you were trying to figure up the interest on several small notes and you were tired and the figures wouldn't add up right. It is just such times as these that Ropp's Calculator proves itself the handiest book you ever owned. To go to the store and buy it would cost 50c but if you will read the ad of the Keystone Steel and Wire Co., published on page 10 of this issue you will find out how you can get it by just sending them a post card. Send for it today because you will find use for it tomorrow.—ADV.

Help your
MOULTERS
MOULT

If you want your hens to moult naturally—

If you want them back on the egg job promptly—fall and winter laying—

Then you must make sure that your moulters are healthy and hungry.

They must eat lots, and be able to digest what they eat.

That's just what

Dr. Hess Poultry
PAN-A-CE-A

does for your moulting flock.

It's a tonic that begins with the appetite—improves a hen's whole system.

It has Iron that keeps the paleness away, makes the combs and wattles red—the blood rich.

Pan-a-ce-a starts the food the egg way as soon as the moult is over.

No time lost.

No dormant egg organs after the moult, where Pan-a-ce-a is fed.

Tell your dealer how many hens you have. There's a right-size package for every flock.

100 hens, the 12-lb. pkg. 200 hens, the 25-lb. pail
60 hens, the 5-lb. pkg. 500 hens, the 100-lb. drum
For fewer hens, there is a smaller package.

MARKET FLASHES

MARKET SUMMARY

Wheat makes small gain. Corn steady. Oats unchanged. Rye declines. Beans firm. Eggs higher and butter firm and higher. Potatoes steady. Poultry inactive. No demand for dressed calves. Receipts of fruit large and market easy. Cattle shows little activity but mostly dull. Hogs steady. Sheep unchanged.

(Note: The above summarized information was received **AFTER** the balance of the market page was set in type. **It contains last minute information up to within one-half hour of** going to press —Editor.)

TRADE AND MARKET REVIEW

THE early part of last week a hundred thousand men, most of them living in Michigan, were facing the prospect of a winter without a job. Henry Ford closed down his gigantic enterprises and announced they would not run again until coal became more plentiful and prices became lower. The shutdown of the Ford plant cast a gloom over the country. It was felt that Mr. Ford was setting a dangerous precedent which other manufacturers might follow in their "strikes" against the profiteering coal mine operators. A general shut-down of manufactories would have been little short of a calamity not only to the workmen but also to the farmers. But the Ford "strike" was short-lived. Ford got his coal at the price he thought he ought to pay and last week Thursday the wheels of his great factories were again set in motion.

Although there is still some unemployment and farmers' prices are very much below the level of other prices the country looks forward to the coming winter with the least apprehension of several years. Automobile manufacturers are months behind with their orders and with some exceptions, they anticipate they will be able to run at full capacity the entire winter. Building has been active all summer long and is still and if the weather permits the building projects the next few months are expected to exceed those of the last three years for the same period.

The partial settlement of the strikes, the President's veto of the soldier bonus bill, and the promise of some slight reduction in state and local taxes have all combined to create a more confident feeling in the future.

The still discouraging feature of the economic situation is the low level of farm product prices, but even these are showing surprising tendencies to advance. We know of nothing that could happen to add more to the general prosperity and contentment of the nation than a 25 to 50 per cent increase in farm commodity prices.

WHEAT

The wheat market had a merry time of it last week due to a general belief that war was imminent between Turkey and England. The memory of what the last great war did to the wheat market is still fresh in the minds of the traders who cleaned up fortunes in that period and the slightest hint of war between European nations causes a considerable flurry in the wheat market. Although as we go to press actual warfare still seems remote, the wheat market is from five to seven cents above the low of the previous week in the primary markets, but there has been little if any effect upon the local markets.

Frankly, the immediate wheat outlook does not look good to us. We do not expect to see a long drawn out war between Turkey and Great Britain, and while a few skirmishes may send up the price of wheat for the time being it will take more than the exchange of a little fire to cause any substantial and permanent changes in the market. We believe a good deal of the activity that took place in wheat last week can be discounted as speculative. Virtually no other influence appeared to warrant the advance in prices.

On the contrary nearly all the news last week and this is of a bearish nature. An English statistician declares there are over a hundred million more bushels of wheat in sight than the world has need of. Even if the statement is true, which we doubt, it offers no occasion for alarm.

The wheat grower must remember that in normal times the various countries of the world carry over several hundred million bushels in their granaries to provide against crop failure. The carry-over was sadly depleted by the war, and very few reserves have been laid up since.

Unless the threatened hostilities between Britain and Turkey reach proportions which we do not anticipate we look for an early drop in wheat prices to be followed by an extended period of even prices. Wheat may again drop to below a dollar a bushel before the next crop, but we doubt it. The rush of wheat to market has been stemmed somewhat by the rising trend of prices and with fewer supplies the market should show a better tone. Wheat prices are considered too low by all concerned and the violent fluctuations of last week show that it doesn't take much to send prices up.

Prices

Detroit—No. 2 red, $1.12; No. 2 white and No. 2 mixed, $1.10.

Chicago—No. 2 red. $1.10 1-2.

New York—No. 2 red, $1.17 3-4.

Prices one year ago — Detroit, No. 2 red, $1.28; No. 2 white and No. 2 mixed, $1.25.

CORN

The corn market has enjoyed a rather healthy tone the past couple of weeks and at the close of last week prices on the Detroit market were higher than they had been for several weeks. Reports from Chicago show a fair amount of corn for exporting was taken from that market last week, shipping sales for the week, including domestic, aggregating 2,500,000 bu. Receipts have been liberal the past fortnight but the movement continued to be restricted by the shortage of cars. Demand has been stimulated by the action of wheat and the war-like news coming from Europe but the talk of peace reaching this country on the opening of the current week caused the market to weaken on the opening day and prices turned lower. The prices on the Detroit market were 1 1-2 cents lower at the close of the day, while the decline at Chicago amounted to only one-half cent.

Regarding the future of corn a market expert in Chicago says that this grain is governed in the end almost entirely by domestic conditions, the amount going abroad being relatively insignificant in comparison with the crops. "We know that the total supply of corn for the country is at least 300,000,000 bushels or more less than last year. The government September report showed 60,500,000 hogs on farms compared with 56,000,000 last year. Here is a factor of greater importance as far as the disappearance of corn is concerned than the export sale of 10,000,000 bushels or more grain." He goes on to say, "A high price for corn never hurt the consumer and simply booms general business."

Reports from cornbelt show the crop in most cases out of danger of frost.

Prices

Detroit—No. 2 yellow, 70c; No. 3 yellow, 69c; No. 4 yellow, 67c.

Chicago—No. 2 yellow, 63 1-4@63 3-4c.

New York—No. 2 yellow and No. 2 white, 81 1-2c.

Prices one year ago—Detroit, No. 2 yellow, 55 1-2c; No. 3 yellow, 54 1-2c; No. 4 yellow, 51 1-2c.

OATS

For the reasons which it is not easy to understand oats have shown some strength the past few weeks and prices are somewhat higher than we anticipated they would be at harvest time. It is apparent that the influence of the enormous crop of 1920 has about run its course and that the demand is now gradually overtaking the supply. War news of a reliable character might very easily send the price of oats up ten cents a bushel in no time.

Prices

Detroit—No. 2 white, 43c for new, 45c for old; No. 3 white, 41c for new; No. 4 white, 38c for new.

Chicago — No. 2 white, 40 1-4@41c; No. 3 white, 39@39 3-4c.

New York — No. 2 white, 49c.

Prices one year ago — Detroit No. 2 white, 40 1-2c; No. 3 white, 38c; No. 4 white, 34c.

RYE

Practically the same tone that has prevailed in the wheat, corn and oat markets during the past fortnight also ruled the rye market. The decline in prices on the opening day of the current week took place in rye as well as other grains. The Detroit market reported a decline of 1c and the prices on the Chicago market dropped from 1 1-2c to 2c.

Prices

Detroit—Cash, No. 2, 75c.

Chicago—Cash, No. 2, 70 1-4c.

Prices one year ago—Detroit, $1.02@$1.04 1-2.

BEANS

A most unusual thing has happened in the bean market. Prices have advanced from 25 to 75 cents per cwt, during the very height of the marketing season, and in the face of one of the biggest crops which Michigan farmers have produced for a long time. The drastic decline in bean prices which was registered from about the first of August to the middle of September was most discouraging to Michigan bean growers who had begun to hope that prices would remain at a fairly high level and enable them to recuperate their losses of the last few years. The efforts to bear down the market was for a time successful, but with every elevator and farm bin empty and farmers not over anxious to contract their new crop, the bears were soon routed and the fact that there was a substantial advance in prices at a time when the change is normally downward gives us good reason to hope that prices on the entire crop will be stabilized at not less than $5 per cwt.

The more reputable jobbers appear to be anxious to do everything they can to help the grower get a good price this year, but of course there are black sheep among the jobbers just as there are among the farmers who will take advantage of a situation for their immediate gain, without thought to the future. If these fellows can be kept in leash, and the farmers will use a little judgement in selling their crop, they will not, we feel, be disappointed in the returns.

Prices

Detroit — C. H. P., $5.25 per cwt.

Chicago—C. H. P., $5.50 1-2@6 per cwt.

Price one year ago — Detroit, C. H. P., $4.50 per cwt.

POTATOES

Wet weather and early frosts have damaged the Michigan potato crop to quite an extent, and we would not be surprised to see the October estimate for Michigan take a drop of several million bushels. The September estimate indicated a crop for Michigan of over 36 million bushels but we hardly think that actual digging will produce that many potatoes. However, the production will still be sufficiently large to warrant some over the final outcome.

Quite contrary to rule potato prices have registered a fair advance the past two weeks. Our readers will recall that we stated our belief two weeks ago that we looked for the market to strengthen "before very long", basing our belief on the probable over-estimation of the crop, and on the prohibitory freight rates which at present prices exclude western potatoes from the eastern markets. We also said in our September 16th issue that "because of the low opening market it is unlikely that there will be any drastic declines when the bulk of the crop is harvested, which fact, we believe warrants the grower in biding his time and waiting for the developments of the next sixty days." Since that was written buyers have advanced their prices to farmers from 7 to 10 cents a bushel throughout the commercial potato growing area. Farmers should not, however, become over-optimistic because of this advance. Potato prices may be a little higher than now but if the final estimate bears out the forecast of Sept. 1st, there will be nearly 100 million more bushels to market than last year, assuring that last year's estimate was correct, which we have reason to question. It seems highly improbable at the present time that farmers will see 75 cents per bushel on their 1922 crop.

Prices

Detroit — $1.50 per cwt.

Chicago — $1.10 per cwt.

New York — $1.30 per cwt.

Prices one year ago — Detroit, $2.84 per cwt.

HAY

Eastern markets were barely steady last week. Arrivals continued heavy as there was lot of hay in transit before the embargo was placed and this will have to be absorbed before there will be a stronger tone shown. Country loadings are reported small, but the demand is limited also. Western markets are firm and steady, due to smaller receipts and a good demand, especially for the better grades.

Prices

Detroit—Standard timothy and light clover mixed $15.50@16; No. 1 clover, $14@14.50 per ton.

Chicago—No. 2 timothy, $20@21; No. 1 clover, $14@16 per ton.

New York — No. 2 timothy and light clover mixed, $19.00@23 per ton.

Prices one year ago — Standard timothy, and No. 1 light clover mixed, $19@20; No. 1 clover, $14@15 per ton.

APPLES

During the past fortnight there was more activity in the apple market than had been expected and buyers have been booking orders rather freely. There seems to be a more optimistic feeling prevalent among the dealers than at any time previous this fall. Prices have ruled firm on all grades on most markets. American apples are constantly gaining in popularity with our foreign neighbors as reports show 41,647 barrels and 21,640 boxes of apples were shipped from the United States and Canada during the week ending September 16th, as compared with 31,852 barrels and 1,199 boxes the same week a year ago. Total exports to date this season aggregate 118,525 barrels and 89,220 boxes.

MISCELLANEOUS MARKET QUOTATIONS

Detroit, Tuesday, Sept. 26.

BUTTER—Best creamery, in tubs, 36@36 1-2 per lb.

EGGS—Best current receipts, 28@30c; fresh candled and graded, 31@34c; refrigerator firsts, 25 1-2@28c per doz.

GRAPES—Michigan, $2@35c per 4-quart basket and $2.50@3 per bu.

APPLES—New, $1@1.50 per bu.

PEACHES— Michigan Elbertas, $1.75@2; island peaches, fancy $2@

2.25. AA $1.75@2. A $1.50@1.75, B $1@1.25 per bu; New York, $1.50 @1.75 per bu.

PEARS—Bartletts, $2.25 @ 2.75 per bu; common, $1.50@2 per bu.

CELERY—Michigan, 20@30c per doz.

MUSHROOMS—Fancy, 50 @ 60c per lb.

GREEN CORN—20@25c per doz.

HONEY—Comb, 22@33c per lb.

CABBAGE—Home grown, 50@ 75c per lb.

POPCORN—4 1-2 @ 5c; Little Buster, 7 1-2@8c per lb.

ONIONS—$1.50@2 per sack of 100 lbs.

TOMATOES——Home grown, 75c @$1 per bu.

DRESSED CALVES—Choice, 18c; medium, 15@16c; large coarse, 8@ 11c per lb.

MELENS—Watermelons, 40 @ 50c each; Colorado pink meats, $1.25@1.50 per flat. Osage, $1.50@ 2 per bu; honeydew, $2@2.25 per case.

LIVE POULTRY—Best springs,22 @23c; leghorns, 19@20c; large fat hens, 25c; medium hens, 22@23c; small hens, 17@18c; old roosters, 15c; geese, 15c; large ducks, 20@ 22c; small ducks, 18@20c; turkeys, 25c per lb.

HIDES—No. 1 cured, 12c; No. 1 green, 10c; No. 1 cured, bulls, 8c; No 1 green bulls, 6c; No 1 cured calf, 17c; No 1 green calf, 15c; No 1 cured kip, 12c; No 1 green kip, 10c; No 1 horsehides, $2.50; No 2 horsehides, $1.50; sheep pelts, 25c@$1; No. 2 horsehide, 1c under No. 1 calf and kip 1 1-2c under No. 1.

CHICAGO BUTTER MARKET

The butter market ruled firm Monday, Sept. 25. Quality of current receipts was better but the demand for fine butter was sufficient to clean up the supply, and some of the more critical buyers were forced to pay a slight premium for goods to suit their needs. Medium grades were a trifle slow and dealers were rather anxious to move these grades, but the supply was not burdensome. Undergrades were scarce and in good demand. Centralized were slow and irregular.

CHICAGO LIVE STOCK MARKET

Widening of the price range featured the beef steer market during last week. Choice and prime steers were scarce as compared with the urgent demand, and values climbed daily until the peak was reached on Friday, when practically all steer of value to sell at $11.00 and better stood 25c to 40c above close of week before last. There was a certain class of steers selling around $10.50, slightly below and sightly above that figure, which was considered about steady with a week previous, but those selling downward from $10.00 showed uneven declines amounting to 25c to 50c generally, cases of 50c or more representing extreme low spots measured with last week's best selling. The best steers were in strong hands and at no time looked weak, except perhaps on Friday, when demand was rather indifferent. Lower grades of natives were adversely influenced by the profusion of western range cattle which came directly in competition with them and after the initial session values slumped almost daily. On the other hand, new higher tops were breaking out every day and prime weighty steers were flirting with the $12 mark after midweek, only to get within 5c of that figure before the week-end.

Chicago's receipts for the week at 72,500 were the largest of any week previous this year and the largest since the week ending Oct. 23 of last year, when 73,580 arrived. With the exception of that week, the past six-day receipts ranked highest since the third week in January, 1921, when 77,601 cattle were marketed, that week being the largest that year. Seven primary markets reported a total of 304,000 cattle for the past six-day period, which is the largest weekly run since the third week of November, 1920, when 355,000 cattle were marketed.

Although offerings of hogs last week were among the smallest of the year, they were slightly above normal for this season at 118,800, being 5,600 smaller than previous week, 3,800 smaller than a year ago, 40,200 larger than two years ago and 13,100 larger than the eleven-year average. Only four corresponding weeks during the past eleven years were credited with more hogs than last week.

The general run of hogs last week was only slightly heavier than previous week, with the estimated average weight of 250 lbs., showing 1 lb. gain as compared with a week ago, 9 lbs. compared with a year ago and 14 lbs. comparing with eleven year average. Last week's average stands third heaviest in over eleven years comparing with corresponding periods.

A good demand together with a scarcity of desirable light hogs, resulted in sharp advances on the latter class after midweek, with top reaching the highest point since early last month. Last week's extreme top at $10.55 paid late in the week shows a 55c gain over previous week's top being $1.80 above corresponding week a year ago, $7.70 below two years ago and within $2.25 of the eleven year average.

Active outside competition on best grades in practically all classes added tone to the trade last week advancing the general average cost during the week to $9.00, being $1.50 above a year ago, and $7.70 lower than two years ago and $2.70 below the eleven year average. Last week's average stands highest since first week of August.

Offerings of sheep last week totaling among the largest of the year at approximately 85,000, are comparatively small for this part of the season, being below any corresponding period in several previous years. Practically half of the receipts arrived from the range, although supply included just a sprinkling of aged stock and only one large shipment of yearlings.

Handy aged sheep met an active demand from country and local buyers, with values largely 25c above previous week's close, best light ewes quoted slightly above $7.00. However, cull and weighty sheep were neglected after midweek and prices fluctuated at the recent gains closing largely on a level within a week previous.

Wethers were consideraby fewer than previous week, with quotations generally 25c higher, while a comparatively liberal supply of range yearlings during midweek sold for feeding purposes at $11.50. A few aged killing wethers brought $8.00, with yearling wethers late selling up to $11.75 for local slaughter.

Lack of aged sheep quality accounted for the 10c drop in the average cost during the week, with last week's average of $6.40, comparing with $6.50 a week ago, $4.10 a year ago and $6.00 two years ago.

Combined offerings at the seven leading western markets last week at 238,000 are the largest thus far this year, but considerably below normal for this season, being smaller than any corresponding week in over eight previous years. Arrivals for the year to date at the same centers are practically the lightest for any same period in over seven years.

WOOL

Actual signing of the tariff law immediately lent a feeling of strength and security to the wool trade, and prices are well maintained, with a good active business. Though price levels remain unchanged, the tone throughout is firm and the volume of wool moving is slightly larger than recently. All grades are sharing in the activity and dealers in the midwest are almost uniformly in a rather optimistic mood.

Quotations on mid-western or so-called "native" wools in large lots — such prices as are obtained by the farmers pools — are as follows: Fine and medium staple, 47 @48c; 1-2 blood staple, 46@47c; 1-2 blood clothing, 34@45c; 5-8 blood wools, 43@45c; 1-4 blood, 40 @42c; low 1-4 blood, 30@32c; braid, 26@28c. Western territory wools sell at prices which range from these levels to 4c lower, for the corresponding grades.

WHEAT AND CORN EXPORTS

Bradstreet's of Sept. 16th says: wheat, including flour, exports from the United States and Canada for the week ending September 14, aggregate 6,945,930 bushels, against 8,713,163 bushels last week and 11,601,497 bushels in the like week a year ago. For the eleven weeks ending September 14 exports are 91,733,299 bushels, against 110,128,664 bushels in the corresponding period a year ago. Corn exports for the week are 1,763,954 bushels, against 1,994,712 bushels last week and 3,737,437 bushels in the same week a year ago. For the eleven weeks ending September 14 corn exports are 28,530,705 bushels, against 25,690,264 bushels a year ago.

1922 LAMB CROP SHORT

Realization of how short the 1922 lamb crop was is now dawning on the trade. Those who knew this early in the season and made lamb contracts at early prices have been substantially rewarded. The highest prices of the season have been recorded recently and still further appreciation is possible, although lamb is always in competition with pork which is actually much cheaper. However, there is an element among consumers that will eat lamb regardless of cost and just as long as that market is not saturated, stability is assured. Native lambs have never been marketed as early as this year, and, except for feeder grades, the end of the Western movement is already in sight. As recuperation of breding flocks will require several seasons, a good market, both for the 1923 lamb crop and wool clip appears assured.—Round-up.

STOCK OF WOOL IN U. S.
479,151,184 POUNDS

Stocks of wool in and afloat to the United States on June 30, 1922, totaled 479,151,184 pounds, grease equivalent, according to the Quarterly Joint Wool Stock Report just released by the Bureau of the Census, United States Department of Commerce, and the Bureau of Agriculture Economics, United States Department of Agriculture. This is the first report issued under a joint arrangement between the two Government departments.

Stocks by condition consisted of 322,332,921 pounds of grease wool, 35,648,032 pounds of scoured wool, 16,629,680 pounds of pulled wool, 23,346,363 pounds of tops, and 8,328,283 pounds of oils. Dealers held 176,857,999 pounds and manfacturers 197,652,634 pounds. Of the total quantity reported, 54.8 per cent was foreign wool, and 45.2 per cent was of domestic production. The supply of 1-2 blood and fine wool is said to compare favorably with that of 1-4 and 3-8 blood.

The distribution by sections of stocks by manufacturers was: New England 116,664,403 pounds, Middle Atlantic 87,099,512 pounds. Pacific Coast 2,773,443 pounds, all other sections 18.544,333 pounds. Holdings of dealers according to markets were: Boston 108,167,907 pounds. Chicago 10,833,492 pounds, New York 6.854,977 pounds, Philadelphia 24,039,626 pounds, Portland 2,849,854 pounds, St. Louis 12,416,061 pounds, San Francisco 1,849.948 pounds, other cities 14,091,633 pounds.

MAINE POTATO GROWERS HOLDING CROP

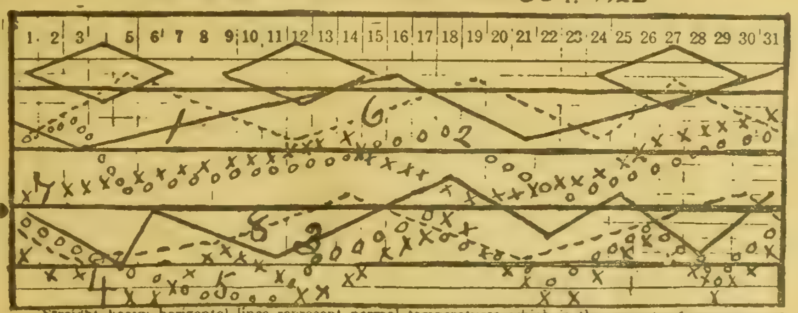
Aroostook county farmers are unwilling to sell their potato crop at present prices as they expect better conditions later in season. Growers are selling just enough potatoes at present to get money enough to pay help for digging. As the crop will average only 60 to 65 barrels per acre, the present price of 90c@$1 per barrel is not sufficient to pay the fertilizer bill and digging expenses.

Digging is nearly half over and there is no doubt that Aroostook county wil harvest a good crop. This fact, together with reports that late blight and rot will reduce the yield in some of the other states which compete with Maine, is the basis for a general feeling that prices will rule better as soon as Long Isand and Jersey commence to sacken up a bit on their present heavy shipments. Shipments from Maine at present are not heavy for the time of the year, averaging only about 50 cars per day. Early Cobblers are all pretty well shipped out. Mountain varieties are now being loaded and the quality of the latter is excellent. The tubers run even size, bright, smooth and sound.

THE WEATHER FOR NEXT WEEK

As forecasted by W. T. Foster for The Michigan Business Farmer

FOSTER'S WEATHER CHART FOR OCT. 1922



Straight, heavy, horizontal lines represent normal temperatures, which is the average of same days of the year for forty years. Crooked lines above normal lines mean warmer; below, cooler; that marked 1 is for section 1, north of latitude 47, between meridian 90 and Rockies crest—2 for section 2 on my section map is for east of meridian 90, north of latitude 47—3, between latitudes 39 and 47 and between meridian 90 and Rockies crest—4, east of meridian 90, between latitudes 39 and 47—5, south of latitude 39, between meridian 90 and Rockies crest—6, east of meridian 90, south of latitude 39—7, north of latitude 43½, west of Rockies crest—8, south of latitude 43½ to Mexican line and west of Rockies crest.

Washington, Sept. 29, 1922.—I advise not to sow winter grain on dry soil. There are many risks before those who are interested in planting and sowing for the crops of 1923 and 1924. With confidence I can say to Mexico a great winter drouth, including four or five months, covering the whole of that country, will begin in October, 1923, and ruin a large part of winter farming products and winter grain. But the drouths that will come to America, Canada and Alaska within those two years will be local, cannot be explained in a general weather bulletin, and therefore must be dealt with privately. Australia and New Zealand have short crops on account of the long foretold shortage of rain—not a drouth—but the great drouth, beginning in October, 1922, will ruin their crops and they should prepare for a famine that will hit them about May, 1923. I am not expecting a drouth in North America this year but—after the general of heavy rains of October—a rapid decrease of rain may be expected where excessive rains have fallen for several months. I will again warn you of great extremes of temperatures in October averaging colder than usual east of the Rockies; better weather west of the Rockies.

Michigan: Highest temperatures 1, 9 and 18; lowest 5 and 12; average much colder than usual; severe storms and most rain during weeks centering on Oct. 6 and 14; cold waves and threatening frosts following 1 and 9.

The cause of the motion and force is the all important question in all the sciences. Further weather cannot be known without understanding that cause. I know that the forces of the solar system are moving inward toward the sun; all other scientists say they are moving outward from the sun. There are three causes of motion that drive the forces toward the sun—pressure from outer ether, condensation of inward moving matter at the sun, the pull of the sun's electromagnetic force. See my explanation of that electro magnetic form and force. Besides these three causes we all know of the incidental energy that comes from compressed matter, not chemically combined, which causes motion when it breaks its bonds.

Irresistible Values

Every item on this page means a big money-saving that no one can afford to miss. These are the Lowest Prices in America and we want you to prove it our risk .

SEND NO MONEY

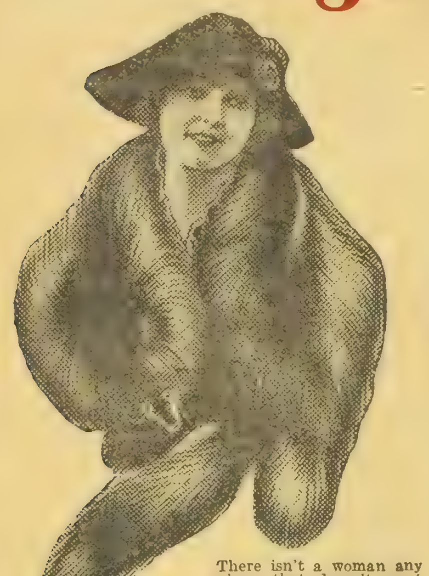
Select the articles you want, send us your order, and pay nothing till the goods arrive. Then pay the smashed bargain price and postage. Send no money now.

PAY ON ARRIVAL

Letter or postcard brings as many bargains as you want. If you are not satisfied when you see how much you have saved, return the goods, and we'll refund your money.

Manchurian Wolf Fur Scarf

$3.98



There isn't a woman any where that doesn't want and need a handsome fur scarf. And Sharood offers an unusual value at a price within the reach of everyone. This scarf is about 46 inches long and 12 inches wide. It is stylish as well as warm.

FARMERS TO OWN FIRE FIGHTING EQUIPMENT

UNTIL recently when there was a fire in the rural district about Owosso the farmers would phone the fire department of that city and the fire fighting apparatus would be rushed out to extinguish the blaze but now the city fathers say this can be done no more. They say they pay everything and the farmers nothing and what would become of their property if a fire should break out in town while the trucks were out in the country. This has caused an agitation among the farmers for the purchase by township, of fire trucks, equipped with chemical tanks and small pumps. Efforts are being made by prominent farm leaders to have placed on the ballots at the spring election in the townships, proposals to raise by tax the funds with which to buy three trucks.

Vernon township of this county has had a fire truck of its own for several months. Continued objection on the part of Durand people to the sending of the Durand truck into the country, and a final threat of injunction proceedings, caused the Vernon township voters to authorize the township board to buy a truck. It is kept in the fire station at Durand, and Durand firemen man it. The truck is equipped with several hundred gallons of chemical, hose, roof ladders, and other standard equipment. It has responded to numerous calls and done effective work.

The city commission at Owosso has stated that if the farmers, within a radius of eight miles of Owosso, want to buy a fire truck, it may be kept at Central station there and in case of fire two men from he local department will be sent out.

LIVING COSTS SOAR IN GERMANY

"IF winter comes," has taken on a new significance for the average German workingman with a family. Not a single day passes without the newspaper announcing new increases in the price of bread, potatoes, coal, and other necessaries. Street car fares, newspaper subscriptions, smokes and beer are going up every other day, while shoes and clothing costs are almost "out of sight."

In addition to the cost of living there also is beginning to be noticeable a shortage of potatoes, sugar, and other staples. The mayor of Berlin posted signs throughout the city advising the people to buy their own supplies of potatoes as the city, which heretofore has bought them in large quantities and retailed them at cost price to the residents, can do so no longer as the treasury is empty. The prices of food have gone up so that now they average 343 times the pre-war standard.

1922 ROAD PROGRAM ONLY HALF FINISHED

BECAUSE of a shortage of cement for which the coal strike and the car shortage are responsible about 50 per cent of the road construction mileage for which the State Highway Department awarded contracts since Jan. 1, and which it was expected would be completed before Dec. 31, will have to go over to 1923. This is the report of department officials.

Work on some of the 1922 contracts which can not be completed until next year are in the 16 counties of Calhoun, Clinton, Lenawee, Bay, St. Clair, St. Joseph, Charlevoix, Saginaw, Genesee, Monroe, Sanilac, Macomb, Lapeer, Huron and Tuscola.

Since construction started this year on department contracts, there had been completed in the state, up to Sept. 1, 98 miles of cement roads and 317 miles of all classes of roads.

MARION CO-OPERATIVE CREAMERY SUCCESSFUL

PATRONS of the Marion co-operative creamery are well satisfied with the business done by that concern. It has increased so rapidly of late that it has been found necessary to get an expert accountant to systematize the work and make it possible to operate without increasing the number of employes. This is a home business and has routes leading in all directions from town.—Evart Review.

CHESTER WHITE BREEDERS HAVE STATE ASSOCIATION

A NUMBER of breeders of Chester White Swine held a meeting on the State Fair grounds September 7th and organized a State Association to be known as the Michigan Chester White Swine Breeders Association and elected officers as follows: A. J. Hawkins of Coldwater, president; Fred L. Bodime of Reese, vice-president: F. W. Alexander of Vassar, secretary, treasurer; Andy Adams of Litchfield, Lucian Hill of Tekonsha and Norman Weber of Royal Oak, executive committee.

It is the purpose of the organization to promote the interests of the breed through holding public sales, also in giving support to Boys and Girls pig club work throughout the state. Membership is open to all breeders of Chester Whites in the state and the dues is only $1.00 per year; all money after paying the small office expenses will be used to promote the breed in this state. It is requested that all breeders of the Chesters who believe in boosting the breed, communicate with the secretary at once.

AMERICAN PIGS POPULAR IN CZECHOSLOVAKIA

THE current year will show a record volume of purchases of American lard and fat pork by Czechoslovakia, says Special Agent Dennis, in a cable to the Department of Commerce. The recent rapid trade expansion is due to the scarcity of butter and to the export embargo on Yogoslavian fat hogs, also to the strength of the currency of Czechoslovakia. Whereas before the war little or no fat pork, and less than 2,000 tons of lard were imported annually, the estimated purchases for the present year will exceed 100,000 tons of combined lard and fat pork. American fat pork is being used in increasingly large quantities by laborers in the iron and coal mines, and by the loggers in the Slavian forests. The American lard is underselling that from Hungary, Rumania, and Yugoslavia, and is actually being imported into the latter countries which have heretofore been strong competitors as exporters of this product. Prague importers report difficulty in filling orders for lard. The country's hog industry is unorganized and the native sides deficient in fat. Barring the approaching let up in demand incident to the killing season, traders should work for continued expansion in the American pork products trade.

INDIA NOW THIRD WHEAT PRODUCING COUNTRY

Next to the United States and Canada, this year's wheat corp of India amounting to 9,813,000 tons, places that British Colony as the greatest wheat grower in the world for 1922. Karachi, the leading wheat port of India, is also the chief wheat port of the British empire, says Consul A. M. Warren, Karachi, in a dispatch to the Department of Commerce.

An embargo on the exportation of wheat now exists in India and unless this is removed it is feared that the inevitable surplus on hand will tend to greatly decrease planting next year, thereby risking a country-wide shortage should there be insufficient monsoon.

NORWEGIAN FRUIT FAILURE MAY MEAN BIG IMPORTS

The failure of the Norwegian fruit crop this year will necessitate heavy foreign imports and it is estimated by American Consul George Nicholas Ifft, Bergen, Norway, in a dispatch to the Department of Commerce that double the usual quantity of American apples and other fruits will be required.

What Are YOU Getting Out of Life?

A mere living—or a better standard every year?

Success comes from saving; but how much you get out of life is dependent not on how much you save, but how much your savings earn for you.

You can double the interest your money is making you—safely, easily and surely.

Let us show you how. We'll give you the facts —you be the judge.

Tear this advertisement out, write your name and address on the margin; then send it to us. It does not obligate you and it may be the means of doubling your income.

Successful County Fair Minus Races and Midway

By L. D. TUCKER

WHICH KIND OF FAIR DO YOU PREFER?

ANNUALLY about 100,000 Michigan business farmers and their wives attend the state and county fairs. Why do they go? Is it to see the exhibits, the horse races, the aeroplanes, the midway, —or just the crowd? The bigger fairs still have the midway. The smaller fairs have tried to eliminate them because of the cheap and often fraudulent character of the attractions. The midway at the Michigan State Fair has been under fire for several years, yet at the last fair, it was patronized by many thousands of people. Do the farm folks like the midway? Would they still attend their state and county fair if the midway was done away with? The accompanying article tells about a county fair in the upper peninsula which boasted of neither midway, carnival show, horse races nor aeroplanes, yet people attended in large numbers and were satisfied with what they saw. As Mr. Tucker suggests in his article—you have probably seen both types of fairs. Which do you like the best? A letter to the editor telling what you like best about the state or county fair will be appreciated. —Editor.

YOU'VE seen them both—no doubt. But the fact remains that there exists among the communities today two distinct types of county fairs—one of money-making, with its shows, its aeroplanes and its horse-racing, and the other the agricultural fair, with its wealth of fruits, grains, dairy products and live stock. And after all, it is the latter type which really conveys the purpose of a county agricultural fair.

Not that the agricultural phase is entirely over-looked in the fair which features horse-racing, and hair-raisers on its hand-bills and posters. It can be found, in varying quantities, scattered throughout the grounds, some in this building and some in that, but, as a rule, one has to break away from the amusement-seeking crowd to find it, for, where thrillers and other entertainment are emphasized the mass of ticket buyers are not interested in the pumpkins, watermelons, apples, peaches, pears, cattle, chickens, etc.

Which brings us back to our contention that, after all, will do a more constructive service to that community than any other type. One hundred farmers visiting the fair in search of new ideas, better methods and bigger results, must surely mean more than one thousand so-called city folk seeking amusement and entertainment only.

And that is what impressed us about the fair held over in Ontonagon county recently. It was a real county fair. There wasn't an aeroplane on the grounds, and in fact the only really disturbing element was a powerful tractor which was showing the farmers new ways and methods of plowing and stump pulling, in an adjoining field. There wasn't a show on the ground. You weren't barked at to "Come and see Nemo, the smallest dwarf in the World." There were no games of chance. You couldn't lose your money trying to ring a cane with a ring that wouldn't slide over any one of the canes anyway.

There were no horse races, tight rope walkers, dog and pony shows or, in fact, not a single feature, with the possible exception of a lunch counter or two and, perhaps, a band, which would tend to detract from the big business of the day—the agricultural exhibit.

It is doubtful if many, or any, county fairs throughout the peninsula improved on that agricultural exhibit. It was the result of hours of pains-taking effort on the part of those who had arranged it. In the fruit section alone, 160 plates were neatly arranged, each bearing its burden of some record-breaking specimen of the farmer's art. There were apples, peaches, plums and pears of the finest texture, shape and color and widest variety.

The apples particularly—all grown in Ontonagon county, (considered the most fertile in the upper peninsula of Michigan) showed up strikingly. There were the Duchess and Wealthies, and a half a dozen or more varieties of seedlings, with the great, red Wolf Rivers standing out prominently along the top row. Plums rivalling in size and taste the product of California itself, were there in abundance.

In another section, but within the same building, were the root and grain crops. Everything from the humble bean to the huge, golden pumpkin was neatly arranged in rows, where all might see and admire.

Here was the handiwork, exhibited by the women of that community —needle work and cooking. There was the work of the girls' garment clubs, and, in one corner, samples of the progress achieved by the school boys and girls in penmanship, history and other allied subjects.

In fact it seemed that everyone in the community—from the youngest school child to the oldest individual in the county—was in some way represented in that display. It was, indeed, a real, old-time county fair, and I doubt if any county in the peninsula this fall could boast of an agricultural display which could equal that shown at the Ontonagon fair.

Two days were devoted to Ontonagon's fair. During the time practically every farmer in the community visited the display, and it was not difficult too observe that the majority, and they carefully examined the various specimens, were reaping the maximum of benefit from the things they saw. They came, not to be amused or entertained, entirely, but to learn what their neighbors were doing and how they were doing it.

Other communities could profit by adopting Ontonagon's example. They had a real, honest-to-gosh fair over there.

M. A. C. ANNOUNCES ATTRACTIVE WINTER COURSES

THE Michigan Agricultural College has announced its regular winter short courses to begin this year on October 30th. The advantages of these courses to those who cannot take the full four year course are many, and it is surprising the amount of practical instruction which students receive during the two, four, eight, twelve, or sixteen weeks, depending upon the course selected.

One of the advantages which will appeal to many farm parents this year is that of economy. The full four-year course involves the expenditure of several hundred dollars, while the eight weeks' course can be secured at a total expense of from $80 to $100. Many farm boys who have planned on taking up the regular courses at the M. A. C. this year have been disappointed because of the low farming returns. To such the short courses afford an excellent opportunity for adding materially to their fund of knowledge and giving them the contact with college life and college people which is so helpful in broadening the viewpoint.

The fall term which begins Ocober 30th consists of the following required subjects: Animal feeding, types of livestock, farm crops A, farm engineering, agricultural chemistry, gymnasium. The winter term beginning January 2nd, includes such subjects as: Soils A, study of breeds, drainage, gymnasium. Elective subjects are: Farm dairying and testing, parlimentary law and speaking, farm management, farm accounting, dairy barn and herd management, potato production, horticulture A, shop work, swine breeding and management, bee-keeping.

Special courses are given in dairying, dairy manufactures, marketing milk, ice cream making, horticulture, poultry, truck and tractor manufacture and operation.

All students completing the first year in the 16 weeks' course are required to elect one of 15 different projects which can be carried out during the summer following. These projects include almost every activity on the average farm.

In discussing the short courses, president Friday of the M. A. C., recently said:

"There are twenty thousand farmers in Michigan who should take these short courses during the next five years. There is one vital difference between a large-scale industry like manufacture and agriculture which is still carried on in establishments owned by a single man and employing on the average only one additional worker. Manufacturing in Michigan is conducted by 8,300 establishments, employing 550,000 people. The average manager in this industry supervises almost seventy men.

"The volume of output is great enough in most of these establishments to enable the owner to employ the services of skilled engineers, chemists, accountants and salesmen. These professional men solve the difficult problems which present themselves for the manufacturer.

"The agriculture of Michigan is carried on by 196,000 farms. On the average there are two workers to the farm and one of these is the farmer himself. It is manifest that each of these farmers must decide what he will produce, what methods of production will be followed and how his product shall be marketed. Clearly, in an establishment the size of the average farm it is not economical to hire the service of a technical expert who should analyze and criticize the methods employed, and who shall devise new and improved methods for the conduct of the business. The farmer therefore needs an all-round training in the technical problems relating to his business; for he must solve most of these problems himself when they arise. This is one of the reasons why every wide-awake young farmer should come to the Agriculture College for training in the Short Course. Unless he acquires this technical skill for himself his farm will lose a large portion of the benefit which would result from the utilization of the scientific knowledge concerning agriculture.

There is another reason why the progressive young farmer should spend at least one winter at the Agriculture College. There are many problems of agriculture which are so difficult for anyone but a professional expert to handle. The Agricultural College employs such a corps of experts constantly. Those who are aware of their existence can avail themselves of this special training when it is needed on any particular farm. The man who has taken a short course at the Agricultural College knows exactly what help he may obtain from the institution when he has need for it. It is the function of the Michigan Agricultural College to furnish to its 196,000 farmers just that skilled training which the large manufacturing establishments buys for itself on a commercial basis."

Mr. E. B. Hill assistant to Dean Shaw, is director of the short courses and Mr. A. M. Berridgs, former member of the State Farm Bureau Board and a successful farmer in Montcalm county, is associate director. Complete information on the courses can be obtained by addressing Mr. Hill, care of the College at East Lansing.

PROVES VALUE OF PURE-BRED SIRES IN GRADE HERDS

THE LEER Guernsey Breeders Association of Alpena County, promoted by the American Guernsey Cattle Club are exhibiting at the National Dairy Show held at St. Paul, Minn., October 7-14th.

In the short period of time this Association has made remarkable strides in the work of improvement if dairy cattle by the use of Pure-bred Guernsey sires. One of the outstanding features are that prior to the year 1909 little or no effort had been made to improve the livestock in Leer Community. As a common practice sires were selected from their own herds and by that process of inbreeding of scrub cattle the herds were constantly degenerating, producing as a result a very inferior type of scrub cattle.

Finally on May 22nd, 1909, as a result of the untireing efforts of Mr. W. T. Raven, Dairy Extension Specialast, M. A. C., the Leer Guernsey Breeders Ass'n was organized with twenty charter members who subscribed a total of 130 scrub cows.

A sufficient sum was raised to purchase three registered pure-bred Guernsey sires. Each of the three sires were placed at the head of herds giving a total of not less than forty cows for each group. A breeding fee of $1.00 per head was charged by the association. The funds obtained in that manner were used to defray the expenses of maintaining the sires and to assist in replacing sires as it became necessary to do so. To date the association is gratified of the fact that, small sum so obtained has been found to be sufficient to meet the needs.

The herds of the association members being divided up into groups, each sire is used two years in each group. When the circuit of the group has been made by each sire he is then replaced by another registered pure-bred sire. During the life of the Association to date eleven different sires have been used. Furthermore, each time a new sire was secured for the association only the best obtainable would do.

The good effects of that practice is clearly shown by the desirable confirmation of the offsprings and the attractive prices that have been received for the surplus stock which were sold. As a matter of fact the temptation to sell has been so great —as to threaten the financial affairs of the association, because of the reduced number of cows in the present association.

Moreover, as another influential factor, each year the asociation has an assembly of their Guernseys, this occasion is known as the Leer Guern-

(Continued on page 23)

The Fifty-Fifty Farming Agreement

Not a Lease, But An Ideal Partnership Plan for Land Owner and Land Worker

By **H. A. BEREMAN,** *Farmer and Breeder*

Dr. C. L. Wendt. originator of the modern farm partnership agreement.

SEVERAL years ago an account was published of what was then called "A Partnership Lease" that had been originated and worked out by Dr. C. L. Wendt. The idea has grown since that time, and now promises to revolutionize the vexatious problem of land tenantry in this country where nearly half of the farming land is now operated by renters. Many of these move every year, and on the average all of them move every two and a half years according to statistics of the Census Bureau.

This fifty-fifty idea is so vital to the welfare of the entire Nation, that the writer recently took a little journey to the home of Dr. Wendt at Canton, S. D., and spent some time with him going over his latest experiences and plans, and visiting two of his farms—and incidentally seeing a lot of the fine farming country in Lincoln county. We feel that this modern and wholly American plan of farm partnership is so valuable, that we call special attention to the general scope and details of the plan as worked out by Dr. Wendt in his own experience.

And first, let us state that the Wendt farming agreement is not a lease but a business partnership. The landlord and tenant system has not changed in a thousand years, and this ancient "Master and Servant" relation does not adapt itself to American ideals. A "landlord" is a lord of the land, and we do not have any such in our country. "Tenant" means a temporary occupant and we all know what happens to a rolling stone. As the fifty-fifty plan is based on the idea of permanence, the words "landlord" and "tenant" are considered out of date, and we think our readers will agree that "landowner" and "landworker" more accurately define the relations between farm partners, and that these terms have a more truly American ring.

All great movements and worthwhile ideas require a good deal of time in which to ripen or prove themselves. Dr. Wendt began to think about better ways of farm tenantry a score of years ago. About fourteen years ago he put his partnership plan into effect by entering into an agreement with a young man in his employ—Frank Painter by name. That original agreement stands today on the same footing and promises to remain indefinitely. Young Painter has prospered in the meantime—and is not this fact an eloquent variant on the usual experience of renters? He has now bought a fine farm of his own—but does he live on his own farm? No, he prefers to retain his business connection with Dr. Wendt, for he has learned precisely what this means to him in cold dollars and cents. But he does manage his own farm on the fifty-fifty plan with another man who is also getting along in the world, and who doubtless will invest his accumulated earnings in South Dakota land that he will operate as owner while still another ambitious man takes the part of land worker.

But the idea does not await such slow methods of spreading. In Lincoln county, where all the people can see for themselves just how it works, the farmers are practically all sold on the fifty-fifty plan. No accurate count could be made at the time of our visit, but there are probably more than a score of farms now being operated on the identical contract that Dr. Wendt has developed with so much thought and foresight. You can almost pick out these places in driving about the country in Lincoln county, for they are usually a little more prosperous looking; just a little neater as to farmsteads; just a bit pleasanter and more home-like in the character of the improvements .

One land worker made a net profit of $21,000 in seven years on the partnership plan, and then bought and moved to a farm of his own. That would seem to be about 100 per cent ideal from the standpoint of most farmers. But it is interesting to note that this man would now like to get back to the old system, for he made more money that way than he has since. You can write your own explanation of this apparent inconsistency in human nature, but we suggest that the basis of it is the old adage, "Two heads are better than one."

Partial view of the hog house on the Wendt and Painter farm.

The curse of peasantry as it is known in Europe can not be overemphasized. For many years it has hung over our own free land with its republican form of government, and its absence of titles, landed gentry and the like. Many thoughtful students of history and political economy have foreseen the trend of the times—the rapidly advancing prices of lands; the drift to the cities; the increasing number of farms operated by renters who cared only to make a living; and the growing army of absentee farm owners awaiting buyers at fancy prices. Much time and thought has been put into the devising of better forms of leases—especially leases for long periods—as one solution of the growing tenantry evil of this country.

But we think it can be laid down as a law of human nature and economics that all leases are bad and some are worse. To illustrate this point, we ask any reader whether after signing up a lease—either as "landlord" or "tenant"—he got up from the table feeling the same towards the party of the other part? We never have found a man yet who has not admitted that he didn't feel quite the same; most of them say that each party was trying to get just a little advantage over his opponent.

And that's exactly what we mean when we say that all leases are bad. They nearly always bring men together on terms of mutual hostility. The owner trys to make the tenant pay another half dollar an acre, while the tenant tries also to drive a sharp bargain and to induce the land owner to throw in something over and above the customery usage. The product of the old landlord and tenant system is a feeling of antagonism. There is no deep underlying sentiment of friendliness—and Dr. Wendt states that the element of friendship is the very heart of his form of agreement. Unless men are genuinely friends—trusting each other and co-operating in harmony—neither of them can prosper no matter how much legal talent they employ in writing the lease.

The Wendt system is a business partnership between two men, each of whom puts into the venture the capital he has at hand. The land owner invests his land and the worker invests his labor. The title to the land remains in the name of the original owner as a matter of course, until such time as the worker may wish to make other arrangements.

As a matter of history—covering all those cases investigated by the writer of this article—the partnership plan almost invariably results in more profit to worker and owner than is usually enjoyed by farms operated by their owners. The value of "two heads;" the advantage of consultation between the man on the land and the man in town; the benefits from having a permanent interest in making the land productive instead of robbing the soil or speculating in real estate; the immense value of feeding grain and roughage to high class live stock that are owned equally by both parties—these are the levers whereby profit is pried loose from soils that otherwise might not pay the taxes.

One of the important features of the partnership plan is that accurate books must be kept in which to record operations—purchases, sales, dates of planting, balance sheets, etc. This puts the process of tiling the soil on a business basis; it makes of it a commercial operation that must of necessity develop on the same plane as other industries.

Perhaps the most serious fault with the renter system is that it makes no provision for keeping up the soil's productive power. The renter has no inducements to enrich the land belonging to another, for he may move next year; the owner expects to sell on a rising market—he should worry about soil fertility! The result is that all over this broad domain of ours the soil is steadily growing less productive; acre yields are not increasing although population continues to grow; farming is still a process of soil exploitation and will continue so until land values are measured by productive capacity, and farms are made to pay legitimate dividends on capital and labor invested.

With this serious problem staring the American people in the face; with lands constantly rising in price; and with more farms operated every year by shifting renters, it is high time that farmers adopted a plan that will build up the integrity of our soils and put agriculture on its feet. A study of the partnership plan will show that it is destined to accomplish the desired end, and we urge the co-operation of all earnest people to spread the doctrine of mutuality in farm tenures.

As an illustration of what naturally follows, the Wendt & Painter farm of 160 acres has been greatly improved in the fourteen years it has been operated on the fifty-fifty plan. In that time the average yield of corn has climbed from 30 to 60 bushels an acre, and other crops show similar increases. This fact alone spells profit in the place of loss, for it is one of the corner

(Continued on page 16.)

Treatment of Stinking Smut of Wheat

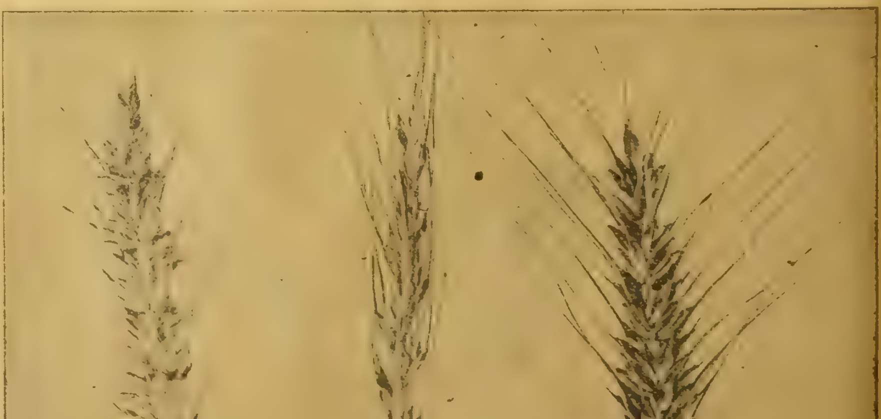
I would like to know how to disinfect smutty wheat so that it will make satisfactory seed. Will you please be so kind as to advise if this can be done, and if it can, will you state how I can go about it?—W. E. H., Fowler, Mich.

WHEAT in many sections of Michigan has been injured by Stinking Smut. This disease may make a field of fine promise produce only a low grade, ill-smelling crop, which without expensive washing and scrubbing is unfit for human food. From an investigation into actual condition in every county in the state, it is found that Stinking Smut wastes at least 5 per cent of the wheat crop of Michigan. Fields with 10, 25, 30, and even 70 per cent of the heads smutted are not uncommon.

As his wheat ripens, the farmer notices certain heads which are of dark-green or slate-green color and which have a shape different from the normal. The kernels in these heads are light and puffy and are filled with a brown black powder. Such diseased stalks are not so tall as the healthy ones and they may be markedly dwarfed,—"Low Stinking Smut." The smutted kernels have a vile odor, like that of rotted fish. Sometimes such a field is so smutty that one can smell it from the road. Threshing such a field is a job no one wants. Smut arises from the thresher in clouds endangering fields—for smut can persist in the soil until seeding time if not longer. It is evident that the thresher having handled smutty grain carries smut with it to the next batch of grain. Similarly the cleaner once loaded with smut becomes a source of contamination.

Although most of the smut balls which are formed in the heads in place of the kernels break in threshing, thus dusting the grain with the

(Continued on page 20.)

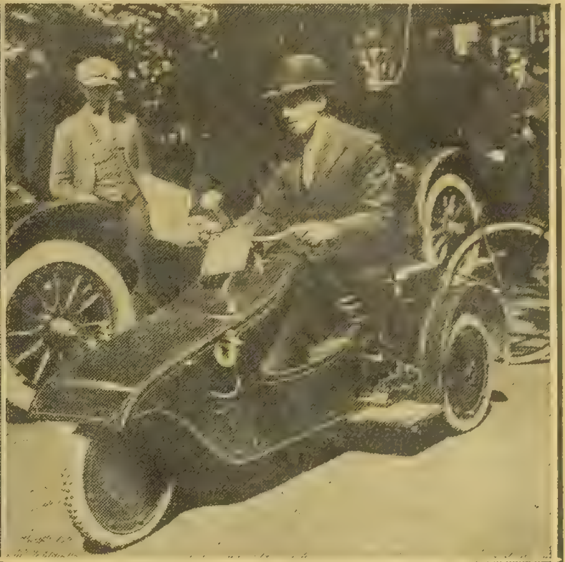


Stinking Smut of winter wheat showing effect on the wheat head and the puffy smut balls filled with smut powder. Healthy head and kernels for comparison.

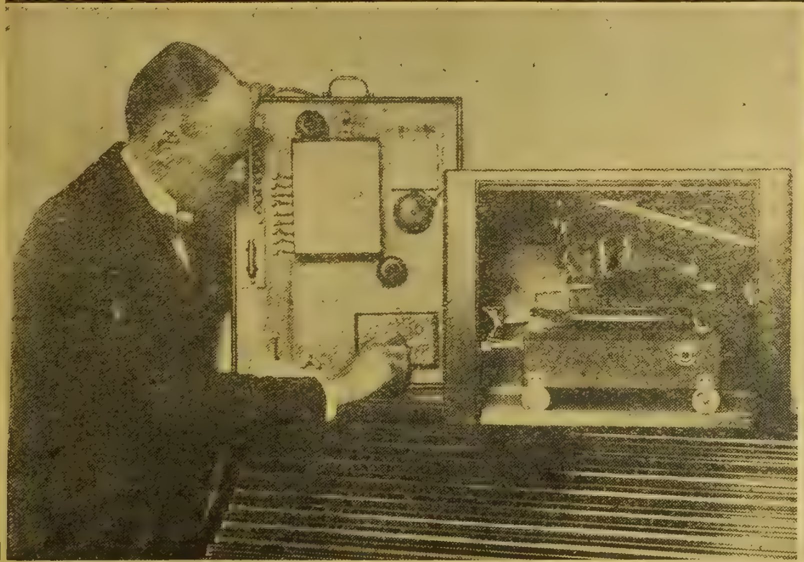
PICTURES FROM FAR AND NEAR

STINNES PLANS STRATEGIC COUP TO AID GERMANY—Hugo Stinnes, Germany's industrial leader, who according to developments in the negotiations between the German government and the Belgian financial delegates over the question of reparation guarantees, may again step in and show himself master of the situation by taking over a large part of the guarantee demanded by Belgium. It is Stinnes' idea to give French and Belgian industries a large share in German industry, thus making it a matter of necessity for those two nations to help rather than hinder the Teutons.

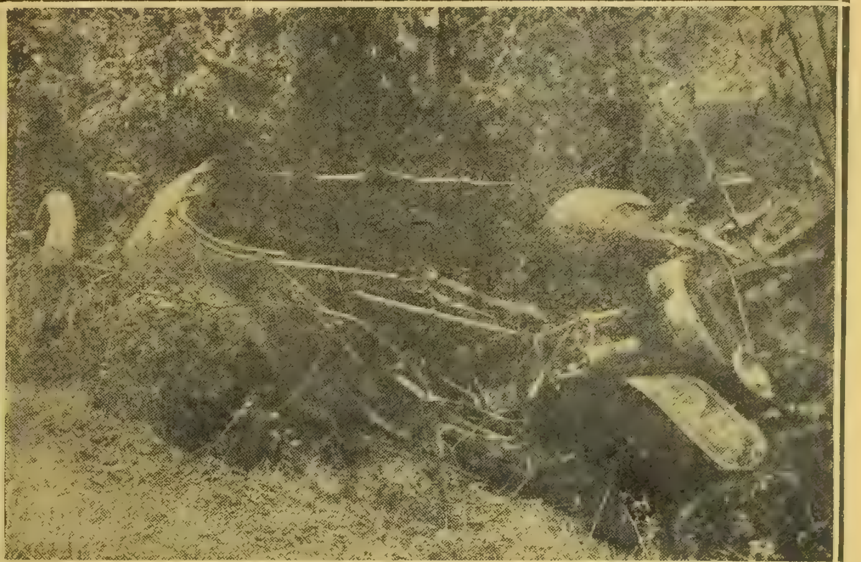
BEATUY CAPTURES TWO CUPS AT THE PAGEANT—Miss Thelma Blossom, or "Miss Indianapolis" as she was known, snapped while in her roller chair at Atlantic City holding the two cups she won at a pageant recently held there. She received one of the cups for being adjudged winner of the roller chair parade and won the other as "America's most beautiful girl in evening dress." Miss Blossom was chosen from 57 beauties represented as many different cities in America. "Miss Detroit," representing Michigan's metropolis was second.



ONE PASSENGER RUNABOUT APPEARS ON STREETS OF LONDON—Traffic jams were to be found on every hand but even the "bobbies" forgot their troubles and smiled when this "automobile" passed down the streets of London, England, recently. Reports have it that these small autos are becoming quite popular in Englaand. Prices range from $300 to $400. It would be dangerous business trying to drive one on the streets of Detroit, or other large American cities, owing to the heavy traffic but one would be handy on the farm—son John could use it to go after the cows.



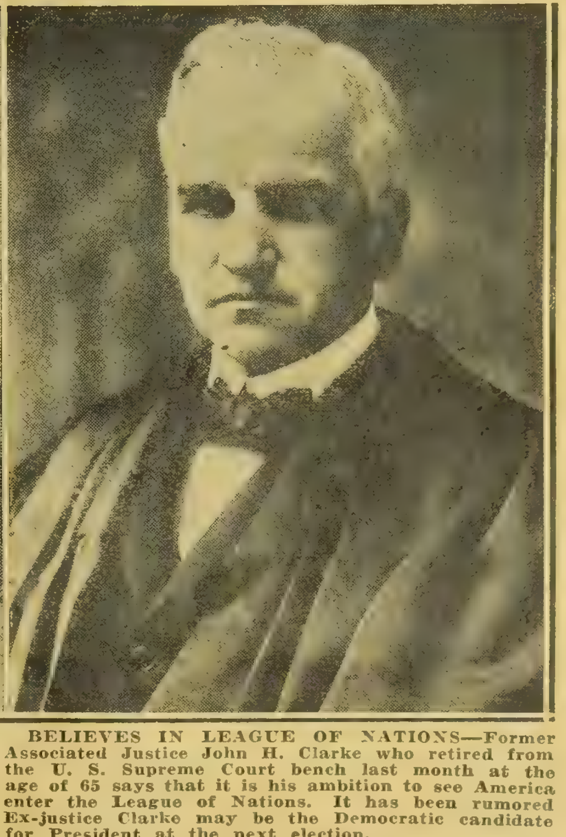
NO PLACE FOR A BURGLAR—The "Telealarm," invented by J. R. Coltman of London, will catch a burglar as well as give alarm at the outbreak of a fire. It consists of a box containing a telephone and a graphophone. The latter is connected with electric wires placed across all doors and windows and when one of the wires is touched it starts the graphophone. At the same time the voice gives the alarm over the telephone which is connected with the exchange. The open circuit on the same record gives warning when fire breaks out. The alarm continues for twenty minutes.



JUST LIKE A MOVIE THRILLER—After this automobile struck a telephone pole, crashed through a wooden fence and plunged down a 200 foot embankment into a deep ravine, the gasoline tank exploding enroute, enveloping the machine in flames, its occupants Mr. and Mrs. George Halland of Cincinnati, Ohio. were extricated from the wreckage without being seriously injured. Policemen who rescued them, say they have a charmed life. We are of the same opinion, what is yours?

NOW, ALL TOGETHER—Bandmaster Ape, a trained ape of Berlin, Germany, in his best conductor's manner, baton raised, hair wildly waving, a la Genius, and eyes concentrated, is endeavoring to get the best results from his band. His imitation is declared by all who have seen him as "wonderful"—so natural and so life-like.

SHOVELING SALT IN A MICHIGAN REFINERY—It looks as though there has been a big snow storm, now doesn't it? But you would find it a bit briny to your taste for it is salt that you see. The above was taken in one of the great salt refineries located at St. Clair, Michigan.



BELIEVES IN LEAGUE OF NATIONS—Former Associated Justice John H. Clarke who retired from the U. S. Supreme Court bench last month at the age of 65 says that it is his ambition to see America enter the League of Nations. It has been rumored Ex-justice Clarke may be the Democratic candidate for President at the next election.

Aspirin

Say "Bayer" and Insist!

Genuine

Unless you see the name "Bayer" on package or on tablets you are not getting the genuine Bayer product prescribed by physicians over twenty-two years and proved safe by millions for

Colds Headache
Toothache Lumbago
Earache Rheumatism
Neuralgia Pain, Pain

Accept "Bayer Tablets of Aspirin" only. Each unbroken package contains proper directions. Handy boxes of twelve tablets cost few cents. Druggists also sell bottles of 24 and 100. Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid. (1)

EARN BIG MONEY
LEARN THE AUTOMOBILE BUSINESS

—the world's greatest industry. Millions of cars, tires, batteries, etc., need constant service. Thousands of trained men wanted. Wonderful opportunities open to men who "know how." Come to Michigan State Auto School and get this training now. Our course fits you to fill any automotive job. Our graduates always in demand. More than 18,000 graduates thruout world holding good jobs or in business for themselves.

Make $2,000 to $10,000 Yearly

Our graduates are able to step into good jobs as soon as Course is completed. Many go in business for themselves. Edwards, (Mich.) was offered $40.00 per week a few days after completing our course; Nelson (N. Y.) took our Course when 17,—now has five men working for him; Tirb (Mich.) gets $50.00 per week; Wolf (Iowa) making about $75.00 weekly in business of his own; Anderson (Minn.) made $300 per month in garage of his own. Hundreds more like these in our files.

Complete Course — Endorsed by Big Auto Factories

Every branch of the auto business is taught:—construction, operation, unkeep, and repair of autos, tractors, trucks, farm lighting plants, and gas engines. We teach by actual experience on each machine. No guess werk. Students visit auto factories, meet executives and service men, and learn factory methods right where 79% of automobiles are made. In fact the big auto factories helped outline our Courses and heartily endorse our school. M. S. A. S. training is complete, practical an profitable. IT PAYS TO LEARN THE M. S. A. S WAY.

Special Courses in Battery Repairing, Tire Repairing, Brazing, Welding, and Machine Shop Practice. All teaching done by actual practice.

Good Positions Await Our Graduates

Factories, garages, and service stations continually ask for our graduates. Positions offer good pay with excellent opportunities for advancement, or go in business for yourself.

Write Today, for free catalog. Gives complete information about courses and opportunities in automobile business. Be a go-getter! Train for Success—let us help you. Write today.

The Hunted Woman

By James Oliver Curwood

Michigan's Own and America's Formost Author of the Great Northwest

THE SYNOPSIS

A WOMAN with a pearl-gray veil drawn closely about her face is one of the many passengers on the train that connects "The Horde" with the civilized world. For eighteen hours she has been riding steadily bound for Tete Jaune Cache, the land of "The Horde," where she has no friends and all will be strange to her. The train stops at a town composed of several tents and she inquires how long the train will stop and is advised that it will not move for at least two hours. Desiring food and a bath she asks where she can secure them and is directed to "Bill's Shack". Bill's Shack is owned and operated by Bill Quade, leader of the lawless band of the town. When she steps inside the doorway she recognizes him as a brute but as she has entered and is very hungry and dusty she decides to go through with her plan. Quade says he has a room she can rent and asks her to follow him. As they pass out of the room there appears a newcomer in the doorway opening off the street. The newcomer is not of the kind of men lounging about the room but shows in face and in actions that he is of the wholesome living type. He has seen the girl enter this place and believes she has made a mistake and as he stands in the doorway his eyes rest upon the curtain-covered doorway through which the girl and Quade has just passed. In but a moment the girl steps out, her face flaming like fire and eyes filled with the flash of lightning. Quade follows her apologetically. He starts to offer the girl a roll of money but before he can do so the newcomer steps to the girl's side and strikes Quade with terrific force. The Brute goes down in a heap and the newcomer hurries the girl outside and away from the scene. The newcomer, who is John Aldous a novelist and known as a woman hater, learns from the girl that her name is Joanne Gray. He takes her to the home of a friend and returns to Bill's Shack warning Quade to leave the girl alone. He returns to the girl and asks her to be his guest at supper in his cabin. She accepts.

(Continued From Last Issue)

"YES," said Aldous, deliberately. "You are that Joanne. But you possess what I could not give her. Joanne of 'Fair Play' was splendid without a soul. You have what she lacked. You may not understand, but you have come to perfect what I only partly created."

The colour had slowly ebbed from Joanne's face. There was a mysterious darkness in her eyes.

"If you were not John Aldous I would strike you," she said. "As it is—yes—I want you as a friend."

She held out her hand. For a moment he felt its warmth again in his own. He bowed over it. Her eyes rested steadily on his blond head, and again she noted the sprinkle of premature gray in his hair For a second time she felt almost overwhelmingly the mysterious strength of this man. Perhaps each took three breaths before John Aldous raised his head. In that time something wonderful and complete passed between them. Neither could have told the other what it was. When their eyes met again, it was in their faces.

"I have planned to have supper in my cabin to-night," said Aldous, breaking the tension of that first moment. "Won't you be my guest, Ladygray?"

"Mrs. Otto—" she began.

"I will go to her at once and explain that you are going to eat partridges with me," he interrupted. "Come—let me show you into my workshop and home."

He led her to the cabin and into its one big room.

"You will make yourself at home while I am gone, won't you?" he invited. "If it will give you any pleasure you may peel a fey potatoes. I won't be gone ten minutes."

Not waiting for any protest she might have, Aldous slipped back through the door and took the path up to the Ottos'.

CHAPTER V

AS soon as he had passed from the view of the cabin door Aldous shortened his pace. He knew that never in his life had he needed to readjust himself more than at the present moment. A quarter of an hour had seen a complete and miraculous revolution within him. It was a change so unusual and apparently so impossible that he could not grasp the situation and the fact all at once. But the truth of it swept over him more and more swiftly as he made his way along the dark, narrow trail that led up to the Niette Plain. It was something that not only amazed and thrilled him. First—as in all things—he saw the humour of it. He, John Aldous of all men, had even gone so far as to offer the sacrifice of his most important work. Frankly he had told Joanne that she interested him more just now than his book. Again he repeated to himself that it had not been a surrender—but an obliteration. With a pair of lovely eyes looking quietly into him, he had wiped the slate clean of the things he had preached for ten years and the laws he had made for himself. And as he came in sight of the big Otto tent, he found himself smiling, his breath coming quickly, strange voices singing within him.

He stopped to load and light his pipe before he faced Mrs. Otto, and he clouded himself in as much smoke as possible while he explained to her that he had almost forced Joanne to stop at his cabin and eat partridges with him. He learned that the Tete Jaune train could not go on until the next day, and after Mrs. Otto had made him take a loaf of fresh bread and a can of home-made marmalade as a contribution to their feast, he turned back toward the cabin, trying to whistle in his old careless way.

The questions he had first asked himself about Joanne forced themselves back upon him now with deeper import. Almost unconsciously he had revealed himself to her. He had spread open for her eyes and understanding the page which he had so long hidden. He had as much as confessed to her that she had come to change him—to complete what he had only half created. It had been an almost inconceivable and daring confession, and he believed that she understood him. More than that, she had learned about him. She had read his books. She knew John Aldous—the man.

But what did he know about her beyond the fact that her name was Joanne Gray, and that the on-sweeping Horde had brought her into his life as mysteriously as a storm might have flung him a bit of down from a swan's breast? Where had she come from? And why was she going to Tete Jaune? It must be some important motive was taking her to a place like Tete Jaune, the rail-end, a place of several thousand men, with its crude muscle and brawn and the seven passions of man. It was an impossible place for a young and beautiful woman unprotected. If Joanne had known any one among the engineers orconter of introduction to them, the tense tractors, or had she possessed a letlines would not have gathered so deeply about the corners of Aldous' mouth. But these men whose brains were behind the Horde—the engineers and the contractors—knew what women alone and unprotected meant at Tete Jaune. Such women floated in with the Horde. And Joanne was going in with the Horde. There lay the peril—and the mystery of it.

So engrossed was Aldous in his thoughts that he had come very quietly to the cabin door. It was Joanne's voice that roused him. Sweet and low she was singing a few lines from a song which he had never heard.

She stopped when Aldous appeared at the door. It seemed to him that her eyes were a deeper, more wonderful blue as she looked up at him, and smiled. She had found a towel for an apron, and was peeling potatoes.

"You will have some unusual excuses to make very soon," she greeted him. "We had a visitor while you were gone. I was washing the potatoes when I looked up to find a pair of the fiercest, reddest moustaches I have ever seen, ornamenting the doorway. The man had two eyes that seemed about to fall out when he saw me. He popped away like a rabbit—and—and—there's something he left behind in his haste!"

Joanne's eyes were flooded with laughter as she nodded at the door. On the sill was a huge quid of tobacco.

"Stevens!" Aldous chuckled. "God bless my soul, if you frightened him into giving up a quid of tobacco like that you sure did startle him some!" He kicked Stevene' lost property out with the toe of his boot and turned to Joanne, showing her the fresh bread and marmalade. "Mrs. Otto sent these to you," he said. "And the train won't leave until tomorrow."

In her silence he pulled a chair in front of her, sat down close, and thrust the point of his hunting knife into one of the two remaining potatoes.

"And when it does go I'm going with you," he added.

He expected this announcement would have some effect on her. As she jumped up with the pan of potatoes, leaving the one still speared on the end of his knife, he caught only the corner of a bewitching smile.

"You still believe that I will be unable to take care of myself up at this terrible Tete Jaune?" she asked, bending for a moment over the table. "Do you?"

"No. You can care for yourself anywhere, Ladygray," he repeated. "But I am quite sure that it will be less troublesome for me to see that no insults are offered you than for you to resent those insults when they come. Tete Jaune is full of Quades," he added.

The smile was gone from her face when she turned to him. Her blue eyes were filled with a tense anxiety.

"I had almost forgotten that man," she whispered. "And you mean that you would fight for me—again?"

"A thousand times.'

The colour grew deeper in her cheeks. "I read something about you once that I have never forgotten, John Aldous," she said. "It was after you returned from Thibet., It said that you were largely made up of two emotions—your contempt for woman and your love of adventure; that it would be impossible for you not to see a flaw in one, and that for the other—physical excitement—you would go to the ends of the earth. Perhaps it is this—your desire for adventure—that makes you want to go with me to Tete Jaune?"

"I am beginning to believe that it will be the greatest adventure of my life," he replied, and something in his quiet voice held her silent. He rose to his feet, and stood before her. "It is already the Great Adventure," he went on. "I feel it. And I am the one to judge. Until to-day I would have asked my life that no power could have wrung from me the confession I am going to make to you voluntarily I have laughed at the opinion the world has held of me. To me it has all been a colossal joke. I have enjoyed the hundreds of columns aimed at me by excited women through the press. They have all asked the same question: Why do you not write of the good things in women instead of always the bad? I have never given them an answer. But I answer you now—here. I have not picked upon the weaknesses of women because I despise them. Those weaknesses—the destroying frailties of womankind—I have driven over roughshod through the pages of my books because I have always believed that Woman was the one thing which God came nearest to creating perfect. I believe they should be perfect. And because they have not quite that perfection which should be theirs I have driven the cold facts home as hard as I could. I have been a fool and an inconoclast instead of a builder. This confession to you is proof that you have brought me face to face with the greatest adventure of all."

The colour in her cheeks had centred in two bright spots. Her lips formed words which came slowly, strangely.

"I guess—I understand," she said. "Perhaps I, too, would have been that kind of an inconoclast—if I could have put the things I have thought into written words." She

Pioneers Together

—the staunch builders of this great country—and Montgomery Ward & Co., who first supplied their needs by mail.

Fifty years of progress together, and today this great new-old institution of Montgomery Ward & Co. is filled with the same spirit of the Pioneer—always progressing—always leading the way.

We enter our second half-century of service by offering you in this, our Golden Jubilee Catalogue, the fruits of fifty years' experience in making low prices on goods of dependable quality alway

Millions Buy from this Book on Faith in the Name "Montgomery Ward"

This book is saving many millions of dollars for the American people.

Is it saving money for *you* and for *your* family? Are you taking *full advantage* of your opportunity?

This book—our Golden Jubilee Catalogue—celebrates our 50th Anniversary by offering you the lowest prices possible on everything for the Home, the Farm and the Family.

It is filled with bargains—with merchandise of high quality. And every price is a Money Saving price for you.

For Fifty Years Montgomery Ward & Co. have earnestly worked to serve the American people.

Today millions of people are buying from this book on faith in the name "Montgomery Ward."

And it is our policy to keep faith with our customers. It is our policy to sell only serviceable goods, to serve you promptly — always to offer you a saving — and to deal with you always in the full spirit of the Golden Rule.

Montgomery Ward & Co. begins its second half-century of business existence. Yet today it is filled with the spirit of youth; alert, looking ahead, improving its service, filling orders quicker, and offering lower and lower prices.

To buy from this Golden Jubilee Catalogue is to be guaranteed a definite saving and entire satisfaction—and back of this guarantee is the reputation of Fifty Years of fair dealing.

Interesting stories from three of our oldest customers

"I received my first Montgomery Ward price list in 1872, and I became a customer almost immediately. The catalogue has been coming regularly ever since, and I have been doing business with Montgomery Ward & Co. practically all of that time.

"I wish to state, that in all of those years there has never been any occasion to make a complaint or to return any goods we have ordered from Montgomery Ward & Co."

William McCandless, Sloan, Iowa
A Customer Since 1872

For fifty years, ever since Montgomery Ward & Co. was started, Mrs. Merrick has taken a keen interest in its development.

"I have been a customer from the first.

"I have always had the most courteous treatment from you," she said. "I believe that much of your success has been due to your unfailing policy of fair dealing."

Mrs. Emma E. Merrick, Malcolm, Iowa
A Customer Since 1872

Mr. Beatty is a real pioneer. He is the only man now doing business in Helena who came to Montana in 1862. He served under General Johnson in Utah (1857-8). He finally settled in Winston, Montana.

"I have traded with Montgomery Ward & Co. for 45 years," he said, "and I have never found anything wrong that has not been satisfactorily settled. If you continue to deal as fairly with your customers as you have in the past you will surely prosper."

Mr. George Beatty, Winston, Montana
A Customer Since 1877

Farmers Service Bureau

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you. All inquiries must be accompanied by full name and address. Name not used if so requested.)

CLEAR OUT SWALE

Can you thru your Farmers Service Bureau tell me how I can clear out a swale covering one acre, it is covered at present with willow and other small brush, as it is at present it only dries out for about six weeks of the year and then not sufficiently that I can get a horse in to pull them. It is my opinion that if this can be cleared permanently I would be able to get a little pasture, or in some other way use it.—R. F. P., Hastings, Michigan.

—I believe the simplest plan, if the ground is solid enough to hold up a team around the swale, is to use a long rope with the team on solid ground for pulling the willows. Perhaps this will require two men to do the work in addition to the team, but it is a very inexpensive way of handling the proposition.

Another suggestion which might be made is that the possibility of draining this hole should be investigated, if possible to drain it would, of course, be possible to use a team on it at practically any time.—H. H. Musselman, Professor of Farm Mechanics, M. A. C.

CANNOT RECOVER TAX

If a party didn't know whether he had to pay tax on cut-over land or not and had already paid his tax before he found out, would the tax collector be obliged to give it back to the landowner?—Mrs. F. D. A., Edmore, Mich.

—No. The property owners who believes himself entitled to exemption from taxes is supposed to make application for such exemption. If through ignorance of the law or oversight he fails to do so and the tax is levied and paid he cannot recover.—Editor.

MIDLAND MUTUAL INSURANCE COMPANY

An agent of the Midland Mutual Insurance Co., of Columbus, Ohio, states that they have deposited $75,000.00 at Lansing to do business in the state of Michigan. Is this true?—W. R., Hoxeyville, Mich.

The Midland Mutual Life Insurance Company of Columbus, Ohio, has on deposit with the Superintendent of Insurance of the State of Ohio $100,000.00 for the protection of its policyholders. The company is not required to maintain a deposit in Michigan in order to receive license to transact business herein.—H. B. Corell, State Dept. Insurance, Lansing.

LIQUID IN BATTERY MUDDY

We have a 32-volt electric lighting plant that we have had about a year. The batteries consist of 16 glass jars with rubber plates fastened together by bands. At first when fully charged the liquid would foam and become almost milky. Lately after becoming milky the fluid becomes dark and almost muddy, when fully charged. Would overcharging the batteries cause this or is the fluid or acid worn out?—Subscriber, Mich.

—The dark color of the electrolyte would indicate that active material from the plates has been dislodged somewhat, due to the battery being charged at too high a rate. The plates in the cells may have deteriorated, somewhat, so that the battery cannot now be charged at as high a rate as when it was new. You may use lights or other equipment while charging the battery making it charge at a lower rate or have your agent adjust the plant to charge at a lower rate.—F. E. Fogle, Ass't Professor of Farm Mechanics, M. A. C.

RATS GET IN CELLAR

I have trouble with rats getting in my cellar and digging holes. What can I do to kell them? I got a trap set and put rat biscuits in it but they don't touch the biscuits—Mrs. I. E., Grand Junction, Mich.

—It is difficult to rid any place of rats, it will be very hard to rid this place. We have no printed matter but you can get a bulletin entitled, "How to Destroy Rats", by writing the Biological Survey, U. S. Department of Agriculture, Washington, D. C. All we can say is to use any poison which you can make the rats take. There are a dozen kinds on the market most of them contain either arsenic, strychnine or phosphorous. One of the less harmful poisons is Barium Carbonate which kills rats promptly but in small doses is not harmful to most domestic animals. I am giving directions below as given by the Washington Bureau mentioned above. In dealing with rats the main thing is to cut off the food supply. Either make the premises rat-proof or keep the food in rat-proof containers. Rats will not stay where they cannot get food. No one kind of trap will be satisfactory under all conditions, sometimes ten different kinds must be tried in order to catch the last and wisest rat.—Walter B. Barrows, Professor of Zoology, M. A. C.

One of the cheapest and most effective poisons for rats and mice is barium carbonate. This mineral has the advantage of being without taste or smell. It has a corrosive action on the mucous lining of the stomach and is dangerous to larger animals if taken in sufficient quantity. In the small doses fed to rats and mice it would be harmless to domestic animals. Its action upon rats is slow, and if exit is possible they usually leave the premises in search of water. For this reason the poison may frequently, though not always, be used in houses without disagreeable consequences.

Barium carbonate may be fed in the form of dough composed of four parts of meal or flour and one part of the mineral. A more convenient plan is ordinary oatmeal with about one-eighth of its bulk of the mineral, mixed with water into a stiff dough. A third plan is to spread the barium carbonate upon fish, toasted bread (moistened), or ordinary bread and butter. The prepared bait should be placed in rat runs, about a teaspoonful at a place. If a single application of the poison fails to kill or drive away all rats from the premises, it should be repeated with a change of bait.—Farmers Bulletin, No. 369, U. S. Department of Agriculture.

FALLEN TELEPHONE POLES

We have received some complaints from subscribers against telephone companies which have not yet removed poles which were felled by the ice storm last spring, or renewed service on their lines. These complaints have been referred to the Public Utilities Commission which has jurisdiction in the matter. The Commission is now seeking information on such cases in order that it may compel telephone companies to remove their poles and renew service. Subscribers who know of any such condition existing are requested to report the full facts to the Commission at Lansing, stating the name and address of the company, township or townships in which the lines are still unrepaired and subscribers inconvenienced as a result and the extent of such inconvenience.—Editor.

NEED NOT DONATE LAND FOR HIGHWAY

I own a farm that is located on a corner. Three years ago the township had the highway surveyed out and I then built my fence allowing two rods and five inches for the road. Now the township wants me to move my fence back two rods more and threaten to sue me if I do not. The fence has stood there for nearly three years. Can they compel me to move it back? I would much appreciate your opinion upon this matter.—A. L. T., Presque Isle County, Mich.

—You are not obliged to donate any land whatever for highway purposes. If you have enclosed your premises by a fence and the public has never been in possession the township cannot obtain such land except by condemnation proceedings and pay you the full value of the land for farm purposes.—Legal Editor

Rains Improve Crop Outlook in Europe

ALFRED P. DENNIS, special representative of the Department of Commerce, now in Berlin, reports that August weather conditions were favorable to the French wheat harvest, and though the yield will be about 20 per cent short of that of last year, the quality of the new grain is good, being rich in gluten and above the average. Excessive rains affected adversely the harvests in England, Sweden, Denmark, and Germany. The quality of the wheat, however, is much improved.

The protracted hot,rainless spell seriously reduced the corn crop prospects in Italy and Jugoslavia; the deterioration in the latter country being estimated at 30 per cent. The Rumanian corn crop is now estimated at 129,000,000 bushels instead of 184,000,000 bushels as previously reported, based on an average yield of not over 15 bushels per acre, with the surlpus for export estimated at 48,000,000 bushels. It is estimated that the new wheat crop of Rumania will furnish 7,000,000 bushels for exports, all of which will likely be absorbed in the commitments already made to France and Switzerland.

The estimated total yield for Rumania of all cereal crops is 9,000,000 tons, as compared with 6,993,487 tons in 1921. Aside from Rumania, Poland is the only other European country which shows marked gains in the bread-grain crops over last year with official estimates given at 6,558,000 tons this season as compared with 5,412,000 tons in 1921.

Italy Needs 110,000,000 Bu. Wheat

With a poor potato and corn crop and a wheat yield 20 per cent under that of last year, Italy will need to import approximately 110,000,000 bushels of wheat during this cereal year. The French wheat crop is considerably below the crop of 1921, but probable imports are now figured down to 35,000,000 bushels, owing to compulsory long milling, the dilution of flour and the falling off in the per captia consumption of bread.

Germany is reported as carrying 600,000 tons of government stocks of wheat and rye, leaving the total necessary imports of cereals by the state at 1,400,000 tons during the current cereal year. Rye is making a better showing than wheat in all the principal grain producing countries, giving about an average return per acre, but with the exception of Poland the acreage planted in rye this year was less than last season.

Private importations into Germany are dominated by the money stringency, with the stocks of grain in the millers hands running low, and importers are hesitant about making commitments owing to the violent fluctations of the mark. To see the country through the coming winter heavy private importations will be required. American sales might be increased through more liberal credit arrangements on this side, to the effect that grain might be shipped to the big responsible milling associations, such as exist in the lower Rhine region, at a stipulated price in dollars, with payment deferred until the grain actually arrives and has been converted into flour. Knowing the dollar exchange value of the mark on the date the flour is sold a price to the bakers could be made which would be sufficient to cover the cost of the grain and afford secure profits to the importing millers. In general it would not seem advisable for American grains to be pressed for sale on the European markets at this precise time.

Beet and Potato Crops

The population in Northern Europe are assured heavier crops of beet root and potatoes. This increase production of potatoes will be a great help toward meeting the cereal deficiencies. Owing to the big yield of potatoes in England the market is being gluted.

The German potato crop will barely surpass 30,000,000 tons, as compared with 26,000,000 tons last year, while that of Belgium will run 50 per cent above that of last season, and there will be also a marked increase in this crop in Holland and Czechoslovakia. The beet fields in France, Belgium, Holland, Germany, and Czechoslovakia are luxuriant, but unless warm, sunshiny weather sets in, the roots will be deficient in sugar content. The French beets have prospered under ideal growing conditions. Sweden will show a big drop in sugar production, and the Italian beet yield has been seriously hurt by the drouth.

MUSINGS OF A PLAIN FARMER

Sanilac Co. seat is active today. Is it the primaries or the Farm Bureau? Both I believe.

There are groups of F. B. delegates scattered about the streets.

Where do we eat? Seems to be the big question.

That's the fifteenth candidate that has presented himself for my inspection.

Ah! Dinner is ready. Every man for himself here. Our table manners are limited to the length of our arm.

A short smoke for the smokers and then to business.

Order, Credentials.

Resolutions, motions, amendments steam-rollers and what not.

Points more than all the lawyers in Bohemia could handle.

The secretary of the different locals are giving some long figures. They all report a balance on the right side of the ledger. Press forward boys! And may the angels and ministers of grace defend you.

County Agent Irving of Huron is presenting some facts and figures that's getting under my pelt. He is emphazing the importance of the farmers' support in the coming membership drive. I am going to sign up. Though hades itself should gap and threaten to engulf me.

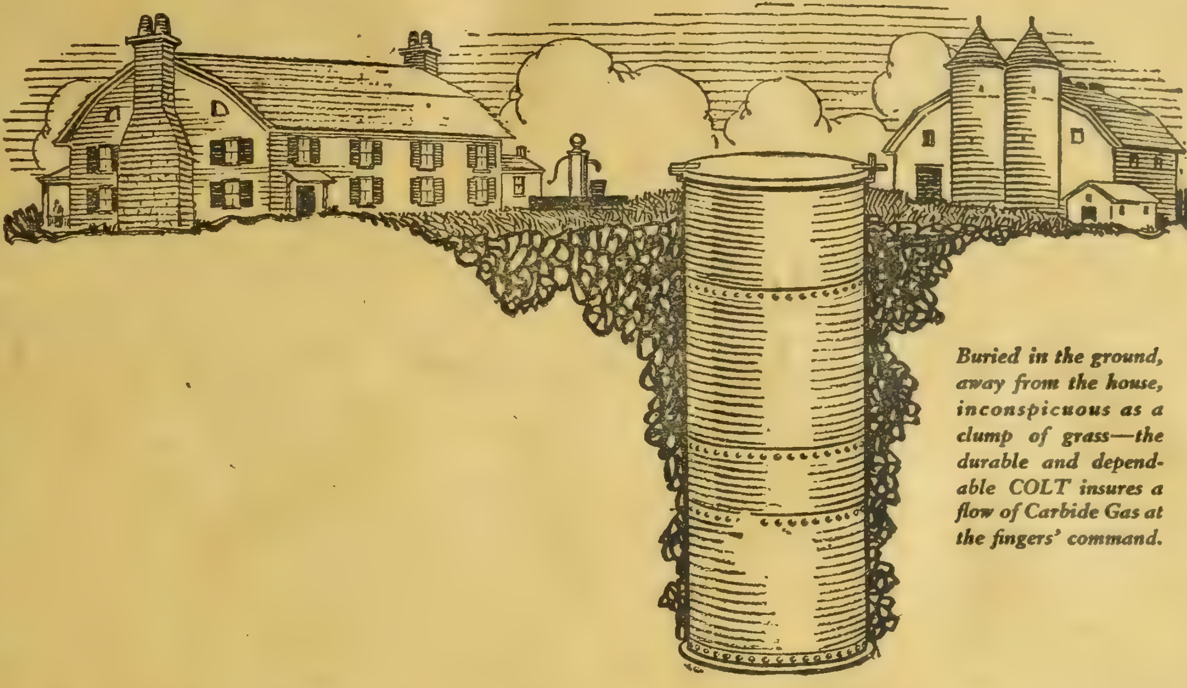
C. V. Ballard of the M. A. C. is giving us a good sound business talk County Agent Martin makes his report. It's accepted with thanks. He forgot to mention the six million questions he answered during the year, and that he helped me get some seed potatoes.

Election of officers. A good line-up from the president down to the janitor.

Adjournment until the picnic when we will meet again.

She was a good meeting. Where O where are those bachelor delegates that came with me? I want to go home.

It will be their business to explain to Mrs. B. when they drop me off at the gate. I must trace up some young ladies that would be willing to co-operate with them.—A. P. Ballard.



Buried in the ground, away from the house, inconspicuous as a clump of grass—the durable and dependable COLT insures a flow of Carbide Gas at the fingers' command.

Plant a COLT "Gas Well" on your farm NOW!

The months of short days and long nights are on their way.

Six months of evenings to be passed indoors await you!

Will they be lighted by the dim, eye-straining flame of a lamp—or the soft, friendly brilliance of *real* light—CARBIDE GAS LIGHT?

Act *NOW* for *real* light! Get a COLT Lighting and Cooking Plant—generate this wonderful Carbide Gas.

Hundreds of farmers are preparing this month for bright, cheery evenings by installing COLTS. This is the great planting season for COLTS. More are being installed this Autumn than in any other season. Don't risk disappointment—order your COLT *now,* before Winter closes in.

The Health Light for Reading

Carbide Gas Light is *pure white* in color —not *yellow.* Looks exactly like sunlight —restful and soothing to the eyes. Read or sew under it for hours—no eye weariness. The most beautiful as well as the most healthful of artificial lights.

Comes to you at the twist of fingers. Turn a little igniter. . . . . on goes the light! You use no matches.

Carbide Gas for cooking, too—*an added feature of the COLT.* Your wife will certainly appreciate this.

How is the gas made? The COLT does this automatically—mixes Carbide with water.

Study Lighting Plant Costs. Result: You'll Install a Colt

Easy to install—within reach of all. No continual replacement of parts, no adjusting or tinkering necessary, no service required—simplicity itself. The most economical system all the way thru. Comes from Factory to Farm. Sold direct by COLT solicitors—no distributors or dealers to take a profit.

Send Postcard for Full Story

You want *good* light—you want it installed now. Write for full particulars—*then act for BETTER LIGHT!*

31ST SUCCESSFUL YEAR

Westclox

The household timekeeper

FOLKS who used to set their minds now set Big Ben and sleep soundly, restfully, confidently.

They know that any Westclox alarm will call them on the dot; whether it's at 2 A.M. for the dairyman, or later for 'tween season chores.

After it starts the day on time, it sees the children off to school, times the trip to town, meals or whatever else is needed.

It is surprising how often Big Ben gets an inquiring look, and satisfying the way he answers it, day in and day out, demanding almost no attention.

That's characteristic of any timepiece with Westclox on its dial. They must be able to run on time and ring on time before they are allowed to wear the name Westclox.

One of Our Customers Saved $120.00 On His Windsor Pipeless Furnace

Read this letter from one of the thousands of customers who now have *Windsor Pipeless Furnaces* in their homes:

Improved WINDSOR 69.00 as illustrated

June 11, 1922.

The Windsor Pipeless furnace that I bought of you last December is certainly all you claim for it. In the first place, I saved $120 in price. Second, it gives you all the heat there is in coal. Third, anyone can install it. If I were buying another furnace it would be a Windsor Pipeless. None better that I know of.

I. J. AUGUSTINE,
615 North 17th Street East,
Cedar Rapids, Iowa.

FRUIT AND ORCHARD

Edited by FRANK D. WELLS

THE STORY OF A PEACH TREE

Would you advise planting three-year-old peach trees? One of my neighbors planted three-year-old trees in 1918, but I can't see that they are any better than an orchard of two-year-old trees planted at the same time.—R. L. A., Oakland County.

—As an answer to this question, let us look up the history of these trees.

In the fall 1919 there was a peach ripening on a tree, somewhere in the mountains of the Carolinas. It was small and white, but when full ripe had a good flavor. A wild tree produced it, consequently it was "natural" fruit.

The peach, like thousands of others was gathered by the mountaineers to dry for winter. The pit was saved and sold to a dealer who shipped it to a northern nursery.

At some time during fall of 1915 that pit was planted. In the spring of 1916 it grew and that summer it was budded. During the next summer it grew into a tree and in the fall it was dug and stored in a nursery cellar, to be sent out for planting in 1918.

The trees were graded and designated according to size as X, XX or XXX. The difference in the growth of peaches is remarkable. A tree may be less than two feet high or more than seven, the growth of a single season.

Such a difference in the size makes it is easy for an agent to claim a difference in the age of his stock. However, the peach trees sent out by nurseries are of one age, regardless of the inequality in size.

In regard to the size for planting, most orchardists prefer a medium grade, claiming that they are more thrifty than larger trees. Some successful growers, however, prefer large stock and have good orchards to prove their claim. Perhaps there is less in the tree itself than in the way it is cared for.

GROWING SEEDLINGS

How are apple, quince, cherry, pear and swamp huckleberries started from seed? How are grape cuttings made and when should they be planted?—W. E. S.

—Apple seeds are mostly obtained from cider pomace by washing. In early spring they are planted like seeds generally in rows far enough apart to admit cultivating. Pear and quince seeds are similar to the apple.

Cherry pits, like other stone fruits are planted in the fall. Planting is similar to that of the apple.

The growing of huckleberries from seed is not a simple matter. It is really something which should be done in a greenhouse, or a hotbed. The seeds are freed from pulp by soaking thoroughly, then kept by mixing in fine moist sand and storing in a cool place. The seeds in a greenhouse may be sown the latter part of winter in boxes containing a mixture of sand and loam, covering slightly. Cover with sphagnum and keep in a temperature between 60 and 65 degrees. The seed is slow to germinate, but if kept moist some of them should show signs of life in a month, though others may remain dormant much longer, even a year. Through the spring and summer they are transplanted three times. By the first of September they should be ready to harden off for winter. Give little water, but protect from frost as late as convenient. Protect through winter with some covering over the cold frame. Air the frames once or twice a month, a few hours at a time as a protection from fungus. The following spring they are planted out in beds of sandy soil and kept well watered. Protection is needed the second winter. After that they are planted out and grown as ordinary nursery stock. This is enough to scare anybody but a hardened hothouse man.

Grape cuttings are made from the hard wood, during the winter or early spring, using the trimmings from the vines. The cuttings are made long enough to include at least two, better three, buds. The butt end is cut straight across. The butt bundles, the cutting are buried in moist sand in a cool cellar. By spring they will have calloused and may be planted out when the weather permits. They should be deep enough so the top bud only is above the surface.

SPRING OR FALL PLANTING?

Would you plant fruit trees in the fall or spring? This is the question that comes up for an answer every year.

In the fall there is time for preparing the ground and planting the trees. The soil becomes settled around the roots. In the spring the trees will be ready to grow with the first warm weather. Nurserymen are not rushed with orders, so that shipping and delivery are subject to less delay than in spring.

But if the winter is severe the trees may be injured seriously, in which case they would fare much better in the storage cellar of the nursery. Fall orders are looked upon with disfavor by nurserymen and some of them charge an extra price for shipping at that season. There is an extra expense attached to handling in the fall, besides the results are liable to be unsatisfactory.

In the spring the weather may be bad, so as to cause delay, the trees may arrive too soon, necessitating extra work in handling. They may be too long on the way, so be injured. But all things considered the spring gives better results than the fall, at least in the latitude of lower Michigan. Farther south, where the winters are less severe, fall planting is in favor.

The objections to fall planting do not hold good in case of forest and ornamental trees generally. They are usually older and can endure the winter better. Fall planting is usually preferred for them. Shrubs are planted in the spring, unless they can be protected when they are set.

NOTES

The Gideon apple has been in disfavor, but that is not so much the fault of the fruit as a misunderstanding of its real character. It has been described by some prominent nurserymen as a winter apple, but those who plant it in Southern Michigan with that in view, will be disappointed. Here it ripens in autumn just about early enough to prevent rotting on the tree. Farther north it ripens later. It originated in Minnesota and is a cold-climate apple.

But the Gideon has much in its favor. The fruit is not of the highest quality, but it is ready for green apple pie about the middle of July and furnishes a supply for this purpose during two months or more. The tree grows vigorously, bears early and often. For tap-working with weaker varieties it is one of the best. But it should be planted for what it is and not for a winter apple.

MICHIGAN CROPS

INCREASING RUST RESISTANCE OF WHEAT

EACT year the disease known as "wheat rust" takes its toll of the crop. Some years the damage is comparatively small but it is always serious enough to be a constant menance .

Wheat rust comes in two stages —first, the summer stage as yellow spots and then the winter stage as black spots. It has long been known that the common barberry bush is an important factor in the propagation of the disease but it is only of late that anything approaching an efficient campaign from its eradication has been attempted.

The spores of the black rust can infect only the common barberry. They cannot, directly infect wheat. In the spring, the spores produce small spots on the barberry leaves. These spots are full of tiny orange cups containing another crop of spores. If black rust cannot find barberry leaves it is rendered quite harmless and the loss of many bushels of wheat per acre prevented.

It has been obvious that much damage could be avoided by hastening the maturity of the crop, for rust is most virulent at the latter end of the growing period. Fertilizers have been used successfully to accomplish that end. They not only nourish the plant so that it is better able to withstand rust, but also ripen the crop earlier.

While phosphoric acid is very effective in this connection, it is probably true that potash and ammonia both have their place. Lack of potash delays the maturity of nearly all crops. Lack of ammonia may delay maturity or may result in an abnormally early ripening and loss of the crop. A well nourished wheat plant will suffer much less from rust and other injury than will an unnourished one.

USE FERTILIZER WITH WHEAT

I have a 5-acre field of some light land and some is mixed with clay and sand. I have had hay in the field for two years and now I want to put wheat in this field. Would it be best to put lime or fertilizer, and what kind of fertilizer would I use? I can get lime at $18 a ton. A. S., Bad Axe, Mich.

—Under the conditions you mention would suggest using a fertilizer with the wheat. It is likely that the use of two hundred pounds of 16% acid phosphate, when the wheat is sown, and a top dressing of from fifty to seventy-five pounds of sodium nitrate in the spring just as growth starts, would give the best results. On light land potash oftentimes pays if a seeding is to be made in the wheat. Light soil is quite likely to be acid and an application of two tons of ground limestone would be found much more economical than hydrated lime at $18 a ton.—C. R. Megee, Research Associate in Farm Crops, M. A. C.

FUR DEPARTMENT

TEMPERING STEEL TRAPS

Would you please inform me as to whether steel traps can be tempered after going thru a fire. We have someblacksmiths here that say the springs cannot be tempered. If they can be please tell me how.—F. C., Swan Creek, Mich.

—If the steel traps springs have been overheated (or "burned" as the blacksmith says) then they are useless, but, if they have not been overheated but have just had their temper drawn through heating, they can be tempered again.

Owing to the springs being likely heated and cooled un-uniformly it is best to anneal them first to relieve all strains and stresses in the steel. The annealing can be done from a heat slightly over the hardening heat. After heating for annealing the springs should be packed in lime, hot sand or ashes and allowed to cool off slowly.

The lowest heat which will give the desired results should always be used in hardening. A simple method for finding the hardening point of to use a magnet. When the magnet "lets go" of the heated steel, you have reached the hardening heat for that particular steel, if it is straight carbon steel.

To harden the steel springs, heat the entire spring in flame of a clear fire until there is just enough heat to harden, on reaching the hardening point, cool off "dead cold" in clean water. Polish the steel bright.

Hold the spring edgeways about two inches high over the fire, do not blow the fire but heat the spring very slowly, moving it back and forth, turning it over to insure even temper. Watch the spring very closely until the color turns to a very pale blue (almost grey color.) Do not cool off in water but lay the spring down where it will be free from draughts of cold air and allow springs to cool off.

When heating springs hold them at the end. If they are held in the center the center will be soft.

Another Method

Anneal and harden as above but to temper, hold spring over fire placing spring in a very dark place, now and again until it shows a very dark red, just visible to the eye, then lay down where it will be free from cold draughts and allow to cool off. —Bert Daugster.

BAD COMPANY

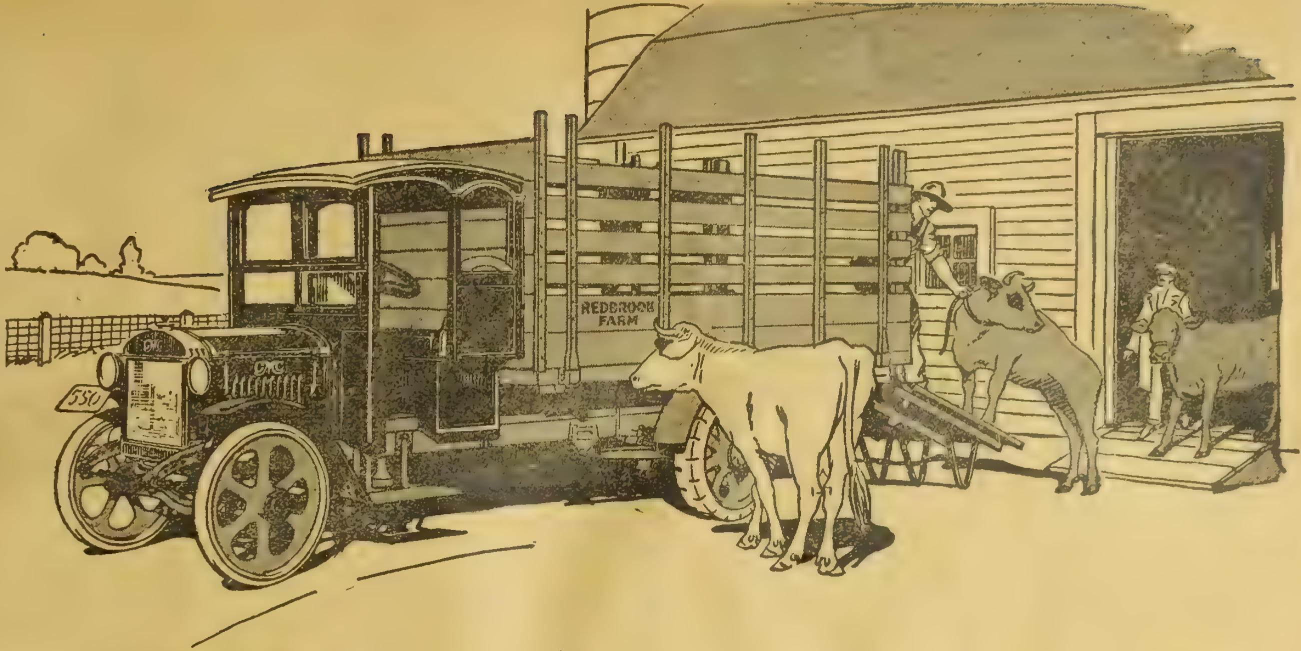
A negro who had an injured head entered a doctor's office.

"Hello Sam! Got cut again, I see."

"Yes, sah. I done got carved up wid a razor."

"Why don't you keep out of bad company?" said the physician, after he had dressed the wound.

"'Deed I'd like to; but ain't got 'nuff money to get a divorce." —Everybody's.



GMC

Model K41—Two Ton

$2375

Chassis Only—At the Factory

Haul Stock This Fall With a GMC

Flashing along the good highways at a fast speed and also developing more pulling power in bad going than is averaged by trucks of like capacity, the Model K-41, Two Ton GMC truck, is the finest equipment yet produced for hauling stock and for other heavy work on the farm.

Like the "Jim-Dandy" one ton GMC, this truck has exclusive improvements that increase operating economy and reduce the time and expense of maintenance. Model K-41 is equipped with the GMC Two-Range Transmission, providing greater pulling power in combination with more road speed—a combination never before accomplished until the development of this distinctive feature by GMC engineers.

The Two-Range transmission has successfully multiplied economical engine power into greater power at the wheels and has opened up new fields for motor truck use, both in the city and on the farm. With this transmission a GMC truck will go anywhere that wheels can get traction and on good roads will speed 18 miles an hour with solid tires.

It has such other advantages as GMC Removable Cylinder Walls, Pressure Lubrication, Removable Valve Lifter Assemblies, Instantaneous Governor Action, Magneto Ignition, Conduit Wiring, Thermo-Syphon Cooling, Electric Lights and Generator, Provision for Starting Motor and many other refinements not usually found on motor trucks.

Write for an illustrated booklet "GMC Trucks on the Farm."

GMC Chassis list at factory as follows: One Ton, $1295; Two Ton, $2375; Three and One-half Ton, $3600; Five Ton, $3950; tax to be added

"The Farm Paper of Service"

Fall Housecleaning

IF you happen to know of anyone who has had trouble getting the Business Farmer regularly, as issued, or whose name has dropped from the list or who has any other complaint regarding our mailing, now is the time to send it in. We are having a fall housecleaning in our mailing department.—Publisher.

So this is Fall

WHAT canvas can portray, what silver-tongued orator can describe, what imagination can picture the glories of the woods which the hand of fall has painted with a thousand colors?

If you would find peace, lose yourself in the woods one of these bright October days. Just lay aside the cares of the farm or household and go down in the woodlot and spend a few hours with the gaily-colored maples, with the birds and chipmunks, and with God who smiles from every sun-lit leaf and twig.

Here for a few brief hours, "the world forgot and by the world forgotten," you can get acquainted with your better self. You can see your faults and your virtues and the faults and virtues of your children and friends and neighbors in their proper light. And that will be a good thing for you and for them. An occassional communion with one's own self works wonders in the forming of noble character. The place to talk things over with yourself is in the solitude of the woods and the time is the glorious fall.

Be on Thy Guard

FARMERS and farmer legislators who have fought for the primary and believe in the primary as a means of keeping the government in the hands of the people should be on their guard. For it is in danger.

The primary robbed the political boss of his power. No longer does he control elections or sell offices to the highest bidder. He is a king without a crown, a Kaiser dethroned and disgraced But, unless signs fail, he is staging a come-back. So watch out.

Only four hundred thousand out of a million voters cast their ballots in Michigan in the recent primary election. The political bosses say that's an indication that the primary is a failure as a means of interesting people in their government and in the men who are chosen to run their government. They never used that argument when nominations were controlled by conventions Because in those "good old days," the town hall couldn't accomodate more than one out of ten of the registered voters, and it took a mighty spirited contest to induce more than one out of twenty to participate in the election of delegates to the county conventions.

But this fact is easily overlooked by those who want to restore the convention system to power. What they are looking for now are excuses to destroy the primary. And they can find plenty of evidence that the primary isn't as popular as it ought to be, and plenty of good men who will help to lay it tenderly on the shelf.

The next legislature will undoubtedly be asked to "amend" the primary law, and there are those who are willing to wager that any amendment which will be satisfactory to the political bosses will in effect be a complete emasculation. If you are against the primary law your fondest hopes may soon be realized. But if you revere it as one of the instruments of representative government be on the alert to save it from its enemies.

Dr. Friday and the Middleman

"This is the first time that I have availed myself of telling you that I am a subscriber and a real reader of your paper. It is said that every man owes a part of his time to the upbuilding of the industry to which he belongs.

"On the fourth page of the September 16th issue I read what President Friday of M. A. C. had to say at the State Fair in regard to the middleman. If he continues such lines of talk in further addresses the farmers of the State of Michigan should petition to have him removed at once. He has already impeached himself.

"It can't be possible that he has read what the Philadelphia bank has to say about the need and value of farm organizations in the same issue. I wonder if he does not think that the producer is entitled to at least fifty per cent of the consumers' dollar? We would be very much pleased to read an editorial in your paper as to what you think of his address at the Fair. You have always appeared to me to be fearless and it is certain the Professor needs information . He furthermore should be closeted with Baruch for a time.—Marvin C. Haight, Van Buren County, Michigan.

IT may as well be confessed, now that you have brought up the subject, that many of President David Friday's best friends were surprised and disappointed with his State Fair address. It was a distinctly un-Friday-like speech. It bristled with the "two blades of grass" theory, and contained no encouragement for the co-operator. It rankled his farmer audience even to the point of heckling, which is bad for any speaker and particularly for the president pear agricultural college. If Pres. Frida startec believes that few if any economies ca cut fected in the marketing of crops, we be admire him for the courage of his admission even though we do not agree with him. It would be bad for progress if our educators should preach a doctrine which they did not believe merely to satisfy the whims of their hearers.

But does Dr. Friday really want us to believe that he sees no hope for bringing producer and consumer closer together? We doubt it. Or is he temporarily disheartened by the failure of the co-operative movement to cope with the problems of co-operation, and prefers to rest his reputation as an educator upon the more popular theory of profits by efficiency in production rather than upon the yet-to-be-proven theory of profits by efficiency in marketing? This sounds more likely.

Men assume a tremendous responsibility when they strike out from the trodden paths and seek to find a better way to market. If they encounter unforseen obstacles, as they often do and the way proves more difficult and costly than the old-travelled road, they must humbly accept the censure which is so often heaped upon them. Even the most ardent believers in co-operative organization are beginning to shrink from the role of leadership in untried marketing experiments.

Shall the President of the Michigan Agricultural College risk his brilliant reputation as an economist by preaching doctrines which he may not be able to prove when there are other theories which he can embrace with perfect safety?

NOTICE TO SUBSCRIBERS.

Rather than curtail departments and print incomplete issues, as some farm papers have been forced to do, we have preferred to issue The Michigan Business Farmer, **every-other-week temporarily.**

Each issue missed has been credited to the subscriber, so that in the end no one will lose a single issue for which he has paid. We respectfully ask your patience and thank you for your loyalty to

"The Only Farm Weekly Owned and Edited in Michigan!"

Cutting State Expenses

TAXPAYERS who have been clamoring about the cost of running the state government and demanding a reduction in state taxes will find a crumb or two of comfort in the comparative tax levies for the years 1921 and 1922.

The 1921 expenditures called for total taxes of $20,441,333.79, while the 1922 but $17,300,843.94. Lest someone may think there is a "nigger in the woodpile" somewhere, it is interesting to compare the principal items in the budgets. There is no special significance to the saving in the state office building expenditure which last year was $1,107,500 and this year is nothing. But there is some significance in a comparison of the regular running expenses of the state as shown by the following table:

Functional Division	August 1921	August 1922	Decrease
Executive .....$	33,550.00	$ 33,550.00	
Administrative	1,064,227.50	855,236.00	208,991.50
Legislative ...	62,000.00	225,000.00	*$163,000.00
Judicial	404,575.00	402,575.00	2,000.00
Regulative	1,115,965.80	945,866.00	170,099.80
Educational...	2,170,346.74	1,546,730.96	623,615.78
Agricultural	585,209.00	445,392.00	139,817.00
Defensive.... .	345,000.00	270,000.00	75,000.00
Penal	685,351.00	677,951.00	7,400.00
Curative	2,765,608.50	2,622,103.98	143,504.52
Correctional and Charitable ..	1,291,474.80	1,216,262.00	75,212.80
Protective	743,641.00	646,677.00	46,964.00
Constructive General	160,643.45	1,000.00	159,634.45
TOTAL	$11,427,583.79	$9,938,343.94	$1,489,239.85
Special:—			
University of Mich. Mill Tax	$3,000,000.00	$3,000,000.00	
Mich. Agr'l Coll. Mill Tax	1,000,000.00	1,000,000.00	
Highway Bond Sinking Fund ..	1,200,000.00	1,500,000.00	*300,000.00
Soldier's Bonus Sinking Fund .	2,456,250.00	1,612,500.00	843,750.00
War Loan 1917 Sinking Fund ..	250,000.00	250,000.00	
State Office Building	1,107,500.00		1,107,500.00
TOTAL ..	$9,013,750.00	$7,362,500.00	$1,651,250.00
Gd Total	$20,441,333.79	$17,300,843.94	$3,140,489.85

*Increase.

After you have digested these figures and secured what comfort you can from them, you might dwell for a moment upon the insignificant sums that have been set aside both years for paying interest on the bonded indebtedness. The taxpayers themselves voted to bond the state for $60,000,000 to build roads and pay the soldier boys a bonus. Most of the money has been spent, but very few of the bonds have been retired. We have here an item of over $3,000,000 or one-fifth of the total tax lexy for interest alone, with not a nickel laid aside to retire the principal itself.

If the reduction in expenditures for the maintenance of the various state departments and institutions represents an actual economy in management it offers cause for congratulation, but common sense tells us that little if any additional saving can be effected in this direction. At the same time it is short-sighted economy to fail to make provision for the annual retirement of a certain number of the state's bonds. This provision must be made soon, and when it is made all ye who look for lower state taxes for the next ten years may as well abandon hope.

Higher Prices for Reactors

THROUGH the offices of the Department of Agriculture the meat packers have been induced to pay higher prices for cattle which react to the tuberculin test. Every farmer who has had his herd tested and his reactors killed knows that the meat buyers have a prejudice against such animals and offer only a third to a half of what they are actually worth. In the large majority of cases reacting cattle are as fit for food as the non-reactor, but cattle buyers are either ignorant of the fact or deliberately take advantage of the owners. If the department has really succeeded in improving the market and price for reactors, it has removed one of the most difficult obstacles in the way of tuberculosis eradication.

Dodge it as he may for a time, sooner or later Pres. Friday is bound to run headlong into the marketing proposition, and when he does, he'll take off his coat, roll up his sleeves and tackle it with his characteristic energy.

WHAT THE NEIGHBORS SAY

BEANS AND SPUDS

WHEN I wrote you last in regard to the future of spuds and beans I had no idea the weather man was coming at "double quick" to help me out in my forecasting. Western Michigan has had more than two weeks of almost constant rain. In the past thirty years we have never had such a rainfall at this time of the year (Sept. 15) more than twice before.

Beans are pulled and have lain out in all this rain. They will run from 50 per cent to total loss. One man had 40 acres just ready to haul in when it commenced to rain, Now part of them lay in water. One man has 20 acres of corn to cut by hand and has got to wear rubber boots and every time he steps he will go into the mud six inches. Part of his beans stand in water and part of his spuds are rotten. I know of several fields which will not be dug.

Spuds that are planted around the tenth of June will not dig over 60 per cent of what they have been estimated on account of being hit with blight. One year ago bean buyers paid the girls 8 cents per pound for picking, the same rate is paid this year. Farmers will get nothing at all for their beans.—A. A. Lambertson, Kent County, Mich.

—Since you wrote the above the bean market has scored a substantial advance and potatoes have taken a further drop. No doubt lots of potatoes were ruined in this and other states by the September rains, blight killing frosts which hit many of the northern counties about the 22nd of the month. On the other hand, many sections report a fine crop and weather the very last of September and the first week of October was ideal for digging. All northern Michigan reports a good crop of excellent quality.—Editor.

WHY INQUIRY HAS BEEN IGNORED

THERE is in our vicinity an exceedingly dangerous electric crossing, the fault lying in the fact that the highway makes a steep descent onto the track with view obstructed on either side by banks; also, to the fact that a short drive parallel with the track which might be used in case of emergency was closed a year ago when the Covert Road was built. This road was accepted by the Road Commissioners not withstanding the hazardous condition of said crossing. Already one fatal accident has occurred at this crossing and others have been narrowly averted. Many people in the community feel that the condition should be remedied but do not know how to go about getting it accomplished.

About the middle of July I addressed a letter to the Attorney General stating the conditions and asking for information as to how to proceed. I received a letter from him bearing the postmark of July 21, stating that he had referred my letter to the Public Utilities Commission and that I would doubtless hear from them in a few days.

Days have lengthened into weeks, and weeks into months and more without any word from the Grosbeck-appointed, Michigan Public Utilities Commission. Let us hope they are busy with more important (?) matters than serving the people who are working and scrimping to secure money with which to pay their salaries.

I am only a woman but my vote counts as much as a man's and I think I voice the sentiment of the other farm women when I say I intend to use it to help secure better returns for the money invested. We farm women know what "strict economy" is and when we use the term we do not mean the Grosbeck nor Harding kind of "economy," but our own peculiar brand with the home-made label.

Any help you may be able to give thru the "Farmers Service Bureau or "What the Neighbors Say" will be greatly appreciated. Yours for a better commonwealth.—Mrs. Chas. Voorhees, Calhoun County. Mich.

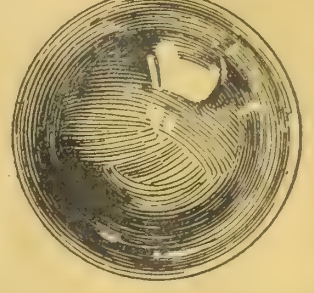
—Of course, we cannot say why your inquiry has been ignored. It may have never reached the hands

(Continued on page 17.)

Now—BALL BEARINGS in the larger PRIMROSES!

The Highest Development in CREAM SEPARATOR Construction

For forty-five years dairymen have struggled with hard-turning cream separators. Excessive friction caused them much trouble in the hand operation of the machines. Now the cream separator engineers of the Harvester Company, with this problem constantly in mind, and the satisfaction of the operator at stake, have designed and constructed a Ball-Bearing Primrose Cream Separator which reduces the power required to operate by approximately 35%.

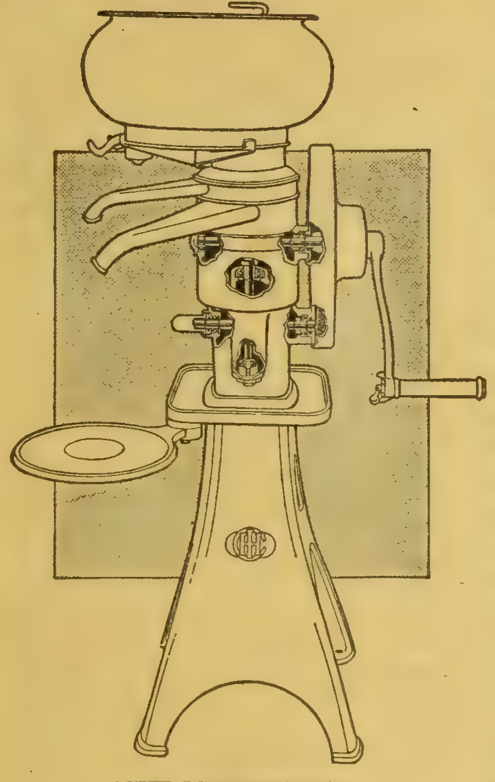


In this latest Primrose, the ball bearings are located at points where the resistance is greatest in the operation of all makes of cream separators.

The Ball-Bearing Primrose is in no sense an experiment. It has been tested and proved a remarkable improvement in the hands of thousands of farmers and dairymen in New York, Wisconsin, California, Minnesota, and other dairy sections of the United States. The unanimous decision of all users is that it represents a development which has long been needed, especially in territory where large machines are in use, and where more would be profitably used were it not for the hard turning of the plain-bearing machines.

The International Harvester Company's broad and liberal guarantee stands solidly behind this product. Primrose deserves its high reputation, not only for its recovery of the greatest amount of butter fat when operated as instructed, but for its ability to do so with less labor.

The Ball-Bearing Primrose is one of the products in the McCormick-Deering line of farm operating equipment. It may be seen and studied at the store of your McCormick-Deering dealer. Write us for catalog if you prefer.



NEW PRIMROSE No. 5

BALL BEARINGS make it easy to operate this big 1,100-lb. capacity Primrose *by hand.* Cut out to show the six ball bearings on crankshaft, on pinion shaft and on spindle.

SQUARE DEAL FENCE

Made $400 In 39 Days!

Showing this 300 CANDLE POWER Light in Farm Homes

George Vivian, a Minnesota man, made $400 in 39 days working spare time. One day's effort alone brought him $39. C. E. Hartley, an Ohio man, made over $1000 in few months. James Connelly, of Pennsylvania, made over $300 in 23 days showing The Diamond Light to neighbors.

Burns Kerosene or Gasoline

Hundreds are making from $10 to $40 a day showing this wonderful 300 candle power farm home light. It burns kerosene or gasoline. It is clean, safe, odorless and costs only half as much as an old-style wick lamp to operate.

THE DIAMOND LIGHT

Thousands of users say they don't see how they ever got along without The Diamond Light. There is no fuss nor bother; no wicks to trim; no chimneys to clean. Lights with a match. Its brilliant white light is easy on eyes and makes the room as light as day. Its simplicity and beauty win instant approval wherever shown.

Most Wonderful Light Ever Designed For Farm Home

THE EYES OF SHCOOL CHILDREN

MORE attention is being paid today to the health of our children than ever before. Throats, teeth, ears and eyes are looked after with more care in both homes and schools. A child can not do good work in school nor be a good, happy child anywhere unless he or she is in good physical condition.

It was recently said by a prominent educator that of the 24,000,000 school children in the United States not more than one third have received eye tests and that many whose eyes have been tested have been found to have been fitted incorrectly. This statement if true is most discouraging for it is doubtless true that 80% of the so-called dull or backward children have defective vision not defective brains and can not be held responsible for their dullness.

The manner in which a room is lighted has some effect upon the eyesight of those living in it. Low shaded lights are not only more artistic but are much easier for the eyes than a high bright light which gives a most unpleasant effect. It is true that a light falling on the book from behind the left shoulder is the best direction for the light to come from altho why it is left instead of right has never to my knowledge been told. Perhaps for the same reason that we must throw salt in that direction to avoid a quarrel.

Cross-Eyed Mary

"With golden curls and rosy cheeks she skipped joyfully to school. It was her first day, the very first that she had ever been away from home. She was six years old now and was going to be a little lady. The rapture she felt as she thought of the other girls she would meet and play with. Her cup of joy was full and over-flowing.

"Reaching the school she formed in line with the other girls who stared at her—some grinned, some smiled, some laughed at her and said "hello, cross eyes". For the first time in her little life she suffered a pang of pain such as she had ever suffered before, for she realized that she was different from the others—she was cross-eyed.

"The day at school dragged on and on. It was so long. It seemed that she would never get away from it. But, when the day ended she hurried home amid the jeers of the boys and girls calling after her—"Cross-eyed Maary". Her dear litheart was broken and all the joy she felt in the morning was turned to tears.

"She persevered at school day after day until she could stand it no longer. Then she went to her mother with big tears in her eyes and told her all her troubles. She begged her mother not to send her back to school because she wasn't the same as other girls.

"And, it was not until those chubby little arms were clasped about her mother's neck, with the big tears rolling thick and fast down her cheeks, that the mother realized the injustice she had done.

"MORAL: Many heart-aches and sorrows can be kept from the dear little ones we love, and many hours of regret from parents, if they watch carefully over their children. Little Mary's eyes should have had attention when the first tendency of trouble became apparent. Many of these cases merely require lenses to correct the defect which causes the eye to cross.—The Eye Sight Conservation Council of America.

CANNING BAKED BEANS

I WONDER how many readers have ever tried canning baked beans? We are very fond of baked beans but during hot weather when the oil stove is used for cooking, it is too expensive to cook them as I like to bake them for two or three hours. When we have a reasonably cool day I bake a couple of pans full and fill three quart cans with the baked pork and beans. Then adjust the rubbers and tighten the tops with the thumb and third finger as for cold pack canning. I then place them in the pressure cooker, process for about 20 minutes. If one has not a pressure cooker I think they would need to be steamed for an hour or more. I have never had the slightest trouble about their keeping when processed 20 minutes altho this was original as there was no receipe given in cook book that comes with the cooker. They are one of the best things we keep on our emergency shelf. I always add about a spoonfull of brown sugar or molasses to a panful of beans, not enough so they will taste sweet but it adds a great deal to their flavor.—Mrs. Claudia Betts.

A SHORT SUMMARY

SKIRTS are coming down, a short distance anyway and if your skirts are too short put a yoke around the top, wear an over blouse to cover the short yoke and no one will be the wiser.

Over blouses are much worn—in shades to match and contrasting colors also.

The white shirt-waist with colored skirts seems to be tabooed this season.

However, women in business will wear what seems to them suitable and useful. Soft clinging materials are again favorites although many taffetas are worn.

Odd and striking combinations of colors are seen everywhere but for the woman of moderate means quiet colors and combinations are best. One does not tire of them as soon and the fact that a dress is worn for several seasons is not so apparent.

I do not believe that the uneven skirt at the bottom will hold in favor very long it has a little untidy, ragged appearance that some hold objectionable, especially for street wear .

It is certainly an extreme of fashion. A recent fashion exhibit clothes for different purposes were shown. For the women of society, for the business women, for the home women and many extremes of style for the young girl, who in all reason should be dressed most inconspicuously and simply.

It all goes to show that if we dress moderately following the general trend of the fashions we will not feel out-of-date nor unusual in almost anything we want to put on.

The sport clothes are very attractive, plain as to line and most comfortable as to cut; made of soft wooly materials that stand hard usage and look well. For dress shoes, patent leather comes first, then satin and suede.

LEAGUE ILLUSTRATES CITIZENSHIP BY PLAYS

THE Massachusetts League of Women Voters is preparing a series of plays for citizenship education. Mrs. Frederick P. Bagley, first Vice-President of the Massachusetts League, has written the first play to be produced—"How Maggie Mac Taggert Became a Citizen." Mrs. Bagley is former chairman of the National League's committee on American Citizenship, and her long experience in this work, both in the League and in the State has given her a great fund of dramatic and colorful stories for these plays. Mrs. Bagley's play was produced under the auspices of the Citizenship Dramatic Club by the Duxbury League of Women Voters and netted them a nice sum for door receipts.

GIFTS FOR CHRISTMAS

IT is not too soon to begin to make plans for our Christmas giving. When one has time to spare most acceptable gifts can be made such as dainty aprons, bags of all kinds, and whoever has enough of them? Pretty underwear, caps and doll dresses also, for the new or old dolly must be dressed up freshly at the holiday time.

Then there are the cunning stuffed animals that all children love so so well.

We have patterns for all these articles pictured in our new catalog.

I can choose them for you if you wish me to but it is really better to have the catalog and make your own choice.

BOILED CHRISTMAS PUDDING

ONE quart seeded rainins, pint currants, half pint citron cut up, quart of apples peeled and chopped, quart of fresh and nicely chopped suet, a heaping quart of stale bread crumbs, 8 eggs beaten, nutmeg, teaspoonfull salt, flour fruit thoroughly from a quart of flour, then mix remainder as follows, in a large bowl or tray, put the eggs with sugar, nutmeg and a cup of milk, stir in the fruit, crumbs and suet one after the other until all are used, adding enough flour to make the fruit stick together which will take about all the quart. Dip pudding cloth in boiling water, dredge on inside a thick coating of flour, put in the pudding and tie tightly, allowing room to swell, and boil from two to three hours in a good sized pot with plenty of water, replenishing as needed from tea-kettle. When done turn in a large flat dsh and send to table with a sprig of holly, or any bit of evergreen with bright berries stuck in the top. Serve with any pudding sauce.;This recipe furnishes enough for twenty people but if the family is small, one-half the quantity may be prepared, or it is equally good warmed over by steaming. For sauce, cream a halfpound sweet butter, stir in three quarters of a pound of brown sugar, and one beaten yoke of an egg, simmer a few minutes over a slow fire, stirring almost constantly. When near boiling add a half pint bottled grape juice, and serve after grating a little nutmeg on the surface.—Mrs. J

COLD PACK CANNING OUTFIT

I NOTICED in a recent issue of M. B. F. a request for information in regard to a cold pack canning outfit. I purchased the "Hall Cold Pack Canner" made in Grand Rapids and I gave it the preference over all others, for the reason that one may can 2 quarts; 1 quart or pint cans all at the same time if one so desires. It is made of heavy galvanized iron and is about two feet high and 12 inches in diameter.

One can can 12 puarts over one burner of an oil stove.

I have canned meat, vegetables, and fruit and never lost a can.

I Will give the readers of this page my recipe for making hard soap: To one can of lye add 2 1-2 pints of soft water (cold), and cool to 80 degrees F. by your thermometer. Melt 5 1-2 lbs. of cleansed grease and cool to 120 degrees. When ready to mix add 1 cup of ammonia and 4 tablespoons full of borax to the lye, pour grease into the lye stirring constantly until the mixture drops from the paddle as thick as honey, and pour into a wooden box lined with heavy paper, and when it sets cut into bars.

The secret of success is not to stir the mixture too long, as it will separate. I have never had a failure and the soap is as white as any you buy when cured.—Mrs. M. M. H.

CANNED FRUIT SPOILS

I am interested in your paper. I am a young girl of seventeen and have kept house for my father for two years.

I have trouble with my fruit spoiling. I use new tops and rubbers some new cans, my daddy turns them tight and I seal them with wax but yet they spoil.

My cellar is very damp, would that cause fruit to spoil? Do cans have to be hot when the fruit is put in? I read in a magazine that if you put a silver knife in the cans, they would not need to be hot. I never break a can that way. I wonder if that would make them spoil. I would like house plant slips if some.—Emily Randall, Brown City, Mich., R 2.

—Wash your cans well with hot soap-suds then scald them with boiling water and turn them upside down to exclude germs from the air which often lodge in the cans and cause perfectly well canned fruit to spoil—then wash in soap suds your tops and rubbers, put them in a pan

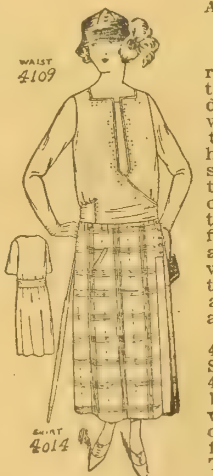
Address orders to Mrs. Jenny, Pattern Department, M. B. F.

A word for our patterns from one of our readers.

We enjoy the M. B. F. in our home very much, and hope it may continue in its good work. I have used the patterns with good success, and am sending for another, Also the Fashion Book. Please send me the 1922-23 Book of Fashions.—Mrs. George Douglas.



A Pleasing Separate Waist and Skirt Style

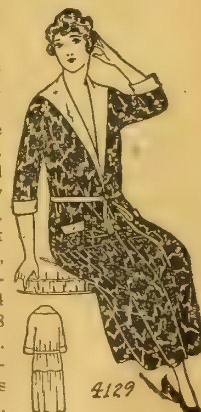
4109-4014. Plaided ratine was used for the skirt, and crepe de chine for the waist here illustrated. One could have both waist and skirt of either material. The surplice closing is becoming to slender and stout figures. The skirt is a two piece model, with plait inserts at the left side, where also the closing is affected.

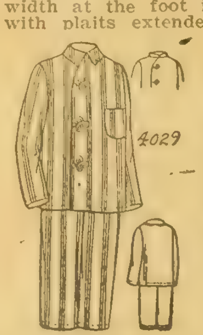
The Waist Pattern 4109 is cut in 7 Sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure It will require 3 yards of 32 inch material for a medium size. The Skirt 4014 is cut in 7 Sizes: 25. 27, 29, 31, 33, 35 and 37 inches waist measure, and will require 2 5-8 yards of 40 inch material for a 29 inch size. The width at the foot is about 2 1-4 yards with plaits extended.

A Unique and Pretty Negligee

4129. This model is attractive in crepe, satin, corduroy, printed crepe de chine, and georgette. Beacon cloth, flannel and eiderdown may also be used for it.

The Pattern is cut in 4 Sizes: Small, 34-36; Medium, 38-40; Large, 42-44 Extra Large, 46-48 inches bust measure. A Medium size requires 6 1-4 yards of 27 inch material.





A Servicable Garment

4029. This is a popular model it is good for muslin, cambric, flannelette, soisette, madras and silk. The neck may be finished with a standing or a turnback collar.

The Pattern is cut in 5 Sizes: 32, 36, 40, 44 and 48 inches breast measure. A 40 inch size requires 7 3-8 yards of 27 inch material.

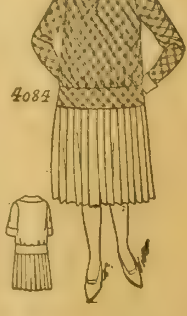
Pattern mailed to any address on receipt of 12c in silver or stamps.

A Popular Style for the Growing Girl

4084. This makes a fine costume for school. Plaid suiting could be used for the blouse and plain serge for the skirt. One may have the sleeve in wrist or elbow length.

The Pattern is cut in 4 Sizes: 8, 10, 12 and 14 years. To make the model illustrated for a 10 year size will require 2 1-8 yards of 32 inch material for the blouse and 2 5-8 yards for the skirt.

Pattern mailed to any address on receipt of 12c in silver or stamps.



and cover with boiling water, leave them in the water until you are ready to use them. When you are ready to fill a jar set it on a plate on which is spread a wet cloth, put one cup of fruit in and let it warm the can then fill the can first having adjusted the rubber and fitted your top so that there is no delay when the can is full. Fill the can to overflowing and put on the top, screwing it down tightly. Boiling fruit can have no germs, if your cans, tops and rubbers are sterile then it looks as if the mischievious germs came from the air.

Of course if you process your fruit the method is a little different but the same general rules hold good. Perhaps you know Emily that soap-suds themselves are a disinfectant and I believe in using plenty of soap whenever it is required. I love to see dishes come out of nice, white, foaming suds, clothes also and last but not least soap-suds is fine for our skins. I take it for granted that you know all this but there are some much older housekeepers than you who do not.

Now in the end do not put any food products in a damp place. I would say better have it a little too warm than damp. You know canned fruit is kept in stores that are always warm without trouble, that is because it was put up sterile (without any germs.) Will be glad to help in any way.—Mrs. J.

SEEDLING GERANIUMS

I saw in your paper recently a request for some one to write their experience with seedling geraniums. In the spring of 1921, I procured a packet of geranium seed from a seed house and planted out of doors. I guess they all grew as they came up very thick and grew fast, but I had to put them in pots as the cut worms began taking them. I kept them all summer and not one of them blossomed though. They grew to be fine specimens. I had something like fifty of them and I kept them around all winter and only two blossomed. They were both single scarlet. This spring I set the whole lot out of doors and they have been full of blooms all summer. Everyone was single but there were several shades of pink and one varigated pink and white but more scarlet than any other color.

Last summer I hand fertilized some of my double geraniums and this spring sowed the seed. Only one grew and is now about a foot high but I expect to have to keep it over winter to see it blossom.

This summer I saved the seed from my seedlings out of doors and will try it again next summer. If "Subscriber" will send her name I will divide with her.

Can anyone tell me how to keep geraniums in the cellar over winter? Will they live if the cellar is dark? Also how much if any moisture do they require.

Does anyone know if a flowering maple should be kept down in the cellar or not in the winter.—"Another Subscriber."

SOUP RECIPES WANTED

I would again like to come to your page for help. I find so many good recipes there, I would like some good recipes for soup, especially one using green and red sweet peppers, also some vegetable soups, am sending my receipe for chowder, those not caring much for ketchup or chili sauce will find this excellent to serve with meats.

Receipe for Chowder

I gallon green tomatoes, measure after chopping fine, 12 onions, 12 sweet peppers, 6 green and 6 red, (remove all seeds.), 1 cup of salt, chop all fine, I use a food chopper, then mix these ingredients together, let stand two hours; then drain off juice; 2 quarts of vinegar, 3 pounds of brown sugar, or half brown and half white, 1 teaspoonful of whole cloves, 1 teaspoonful of whole allspice, 1 teaspoonful of coriander seed, 2 teaspoonful tumeric, 2 teaspoonful of celery seed and 2 teaspoonful of mustard seed, tie all the spices in a piece of cheese cloth, put in vinegar, add sugar, let boil well, then add drained vegetables and boil 1 1-2 to 2 hours until tender.

Ingredients of this chowder will keep their original fresh colors not turning into a dark dirty color that by some recipes chowder seems to. Thanking you all for past favors, I am, Sincerely, Mrs. John Vollmer, Jasper, Michigan, R. 4.

HONEY CAKE

One pound strained honey, one egg, one cup sour cream, one-half teaspoon soda, any kind of seasoning that is desired, and enough flour to make a good stiff batter. Miss Inez Ruth Foutch.

CORRESPONDENCE COLUMN

I will send the name of the company making the pressure cooker to any one sending me a stamped and addressed envelope.

A subscriber asks for information in regard to the Auto Knitter. ill some of our readers who have used the machine write and tell us what success you have had with it and whether the investment paid financially?

Egg Tester Wanted

Would like to know where I could get an egg tester with magnifying glass. I would like to hear thru the Home Department. I know a number of people who would be glad to know where to get one.—Mrs D. C. M.

HOME SPUN

Brown or gray crockery bowls of medium size are very nice for putting away leftovers. They may be put in the oven when you wish to re-heat the food.

Disinfect drains with a solution of 2 oz. of chloride of lime to 1 gal. of water.

Use a strong solution of washing soda in boiling water in the kitchen sink two or three times a week, this keeps it sweet.

Plenty of pulverized borax in the water in which daintily colored dress goods are washed will keep them from fading.

Cayanne pepper is very offensive to mice.

Keep potatoes under water when peeling them this will leave very little stain on the fingers. It applies also to onions.

Use wooden tooth-picks for testing cakes. They are much cleaner than broom straws.

ERRORS!

Two typographical errors in the last issue should be corrected. Dr. Coue' is the name of the French doctor.

The prescription for colds should read—Acitanilide 10 grains not 10 drahms.

THE HUNTED WOMAN

(Continued from page 6)

drew a deep breath, and went on, her eyes full upon him, speaking as if out of a dream. "The Great Adventure—for you. Yes and perhaps for both."

Her hands were drawn tightly to her breast. Something about her as she stood there, her back to the table, drew John Aldous to her side, forced the question from his lips: "Tell me, Ladygray—why are you going to Tete Jaune?"

In that same strange way, as if her lips were framing words beyond their power to control, she answered:

"I am going—to find—my husband."

(To be continued)

NEW LAMP BURNS 94% AIR

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94 per cent air and 6 per cent common kerosene (coal-oil).

The inventor, A. R. Johnson, 609 W. Lake St., Chicago, is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month. (Adv.)

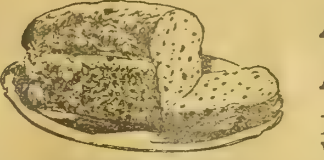
Lily White

"The Flour the Best Cooks Use"



A GOOD RECIPE FOR NUT BREAD

1 egg, 1 cup sugar, 1 cup sweet milk, 1 teaspoon salt, 1 cup nuts, 4½ cups Lily White Flour, 4 level teaspoons baking powder. Mix well and let stand twenty minutes in two pans nine inches long, four and three-quarters inches wide, three inches deep. This amount just fills these two pans. Grease pans and over top of loaves with melted butter; bake in moderate oven until done. (Use one-half cup of flour to knead in soft dough.)

Our Guarantee

We Guarantee you will like Lily White Flour, "the flour the best cooks use" better than any flour you ever used for every requirement of home baking.

If for any reason whatsoever you do not, your dealer will refund the purchase price.---He's so instructed.

Bakes So Evenly

Everything baked with Lily White Flour has an even, firm texture. Loaves of bread are good looking, light, flavory and tender. Biscuits and rolls are delicious—the kind you will enjoy making and everyone enjoys eating. The reason for this is the perfectly uniform granulation and the absolute cleanliness of Lily White.

Why You Should Use Lily White

REASON No. 6

Scientifically Milled from the Best Wheat

Sixty years of milling experience stand behind Lily White Flour. It is milled of the finest wheat grown in America. The grain is cleaned, washed and scoured eight times. It is milled by the six-break system. It is untouched by human hands. Every process to produce a better flour is employed by the Lily White millers and a better flour is the result.

Fill a Big Job

Qualify in Eight Weeks to Earn Real Money in the

Auto & Tractor Business

Come to the great shops of Rahe where thousands of dollars have been spent in the latest tools and equipment. Stay *only* eight weeks, then step out as an expert. My training made Louis Beimer a Foreman at the age of 24. It started O. H. Justus in what is now a big business. It enabled E. Rushfeldt to earn $10 a day. It has helped hundreds of others to do as well or better.

Big Firms Need Men

I get calls every day from Garages, Battery Stations, Auto Repair, Welding Shops, and other successful firms for Rahe men. The big fellows need trained men right away and they know where to come for them.

Railroad Fare and Board FREE

That's my proposition for *a short time only* to help fill these vacancies. Even that is not all. I'll tell you about the rest in my letter. It's something no one else has ever done.

Get This Big Book

This large illustrated book tells how others are succeeding. It tells many things you ought to know about Autos and Tractors. Write for it and *short-time* offer now before it expires. Write for it today.

Rheumatism

A Remarkable Home Treatment Given by One Who Had It

In the year 1893 I was attacked by Muscular and Sub-Acute Rheumatism. I suffered as only those who are thus afflicted know for over three years. I tried remedy after remedy, but such relief as I obtained was only temporary. Finally, I found a treatment that cured me completely and such a pitiful condition has never returned. I have given it to a number who were terribly afflicted, even bedridden, some of them seventy to eighty years old, and the results were the same as in my own case.

I want every sufferer from any form of muscular and sub-acute (swelling at the joints) rheumatism to try the great value of my improved "Home Treatment" for its remarkable healing power. Don't send a cent; simply mail your name and address, and I will send it free to try. After you have used it, and it has proven itself to be that long-looked for means of getting rid of such forms of rheumatism, you may send the price of it, One Dollar, but understand I do not want your money unless you are perfectly satisfied to send it. Isn't that fair? Why suffer any longer, when relief is thus offered you free. Don't delay. Write today.

What Have You to Offer?

The Children's Hour

DEAR Neices and Nephews: As I am writing this two days before our bird contest closes I cannot decide who is the winner but to date a boy is leading and he has written such an interesting letter that it will be hard to beat. The boys seem to be showing more interest than usual in the contest. I have received nealy as many letters from the boys as I have from the girls. Next issue we will know who is the lucky one and I will announce it.

How many of you are out to win some of the prize money M. B. F. is giving away in its picture contest, which I told you about last issue? If you have not entered yet there is still plenty of time. It is just like getting paid for playing so you better enter by using the picture printed at the bottom of this page, or if you want another picture just write to the Contest Manager, Michigan Business Farmer, Mt. Clemens, Mich., and he will send you one by return mail. At the same time ask him any questions you desire answered regarding the contest. I hope some of you win.—UNCLE NED.

OUR BOYS AND GIRLS

Dear Uncle Ned:—How are you these fine days? I hope lovely the same as I. I go to school. We have a nice teacher. I am somewhere in my teens. It might be thirteen, fourteen, fifteen or sixteen. The one who guesses my right age first will receive a good long letter from me, about my pony, kitten and I for we have some great times. I am going to tell you about my trip to Lake Michigan.

One lovely Sunday morning at five o'clock we started for Lake Michigan. We went in two cars. And did not have any car trouble going or coming back. We stopped at two places and got a drink and rested for we got very tired riding. We had thirty miles of paved roads. It was certainly a nice road. But just the same we got tired of riding on it. We reached Muskegon at eleven o'clock and then we went all through a big boat that was anchored to the shore. The boat was two hundred feet long and was just as nice as any house. We took our dinner with us and ate our dinner on the shore. They had a merry-go-round, many other things for children to have fun with. In the afternoon I went in bathing awhile and then rode on the merry go-round. The shores of Lake Michigan are nothing but pure white sand with some beautiful buildings built upon it. The sand is nothing like the sand around here. There were great big sand hills quite a ways out in the lake which looked beautiful. We walked out on a dock for about a half a mile. The light houses were built on it. We walked along the shore for about a half a mile. Then we started for home and when we were coming through Muskegon we saw an auto accident. The auto turned over two or three times. We did not stop to see if anyone was killed. We stopped at a little place coming home and ate our supper and then came on home. We reached home at eight o'clock that night. And were tired and sleepy.—Bernice Lee, Barryton, Mich., R. 2, Box 76.

Dear Uncle Ned:—I was quite interested in this contest, so I thought I would try to win a prize. My birds names are:

Robin, sparrow, wild dove, barn owl, screech owl, wren, woodpecker, swallow, blackbird, raven, nuthatch, crane, stork, vulture, sea gull, eagle, ground bird, quail, oriole, canary, bob-o-link, whip-poor-will, chicken hawk, snowbird, lark, bluebird, bluejay yellowhammer, goldfinch, martin, bat, thrush, magpie, cowbird, catbird, crow, chickadee, hummingbird, pigeon, ostrich, snipe, nightingale, warbler, sapsucker, partridge, peacock, pheobe, cuckoo, kingfisher, mourning dove, condor, flycatcher, and kingbird.

The bird which I like best is the robin, he has a pretty red breast and is quite a tame little fellow. He always lets you know when he is in danger by his song. This summer a father and mother robin decided to build their home in our wagon shed. They were busy every day from early morning until dusk, gathering sticks, straw and clay, with which they built their home, at last their interesting work was completed, and the next time I looked into the nest what do you think I saw? Three little baby robins with wide open mouths calling to their parents for food. My sisters and I sat about five feet away from the nest and watched the proud robins feed their children.—Your loving neice, Jennie Falk, Manistee, Mich., R. No. 1, Box 58.

Dear Uncle Ned:—Here are the birds I know: Sparrow, bluebird, canary, bluejay, catbird, thrush, hummingbird, quail, bob-o-link, black bird, stork, killdeer, robin, wren, meadowlark, mudhen, swallow, chickadee, snowbird, pheobe, woodpecker, hawk, owl, bat, whip-poor-will, mockingbird, kingfisher crane, eagle, oriole, lark, peacock and magpie.

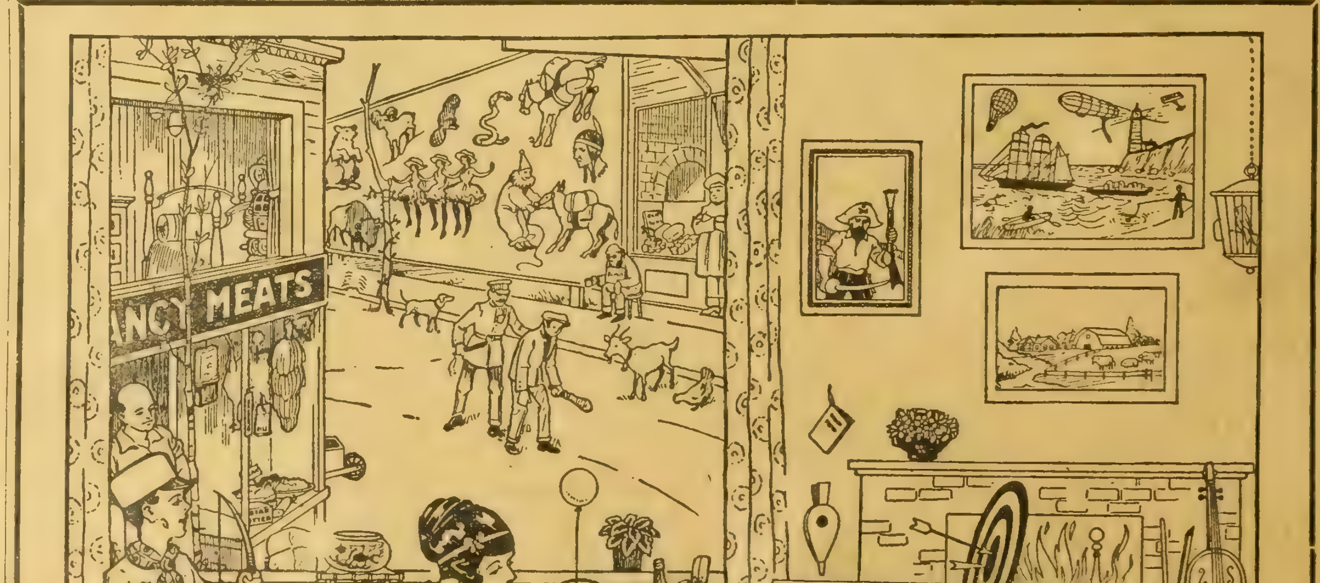
I like a canary best because you can have it for a pet. It is yellow and has black stripes on its wings, it sings very nice. They eat seed and drink water.—Edith Sharpe, Clare, Michigan, R. No. 4.

Dear Uncle Ned—I want to join your merry circle. I like to read the letters in the M. B. F. My father owns 160 acres of land but we aren't living on it. He is working out building roads for the county. My mother cooks for the men that work for him. My occupation is running errands and helping mother wash dishes. We are going to farm next summer, and I'm going to help. I am 15 years old. I have brown hair and brown eyes. My name is Leslie. Now guess which I am, a boy or a girl. Who guesses correctly will receive a long letter. —Leslie Hillard, Cadillac, Mich., R. No. 2.

Dear Uncle Ned:—Here are the names of the birds which I saw to and from school, and the one I like best:

Bluebird, lark, wren, sparrow, partridge, thrush, crow, pigeon, crane, killdeer, quail, catbird, woodpecker, chickadee.

The most beautiful birds I think are the canaries. They are such pretty singers and nice colors, black and yellow. We have some weeping willow trees by our house and the canaries make their nests in them. Early in the morning they flutter about, and look so pretty. Your neice, Beatrice Meyette, Pinconing, Mich., R. 3, Box 108.



HOW MANY OBJECTS CAN YOU FIND IN THIS PICTURE THAT BEGIN WITH "B"?

Look up the September 30th issue of the Michigan Business Farmer and see the full announcement of the great $500 puzzle contest, open to anyone who is not an employee of this paper. If you haven't one handy, make up a list of all the objects in the above picture which begin with "B" for instance "book, bear, ball," etc. SEND IN YOUR LIST AT ONCE and we will mail you at once complete list of prizes and names of judges, etc. Anyone, anywhere or all the folks in your family can help make up the list. Address: CONTEST MANAGER, THE MICHIGAN BUSINESS FARMER, Mount Clemens, Michigan.

THE FIFTY-FIFTY FARMING AGREEMENT

(Continued from page 4.)

stones of farm economics that profit lies in raising bumper crops—or at least crops whose yields per acre are much above the average.

With no community of interest landlord and renter are not concerned in raising pure bred live stock. For this is a process of long years of continuous improvement, and only comes ,as a rule, where men of vision work for a definite pattern of perfection.

On the Wendt & Painter farm—and on the other farms owned by Dr. Wendt—will be found pure bred animals. Frank Painter gives his attention to high class Durocs. On another farm Poland China swine unite with Holstein cows to turn feed into food. With good breeding stock selling at substantial advances above market quotations for common stock, it is easy to see how Mr. Painter made a good living for himself and family and bought a good farm with his profits; and how the other land worker we referred to, actually put away $3,000 a year clear profit for seven years—an almost unheard of procedure—for it must be remembered that the land owner shared equally with his partner in the profits.

The general policy of all the partnership farms we know of, is to sell nothing but live stock—pure bred and market hogs and cattle, dairy and poultry products, étc. When this policy is consistently followed for a number of years, it is easy to see how profits for both partners are likely to exceed those of the average grain farmer.

The Wendt farming agreement is short and simple in form but it represents the most painstaking care in the wording thereof. It is not likely that the lawyer called upon to write a partnership agreement, could or would give to the task as much thought or as much actual experience .

Some have attempted to improve upon the terms of this contract, but nearly always such experiments result in disaster. For the agreement as it stands is based upon absolute justice to land owner and land worker, with the idea of cementing their friendly co-operation for a common purpose. It has been studied from every angle for more than fourteen years and where it has been tried by men willingly to play the game fairly and honestly, it has brought prosperity to the combination .

This suggests that no agreement will succeed where the principal factors there to are not of the right kind; which is the same as saying that partnerships, corporations, government, family life—any form of co-operative effort will fail where all the parties are not in harmony with the central idea of service to the institution.

Dr. Wendt himself is a man of broad human sympathy. His work in his home town is an example of what a man of vision and power can do to make Sinclair Lewis' picture of "Main Street" look ridiculous. He is a substantial member of the community where he has spent his life as a physician. His natural caution is combined with a dream of high ideals of life. His work in that community in building for permanent progress in everything that is worth while, deserves a story all by itself .

It is only natural that a man of this calibre understands the technique of co-operation. He has an instinct for getting along happily with those around him, and this is simply due to his readiness to live by the Golden Rule. He isn't always trying to get the best of the deal. He is willing to make a profit but he knows that he can do so only where his co-laborer also makes a profit.

On the other hand, it takes a man rather above the average in skill, intelligence, and general decency to make a success as the "party of the first part"—the worker who perhaps brings to the partnership only his two strong hands and his thinking brain—an invincible combination, by the way, in any situation in life. The ordinary renter, who merely wishes to strike a shrewd bargain with some one who happens to hold the title to a piece of land, might as well pack up his goods and move on; for that is what he would do anyway—no matter how well-considered the contract that legally bound him to another.

An example of the right kind of man for the job is Frank Painter, who has some original ideas in addition to his training in the details of running a farm. He is smart enough to breed high class Duracs, for instance, and has now a herd of extra good ones that are steadily improving from year to year.

On the very day we were there, Frank said to the Doctor, "Don't you think we should sow some rape in that ten-acre corn field? We can always use more pasture."

"Sure," replied the doctor after a moment's thought. "How much seed do you need and when?"

And right there a little detail in good farm management was disposed of in less than half a minute's time. That's the way it works; two heads are better than one.

Another forward-looking farmer, Mr. B. L. Pruett, is also making good on one of the fine farms in Lincoln County. He added an extra twenty pounds of pork per head to a bunch of hogs by shifting them from field to field as they grew in weight. When they were young and active he pastured them in a distant field; when they got a bit lazy he put them into a field close to the barn; and finally he gave them a three weeks finish in the feed lot where they got practically no exercise. This is a simple matter—but how many hog men have thought of it?

The Wendt farming agreement provides in effect that the land owner is to furnish the land and keep a good set of buildings in proper condition to do business . The worker gives his labor and furnishes his own teams and implements. All the live stock—other than work animals—are bought and owned jointly by the partners and each has an equal share in the increase. No sales or purcheses can be made without mutual consent.

Where a few milk cows are kept, the product is divided equally, but Dr. Wendt is now working on a provision that will permit the worker to own as many cows as he is willing to milk, the feed to be furnished by the partnership, and all of the cream to be sold for the account of the worker—the skim milk to be fed on the farm.

WHY INQUIRY HAS BEEN IGNORED

(Continued from page 13.)

of the Public Utilities Commission, the majority of members of which, by the way, were appointed by Gov. Sleeper and not by Mr. Grosbeck. On the other hand the inquiry may have been referred to a clerk who paid no further attention to it. I have some times thought myself—that men in public positions, especially ones, who consider it beneath the dignity of their office to be bothered with complaints from the ordinary citizen, and the fact that the Business Farmer receives scores of complaints which have been referred to such officials without results, is evidence of the fact. A more active interest in politics by both men and women will help, no doubt to secure greater efficiency and courtesy in public office.—Editor.

A rare opportunity to buy a bargain in a skunk stole from a lady going South. Apt. 4, 1354 Monroe St. (after 6 p. m.)—Washington Evening Star.

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUGUST 24, 1912, of the Michigan Business Farmer, published weekly at Mount Clemens, Michigan, for October 1, 1922. 1. Blast

1/3 more stumps per dollar

Blast 1/3 More Stumps, Clear 1/3 More Land this Fall

IN Dumorite, the newest du Pont dynamite, the purchasing power of your dollar has been increased 35 to 40 cents.

Dumorite has approximately the same strength as 40% dynamite, stick for stick, shoots with the slow heaving action of 20% and you get 1/3 more sticks per dollar.

You can use Dumorite right into winter-time without danger of freezing. It is non-headache. Order your Fall supply now from your hardware or general store.

Send for free 105-page Farmers' Handbook of Explosives, giving complete instructions for all kinds of farm blasting work.

CONSIGNMENT SALE
OF
Registered Holstein Cattle

WEDNESDAY, OCTOBER 18, 1922 AT THE WEST MICHIGAN STATE FAIR GROUNDS, GRAND RAPIDS, MICHIGAN

This is the Annual October Consignment Sale of The West Michigan Holstein Breeders Association and 69 head of good Registered Holstein Cattle will be sold in this sale.

There will be four thirty pound bulls sold in the sale, several good A. R. O. cows, including a 23.57 lb. four-year-old; fresh cows, and cows and heifers soon due to freshen; yearling daughters and heifer calves out of some of the very best bred Holstein bulls in West Michigan, and several young bulls and bull calves of excellent breeding. Here are a few of our choice offerings:

The 31.72 lb. 3 yr. old bull, Goldmine Korndyke Fayne, sold to avoid in-breeding. A 31.26 lb. yearling bull out of a Junior 4 yr. old dam. A 30.80 lb. yearling bull. A 30.50 lb. 6 months old bull calf. Good A. R. O. cows, fresh cows, and springers. Choice yearlings and two year old heifers out of bulls from dams with A. R. O. records from 30 lbs. up to 34.71 lbs. and bred to high class bulls.

A number of very desirable heifer calves out of 30 lb. bulls, including 9 good heifer calves out of the 32.52 lb. bull, Lenawee Pontiac Calamity King.

Some very desirable heifer calves for foundation stock, for Calf Clubs and for starting new herds.

Remember the time and place, Wednesday, October 18, 1922, at the West Michigan State Fair Grounds, Grand Rapids, Michigan.

If interested, write for a Sale Catalog.

W. R. HARPER, Sale Manager, Middleville, Michigan

DAIRY and LIVESTOCK

FEEDING THE DAIRY COW

TOO many cows are underfed. A cow weighing 1000 pounds needs each day for the maintenance of her body, an amount of food equivalent to that supplied in 8 pounds of clover hay and 20 pounds of good corn silage. She must have that food regardless of whether she produces any milk. Food used for milk production must be in addition to that required to keep the cow's body. A 1000-pound cow producing 20 pounds of 4 per cent milk a day, if properly fed, devotes about half of her feed to maintenance and half to milk production. Obviously when a dairyman has gone to the expense of supplying that half of the food required for maintaining the cow's body, it is poor economy to withhold any of the other half, all of which goes to produce milk. A cow then requires feed in accordance to the amount of milk she is able to produces. The heavy producer needs the most feed.

Farm grown roughages (silage, hay, etc.,) furnish the cheapest food nutrients. However, a good dairy cow cannot eat enough roughage to supply her needs for milk production She must have some grain. Therefore, to feed with the most economy the following rules must be observed, says the University of Missouri College of Agrculture.

1. Feed all the roughage a cow will eat. She will eat more if fed three times a day instead of twice.
2. Feed grain in proportion to the pounds of milk produced. To a Jersey or Guernsey cow feed one pound of grain for each 3 to 3½ pounds of milk produced.

To a Holstein, Ayrshire, or Shorthorn feed one pound of grain for each 4 to 4¼ pounds of milk produced.

THE LIVESTOCK SITUATION IN EUROPE

THE following summary of livestock conditions in Europe has just been received by cable from Alfred P. Dennis, special representative of the Department of Commerce, now in Berlin. Mr. Dennis explains that owing to the lack of official census returns there is liability of error in making too high an estimate of the number of European livestock at this time. Though the figures for some countries are lacking and for others are not reliable, estimates for twenty-three countries in Europe have been made based upon the best available returns.

Cattle

There have been heavy losses in the cattle herds of Belgium, Austria, Hungary, and Germany, but those of Great Britian, France, Italy, and Poland are approaching normal. The drought of 1921 has halted the recovery from the low point of the year 1918, but the industry has recently been revived by the past wet spring and summer which has resulted in abundant pasturage. The present stock of cattle is probably not more than 3 per cent under that of 1913, but the ratio of young, thin, and undersized animals is much higher than in the period prior to the war.

Hogs

The hog industry has suffered acutely more than any other branch of animal husbandry, but the recovery since 1919 has been rapid, except in the case of countries such as Germany, France, Belgium, Austria, and Italy, which are dependent upon imported feed. In Great Britian, Denmark, Sweden, and Poland the production is approaching normal, and the number of hogs in Spain, Rumania, Jugoslavia, Holland,d and Switzerland is greater than before the war. The total number of hogs in European countries is now estimated at 12 per cent below normal.

Sheep and Goats

Sheep depending upon natural pasturage rather than upon arable farming suffered less than cattle and hogs. There is a wide variation in recovery in this industry. In Poland the sheep resources are off 41 per cent compared with the pre-war figures, and in France there is a reduction of 35 per cent. Spain has increased the number of sheep by 50 per cent, and the flocks are well maintained in Switzerland, Italy, and Rumania. An accurate census of the total number of sheep in all European countries would probably show the number has aproached to within 6 or 7 per cent of the pre-war figures.

In all the important countries the stocks of goats are reported as showing gains oyer pre-war stocks except in France. These animals, except where commandered for military purpose and for breeding, are being used in increasing numbers for milk supply in the place of cows. The total number of goats in the countries of Europe is estimated at 18 per cent above the pre-war totals.

Consumption and Trade

Compared with pre-war years the national meat consumption in Europe shows a rise in France, Italy, Rumania, Spain, and Poland. It is fairly well maintained in Great Britian, Holland, and Switzerland. There is a sharp decline in both gross and per capita consumption in Belgium, Austria, and Germany. The European demand for American hog products reached the proportions of a boom during the war and has since receded somewhat, but it is still in excess of the pre-war volume in France,Belgium, Italy, and Great Britian. The needs of Germany for American bacon and animal fats are urgent, but the difficulties attendant upon financial arrangements curtail purchases. There will undoubtedly be a further expansion in the European demand for American lard as the general economic conditions improve.

POWDERY MILDEW ON CLOVER

Please tell me if the mold on Mammoth clover is harmful to cattle or horses. Almost all clover in this section is in the same way—A. S., Bad Axe, Mich.

—The white substance found on the clover is known as powdery mildew. This is a fungus disease and is not known to be poisonous. The hay should be well cured before feeding, or in case partially cured hay is fed, it should be fed in comparatively small amounts. Large quantities of partially cured hay, when fed to livestock that has not been getting hay for sometime, is likely to cause trouble.—C. R. Megee, Research Associate in Farm Crops, M. A. C.

VETERINARY DEPARTMENT

REQUIRES SKILLED VETERINARIAN

I have a cow 6 or 7 years old that was fresh last December and was not once in heat since. Otherwise she is the best cow. What must I feed her to get her in heat?—H. R., Lathrop, Mich.

It is my opinion that the trouble in this case is due to a persistant corpus luteum. This could be dislodged by a veterinarian who is skilled in such work, and the cow then in all probability would come in heat within two or three days.—Edw. K. Sales, Asst. Prof. of Surg. and Med., M. A. C.

PIGS CAN NOT USE HIND LEGS

What ails my pigs? They were all right when I fed them last night, this morning some of them can't walk on their hind legs. They have good quarters to sleep in and a large yard for exercise.—C. M. ., Charlevoix, Mich.

One of several conditions might ail your pigs. The paralytic condition may be due to infection with the Botulinus organism, or it may be due to lack of minerals or vitamins in the feed they have been getting. Occasionally it seems to be a result of constipation. You ought to make sure that the condition is not Cholera as pigs often become very weak and unable to walk during outbreaks.—Edw. K. Sales, Division of Veterinary Medicine, Dept. of Surgery and Clinic, M. A. C.

A bullet from a .38-caliber revolver passed through one of Seller's right hips and entered his abdomen.
—Knoxville, Tenn., Journal-Tribune

POULTRY

THE FARM HEN PAYS WELL

THAT a farm poultry flock is one of the best paying parts of a farm business is shown by cost and production figures on 39 farms in Lenawee, Jackson and Shiawassee Counties for the twelve months ending March 31, 1922. The figures are taken from records carefully kept by the farmers and supervised and summarized by the Farm Management Section of the Experiment Station, M. A. C.

The flocks on these farms averaged a return of $200.28 above feed and other direct costs. That the figures apply to the ordinary farm flock is shown by the fact that these flocks averaged 118 hens. The average return per hen was $1.70. Thirteen of the flocks show returns below $1.50 per hen, seven above $2.25 per hen, and nineteen fell between the figures.

One of the striking facts of poultry management brought out by the study of these flocks was the effect of protein feeds upon both egg production and net returns per hen.

The average egg production per hen on eleven farms feeding either tankage or skimmed milk was 96.8 eggs per year. The net return per hen in the first case was $2.59 and in the second $1.28.

The accompanying table gives the direct costs and returns in summary form .

Enterprise Record on Poultry

Thirty-nine farms in Lenawee, Jackson, and Shiawassee counties.

Year endings March 31, 1922.

Total number chickens 4,595, raised, 4,528.*

Average number laying hens, 118; raised, 116.

Direct Costs

Items	Average per farm Amount	Cost
Corn	2,568 lbs.	$24.83
Oats	1,056 lbs.	10.50
Wheat	1,064 lbs.	11.96
Barley	354 lbs.	4.51
Misc. Feeds	815 lbs.	11.91
Silage	151 lbs.	.29
Skim Milk	1,132 lbs.	3.00
Poultry, net decrease		11.10
Equipment, net decrease		1.23
Special Labor		1.98
Miscellaneous		2.06
Total Direct Costs		$83.37

*"Poultry raised" means the number of chicks hatched that lived. It does not mean that they were all raised to maturity, for some were sold at early stages for broilers, etc.

Egg-Sales	453 doz.	$125.80
Eggs for home use	213 doz.	56.42
Meat for home use	100 lbs.	22.04
Poultry, net increase		71.47
Manure	3.93 ton	7.86
Miscellaneous		.06
Total Money Yield		$283.65

—H. M. Eliot, Farm Management, M. A. C.

SICILIAN BUTTERCUP CHICKENS

Can you tell me the original markings fo the Sicilian Buttercup chickens? Some of ours are light yellow with a few black spots on their backs, and black tail, they are quite pretty. The others are darker in color and all black from the neck down. My husband thinks those are truest in color, but I think the lighter ones the prettiest. The roosters are quite dark. I would like to know which ones are the best type for I want to take them to the fair as they are a new breed in our neighborhood.—Mrs. T. F., Howell, Mich.

—I might say that the Sicilian Buttercups are not a standard variety and therefore a description of the color pattern of this breed has been ommitted. The darker colored birds are the ones that are usually prefered by the professional judges of exhibition poultry. They are almost an orange yellow color rather than a light yellow. By directing a communication directly to the Reliable Poultry Journal, Quincy, Illinois, care the Question Box Editor, undoubtedly you could secure an expression from one of the judges who specializes in Mediterranean varieties. Although this breed is not described in the Standard of Profection this judge could give his opinion as to type and color to use for either show purposes or in the breeding pens.—E .C. Foreman, Associate Professor of Poultry Husbandry, M. A. C.

GET PULLETS OFF RANGE EARLY

EARLY fall is the time of year above all others when pullets must be nursed carefully along, because winter egg production is largely dependent on the condition of the young stock when it is placed in permanent laying quarters. Too often poultry keepers allow their birds to run on range until cold weather comes. Nature's chicken house is not the right place for a pullet to be roosting on a late October night. Delay in bringing the pullets off the range was the cause of an unusual amount of roup last fall, according to G. W. Hervey of the University of Missouri College of Agriculture. Allowing them to run on range late means added expense to the feed bill. The birds consume more grain and an insufficient amount of dry mash. Feed that is consumed, instead of rounding the pullets in to laying condition, is used simply to maintain energy requirements against exposure. There is no surplus to devote to the building up of tissue for the formation of eggs.

TREATMENT OF STINKING SMUT OF WHEAT

(Continued from page 4.)

sooty, black powder, some persist and can be found in the threshed grain. The amount may vary from a trace to 1, 2, or 5 per cent. The characteristic fishy odor can be detected in such grain. Badly smutted wheat is not bright red or golden color, but dull and oft-times sooty, especially at the "brush" end.

This is Stinking Smut or Bunt which every farmer rightly fears.

Stinking Smut of wheat is caused by a parasitic fungus which enters the grain at sprouting time and grows inside the young plant, keeping pace with its growth, unseen and unsuspected until the wheat begins to head. Then the smut fungus enters the developing kernel and produces in place of the normal grain its own kind of fruit, the black smut powder already mentioned. Under the microscope this powder is seen to be made of minute, spherical grains, so small that one smutted kernel may contain 5,000,000 of them. These are the "seed" of the smut, which, dusted upon the wheat grow when the wheat germinates, bore into the tender sprout and thus start the smut of the next year's crop. This life story is repeated year after year and it is evident that with each crop the smut gets worse. A field with little smut one year may be heavily smutted the next, great is the power of this fungus to increase. It is also clear that the sprouting time is the danger time for the wheat. Poor growing conditions,—cold, wet seasons—which cause the wheat to start slowly, give the smut a greater chance to get in the wheat sprouts.

The Control of Stink Smut

Stinking Smut control is based upon the fact, that the smut enters he wheat at sprouting time. In fighting smut, the attempt is made to kill the smut "seed" on the wheat before it gets into the sprout. For this purpose, a chemical treatment is employed, which when properly applied does not injure the grain but kills the smut bodies. For years, plant pathologists have recommended soaking the grain in tubs of dilute Formaldehyde, 1 pint to 40 gallons of water, skimming off the floating smut balls, covering the grain for 2 hours, drying and planting. This is undoubtedly the best method of ridding wheat of smut. Many farmers have taken advantage of this method and have protected their wheat crop. But we can not deny that the great majority of farmers have felt that this process took too much time and have neglected the treatment. Millers and elevator men have stated that only a few men in a community were treating their grain.

It was found that fairly clean grain, carefully fanned, if sprinkled with Formaldehyde, diluted 1 pint

to 40 gallons of water, covered 2 hours and then dried would give a crop practcially free from smut. This is one of the methods recommended. It is simple, cheap and easy. With cleaned grain it is effective.

Three years ago the farmers of Kent county put into practice a still simpler method for seed treatment. This is the concentrated treatment which had been almost universally adopted in this state for Oat Smut control.

Its great simplicity, however, led some farmers to use the treatment carelessly in 1917 with the consequence that damage to grain resulted. The results this year were directions were followed were satisfactory, no injury to stand being reported. The directions given this year are hedged around with caution in order to impress farmers—not with the danger of treatment—but with the necessity of strict adherence to the rules given for treatment. The world seems too full of people who always double the dose that the doctors order, working on the principle that if a little is good, a whole lot is better. Both methods outlined are as strong as is advisable to use on wheat and safety lies in strict compliance.

Methods for the Control of Smut

Secure clean grain of good variety. Smutty grain is unsafe seed.

Fan thoroughly to remove all light, shrivelled grains and smut balls.

Disinfect the drill with the Formaldehyde solution.

Avoid infection from old sacks.

Treat by one of the following methods and plant at once.

Do not treat more than you can plant in any one day.

Dilute Formaldehyde Method

Sprinkle the grain until thoroughly wet with solution of 1 pint of Formaldehyde to 40 gallons of water.

Cover with blankets or sacks for two hours.

Formaldehyde treatments are necessary for crop protection but they must be given carefully and with scrupulous attention to directions.

Allow for swollen condition of the grain.

Concentrated Formaldehyde Method

The convenience of this method is its chief advantage. Only those who will follow directions carefully should employ it since considerable loss resulted during the cold. wet planting season of 1917 through improper handling.

Apply Formaldehyde, full strength, with hand sprayer while the grain is being shoveled over and over. Use at the rate of one pint to 50 bushels, 1-2 pint to 25 bushels, 1-5 pint to 10 bushels, etc. The proper amount of Formaldehyde may be diluted one or two times with water to aid distribution. A dose is a dose—this is as strong as Formaldehyde can safely be used on wheat.

Cover or sack the grain four hours—absolutely no longer. Then spread to air in a warm, dry place for an hour or two. It is unsafe to leave grain covered or sacked over night. Formaldehyde cannot be thoroughly aired out of grain. Therefore plant at once. Treat no more grain than can be sown on the same day.

THINGS TO THINK ABOUT

34th anniversary of the Great Blizzard—Many remember the Memorial Visitation of the Fluffy Elements.—New Canada, Con., Advertiser.

That afternoon the dead woman visited her home and said she would come back later.— Philadelphia Bulletin.

At the week's end, little Willard Thompson was kicked in the forehead by a horse, which was tied where the youngster was playing.—O'Neill, Neb., Frontier.

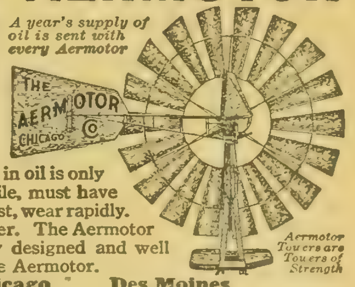
THE AUTO-OILED AERMOTOR

A Real Self-Oiling Windmill

A year's supply of oil is sent with every Aermotor



Oil an Aermotor once a year and it is always oiled. Every moving part is completely and fully oiled. A constant stream of oil flows on every bearing. The shafts run in oil. The double gears run in oil in a tightly enclosed gear case. Friction and wear are practically eliminated.

Any windmill which does not have the gears running in oil is only half oiled. A modern windmill, like a modern automobile, must have its gears enclosed and run in oil. Dry gears, exposed to dust, wear rapidly. Dry bearings and dry gears cause friction and loss of power. The Aermotor pumps in the lightest breeze because it is correctly designed and well oiled. To get everlasting windmill satisfaction, buy the Aermotor.

MARKET FLASHES

MARKET SUMMARY

Wheat steady. Corn and oats in demand and firm. Rye and beans show no change. Butter and eggs in demand. Poultry steady. Demand for dressed calves. Potatoes active. Apples easy. Cattle range from active to dull and lower. Hogs and sheep show advance.

(Note: The above summarized information was received AFTER the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press —Editor.)

WEEKLY TRADE AND MARKET REVIEW

THE industrial outlook has changed but little since our last issue. If anything it shows improvement. For the first time in a long time there are actually more jobs than men to fill them in certain lines. A few months ago the want columns of the daily newspapers were full of "situation wanted" ads. Now the "help wanted" ads predominate.

Railroad employes are rapidly returning to work under wage agreements with the rail operators, and in most cases without the reduction in wages which was at first threatened. With the assistance of the high freights and a volume of business very close to the maximum ever recorded, the railroads are gradually getting on their feet and their books begin to show some heavy balances for distribution to stockholders. Railroads having bond issues to dispose of are quite extravagant with their claims of large earnings, which seem hardly consistent with the hard luck stories they have been telling the Commerce Commission and the public.

Stocks and bonds are experiencing the usual fall demand and prices are generally upward. There is plenty of money available for investment and speculation at 4 per cent interest in New York and slightly higher rates westward.

Two weeks ago we expressed our conviction that there would be no war between England and Turkey, and that those who were looking for increased prices as a result of the disturbances over there would probably be disappointed. Recent developments seem to substantiate our belief.

The two discouraging factors are the coal shortage and the low price of farm products, both of which bid fair to exert an overshadowing influence before the winter is far advanced. It seems quite possible that we can have a winter of even average prosperity and employment with coal prices so high and farm prices so low. Gov. Groesbeck has called the legislature in special session to consider legislation to regulate the coal supply and keep prices down. Now if he will only exert himself to regulate the flow of farm products and keep their prices up we shall all be very grateful.

WHEAT

The wheat market has shown quite unexpected strength during the past fortnight, due, say the market dopsters to the war clouds across the water. Personally we don't believe that the possibility of war has had very much to do with the changed trend in wheat, but it suffices as an excuse for those who are in control of the market and think the time ripe for higher prices. But no matter what the reason or excuse if the farmers are to secure any benefit from advancing prices let them mount. The higher the better. We still maintain, however, in case war does not actually develop, that prices will react somewhat from their present level and rule steady for a considerable period of time. The past week has not only seen some slowing up in the marketing movement, but also some clearing in the supplies in primary markets, and the general tone of the market is very much better than it has been for some time.

Prices

Detroit—No. 2 red, $1.16; No. 2 white and No. 2 mixed, $1.14.

Chicago—No. 2 hard, $1.09¾.

Prices one year age—Detroit, No. 2 red, $1.28; No. 2 white and No. 2 mixed, $1.25.

CORN

The healthy tone the corn market enjoyed during the middle of last month again prevails in the corn market after several interuptions by news from the war zone of Europe. As a result prices after declining came back and gained over the opening two weeks before. Total gains at Detroit last week aggregated 4 cents. Demand dealers report that they have bids from eastern points but are unable to secure the grain to make the sales. This would indicate that farmers are not anxious to unload their corn on the market at prevailing prices which will go far in establishing higher prices if farmers will continue to hold. By orderly marketing is the only way that farmers can expect to get anywhere near what their products are worth and the sooner they realize it and put it into practice the better it will be for them.

Prices

Detroit—No. 2 yellow, 73c; No. 3 yellow, 72c;No. 4 yellow, 70c.

Chicago—No. 2 yellow, 66½ @ 67½c; No. 3 yellow, 66¾ @ 67¼c.

Prices one year ago—Detroit, No. 2 yellow, 51½c; No. 3 yellow, 50½c; No. 4 yellow, 47½c.

OATS

Oats continue to gain in strength with wheat, advancing to 46 cents on the Detroit market. At present prices oats look like a good buy. Supplies are very close to demand and there are reasons for believing in substantially higher prices before another crop.

Prices

Detroit—No. 2 white, 47c; No. 3 white, 45½c; No. 4 white 42c.

Chicago—No. 2 white, 40½c @ 42½c; No. 2 white, 40½c @ 42¾c.

Prices one year ago—Detroit, No. 2 white, 38½c; No. 3 white, 36c; No. 4 white, 32c.

RYE

After a spell of weakness the early part of the last two weeks the rye market firmed up and prices turned upward along with those of other grains. At the close of last weeks the price at Detroit was 2 cents above that of two weeks ago.

Prices

Detroit—Cash, No. 2, 77c.

Chicago—Cash, No. 2, 72½c.

Prices one year ago—Detroit, 90c.

POTATOES

The potato outlook is very discouraging. Prices have taken a pronounced slump the entire country over. This has had the effect of checking the enormous marketing movement which followed immediately in the wake of digging in the principal potato sections. Only such farmers as absolutely need the cash will sell potatoes at prices ruling the past few days. We look for an abrupt drop in potatoes offerings which should have the effect of taking the slack out of the market and encouraging better prices. Within another fortnight when potato digging will be pretty well completed we shall know considerable more about the size and quality of the crop and prospects for better prices, but at the present stage of the game no one but the most daring speculator would gamble on the future of potatoes.

Prices

Detroit—$1.30 per cwt.

Chicago—90c per cwt.

New York—$1.00 per cwt.

rices one year ago—Detroit, $2.61 per cwt.

BEANS

The trend of the bean market indicates that the farmers are using their heads this year and marketing their product slowly. As stated before it is most unusual for a market to advance as the bean market has during the very height of the normal marketing season. This should be highly encouraging to bean growers, as it indicates still better prices as the season advances.

Prices

Detroit—C. H. P., $5.50 per cwt.

Prices one year ago—Detroit, C. H. P., $4.45 per cwt.

HAY

Market in general are showing a firmer tone. Receipts have been not large during the past couple of week and owing to shortage of cars at loading points they are expected to be still smaller this week. Good hay is in steady demand and a shortage in the supplies of this grade is causing a cleanup of the poor grades which have accumulated on many of the larger markets.

Prices

Detroit—Standard timothy and light clover, $15.50 @ $16; No 1 clover, $14 @$14.50 per ton.

Chicago—No. 2 Timothy, $20 @ $21; No. 1 clover, $14 @ $16 per ton.

Prices one year ago—Stanardd timothy, and No. 1 light clover mixed, $19 @ $20; No. 1 clover, $14 @ $15 per ton.

CHICAGO LIVE STOCK MARKET

Liberal daily runs of cattle met a set of uneven and weak to lower market last week at Chicago. Best long-fed steers and yearlings enjoyed good action most days and top cattle advanced 25@45c during the first four days. Medium grades, which comprised the bulk of receipts, declined almost daily, and, with Thursday's sharp break, values stood unevenly 50c@$1.50 below last week's close. Extreme declines were noticed on pretty good steers and yearlings ,the latter particularly being hit hard, and some of the $10.50 yearlings late looked like $11.50 or higher yearlings week before.

Receipts of cattle for the week at Chicago total 76,600, or around 1,400 more than arrived week before last and largest for any week since the third week in January, 1921, when 77,601 cattle were marketed.

Recent warm weather tended to slacken demand for dressed beef, and with an accumulation of medium grade beef on hand, prices broke after mid-week and suffered sharp declines. Weak to lower dressed markets were evident locally, as well as in eastern centers. Orders were mostly for finished steers, and on late sessions not many orders for anything were present.

An oversupply of light and light butchers resulted in a 25c lower top price last week, with best at $10.45, being $1.75 above a year ago, $5.80 below two years ago and within $1.70 for the eleven-year average.

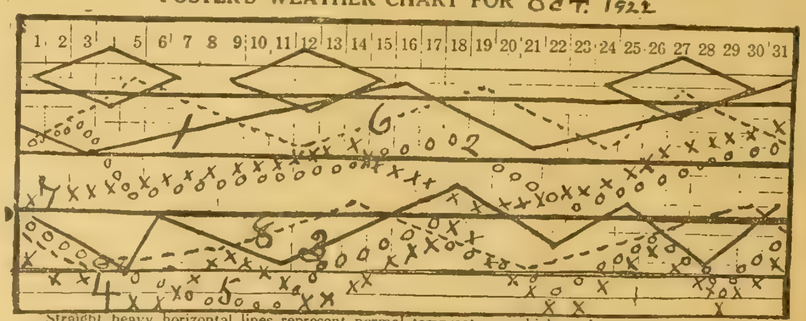
Indifferent outside demand served as an outstanding weakening factor on the local trade, with the week's total shipments being smallest in two years. Shipments at 13,300 show a decrease of 4,990 as compared with a year ago and 7,500 as compared with corresponding week two years ago.

Daily top prices last week in the hog market fluctuated within a 55c "spread," ranging from $9.90 at the extreme close to -10.45 initial day last week, when most classes sold at the highest time of the week. However, the liberal supply of light weights and active buying by local packers of the latter class raised the

THE WEATHER FOR NEXT WEEK

As forecasted by W. T. Foster for The Michigan Business Farmer

FOSTER'S WEATHER CHART FOR OCT. 1922



Straight, heavy, horizontal lines represent normal temperatures, which is the average of same days of the year for forty years. Crooked lines above normal lines mean warmer; below, cooler; that marked 1 is for section 1, north of latitude 47, between meridian 90 and Rockies crest—2 for section 2 on my section map is for east of meridian 90, north of latitude 47—3, between latitudes 39 and 47 and between meridian 90 and Rockies crest—4, east of meridian 90, between latitudes 39 and 47—5, south of latitude 39, between meridian 90 and Rockies crest—6, east of meridian 90, south of latitude 39—7, north of latitude 43½, west of Rockies crest—8, south of latitude 43½ to Mexican line and west of Rockies crest.

Washington, October 14, 1922—The moisture will continue to come from the Caribbean Sea, but it and percipitation will be in decreased amounts in America and Canada, particularly immediately north of Boston and Ozark Mountains and north of the high lands that extend eastward through Tennessee and North Carolina. Further north rain will gradually increase. September rain shortage, north of the high lands of Tennessee and North Carolina, is a good lesson on the effects of high ridges on crop-weather. In other sections much improvement favorable to winter grain for pasture, is expected by the end of October. But I am not now publicly advising about crops for 1923. But I reply to all inquiries from subscribers of this paper. Always address Foster's Weather Bureau, care of Michigan Business Farmer. My public advices about selling grain and cotton have been good. Severe storms are expected to cross continent October 14 to 18, and during that period an increase of moisture.

Forecast for Michigan: Temperatures below on 14, above on 18, normal on 20; average warmer than usual; more rain than average of past month.

The word electricity, when used alone, includes magnitism; they constitute a pair that can never be separated. Electricity, in all cases, passes from the sun to each of the planets. The electricity is matter in motion, does not carry other matter, when static, or not moving, is the same kind of matter but is called the electrosphere and is composed of elecrons, the same as electricity, which is electrons in motion. In all cases in which electricity comes from the sun, magnitism, a finer grade of matter than electricity, passes, in a spiral, around the electric current to the sun. That magnetic spiral carries a fine grade of matter—sun food— to the sun. The electric current from sun to Earth enters at our magnetic north pole, spiral around that incoming electric current tha carries matter from the Earth to sun. The same is true of all the planets.

general average cost on Thursday to $9.15, showing 5c advance over the receipts of the week, due to smaller receipts of heavy packing sows and an uneven gain in this class.

Mid-week prices proved the lowest of the week, when average cost dropped to $8.75. The liberal supply of light weights after mid-week forced top kinds off 55c as compared with a week ago, but served to uphold the general average cost, which closed at $9.05, as against $9.15 previous Saturday.

The second largest week's offerings over two months answered a comparatively indifferent demand, resulting a sharp price reactions, with the week's top and average showing 25c and 30c decline, respectively. Total receipts at 129,600 stand only 1,800 larger than a week ago, but show an increase of 10,500 as compared with a year ago; being 12,300 above the eleven-year average.

Offerings in last week's sheep market totaling about 95,200 head broke values sharply, forcing fat lambs price to the lowest level in over two weeks, while feeders slumped unevenly 50c to $1.00. Although receipts were larger than trade requirements at the present high price level, they show enormous decreases comparing with corresponding periods in recent years, being among the smallest on record for this season of the year.

The improved aged and yearling sheep quality upheld prices in face of several sharp lower sessions, to both packers and country buyers. The latter were large interests of the trade during the fore part of the week, securing several bands of feeding yearlings at 25@50c discount, but neglected practically all classes after midweek. Native and range states contributed more liberally to the sheep trade throughout the week.

Choice aged wethers sold within a range of $600@$7.75, with country buyers securing several strings of feeders at $6.75@$7.00, paying upward to $12.00 for best yearlings. Range yearlings carrying desirable killing flesh moved at $10.60@11.50, with inside prices taking best, at the close. Native ewes cashed downward from $6.75 for local slaughter, with 2 and 3 year old breeding stock selling at $6.00@8.00. Fancy yearling breeding ewes brought $11.50 intial day last week.

MAINE SPUD GROWERS LOOK FOR BETTER PRICES

Bangor, Me., Oct. 7th—The potato situation in Aroostook county as a whole looks brighter and farmers are hopeful for a steady advance in price as the season rolls along. It is estimated by expert authority that the average will be about one-half a crop or a little better than one-half of last season's crop; yet when one realizes that last year's crop was estimated as a crop and ahalf compared with a normal crop it would show that with an estimate of one-half a crop compared with last year, it should tally about three-fourth's crop compared with a normal one.

Some farmers are disappointed over their yield per acre which is far below what they expected. In no place, with possibly a few exceptions, has the yield gone 100 barrels per acre. With the height of the digging season here farmers are busy in getting their tubers out of the soil and well housed. The climatic conditions have been excellent during the past two months and with the digging season here the conditions could not be any better than at the present time. Farmers are housing their crop freely and there is no congestion in the storehouses. On an average from 70 to 80 cars are being shipped out of the state and the price is quoted at $1.00 per barrel. Several days ago the price was 80 cents per barrel and as time goes on farmers are in hopes to have a fair price for what they have to offer. It is said by potato experts that the darkest days have been past they think, and a steady market at a fairly good price will be maintained.

CHICAGO BUTTER MARKET

A firm feeling prevails in the butter market so far this week although business is not active. Offerings are firmly held. Best and medium grades are quickly taken at present prices.

MISCELLANEOUS MARKET QUOTATIONS

Detroit, Tuesday, Oct. 10th.

BUTTER—Best creamery, in tubs, 36@37c per lb.

EGGS—Fresh current receipts, 32@35c; fresh candled and graded, 35@40c; refrigerator firsts, 26½@28½c per dozen.

CABBAGE—Home grown, 50@75c per bushel.

Popcorn—4½@5c; Little Buster, 7½@8c per lb.

ONIONS—$1.75@2 per sack of 100 lbs.

TOMATOES—Home grown, $1@1.50 per bu.

DRESSED CALVES—Choice, 17@18c; medium, 12@14c; large coarse, 5@10c per lb.

LIVE POULTRY—Best springs, 22@23c; leghorns, 18@19c; large fat hens, 25c; medium hens, 22@23c; small hens, 17@18c; old roosters, 15c; geese, 16@17; large ducks, 23@42c; small ducks, 18@20c; turkeys, 25c per lb.

GRAPES—Michigan, 32@35c per 4-quart basket and $2.50@$3 per bu.

APPLES—New, $1@$1.50 per bu.

PEACHES—Utah, $2@2.25 per bu; New York, $1.50@$1.75 per bu.

PEARS—Bartletts, $2.25@$2.75 per bu.

CELERY—Michigan, 20@30c per doz.

HONEY—Comb, 23@25c per lb.

CROP REPORT

The semi-monthly crop notes issued October 4th by John A. Doelle, Commissioner of Agriculture and Verne H. Church, Agricultural Statistician, U. S. Bureau of Agricultural Economics, states that the latter half of September was generally favorable for harvesting crops and the fall seeding of grain.

The greater part of the corn crop has been cut and most of the silos have been filled. Very little damage has been done by frost, except in a few northeastern counties, and the crop is generally good. The yield was shortened somewhat on the lighter soils by dry weather in August.

There has been a tendency in some sections to decrease the acreage of wheat and rye seeded this fall, owing to unsatisfactory prices for these grains. However, the greater part of the large bean acreage has been or will be sown to these crops. The greater part of the seeding has been completed and many fields are showing above ground.

Much damage has been caused by rains during the harvest season in the Saginaw valley, reducing the yield and lowering the quality. Elsewhere the damage has been only local and the crop was secured in good condition. Yields vary widely but will average slightly below normal.

Digging of the late crop of potatoes has commenced. Yields are less than expected in many sections. The tubers are of good size but the set was lessened by dry weather at the critical time. There has been some frost damage, blight and rot in northeastern counties. In other sections the quality is mostly good.

PROVES VALUE OF PURE-BRED SIRES IN GRADE HERDS

(Continued from page 3)

sey Breeders Association Fair. At this time the individuals shown are classified according to age and placed by an expert judge, who likewise gives his reasons for the placings. By this measure the members of the association are constantly up to date and guided in the selection of their breeding stock.

Special effort is now being made and fortunately the plans are nearly completed whereby each of the members is going to be the proud owner of at least one pure-bred Guernsey instead of all high-grades.

Furthermore, the organization of a cow testing association is likewise nearly completed so that production records of each individual may be made.

Unfortunately the only Sixty-third Sixty-fourth blood born to date proved to be a male.

A constant improvement in the cattle is shown by the succeeding generations, and as a result of the efforts of the Leer Guernsey Breeders Association there are now approximately twelve hundred grade Guernseys distributed throughout Alpena county and neighboring counties.—C. O. T. Scheetz, County Agr'l Agent.

MULE-HIDE
"NOT A KICK IN A MILLION FEET"
ROOFING
AND
SHINGLES

Costs More --- but Worth a Lot More than the Difference

Why beat about the bush?

We *want* buyers to know that our roofing costs a little more.

We want them to know also that it costs more because we put materials and workmanship into it that make it stronger and last longer.

And the price?

Well, when you compare MULE-HIDE goods and prices with other goods and prices, you'll find that the difference in cost is surprisingly small.

Get MULE-HIDE. Satisfaction for you is wrapped up in every roll and bundle of roofing and shingles bearing the famous old trademark.

Three Important Amendments to be Voted on—Better Read Page 3

Current Agricultural News

WORLD WHEAT SITUATION

THE Commerce Department's Foodstuffs Division in a world wheat survey says that according to the latest available estimates on wheat production, the principle importing countries have produced less wheat this year than last by about 245 million bushels. These same countries imported for the crop year ending August 1, 1922, 647 million bushels, if we add the 245 million bushels shortage, this gives a total of 892 million bushels required to equal last year's average wheat consumption in the importng countries. It is of course, recognized that some European countries are probably living on a lower standard than last year, and are going to conserve wheat consumption not only through milling regulations but also through the substitution of other foodstuffs, such as potatoes. The potato crop is larger this year and generally speaking, can be and is substituted for bread in times of stress.

The exporting countries produced about 213 million bushels more this year than last, which added to the 647 million bushels they exported would indicate an average surplus of 860 million bushels based on last year's crop.

According to the latest figures available the rye production of Europe, exclusive of Russia, is about 53 million bushels less than last year, while the rye crop of Canada and the United States is about 50 million bushels more, indicating no world change in the rye situation.

For the next four months the wheat and rye available for the export trade should be found in North America. If Europe's combined wheat and rye shortage of about 300 million bushels could be met, it would make America a strong market, and it may be said from now on the breadstuffs market will depend entirely on the economic conditions in European countries and their ability to pay cash for grain.

It is probable that there are somewhat more grain and flour stocks in Europe than statistics indicate, since the farmers in a number of countries have been threatened with requisition of part of their crop during the last year and it is generally known when such conditions exist the crop is concealed to some extent. On two or three occasions when restrictions have been raised in past years, supplies have come out in the unusual amount. This probability of some invisible supplies is one of the uncertain factors that makes it difficult to ascertan the real breadstuffs requirements of Europe.

COOPERATION SAVES OREGON FRUIT CROP

A YEAR ago it looked as though the fruit of the Northwest would rot because the canneries would not run, bringing ruin to thousands of growers and a fruit famine for distant consumers. Then the Oregon Growers' Cooperative Association worked out a plan for running the canneries and saving the crops. The cooperators were not interested in big profits. What they wanted was to get their crops to the people and they did it.

During 1920 the Oregon Growers' Cooperative Association sold 12,000,000 pounds of prunes, which cleaned out all the supply and left no carryover for 1921. In 1921 the Association made arrangements for canning a considerable portion of the tonnage. This year, with the biggest prune crop in the history of the United States, the plants of the cooperative have been put into condition to save the supply by evaporation, and in addition the Association has rented and acquired other plants to meet the emergency.

The experience of the past three years has proved to the unorganized fruit growers that cooperation is the only sure way to market their wares, get a fair return for themselves, and insure a stable supply for the consumers.

BIG TOMATO PACK THIS YEAR

MORE than 1,000,000 tons of tomatoes this year will go into cans and be used in various manufactured products such as catsup, pork, and beans, and the like, according to estimates made by the United States Department of Agriculture. The figure, 1,000,010 tons, is 132 per cent more than the quantity used last year, which was 432,756 tons.

Acreage producing the tomato crop for manufacture is estimated at 215,684 acres, as compared with the final estimate of 87, 933 acres in 1921. Estimated yield is 4.6 per acre, compared with 4.9 tons last year. Reports to the department indicate that 9,336,000 cases of No. 3 cans will be packed this year, compared with 5,050,000 cases in 1921.

In volume of production for manufacture, Indiana leads all states with 271,534 tons. California has 173,786 tons, Maryland 111,510, New Jersey 81, 398, New York 63,245, Ohio 56,847, Missouri 37,163, Deleware 31,712, Utah 30,287, and other states smaller quantities.

WORLD RYE CROP ABOUT SAME AS LAST YEAR

TOTAL production of 1922 for eighteen countries for which figures are available is estimated at 770,152,000 bushels by the United States Department of Agriculture. Production in the same countries last year was 770,603,000 bu. Countries for which reports are not available are Russia, Austria, Denmark, Greece, Norway, and most of the countries of the southern hemisphere.

The rye crop of Germany for 1922 is estimated at about 210,580,000 bushels, according to a cablegram from the International Institute of Agriculture at Rome, a decrease of 57,070,000 bushels from production last year. The rye harvest of France is placed at 37,600,000 bushels compared with 44,392,000 bushels in 1921. An unofficial estimate places the rye crop of Jugoslavia at 7,090,000 bushels, an increase over last year's yield of 5,770,000 bushels.

ORGANIZED CELERY SHIPPERS IMPROVE METHODS

IMPROVED methods of celery shipping and distribution and a standard pack are paying extra returns to the newly organized Farm Burean Celery Shippers Association at Kalamazoo. The celery shippers were organized by the Michigan State Farm Bureau Exchange at Detroit and market their celery thru the Farm Bureau organization.

Before the celery growers organized their own sales organization, they marketed their crop through Kalamazoo dealers who shipped to oithed markets by express. The Farm Bureau Exchange caused the celery growers to adopt a standard pack and to label it Kalamazoo Brand. The Farm Bureau ships the celery to such markets as Detroit, Chicago, Kansas City, St. Louis, Pittsburgh, Philadelphia in carlots and under refrigeration. The celery arrives at destination in perfect condition and the consumer gets it in excellent condition. Distributing through one agency, the celery growers now have better control of the distribution of their celery. They report increased returns since they have been marketng their celery cooperatively under standard pack.

FARMERS SET RECORD IN CO-OP. WHEAT MARKETING

GROWING from a pool of 1,000,000 bushels of wheat to 5,000,000 bushels in one year is the record of the Montana Wheat Growers Association, the farmers' cooperative wheat marketing organization of that state. This remarkable growth of next to the youngest cooperative wheat pool in the northwest is largely due to the enormous increase in membership during the same year of from 1500 to 4700 cooperators with constant additions being made each day.

For Your Family's Sake

You owe it to them to provide for their future in so far as possible. This means the putting aside all you can for them; but if you do your full duty, it means investing it profitably and safely in securities that will give them full earnings regularly and certainly.

Growing Michigan's Champion Potato Crop

How Mason Parmalee of Allegan County Grows 360 Bushels to the Acre

By GEORGE IRVINE

WHO raises the highest yielding potato crops in Michigan and how does he do it? Is there a farmer anywhere in our state who under ordinary soil and market conditions is keeping his potato yield per acre up to the point where he is sure of consistent profits?

Many Michigan potato growers are beginning to ask themselves these questions. An average production per acre hovering around 100 bushels, and prospects of a long stretch of low potato prices are responsible for an inquisitive attitude toward this high yield business among the spud raisers.

The numerous farmers who hope to obtain a share of their future bread and butter at the shrine of the potato may well turn for their Mecca of inspiration and guidance to the 160 acres in Allegan county owned and farmed by Mason Parmalee. For on that farm was grown the champion potato crop of Michigan last year. And it was a money maker too. Mr. Parmalee is a "big league" potato grower. He made the state high production record for 1921 with a twelve acre patch averaging 360 bushels per acre.

Cherry Rill Farm, as Mr. Parmalee has named his place, has no unique advantages of location or soil, nor is it the pet hobby of a rich city farmer. Mr. Parmalee inherited the place from his father, who bought the land from the government for ten shillings an acre when Allegan county was pretty much of a wilderness. Mr. Parmalee himself has worked the farm for thirty years, and has never used a cent of outside capital. The farm has paid it's way from the start.

Let us find the reasons why Cherry Rill Farm is turning out some of Michigan's best potato crops. Naturally we turn first to the soil, for that is what really makes a potato crop. The yielding of a farm as a rule varies directly with the fertility of the soil. In the long run, the soil is what the farmer makes it. Mr. Parmalee has doubled the fertility of his soil, and thus it's producing capacity, since he has been on the farm.

Soil fertility is influenced by only three things—the cropping system, fertilization, and drainage. In them, then, lies the solution of the greatest problem of agriculture. That problem, the maintenance of soil fertility, no longer troubles Mr. Parmalee. He has solved too, with remarkable results, by his method of handling the cropping, fertilizing, and drainage factors. Here is the story in his own words:

"We use a three year rotation, grain, followed by an alfalfa-clover mixture, then corn and potatoes, after which we seed again with grain. We grow barley, oats, wheat or rye for grain, and in the spring sow a half-and-half clover and alfalfa mixture, eight pounds of alfalfa and six pounds of red clover seed per acre, with the grain for a nurse crop. We never pasture the new seeding, but clip it once in the fall if it gets too high. We never take anything off the first year. The next summer we make two or three cuttings of hay, and plow under in the fall. We plow quite deep now—nine inches—but reached that depth by working down a half inch deeper every time. We plow once during a rotation, every third year, and disc the other two years. For cultivated crops we grow corn in the fields next to the barn and potatoes on the sandier land to the north."

Cherry Rill's cropping system, a three year rotation with alfalfa, is worthy of a passing glance. The average farmer would cackle heartily at the thought of plowing under a good stand of alfalfa after harvesting only one hay crop. Possibly that's one of the reasons he is an average farmer.

Application of fertilizer is the other big factor in building up the soil. Four varieties are used regularly on Cherry Rill Farm,—manure, acid phosphate, green manure, and lime.

"Manure is one of the most valuable things on the farm," Mr. Parmalee declares. "Farm papers have a lot to say about keeping farm machinery under cover, but I say if you can't cover both, cover the manure and let the machinery stand out. I

WHAT STATE FARM BUREAU SAYS OF INCOME TAX

ALL Michigan farm organizations are urging their members to endorse the state income tax amendment which will appear on the ballots at the general election Tuesday, November 7. The income tax measure is of great interest to every owner of farm or town property. It intends that the heavy tax burden now carried almost solely by five billion dollars in farm and town real estate shall be shared by five or more billion dollars in stocks and bonds and other intangible property now paying practically no taxes to the state. The State income tax measure would also give wage earners their just share in carrying on the government.

The farm organizations declare that the State income tax proposal cannot be considered as another or an additional tax as it is intended to relieve real property of its excessive tax burdens by more justly distributing the load. It is estimated that a fair and reasonable state income tax would pay the State's annual tax of $20,000,000 and go a long way toward retiring outstanding bond issues. It would cause every wheat producer to share in the taxation program instead of leaving it to owners of farm and town real property.

Here are the Amendments to be Voted On at the November Election

"I wish you would print in your paper the proposed income tax statement and its benefit to farmers. Wishing you much success as we think your paper is fine.—R. E. H., Pierson, Michigan.

Many of us are wondering if you will have space and patience to diagnose the amendments to appear on ballots at the November election? Many, many voters are mislead when amendments appear as they are usually worded to confuse. Looks as though the "excess condemnation act" was reaching for some more of the people's rights. Does this just affect city property owners, or could the power be easily extended to the country? Anyway, it doesn't look like a plausible act, to be passed by the people. What do you know about it and how will it be worded on ballots.—Jacob Copp, Ingham County, Michigan.

THERE are three amendments to be voted on at the fall election, November 7th, excess condemnation amendment, income tax amendment, and giving ports and port districts power to make internal improvements. Four other amendments which are proposed will not be submitted because the required number of signatures were not obtained to the initiatory petitions within the time prescribed by law.

Excess Condemnation

When the voter enters the booth on election day he will be given two ballots. One of them will be the general election ballot on which he votes his choice for county, state and national officers. The other ballot will contain the three amendments mentioned above. The first one on the ballot will be the "excess condemnation" amendment, the object of which is to empower the legislature to authorize municipalities to condemn more land than is necessary for certain public purposes and to issue bonds therefor. The text of the amendment is as follows:

Sec. 5. Subject to this Constitution the legislature may authorize municipalities, subject to reasonable limitations, to condemn and take the fee simple to more land and property than is needed in the acquiring, opening and widening of parks, boulevards, public places, streets, alleys, or for any public use, and after so much land and property has been appropriated for any such needed public purpose, the remainder may be sold or leased with or without such restrictions as may be appropriate to the improvement made. Bonds may be issued to supply the funds to pay in whole or part for the excess property so appropriated, but such bonds shall be a lein only on the property so acquired and they shall not be included in any limitation of the bonded indebtedness of such municipality."

The wording of the amendment is plain. It could NOT be construed as Mr. Copp suggests to apply to rural districts. Only "municipalities", incorporated villages and cities would have the right of excess condemnation, under this provision. The rural voter's interest is only indirectly affected by this amendment.

There are many reasons why this amendment should be adopted. When a city condemns a piece of property for a public improvement, the value of surrounding property instantly rises, and owners of adjoning real estate reap a rich harvest by reason of improvement. The question is, "should a few property owners be enriched by the necessities and tax expenditures of a whole city?" One of the obstacles in the w of public improvements is the cost of condemnation. Since a city pays this cost. it is argued, the city should receive whatever extraordinary benefits arise as a result of the condemnation. The proposed amendment would give cities the right to take at a fair valuation this adjoining property and to bond it or sell it and use the proceeds to apply against the cost of the improvement. Frequently it happens that a city does not condemn as much land as is needed for an improvement, and after work has begun on the improvement it is discovered that more land is needed. The city is then obliged to pay a much higher price for the property than it would have had it been condemned in the first instance.

City real estate owners suffer as much from high taxes as farmers. When their local taxes are high they complain of their state taxes and try through legislation and otherwise to escape their share of state taxation. Excess condemnation should reduce city taxes and make city taxpayers less critical of state taxes. Therefore, indirectly it is to the farmer's advantage to vote for excess condemnation.

The Income Tax

The income tax amendment would amend section 3 of Article ten of the state constitution. The wording is a trifle confusing, but the amendment has been properly drafted and will, if adopted, pave the way for a state income tax. It reads as follows:

"Sec. 3. The legislature shall provide by law a uniform rule of taxation, except on property paying specific taxes, and taxes shall be levied on such property as shall be prescribed by law. ' Provision may be made by law for a tax not to exceed four per centum upon or with respect to the net gains, profits and incomes, from whatever source derived, which tax may be graduated and progressive and which may provide for reasonable exemptions. For the purpose of such a tax, property and persons, firms and corporations upon which such tax may operate may be classified: Provided, that the legislature shall provide by law a uniform rule of taxation for such property, as shall be assessed by the State Board of Assessors, and the rate of taxation on such property shall be the rate which the State Board of Assessors shall ascertain and determine is the average rate leved upon other property upon advalorem taxes are assessed for state, county, township, school and municipal purposes."

The benefit of the income tax to the farmer is perfectly obvious. In the first place, economists declare that the income tax is the most equitable form of taxation ever devised. It forces people to pay taxes in proportion to their ability to pay. under our present taxation system many people pay too much taxes and many do not pay enough. The income tax will equalize this, and reach thousands of salaried individuals who now pay no direct taxes to the state. A state income tax should mean a substantial reduction in taxes on farm property.

Port Rights

The proposed amendment relative to the incorporation of ports and port districts with power to engage in work of internal improvements is merely a further recognition of the home rule rights of local corporate bodies, as are outlined in Article 8 of the Constitution. We can see no possible objection to the adoption of this amendment. It reads as follows:

"Ses. 30. The legislature may provide for the incorporation of ports and port districts and confer power and authority upon them to engage in work of internal improvements in connections therewith." .

A Plan for the Rehabilitation of Agriculture

Co-operative Marketing and Revitalization of U. S. Bureaus Suggested

By GEORGE H. STEVENSON

MANY SCHEMES TO HELP THE FARMER

A FEW years ago folks didn't pay so very much attention to the farmer. He was a sort of good-for-nothing, no-account chap. If he prospered well and good; if he didn't that was his own look out. But times have changed. The American people have learned what a tremendous influence agriculture plays in the economic life of the Nation. They have learned that when the farmer prospers they prosper, too; when he suffers they likewise suffer. So the attitude of non-agricultural groups toward the agricultural group has gone to the other extreme. Instead of being indifferent they are over-zealous if anything and come forward with such an array of palliativies for the farmer that it turns the poor men sick to even look at 'em, and it is doubtful if he could survive the shock of taking them. About two-thirds of the remedies proposed for the relief of agriculture must be discarded as impractical or falling far short of meeting the stiuation. We have here a practical discussion of the farmer's needs and a sensible looking plan for meeting them. Read it and tell us what you think about it.—Editor.

THE question, "What has modern civilization done to the American farmer?" was answered to the best of my ability in the article appearing in the May 27th issue of the Dearborn Independent. A friend remarked, "Everthing you state is absolutely true, but terribly destructive." If telling the truth is destructive of that erroneous impression which many people still hold concerning the status of agriculture, then it was intended that article should be destructive. In this article, however, it is my desire to present a contructive plan for the rehabilitation of agriculture. Agriculture is the basic industry, and if civilization is to endure agriculture must prosper.

In the first place, the field of agriculture falls logically into three divisions: first, economic; second, social; and third, political. I am convinced, however, that the local and political life of the rural community is determined by it economic success. Therefore, the problem of agriculture is essentially a matter of earnings and profits. The improved and modern schools, churches and social organizations of the average rural community may be considered an accurate index of the "dollars and cents" borrowing capacity of the community. Rural pride, however, cannot thrive on husks alone. Far too many rural communities find themselves today mere shells of their former selves, disheartened and impotent.

It is not within the scope of this article to discuss in any detail the intricacies of the organization of the Department of Agriculture, nor of the state institutions. It is my intention, however, to emphasize the recognized fact that the Department of Agriculture has become top-heavy in the administration of regulatory functions; and that it has made available more material along scientific and investigational lines pertaining to the production of farm crops than agriculture, in its present economic plight, is able to make use of.

The Demonstration or Extension organization, consisting of some four thousand county agents, men and women, is the great constructive force, which will prove a vital factor in the readjustment and reconstruction of agriculture. The county agent has the opportunity to become adviser, confident and friend of his constituents. He should and does know the problems of the farmer. Today, however, the county agent, instead of being looked upon as the emissary of the farmer, has become, because of pressure of his superiors, primarily the emissary of a multiplicity of scientific and semi- scientific bureaus desiring to exploit the results of their research, and ofttimes their theories, at the expense of the farmer.

Too much stress is laid upon increased production, but the alert county agent knows, as does the farmer, that the problem of agriculture is not now a question of increased production, but rather a question of marketing at a profit the crops now being produced; likewise, that too often the application of science to farming is not practicable. Science generally increases cost of production, and the market value of an increased quantity does not justify the increased cost.

TOO MUCH SPECIALIST

Science dictates that liberal application of phosphate rock shall be applied to the soil. No one will dispute that increased production follows, but to make the application an expenditure of from $10 to $20 an acre. The average farmer is not in position, being already reavily burdened with debt, to assume this new obligation The Demonstration or Extension Service is the medium through which the Department of Agriculture and state institutions are dishing out to the farmer large

(Continued on page 21.)

Land Clearing Crew Silence the Wail of the Stump Land Farmer

UP in Presque Isle county a week ago a gang of stalwart young men wrestled with dynamite and stump pullers, clearing land of stumps and blasting ditches through swamps. It was the land clearing crew of the M. A. C., which had heard the "wail of the stump land farmer" and sent its picked crew of specialists on a tour through the upper and lower peninsulas to instruct farmers on the cheapest and best ways to clear land.

The tour started in the upper peninsula in the early part of September, worked its way down the Michigan Central to Bay City in the lower peninsula, and then headed back north on the Detroit & Mackinac. In charge of the tour was Mr. Larry F. Livingston—land clearing specialist for the M. A. C., who was accompanied by a corps of men trained in the operation of stump pulling devices and the handling of dynamite. The railroads mentioned co-operated with the M. A. C by furnishing cars and transportation.

Thirty-two schools or demonstratons constituted the tour in the lower peninsula. At convenient points along the rights of way of the co-operating roads, the land clearing train was shunted off on a side track and stump pullers, tractors, dynamite, and last but not least, "Paul Bunyan's" powerful nammer, quickly unloaded and transported to a nearby site where stumps were to be pulled or ditches dug.

A single blast of dynamite tore this perfect ditch through a swamp.

They split 'em like this with dynamite, then yank 'em out with a tractor.

Theory had no place in the operations. Only practical machinery, explosives and home-made devices which are adaptable to conditions found in Northern Michigan were used.

In removing stumps, the land-clearing specialits explained to the farmers who attended the schools why different methods are employed in different cases. Frequently, they say, farmers will use a lot of dynamite in removing a stump which could just as well have been yanked out with a hand puller, while at other times they will waste a good many hours trying to pull a stump with a hand puller which was never meant for such a job when a little explosive would have done the trick much quicker and better.

The same thing is true in the making of ditches. Often it is more practical to employ a dredging machine, but in a great many cases where it is difficult for a dredging machine to work, dynamite is the better agent to use.

In blasting a ditch at Otsego Lake, ten feet wide and three feet deep, 40 per cent nitroglycerine was planted two feet apart in double rows, and the dynamite cap placed near the center of the charge. The concussion resulting from the firing of the single stick of dynamite set off all the others simultaneously and water, mud and debris were blown to a height of 75 or 100 feet, leaving a ditch as clean-cut as though dredged.

Several thousand farmers attended the schools and learned many valuable lessons in the more efficient clearing of land and blasting of ditches.

Boom! If you want to know how the Germans changed the appearance of the European landscape, plant a few sticks of dynamite under the stumps in the back forty, and see them blown to smithereens!

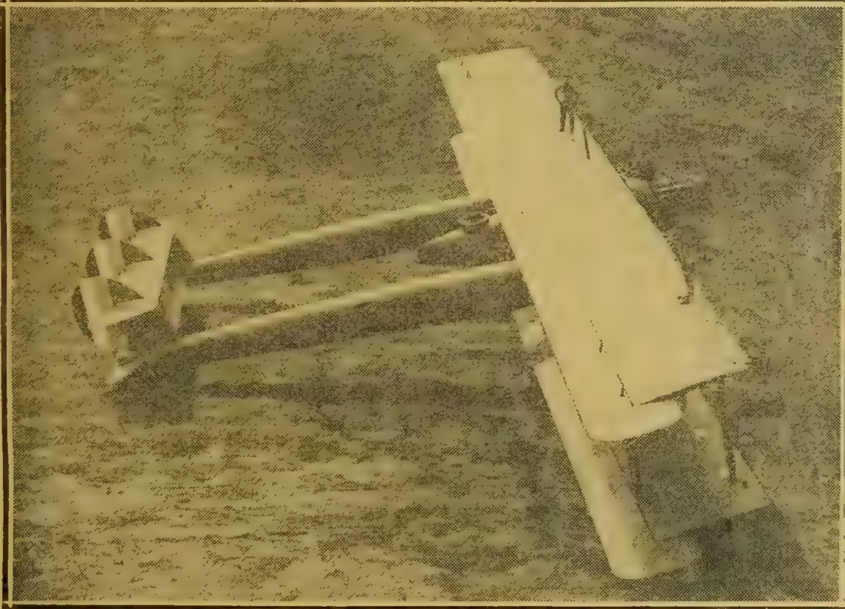
This county agent looks as if he was glad that the removal of stumps was going to give him more work to do in helping the farmers to produce crops on the reclaimed land at a profit.

PICTURES FROM FAR AND NEAR

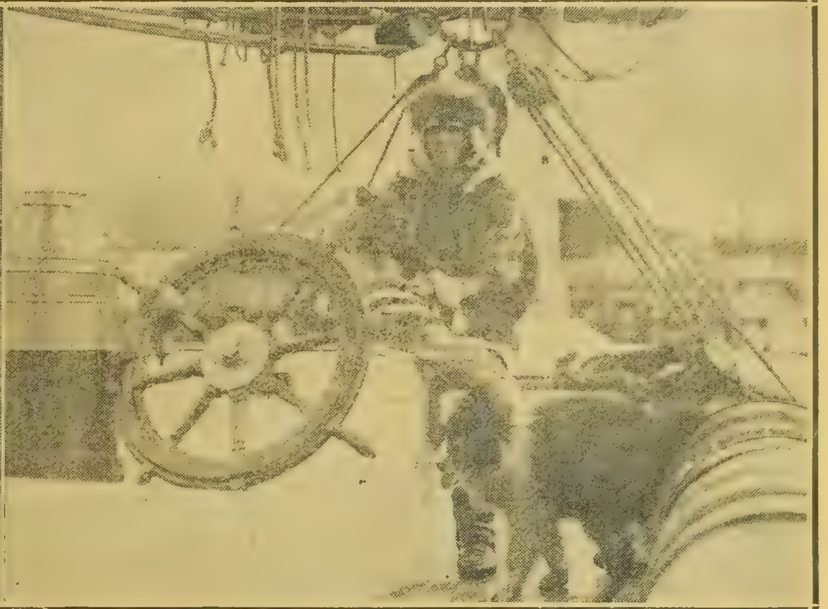
ONE HUNDRED AND TWELVE YEARS YOUNG—Mrs. Peshie Urdang who resides at the Daughters of Israel's home in New York City, recently celebrated her 112th birthday by giving a party at which all attending were over 100 years old. Mrs. Urdang is as active as the average person at sixty and reads without glasses.

UNCLE SAM'S FASTEST MAIL SORTER—This young man, Joseph W. Riley, a clerk in the central post office in Boston, claims the title of the country's speediest sorter of mail. His record is 31,815 outgoing letters sorted in less than 8 hours, which is an average of 66½ a minute, or over one a second. This beats the previous high record by over 11,000.

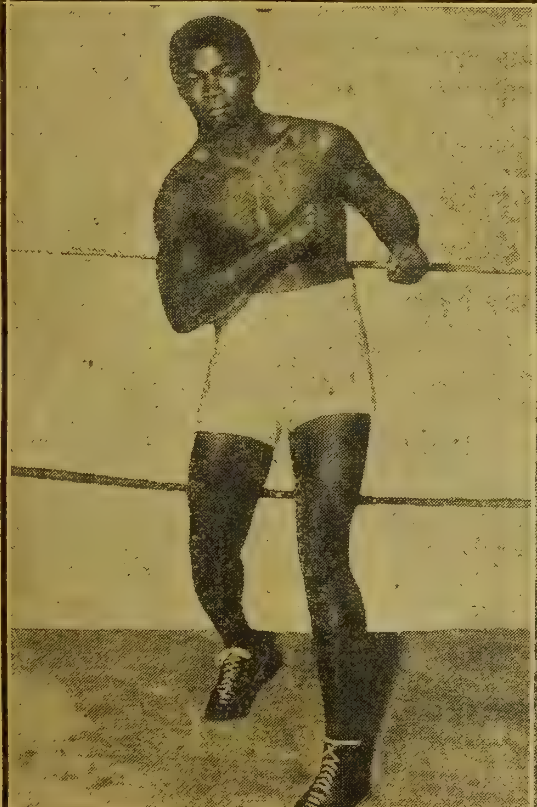
A PROMISING YOUNG POET—Though only seven years old little Josephine Blatt of Brookline, Mass., is writing her way to fame. She began composing poetry at the age of six before she knew how to spell. Josephine was never taught to write verse but grew to love poetry through her mother who was a public reader.



THE AMERICAN "OWL"—The "Owl" in this case is not a feathered bird but the biggest airplane in America. This super-plane carries a 4,000 pound bomb or its equivalent in passengers, has three fuselages, engines and propellers, and each fuselage is equipped with rapid fire guns. The wing spread of the "Owl" is 106 feet from tip to tip.



FROM THE LAND OF ICE AND SNOW—Capt. Donald B. MacMillan who recently returned to America from an expedition to Baffin Land snapped on board ship with two of his dogs. How would you like to own a suit of clothes like the Captain's? Just the thing to keep you warm when doing chores or other work about the farm this winter.



SENSATION OF PUGILISTIC WORLD—Battling Siki, Senegalese fighter, who surprised the world last month by knocking out Georges Carpentier thereby winning the heavyweight championship of Europe. The African battler has signed to meet Joe Beckett, English heavyweight, next month and is trying to land a bout with Jack Dempsey.

FOR-GET-ME-NOT DAY—Walter Ryan was "banged up" at Belleau Woods but he is still "carrying on" with his hands. He is shown above with Florence Fisher, making the tiny blue flowers which will be sold as emblems on For-get-me-not Day, November 4, to raise funds for the disabled American veterans. Miss Fisher is one of the few who have not forgotten.

CAN IT BE TRUE?—This is Iowa's most beautiful girl, Miss Bonnie Murry and she is of the real old-fashioned variety. She doesn't rouge, smoke or care for bobbed hair, and she knows more about cooking than she does flirting. Furthermore, she is not going to spend the $1,000 prize money she won for pretty clothes but to start a college education.

"The Farm Paper of Service"

Tell Your Friends About It

Farmers Service Bureau

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you. All inquiries must be accompanied by full name and address. Name not used if so requested.)

OWNER vs. RENTER

I rented my house last April and during August we had trouble over the lock on my granary. I threshed and put my 200 bushels of wheat in the granary which he claims he rented with the house and which I said he could use until such time as I needed the room. I locked the granary up after the wheat was stored there and he tore the lock off and entirely battered it so it was of no use at all. We had words and I moved the wheat at once and now I want to get him out. When I gave him the receipt for August rent I simply requested him on the bottom of receipt to vacate by September 15th. He did not pay rent in advance, did not have money when he moved in and I thought him honest and I felt sorry for him. I want to get him out right away if I can. What is best for me to do and how. —B. P, Armanda., Mich

—It would be best to consult a competent attorney. You appear to be the victim of misplaced confidence. Your letter does not state how long you rented for. I assume that the lease was not in writing. Your note at the bottom of the receipt may be notice to quit but all such facts should be stated to counsel who will tell you what to do and probably have to ask the aid of the court to remove your tenant if you now have a right to have him removed.—Legal Editor.

BOY'S FATHER MISSING

I am writing to you about a boy who came to our place from Huntington, West Virginia, in search of his father whom he has not seen for nine years. His uncle and grandmother are dead. The boy's name is Clarence Cannoy. His father's name is Rush Cannoy. The last trace of him was at I. Stevenson's logging camp near Gladstone in the upper peninsula. He left there about a year ago. The father used to work for me and the boy came to see if I knew where he was. I did not, so am writing to you to see if we can find him through your paper as others have had such good success.—A. Bert Woodward, Vanderbilt, Mich.

CONTRACTOR MUST PAY MEN TWICE EACH MONTH

Is a contractor doing a road job for the State obliged to pay the men every two weeks. How could a person compel him to pay?—H. F. M., Harrison, Michigan.

—I call your attention to Act 59 of the P. A. of 1913 which is Comp. Sec. 5583-5586 inclusive of the Comp. Laws of 1915, which provides that every contractor engaged in public work shall pay his employees twice each month.

Sec. 3 of the same act provides the penalty for failure to comply with the provision of the act by way of adding 10 per cent of the wages due the employee, which sum may be recovered as liquidated damages for such failure to pay. This of course is subject to the other provision of the law which must be complied with and which you will find contained in the above reference.—State Highway Department.

DESTROY SUMAC

I would like to know the best way to destroy Sumac. Thank you.—R. F. P., Hastings, Mich.

—No experiments have been made recently on the extermination of Sumac, but very extensive experiments were made last year and this year on the extermination of barberry. I think beyond doubt the results of these experiments would apply to Sumac. After trying various sorts of chemicals, the most satisfactory results were obtained, and at least expense, by the use of common salt. For this purpose the coarse sort used by the commercial ice cream manufacturers should be used, not the fine crystals as these dissolve too rapidly. It is best to chop the plants off at or near the level of the ground and put the salt on the cut stubs and around these at a distance which varies with the original size of the shrub. A shrub 2 to 3 feet high would probably be killed by salt spread over a radius of 18 inches from the stem. One 4 to 5 feet high would probably require the salt to be spread for a radius of at least 3 feet. An abundance of salt must be used,—a large plant of the size just mentioned would require about 6 to 10 pounds. If applied in the fall a portion of the salt will remain undissolved until spring so that the action will be gradual but continuous. If fine salt is used it dissolves quickly and soon leeches out. Of course the salt will destroy the usefulness of the land for the following season, but will probably be out of the way by a year after that.

It is probable that in many cases it would be cheaper to pull out the plants by horse labor than to try to salt them out.—E. A. Bessey, Professor of Botany, M. A. C.

WILLING PROPERTY

Can a man will his property to his wife away from his brothers and sisters in Michigan, no children?—M. C. B., Vermontville, Mich.

—A man may will his entire property to his wife and exclude his brothers and sisters if he is mentally competent and no undue influence exits, by complying with the requirements of the law in the execution of the will.—Legal Editor.

MUST KEEP HIGHWAY OPEN

Can a private individual bank logs on the highway? My team became frightened at seeing a pile of logs on the highway and before I could quiet them down again one of them was injured and I wish to know if I can collect damages? Also, if it is against the law to bank logs on the highway I would like to know who to report it to. Thank you.—Reader, Kent County, Mich.

—No private individual or corporation have a legal right to bank logs on a public highway so that they will interfere with public travel. As to whether you could collect damage for injury to your horse this would be a question of facts to be passed upon by a jury after hearing all the evidence in the case. Ordinarily however, I would say that there is an action for damages for such injury. The responsibility of keeping the highway open rests upon the township highway commissioner and chapter 7 of the Highway Law provides the method to be followed by your commissioner to compel the people to remove piles of logs or other matter which may be placed as an encroachment on the public highway.—State Highway Department.

LAW REGARDING HUNTING

A and B each own forty acres adjoining with no fence between. There is a woodlot across one end. A does no hunting and will not allow anyone to hunt on his land, Must he post his land or will a notice published in the county newspaper be sufficient?—L. D. H., Hastings, Mich

The law provided that; "no person shall hunt with firearms or dogs or in any manner in any public park or public game preserve at any time. No person shall hunt with firearms or dogs or in any other manner on enclosed land of another or upon any farm land or farm woodlot connected therewith when notices have been posted on such land by the owner or leasee therein forbidding hunting thereon" If the woodlots are in connection with the farm land and have been posted no one would have a right to hunt thereon. The printing of notices in a public paper is not provided for in the statute. But I am of the opinion that if the person saw the notices in the paper it would be equivalent to the posting on the land.—Legal Editor.

SHARE OF PROPERTY

My stepfather and my mother own real estate. At mothers death, please tell me if I come in for real estate for mother. I claim the property. My stepfather bought the property and owns the deed. Can my stepfather's mother claim my mother's claim? When my mother married my stepfather I was two years old. If I come heir to property for mother's claim and I make my home with them and I am 31 years old and never help him, can he hold mother's claim for my board? —W. H. J., Alpena, Michigan.

—If the real estate is in your mother's name you would inherit it but if in your stepfather's name you would not. Your stepfather's mother, if no other heir nearer, would inherit your stepfather's real estate if he should die before his mother. Unless here was a bargain to pay your board and you lived with your mother you would not be liable for board as it would be presumed ordinarily that you lived with her as a member of the family. There are many questions that would have to be answered before the property rights could be determined from the way you have suggested the property.—Legal Editor.

NOT ENTITLED TO VOTE OR HOLD OFFICE

Can a man vote or hold any office in Michigan who took out his first naturalization papers in another state previous to the 8th of November, 1894?—H. F., Clare, Mich.

—I would be of the opinion that if he was not a resident of the state of Michigan two years and six months before the 8th of November 1894, and had not otherwise completed his citizenship in the United States he would not be entitled to vote and hold office in Michigan.—Legal Editor

MARRIES BEFORE BEING DIVORCED

A certain man married a man under the impression that he was a divorced person, but when the truth was found out, he had not obtained the divorce. Also he married under an assumed name. Would this marrage be held legal in the eyes of the law, or could this girl marry again without going thru any court preceedings? The girl left the man immediately upon finding out she had been deceived. If she should get married should she assume her maiden name or take the name of the man she thought she was marrying? D. E. M., Grand Rapids, Mich.

—You do not state whether the girl left the man before or after he had his divorce. You say she left him as soon as she discovered it but I can not tell whether the discovery was before or after the divorce became operative. It would be dangerous for the girl to act on the theory that she was not lawfully married at the time she left him as there are a number of things to be considered that are not stated in the inquiry. It is advisable for her to ask for a divorce or an anullment of the marriage. If she employs competent counsel he will inform her which to proceed under.—Legal Editor.

LEVYING AGAINST PERSONAL PROPERTY

I am enclosing a notice from the chairman of our township board, and would like to know if there is any such law as he mentioned. Also, why do these roads have to be made when they are not much benefit to farmers, yet the farmer must really what he ought to have and and needs very much to pay for these unnecessary things Am a subscriber to M. B. F.. and sure like it fine, hard to tell which part I like best. —Frank Donaldson, Isabella county,

Resolution of the Millbrook Township Board

"Whereas the funds in our township have become depleted by the return of $6690.00 in the year 1920 and $5300. in 1921, of taxes not paid, and the township being compelled to pay in full on all Covert and Trunk Line Roads, and

"Whereas, under the statue, and the decision of the Supreme Court, it is the duty of the Township Treasurer to levy on personal property of anyone to whom taxes are assessed, if such person has personal property, and sell the same for the taxes and personal tax, and

"Whereas, the Supreme Court has not only held that the Township Treasurer owes a duty to the public

(Continued on page 9.)

THEY HAVE EARNED RE-ELECTION

CHAS. E. TOWNSEND
For UNITED STATES SENATOR

ALEX. J. GROESBECK
For GOVENOR

Republicans of Michigan Are Proud of Their Records; Let the Facts Speak for Themselves

A RECORD OF ACHIEVEMENT

Sen. Capper, recognized leader of the agricultural bloc, says of Sen. Townsend: During my three years' stay in Washington I have come to regard Sen. Townsend as one of the most INFLUENTIAL and USEFUL members of the Senate. HONEST, COURAGEOUS and ABLE, his influence has increased with the length of his service until he is recognized as one of the leaders on the Republican side of the Chamber.

Among the many measures of benefit to agriculture which Sen. Townsend aided in enacting into law, are the following:

The Co-operative Marketing Law.

Grain Standard Acts.

Federal Farm Loan Act, and many beneficial amendments.

Increased annual appropriation for agricultural experiment stations.

Act to enable secretary of agriculture to investigate and report upon the organization and progress of farmers' institutes and agricultural schools.

Act for acquiring and diffusing among the people of the United States useful information on subjects connected with the marketing and distributing of farm and non-manufactured food products.

Act to make investigation relating to the transportation, storage, preparation, marketing, manufacture and distribution of agricultural food products.

Act directing the War Finance Corporation to take certain action for the relief of the present depression (1921) in agricultural sections of the country.

An act for co-operative agricultural extension work.

Act preventing the manufacture, sale of transportation of adulterated, misbranded, poisonous, or deleterious foods.

Act to provide that there shall be in the year 1925, and once every ten years thereafter, a census of agricultural and live stock which shall show the acreage of farm land, value of domestic animals, etc.

Act providing that labor, agricultural and horticultural organizations shall be exempt from taxation.

AUTHOR NATIONAL HIGHWAY BILL

Of supreme importance to the farmers of Michigan are the efforts of Sen. Townsend to secure Federal aid in the building of trunk line roads in the various states. He is the author of the National Highway Bill which released for Federal Aid Roads the sum of $75,000,000 for the year, 1922. In addition, the postoffice Appropriations Bill largely through Sen. Townsend's influence, provides federal aid to state highways for three years, viz: $50,000,000 for 1923; $65,000,000 for 1924, and $75,000,000 for 1925. This Federal Aid means a great deal to the farmers of Michigan. It brings markets nearer to the producer. It lowers transportation costs. It will make farming more profitable.

FATHER OF DEEP WATERWAYS

Perhaps the greatest service of all which Sen. Townsend has rendered the dear old state is his work in behalf of the Great Lakes to Ocean Deep Waterways project. It was Sen. Townsend who introduced and secured the passage of the bill which authorized the President to enter into agreement with Canada and Great Britain for Joint construction of the waterway, the culmination of which will bring Michigan to the threshold of the world's markets and make the farmers free from their bondage of the railroads and exhorbitant freight rates.

Sen. Townsend's tireless efforts in behalf of the St. Lawrence waterway project entitles him to the thanks and the support of all who will benefit by the project and that means ALL MICHIGAN.

FARMERS, IF YOU WANT TO PROTECT YOUR BEST INTERESTS, BE GUIDED BY SEN. TOWNSEND'S RECORD OF ACHIEVEMENT FOR AGRICULTURE AND HELP TO RE-ELECT HIM ON NOVEMBER 7th.

A BUSINESS ADMINISTRATION

Gov. Groesbeck was elected in 1920 pledged to a program of consolidation of state departments and economy in their management.

As a result of his efforts the State Administrative Board was created and given wide powers over the various state departments. Hitherto every State Department was a separate government unto itself. It was responsible to no central authority. It was about like your farm would be if you divided it up according to its different branches of dairying, fruit growing, hog raising, etc., and putting a man in charge of each branch who was his own boss and not accountable to you or anybody else.

Gov. Groesbeck thought that some one individual,—and that individual the Governor who is elected by all the people,—should know how the people's business was being carried on in the several branches of state government.

That is the purpose of the State Administrative Board which consists of the Governor and the heads of the departments. They meet at regular periods and indulge in a round-table discussion of the needs and plans of the different departments. Thus, the Governor learns all about what is going on in each department and each department head learns whats is going on in every other department.

Result: There is now co-ordination in place of division; order instead of confusion; economy in purchasing and administration where there was often extravagance and duplication.

THE STATE OF MICHIGAN IS BEING RUN ON THE BEST BUSINESS BASIS IN ITS HISTORY, AND GOVERNOR GROESBECK IS ENTITLED TO THE CREDIT.

GOV. GROESBECK NOT RESPONSIBLE FOR HIGH TAXES

Gov. Groesbeck's political enemies charge him with extravagance and blame him for high taxes. AGAIN, LET THE FACTS SPEAK FOR THEMSELVES.

The State Tax Levy for 1922 is the LOWEST since 1918.

The general tax levy for

1919	was	$17,430,895.73
1920	”	17,378,328.35
1921	”	20,441,333.79
1922	”	17,300,843.94

The increase for 1921 was due to an interest item of nearly two and a half million dollars for interest on Soldier Bonus bonds which the people voted; to a deficit of nearly a quarter of a million dollars in Normal School appropriations; an increase in the operating expenses of the University and the M. A. C., requiring the levying of higher mill rates.

As a result of Gov. Groesbeck's economy program which was put into effect AS SOON AS HUMANLY POSSIBLE after his election, there has been a NET DECREASE in administration and operation expenditures of $1,839,617.63, a DIRECT SAVING to the taxpayers.

The savings in administration and operation under the simplified governmental machinery provided by the Legislature in 1921, apply to almost every state agency. As an instance, in 1920-21 the state oil inspection cost $82,000, and the fees collected were nearly $81,000. This year the fees were $100,166.30 and the cost of inspection was only $18,000. AND SO IT HAS BEEN ALL THE WAY DOWN THE LINE.

Will you, Mr. Taxpayer, believe the stories of Gov. Groesbeck's political enemies WITHOUT INVESTIGATION, or WILL YOU BE GUIDED BY THE FACTS?

Vote for Chas. E. Townsend for United States Senator and Alex. J. Groesbeck for Governor, on the Republican Ticket on November 7th. They Have Earned Re-election.

What the Neighbors Say

THE GASOLINE TAX

Editor's Note:—The proposal to put a tax on gasoline is one in which every user of the fuel should, of course, be interested. Such views as we have been able to get from our readers indicate that the majority of them favor such a tax, but probably not all who favor the tax own automobiles or other gasoline burning devices. The automobile associations are opposed to the tax, and the following communication from Mrs. Sidney D. Waldron, president of the Detroit Automobile Association, contains the reasons. We should like to have a thorough discussion of the subject in these columns and invite letters from our readers. All communications will be published without comment except as may be necessary to correct a misstatement of facts.—Editor.

I TAKE pleasure in sending you, under separate cover, marked copies of the Detroit Motor News, setting forth our reasons for oppos-the addition of a gasoline tax, on top of the present $7,000,000.00 paid by the motorist in license fees, etc. These articles explain themselves. I would particularly call your attention to the article setting forth the fair market value of all motor vehicles in the State of Michigan, as of December 31st, 1921. This is the first time this data has ever been worked out, and the conclusions are worthy of recognition in your publication.

The Detroit Automobile Club believes that the part of road building, which is permanent—that is, subgrade, drainage, ditches, bridges, etc., etc.,—or in fact all of the road except the surface, is an integral asset to the community, county, state and nation. We believe that the cost of this permanent construction should be spread over the community, county, state and Federal Government, as their respective interest may be determined.

We believe that hard-surfaced roads, such as are today being laid down by the Michigan State Highway Department, may, under proper conditions of maintenance, be considered as permanent and the expense pro-rated accordingly over quite a long period.

We believe there is a great difference between the use of a road, and the wear of a road. We have a great many miles of concrete roads in Michigan. A million Fords a month may run over these roads, and use them to their full capacity with no appreciable wear, except to the Fords. A single vehicle, loaded to the fifteen ton limit allowed by our state law, would in a single trip subject the road to infinitely greater stresses and destruction than these Fords in a generation. The consumption of gasoline bears practically no relation at all to the destruction of roads. It is a measure of use, not a measure of wear.

We believe that the present law is the best law. It reaches every man whose motor vehicle uses the highway. It imposes a tax burden in proportion to horsepower and weight. It is true that since this law was enacted the use of heavy motor vehicles upon our state highways has developed and increased to a point where the law may perhaps require an amendment to enable it to properly fit present conditions.

There is no condition, however, that will be met by the proposed gasoline tax, that cannot be better met by amending the existing statute.

For quotation in brief the above is summed up as follows:

1. Road construction may be divided into the sub-grade, sub-grade ditching, bridges, culverts, etc., which are permanent, and the road surface, which may or may not be premanent.

2. All that part of road construction which is permanent, and consequently is an integral asset to the community, state and nation that it serves, should be paid for by each in proportion as their interest is determined. Maintenance of the road is an expense that should be paid for by those who make the maintenance necessary.

Road wear may accompany road use, but road use does not necessarily mean road wear. A million Fords passing over Woodward Avenue between Pontiac and Detroit would represent enormous use, but no wear, except to the Fords. A single trip of a fifteen-ton load, as allowed by our State law would represent a dozen times more injury to the road than could be done by all the Fords in existence.

4. Measurement of gasoline consumed bears no relation at all to highway destruction.

5. Our present law is an excellent law in principle. Anything that can be done with the gasoline tax law can be done with our present law. If our present system, which reaches the vehicle itself, is not at present spreading the burden fairly where it belongs, then it should be amended to work fairly and uniformly, but we cannot endorse a new source of revenue.

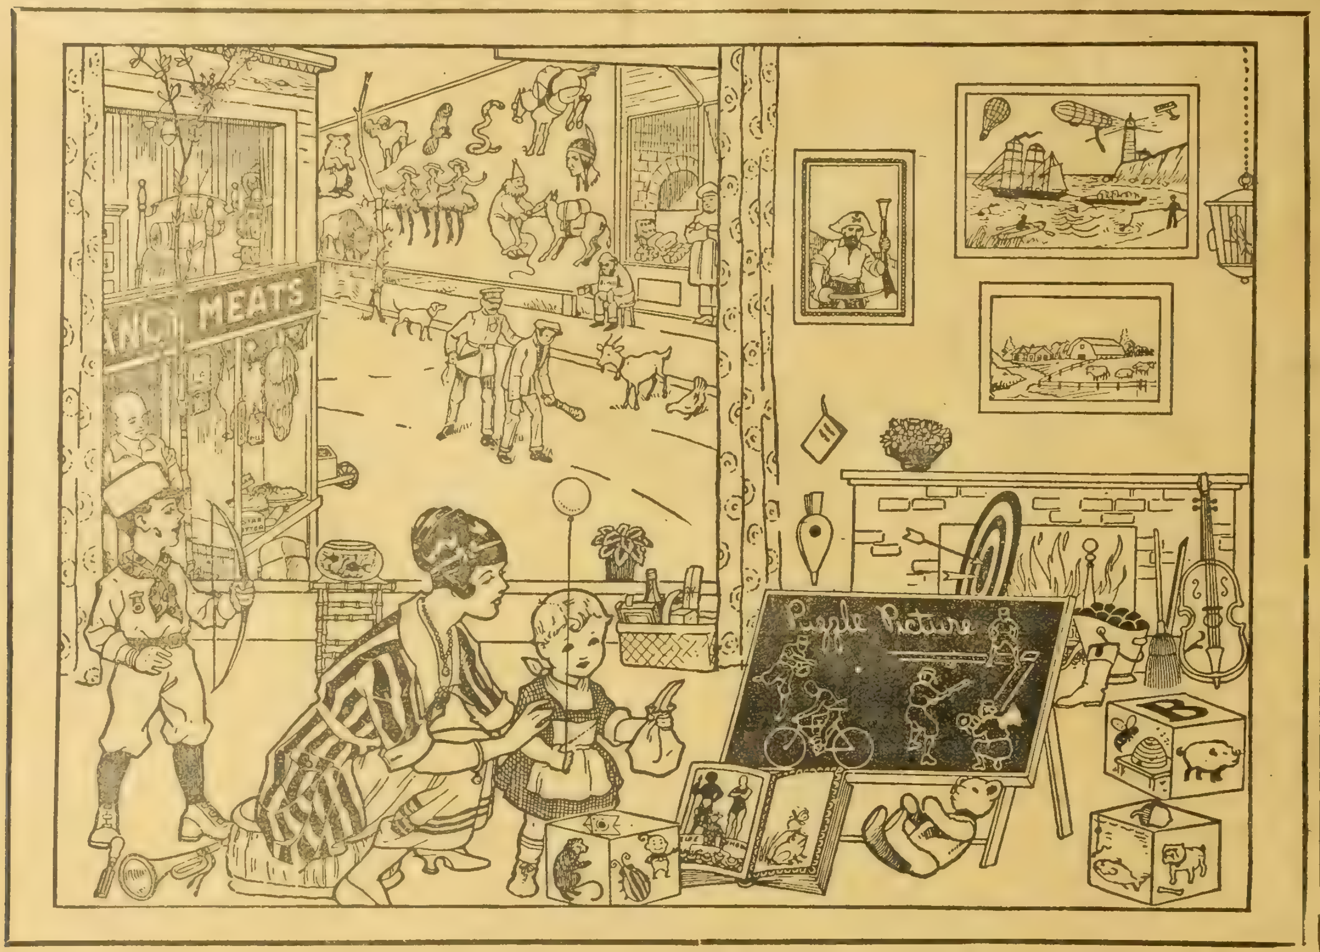
6. Motor vehicles in Michigan at the present time are putting into the State Treasury, in license fees, etc., 5.1 per cent of the fair market value of these motor vehicles. This is at present more than sufficient to meet and does provide a considerable sum to be applied against new construction.—Sidney D. Waldon, President, Detroit Motor Club.

THE MONEY QUESTION

I NEVER had a chance to go to college or even to patronize the little school house very much, so would like to ask your opinion on a few things.

I claim the Civil war debt was never paid. It was fought on a cheap dollar and paid on a dear one. If I borrow 20 bushels of wheat of you and you said when I got it last harvest wheat was $3, but now it is only $1 or less, then I will have to pay back three bushels for each one I borrowed. In other words if I borrow $100 for any length of time and the lenders juggle the debt so that I am paying back two dollars for one, what extra money they get from my note or mortgage belongs to me, and I and my heirs will be paying as long as the world stands. I am just trying to tell why the debt from the world war will never be paid. It was fought on a 25-cent dollar and the debt must be paid with a 100-cent dollar.—B. W. B., Fergus, Mich.

—We try not to think too much about this money question. It's hard on the brain. Causes night



HOW MANY OBJECTS CAN YOU FIND IN THIS PICTURE THAT BEGIN WITH "B"?

You and the Family take tonight off and find all the objects in this picture that begin with "B"!

Can YOU find a Book, a Bear, a Ball, a Badge in this Puzzle Picture? If you can, you can find all of the correct objects and if you do, you will be in line for one of the many CASH prizes The Michigan Business Farmer will distribute after November 25th., 1922.

Thats the way to get started in this friendly contest, in which the prizes run up to a First Prize of $500.00 in cash!

Every member of your family can help you, but the list must be sent in by one person. If you did not read the announcement on page 11, of the September 30th., 1922 issue of The Michigan Business Farmer, look it up or write a postal today for a copy of all the rules and prizes—sent free on request.

Don't send in your list of objects, until you have read all the rules.

But you can start tonight, even if you haven't all the rules, to write down the names of the objects which appear in the picture and correct your list before you send it in, after you have read the rules.

YOU DO NOT HAVE TO SPEND A PENNY OR DO ANYTHING EXCEPT FIND THE MOST CORRECT LIST OF OBJECTS BEGINNING WITH THE LETTER "B" TO WIN A FIRST PRIZE!

But look up the September 30th. issue or send for a proof of the full page announcement which appeared in that issue, which we will gladly send you free.

THIS IS OUR SECOND
PUZZLE CONTEST

$500
FIRST
PRIZE

Last year Mrs. A. E., Tannar Spring Harbor, Michigan, was a First Prize winner, in a contest exactly similar to this one—read what she wrote us after she received the prize money:

"Spring Harbor, Mich., Jan. 29, 1922. Mr. G. Slocum, Mt. Clemens, Mich. Dear Sir—I am pleased to answer your questions concerning my method of winning first prize in 'S' contest, and hope it will be of benefit to others in answering similar puzzles.

So many have congratulated me on my good luck that I have wondered if it was just that I would like to think the time and thought I put on it had some effect.

I have had letters from people asking me how I arranged my list and the number of words it contained, I had no special arrangement except as it was most convenient for myself. I divided the picture into groups and wrote down the words accordingly. We are farmers trying to pay for our farm on contract and this year has been discouraging, so you may know the prize money was most acceptable. It at least gave us courage to keep working. I have wanted a piano ever since leaving home but haven't felt that we could buy one until we are sure of our home. I didn't want to 'fiddle while Rome burned' so I have no piano yet but have a lovely slip of paper which says something about one year from date and interest at five per cent, so I am consoled.

Most people have the opinion that the puzzle contests are not conducted honestly so I would like to assure those interested that I am entirely a stranger to the staff of the Business Farmer and that they were most courteous and did exactly as the rules promised. With many thanks, Yours truly, Mrs. A. E. Tannar.

All you have to do to get in line for the prize money is to find all of the objects in the above picture that begin with "B"—start right away and if you cannot find the September 30th, issue in which the full announcement appeared, write to-day to CONTEST MANAGER, OF THE MICHIGAN BUSINESS FARMER, MT. CLEMENS, MICHIGAN.

mare, lands people in the insane asylum etc. There are no doubt among our readers any number of folks who have made a study of such financial knots as this and will be glad to throw some additional light on the subject. The question is, "Will the world war debt ever be paid? If not, why not?"—Editor.

"LET'S FIX OUR PRICE," SAYS EATON FARMER

HERE'S a theory I have been thinking about and would like to see discussed in M. B. F. Every farmer would have to help make the plan work, but why not set a price on our stuff and no one sell for any less? The details of the scheme would be as follows:

1. The price would, of course, be a profitable one, based on the average cost of production, interest, taxes, unavoidable losses over a period of years, management, etc.
2. Every farmer equipped to store about two years' crops,—letting them on to the market only so fast as the market would absorb them at the set price. Every man would get his share, not some men all and others none.
3. An organization strong enough to hold every farmer to the agreement.
4. Tariff just high enough so that no goods could be sold at less than farmers' price.
5. In case of a bumper crop,—store it. Sell part this year, some more the next, just enough to supply the trade. Let the farms rest, fix the fences, etc., go camping, anything you want to, you still have the stuff to sell and at a profit. When your supply gets low, raise some more. The country will always have a surplus in times of need or disaster or crop shortage which cannot harm the farmer. The farmer would be in a position to take advantage of big crops instead of ruining his market. If a man could not produce a crop at the set price let him raise something else.
6. An arrangement to get the stuff to the consumer at a reasonable commission and transportation charge. Abolish speculation and gambling.
7. Changing conditions might make it necessary to change the price after each period of years, 5 or 10, taking into consideration the supply on hand and the changed cost of production.
8. Nothing but best quality of goods would be put on the market.
9. The surplus of all perishable goods would be preserved to be marketed in years of scarcity. There would be a larger consumption as prices would never be beyond the reach of anyone. It would be up to the farmer to keep their cost of production below the set price. I believe a family as fast as able ought to stock up with about a years supply of food and other things so as to be supplied in case of disasters of an kind.

This plan needs much perfecting I know and will be glad to explain or add to upon request so far as possible. Others perhaps could improve it more than I. Let me know what you think of it at least. No big money concern to go broke, just our dues to keep the organization to direct the affairs—Luman Klink, Eaton county, Mich.

—It's a great idea. I can see but one objection to it. It won't work. It would be a wonderful thing for the farmer,—for the country,—if your theory could be put into practice, for it would insure continuous prosperity to agriculture, and to all. But there are several reasons why we don't believe the scheme would work. One of them is this: Necessity is the first law of nature. There are plenty of farmers who can afford to hold their crops until they want to sell them—or until the consumer is willing to pay the price they want for them. But just think of the hundreds of thousands who can't wait Think of the loans that have to be paid, the interest on mortgages that must be taken care of, clothing for the children, supplies for the farm,—a score of demands upon the farmer's purse which must be met just as soon as the crops can be harvested and sold. So then, I think, the necessity of the many would force them to sell often at prices below that agreed upon as the fair and profitable price. Experience has taught us that it is hard to make sacrifices to gain a desired end. How much harder it would be to keep them together when immediate wants seemed more important than ultimate gain? Another reason why the scheme would probably fail is because few farmers can agree on the cost of production. The level at which the majority of farmers can produce a crop at a profit is too low for many and too high for others. While a set price would automatically eliminate those whose costs are higher what will you do with those whose costs are lower? What possible inducement can you offer a man to hold a crop for a set price which he may never receive if he can secure a profit at a less price of which he is sure? Variations of the ideal marketing plan of which you and others have dreamed will some day be seen but they will be accomplished by education and the willing co-operation of the majority instead of by any hard and fast rules which may work a hardship on many. We would like to hear from other readers on this subject. —Editor.

LEVYING AGAINST PERSONAL PROPERTY

(Continued from page 6.)

to collect all taxes assessed on his roll if possible, but if he neglects to do so, where he can levy and collect, he is liable to damages to any person who might have a claim against that particular piece of land, therefore

"Be it Resolved by the Board of Millbrook Township, Mecosta County, Michigan, that we expect the Treasurer to collect all the taxes assessed on the roll for 1922 and therefore we will hold him responsible for all taxes where he could have levied on any personal property. The cost of levy and sale coming from the property so attached.—M. J. Lambert, Chairman of Millbrook Township Board.

—Yes, the law provides that in case of failure of a land-holder to pay his taxes within the prescribed time, the treasurer may levy against his personal property. The tax problem has reaches serious proportions. Farmers must have relief and soon. The Covert Road law is blamed for about 90 per cent of the high taxes and there is a concerted movement afoot to bring about its repeal at the next session of the legislature. The State Highway Commissioner is opposed to its repeal, and he exerts a powerful influence in legislation on road affairs. However, he has announced himself in favor of amending the law to reduce the burden on property owners who are assessed for benefits, and it is probable that steps will be taken at the next session to bring farmers relief. Likewise additional sources of revenue will be sought and likely secured for financing the construction and maintenance of trunk line roads As you say, the benefit of trunk line roads to farmers is questionable, and legislation will be introduced to make the automobile pay a much larger share of the cost of these roads than it is now doing.—Editor

IS ELIGBLE FOR WIDOW'S PENSION

I am writing you in regard to the widow's pension. I am not a widow, but the father has deserted the children and I am not well enough to work out much, and have to depend on other people and what washing I can get to do. I have two girls. One is 14 years and the other 6. The oldest is not strong, and has to be in school. She is only in the sixth grade. The little girl needs doctor's care now on account of kidney trouble but I am not able to hire a doctor No ones knows where their father is. Will you please let me know if I am eligible to a pension and if so who would be the proper authorities to apply to?—Mrs. C. W. Wexford County, Mich.

—From the facts given I am of the opinion that you are entitled to the so-called "widow's pension." Go to the Judge of Probate at Cadillac, your county seat, and relate the facts to him. If you can convince him that you come within the act mentioned he is authorized to grant you a pension of not exceeding $2 a week for each of your children.—Editor.

100 Cents in Protection
for Every Dollar Spent

That is what you get when you buy MULE-HIDE Roofing and Shingles.

Value! More worth, and worth more because of it.

Why?

Because we take longer in the making of MULE-HIDE Roofing and Shingles.

Because we put into MULE-HIDE products raw material that cost us more.

You pay a little more for MULE-HIDE because we pay more for the stuff that's in it.

Frankly, the difference in price between quality and inferiority is very slight.

There is only one MULE-HIDE. Insist on the old and reliable trademark when you buy roofing and shingles.

The Hunted Woman

By James Oliver Curwood

Michigan's Own and America's Formost Author of the Great Northwest

SYNOPSIS

JOANNE GRAY is one of the passengers on the train that connects "The Horde" with the civilized world. For eighteen hours she has been riding steadily bound for Tete Jaune Cache, the home of "The Horde", where she has no friends and all will be strange to her. The train stops at a town composed of several tents and learning that the train will not leave for two hours she goes in search of food and a bath. She is directed to "Bill's Shack" and it is here where she meets Bill Quade, who not only owns and operates "Bill's Shack" but is also leader of the lawless men of the town. Quade says he has a room she can rent and that he will show it to her. As they pass of the room a newcomer enters the doorway leading off the street. The newcomer is John Aldous, a well known novelist. He sees the strange girl enter the place and believes she has made a mistake and as he stands in the doorway his eyes rest upon the curtained doorway through which the girl and Quade have passed. In but a moment the girl steps out her face flaming and eyes flashing. Quade follows her apologetically. He starts to offer the girl some money but before he can do so Aldous steps to the girls side and floors Quade with a terrific blow. Aldous hurries the girl away from the scene to the home of friends. He then asks the girl to be his guest at supper in his cabin. She accepts.

CHAPTER VI

SILENT, his head bowed a little, John Aldous stood before her after these words. A slight noise outside gave him the pretext to turn to the door. She was going to Tete Jaune—to find her husband! He had not expected that. For a breath, as he looked toward the bush, his mind was in a strange daze. A dozen times she had given him to understand there was no husband, father, or brother waiting for her at the rail-end. She told him that she was alone—without friends. And now, like a confession, those words had come strangely from his lips.

What he had heard was one of Otto's pack-horses coming down to drink. He turned toward her again.

Joanne stood with her back still to the table. She had slipped a hand into the front of her dress and had drawn forth a long thick envelope. As she opened it, Aldous saw that it contained banknotes. From among these she picked out a bit of paper and offered it to him.

"That will explain-partly," she said.

It was a newspaper clipping, worn and faded, with a date two years old. It had apparently been cut from an English paper, told briefly of the tragic death of Mortimer FitzHugh, son of a prominent Devonshire family, who had lost his life while on a hunting trip in the British Columbia Wilds.

"He was my husband," said Joanne, as Aldous finished. "Until six months ago I had no reason to believe that the statement in the paper was not true. Then—an acquaintance came out here hunting. He returned with a strange story. He declared that he had seen Mr. FitzHugh alive. Now you know why I am here. I had not meant to tell you. It places me in a light which I do not think I can explain away—just now. I have come to prove or disprove his death. If he is alive—"

For the first time she betrayed the struggle she was making against some powerful emotion which she was fighting to repress. Her face had paled. She stopped herself with a quick breath, as if knowing that she had already gone too far.

"I guess I understand," said Aldous. "For some reason your anxiety is not that you find him dead, Ladygray, but that you may find him alive."

"Yes—yes, that is it. But you must not urge me farther. It is a terrible thing to say. You will think I am not a woman, but a fiend. And I am your guest. You have invited me to supper. And—the potatoes are ready, and there is no fire!"

She had forced a smile back to her lips. John Aldous whirled toward the door.

"I will have the partridges in two seconds!" he cried. "I dropped them when the horses went through the rapids."

The oppressive and crushing effect of Joanne's first mention of a husband was gone. He made no effort to explain or analyze the two sudden changes that swept over him. He accepted them as facts, and that was all. Where a few moments before there had been the leaden grip of something that seemed to be physically choking him, there was now again the strange buoyancy with which he had gone to the Otto tent. He began to whistle as he went to the river's edge. He was whistling when he returned, the two birds in his hand. Joanne was waiting for him in the door Again her face was a faintly tinted vision of tranquil lovliness her eyes were again like the wonderful blue pools over the sunit mountains. She smiled as he came up. He was amazed—not that she had recovered so completely from the emotional excitement that had racked her, but because she betrayed in no way a sign of grief—of suspense or of anxiety. A few minutes ago he had heard her singing. He could almost believe that her lips might break into song again as she stood there

From that moment until the sun sank behind the mountains and gray shadows began to creep in where the light had been, there was no other reference to the things that had been said since Joanne's arrival. For the first time in years John Aldous completely forgot his work. He was lost in Joanne With the tremendous reaction that was working out in him she became more and more wonderful to him with each breath that he drew. He made no effort to control the change that was sweeping through him. His one effort was to keep it from being too apparent to her.

The way in which Joanne had taken his invitation was as delightful as it was new to him. She had become both guest and hostess. With her lovely arms bared halfway to the shoulders she rolled out a batch of biscuits. "Hot biscuits go so well with marmalade," she told him. He built a fire. Beyond that, and bringing in the water, she gave him to understand that his duties were at an end, and that he could smoke while she prepared the supper. With the beginning of dusk he closed the cabin door that he might have an excuse for lighting the big hanging lamp a little earlier. He had imagined how its warm glow would flood down upon the thick soft coils of her shining hair.

Every fibre in him throbbed with a keen and exquisite satisfaction as he sat down opposite her. During the meal he looked into the quiet, velvety blue of her eyes a hundred times. He found it a delightful sensation to talk to her and look into those eyes at the same time. He told her more about himself than he had ever told another soul. It was she who spoke first of the manuscript upon which he was working. He had spoken of certain adventures that had led up to the writing of one of his books.

"And this last last book you are writing, which you call 'Mothers,'" she said. "Is it to be like 'Fair Play?'"

"It was to have been the last of the triology. But it won't be now, Ladygray. I've changed my mind."

"But it is so nearly finished, you say?"

"I would have completed it this week. I was rushing it to an end at fever heat when—you came."

He saw the troubled look in her eyes, and hastened to add:

"Lets us no talk about that manuscript, Ladygray. Some day I will let you read it. At first I was unreasonably disturbed because I thought that I must finish it within a week from to-day. I start out on a new adventure then—a strange adventure, into the North."

"That means—the wild country?" she asked. "Up there in the North—there are no people?"

"An occasional Indian, perhaps a prospector now and then," he said. "Last year I travelled a hundred and twenty-seven days without seeing a human face except that of my Cree companion."

She had leaned a little over the table, and was looking at him intently, her eyes shining.

"That is why I have understood you, and read between the printed lines in your books," she said. "If I had been a man, I would have been a great deal like you. I love those things—lonliness, emptiness, the great spaces where you hear only the whisperings of the winds and the fall of no other feet but your own. Oh, I should have been a man! It was born in me. And I loved it—loved it."

A poignant grief had shot into her eyes. Her voice broke almost in a sob. Amazed, he looked at her in silence across the table.

"You have lived that life, Ladygray?" he said after a moment. "You have seen it?"

"Yes," she nodded, clasping and unclasping her slim white hands. "For years and years, perhaps even more than you, John Aldous." I was born in it. And it was my life for a long time—until my father died." She paused, and he saw her struggling to subdue the quivering throb in her throat. "We were inseparable," she went on, her voice becoming suddenly strange and quiet. "He was father, mother—everything to me. It was too wonderful. Together we hunted out the mysteries and the strange things in the out-of-the-way places of the earth. It was his passion. He had given birth to it in me. I was always with him, everywhere. And then he died, soon after his discovery of that wonderful buried city of Mindano, in the heart of Africa. Perhaps you have read——"

"Good God," breathed Aldous, so low that his voice did not rise above a whisper. "Joanne— Ladygray—you are not speaking of Daniel Gray—Sir Daniel Gray, the Egyptologist, the antiquarian who uncovered the secrets of an ancient and wonderful civilization in the heart of darkest Africa?"

"Yes."

She bowed her head.

Like one in a dream John Aldous rose from his chair and went to her. He seized her hands and drew her up so that they stood face to face. Again that strange and beautiful calmness filled her eyes.

"Our trials have strangely crossed, Lady Joanne," he said. "They have been crossing—for years. While Sir Daniel was at Murja, on the eve of his great discovery, I was at St. Louis on the Sengal coast. I slept in that little Cape Verde hotel, in the low whitewashed room overlooking the sea. The proprietor told me that Sir Daniel had occupied it before me, and I found a broken fountain pen in the drawer of that black teakwood desk, with the carved serpent's head. And I was at Gampola another time, headed for the interion of Ceylon when I learned that I was travelling again one of Sir Daniel's trails. And you were with him!"

"Always," said Joanne.

For a few moments they looked steadily into each other's eyes. Swiftly, strangely, the world was bridging itself for them. Their minds swept back swiftly as the fire in a thunder sky. They were no longer friends of a day. The grip of Aldous' hand tightened. A hundred things sprang to his lips. Before he could speak, he saw a sudden, startled change leap into Joanne's face. She had turned her face a little, so that she was looking toward the window. A frightened cry broke from her lips. Aldous whirled about. There was nothing there. He looked at Joanne again. She was white and trembling. Her hands were clutched at her breast. Her eyes, big and dark and staring, were still fixed on the window.

"That man!" she panted. "His face was there—against the glass—like a devil's!"

"Quade's!"

"Yes."

She caught his arm as he sprang toward the door.

"Stop!" she cried. "You mustn't go out——"

For a moment he turned at the door. We was as she had seen him in Quade's place, terribly cool, a strange smile on his lips. His eyes were gray, smiling steel.

"Close the door after me and lock it until I return," he said. "You are the first woman guest I ever had, Ladygray. I cannot allow you to be insulted!"

As he went out she saw him slip something from his pocket. She caught a glitter of it in the lamp-glow.

CHAPTER VII

It was in the blood of John Aldous to kill Quade. He ran with the quickness of a hare around the end of the cabin, past the window, and then stopped to listen, his automatic in his hand, his eye piercing the gloom for some moving shadow. He had not counted on an instant's hesitation. He would shoot Quade, for he knew why the mottled beast had been at the window. Steven's boy had been right. Quade was after Joanne. His ugly soul was disrupted with a desire to possess her, and Aldous knew that when roused by passion he was more like a devil-fish than a man—a creeping, slimy, and night-seeking creature who had not only the power of the underworld back of him, but wealth as well. He did not think of him as a man as he stood listening, but as a beast. He was ready to shoot. But he saw nothing. He heard no sound that could have been made by a stumbling foot or a moving body. An hour later, the moon would have been up, but it was dark now except for the stars. He heard the hoot of an owl a hundred yards away. Out in the river something splashed. From the timber beyond Buffalo Prairie came the yapping of a coyote. For five minutes he stood as silent as one of the rocks behind him. He realized that to go on—to seek blindly for Quade in the darkness, would be folly. He went back, tapped at the door, and re-entered the cabin when Joanne threw back the lock.

She was still pale. Her eyes were bright.

"I was coming—in a moment," she said. "I was beginning to fear that—"

"—he had struck me down in the dark?" added Aldous, as she hesitated. "Well, he would like to do just that, Joanne." Unconsciously her name had slipped from him. It seemed the most natural thing in the world for him to call her Joanne now. "Is it necessary for me to tell you what this man Quade is—why he was looking through the window?"

She shuddered.

"No—no—I understand!"

"Only partly," continued Aldous, his face white and set. "It is necessary that you should know more than you have guessed, for your own protection. If you were like most other women I wouldn't tell you the truth, but would try to shield you from it. As it is you should know. There is only one other man in the Rocky Mountains more dangerous that Bill Quade. He is Culver Rann, up at Tete Jaune. They are partners—partners in crime, in sin, in everything that is bad and that brings them gold. Their influence among the rougher elements along the line of rail is complete. They are so strongly entrenched that they have put contractors out of business because they would not submit to blackmail. The few harmless police we have following the steel have been unable to touch them. They have cleaned up hundreds of thousands, chiefly in three things—blackmail, whisky, and women. Quade is the viler of the two. He is like a horrible beast. Culver Rann makes me think of a sleek and shining serpent. But it is this man Quade—"

He found it almost impossible to go on with Joanne's blue eyes gazing so steadily into his.

—"whom we have made our enemy," she finished for him.

"Yes—and more than that," he said, partly turning his head away. "You cannot go to Tete Jaune alone, Joanne. You must go nowhere alone. If you do——"

"What will happen?"

"I don't know. Perhaps nothing would happen. But you cannot go alone. I am going to take you back to Mrs. Otto now. And tomorrow I shall go on to Tete Jaune with you. It is fortunate that I have a place up there to which I can take you and where you will be safe."

As they were preparing to go, Joanne glanced ruefully at the table.

"I am ashamed to leave the dishes in that mess," she said.

He laughed, and tucked her hand under his arm as they went through the door. When they had passed through the little clearing, and the darkness of the spruce and balsam walls shut them in, he took her hand.

"It is dark and you may stumble," he apologized. "This isn't much like the shell plaza in front of the Cape Verde, is it?"

"No. Did you pick up any of the little red bloodshells? I did, and they made me shiver. There were strange stories associated with them."

He knew that she was staring ahead into the blank wall of gloom as she spoke, and that it was not thought of the bloodshells, but of Quade, that made her fingers close more tightly about his own. His right hand was gripping the butt of his automatic. Every nerve in him was on the alert, yet she could detect nothing of caution or preparedness in his careless voice.

"The bloodstones didn't trouble me," he answered. "I can't remember anything that upsets me more than the snakes. I am a terrible coward when it comes to anything that crawls without feet. I will run from a snake no longer than your little finger—in fact, I'm just as scared of a little grass snake as I am of a python. It's the thing, and not the size, that horrifies me. Once I jumped out of a boat into ten feet of water because my companions caught an eel on his line, and perssted in the argument that it was a fish. Thank Heaven we don't have snakes up here. I've seen only three of four in all my experience in the Northland."

"She laughed softly in spite of the uneasy thrill the night held for her.

"It is hard for me to imagine you being afraid,' she aid. "And yet if you are afraid I know it would be of just some little thing like that. My father was one of the bravest men in the world, and a hundred times I have seen him show horror at sight of a spider. If you were afraid of snakes, why did you go up the Gampola, in Ceylon?"

"I didn't know the snakes were there," he chuckled. "I hadn't dreamed there were a half so many snakes in the whole world as there were along that confounded river. I slept sitting up, dressed in rubber wading boots that come to my waste, and wore thick leather gloves. I got out of the country at the earliest possible moment."

When they enterend the edge of the Miette clearing and saw the glow of lights ahead of them, Aldous caught the sudden upturn of his companion's face, laughing at him in the starlight.

"Kind' thoughtful John Aldous!" she whispered as if to herself. "How nice of you it was to talk of such pleasant things while we were coming through that black dreadful swamp—with a Bill Quade waiting for us on the side!"

A low ripple of laughter broke from her lips, and he stopped dead in his tracks, forgetting to put the automatic back in his pocket. At sight of it the amusement died in her face. She caught his arm, and one of her hands siezed the cold steel of the pistol.

"Would he—dare?" she demanded.

"You can't tell," replied Aldous, putting the gun in his pocket. "And that was a creepy sort of conversation to load you down with, wasn't it, Ladygray? I imagine you'll catch me in all sorts of blunders like that." He pointed ahead. "There's Mrs. Otto now. She's looking this way and wondering with all her big heart if you ought not to be at home and in bed."

The door of the Otto home was wide open, and silhouetted in the flood of light was the good-natured Scotch-woman. Aldous gave the whistling signal which she and her menfolk always recognized, and hurrie d on with Joanne.

Before they had quite reached the tent-house, Joanne put a detaining hand on his arm.

"I don't want you to go back to the cabin tonight," she said. "The face at the window—was terrible. I am afraid. I don't want you to be there alone."

(To be continued.)

FUR DEPARTMENT

Edited by A. R. HARDING, America's Foremost Author and Trapper

QUESTIONS INVITED

NEW YORK FUR SALES

QUANTITIES of some of the staple fur offered at the auction held in New York last week in in September was as follows: Muskrat, 260,000; wolf, 10,750: otter, 4,150; skunk, 98,000; badger, 8,250; cross fox, 340; silver fox, 348; red fox, 21,550: gray fox, 9,700; lynx, 7,700; beaver, 10,900; opossum, 167,000; mink, 55,000; civet cat, 12,500; wild cat, 21,000; raccoon, 31,000.

Results compared with April, when last previous sale was held were as follows:

Wolf, northern, 20 per cent higher; wolf, southern, 10 per cent higher; marten, 20 per cent higher; muskrat, northern, 10 per cent higher; muskrat, southern 35 per cent higher; ermine, (weasel) 25 per cent higher; mole, 25 per cent higher; wolverine, no change; fisher, 10 per cent higher; bear, black 15 per cent higher, otter, no change; beaver, 5 per cent higher; skunk, 20 per cent higher; red fox, no change; gray fox no change; cross fox, 10 per cent higher; silver fox, best ¼ and ½, 15 per cent higher; silver fox, black silvery and low, no change; house cat, 25 per cent higher; oopssum, 25 per cent higher; badger, 10 per cent higher; lynx, no change.

Present prices being paid for raw furs are high in comparison with hides, wool and many other farm products indicating much hunting and trapping when the season opens November 1.

MICHIGAN FUR LAWS

THE open season on otter, mink, fisher, marten, raccoon, skunk, and muskrat is November 1 to March 31. Bear, wolf, coyote, fox, lynx and wildcat are not protected at any time.

Beaver season is closed until 1925. Houses or dams of fur animals protected at all times. Fur animals, except beaver, may be destroyed under permit from director, on one's own premises to protect property, but hides must be properly cared for and turned over to the director at expiration of permit. Unlawful to trap on State game preserve or to trap beaver, badger or muskrat, in and within 2 miles of any city public park containing over 200 acres, of which 150 acres or more are woodland.

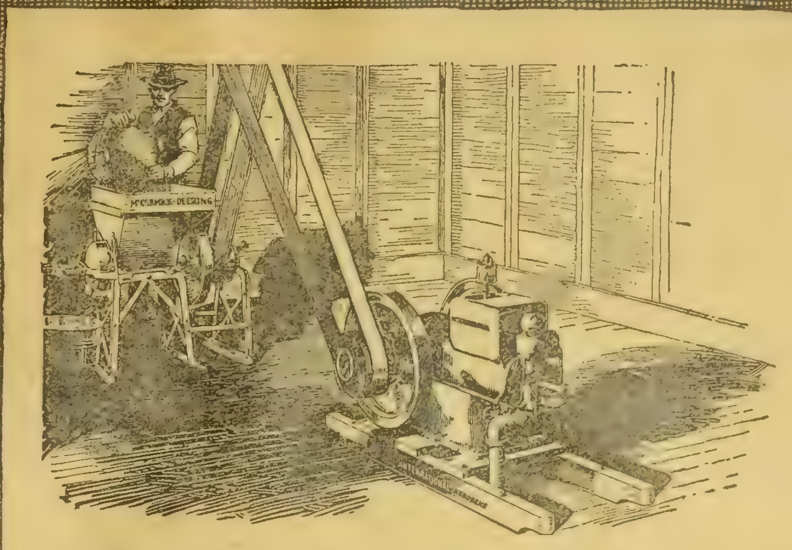
Unlawful to use spears, explosives, chemicals, mechanical devices, or smokers to drive animals from their holes or homes; to destroy, disturb, or molest any beaver, skunk, or muskrat houses or holes; to shoot muskrat except with a .22 caliber rifle, or not to set a trap within 6 feet of a muskrat house or hole.

Resident license, $1.00; non-resident, $10.00; issued by county clerk. A hunting icense also permits the holder to trap fur animals, except beaver. Minor children under 17 years of age may hunt or trap during open season on the inclosed lands of their parents upon which they live, without a license. License to hunt or trap on other lands issued to minors over 12 years and under 17 on application of parents or guardian, but such licensed minors while hunting or trapping must be accompanied by parent or guardian. Aliens prohibited from hunting or taking any wild animals in state.

Possession of the carcass or skin of fur animals killed in closed season prohibited. No restriction on skins legally taken, possessed, or tagged.

Annual license required to engage in raising fur animals, price $5.00. Live animals and skins raised in captivity must be tagged (fee 5 cents for each tag.)

Bounties are paid on woodchuck (groundhog) and crow of 25 cents each; paid by county, one-half refunded by the state.



Shell and Grind . . . . . .
with McCormick-Deering Shellers and Grinders driven by International Kerosene Engines

EVERY man who grows stock for profit should be equipped to grind the feed. It is not hard work when you have an International Kerosene Engine for power, and McCormick-Deering Shellers and Feed Grinders to do the work. A few hours on a rainy day now and then will give you a supply of nutritious stock food that will add many dollars to your year's profits.

If you will stop in at the store of the McCormick-Deering dealer, he will show you International Kerosene Engines in 1½, 3, 6, and 10 h. p. sizes. And while you are there, ask him about McCormick-Deering Feed Grinders. The shellers are made in sizes ranging from hand shellers to 2 and 4-hole and cylinder power shellers for custom work. The grinders are built in sizes and styles for every farm. Find out about these necessary machines next time you are in town.

"The Farm Paper of Service"

That Soil Survey

THERE is in progress today in Charlevoix county a survey of soils which is about the last word in government interference with private rights. A corps of "experts" started in that county on June 17th to examine the soil and report to the state the best purposes for which they THINK it is adapted. These findings will be published under the official seal of the state and will be the final authority on the character and availibility of those lands.

Providing the theorists who are responsible for the survey do not meet with too much opposition they intend to carry it into every county of Michigan, and will not rest until a description of every section of land is tabulated and filed.

In the future a man who desires to buy either improved or unimproved land in Michigan will not have to go to the bother of looking at the land. He will simply send to Lansing and sooner or later will receive a history of the identical piece of land he is interested in. And if the information says the land is no good for agricultural purposes, of course he will not buy and the farmer who has been raising good crops on the land for twenty or thirty years will lose his sale.

If the idea is a good one, why stop with farm lands? Why not extend it to the commodities we buy, to the farmers' live stock, to the business locations in every city, and even to human beings?

Think of the people who have bought spavined horses and cows with crippled udders. The state ought to put a stop to it. Let all live stock be examined for flaws, numbered and registered with the state. Then when John Jones wants to buy a cow of Sam Smith all he does is to write to Lansing and gets a report on cow No. 1,234,567. The report says the cow has a scar two inches long on the inside of her left hind leg. And so Jones is saved from being swindled.

And think of the unsuspecting swains who marry maids with glass eyes and bow-legs. It's an outrage. Let the state step in. Then when the love-lorn youth desires the hand of a young women he writes to Lansing for a report on her markings and pedigree. Horrors! "No. 7,654,321 has web feet and a mole on right knee. Great, great granduncle once arrested for stealing a pig."

There are other advantages to the scheme which are quite too numerous to mention, and most splendid of all the "cost isn't much." The "experts" up in Charlevoix county have figured out that a soil survey of all Michigan will not cost to exceed 10 cents per acre or $3,681,900 for the entire state. And the cost of registering animals and people ought to be done for even less, say 5 cents a head, which really makes the whole thing quite reasonable, considering the large number of people to whom the scheme would give employment. In fact, it is possible that the thing could be carried to such an extent as to provide a job for everyone at state expense.

Returning to the serious aspects of the soil survey it may have some value, but in the main it appears impractical and altogether too costly for the limited benefits to be derived. The desire of the state to protect prospective buyers of farm lands from being swindled is a worthy object, but can be attained without any such elaborate survey as has been undertaken.

There is no need for the purchaser of any lands in Michigan to be deceived as to what he is getting. The ordinary intelligent man can tell by a visit to the locality at the season of the year when vegetation is in bloom whether the land is good for anything. If he buys without seeing the land or when it is covered with a blanket of snow he has no one but himself to blame if he is swindled.

Consider Poor Europe

IF we think we have a hard time of it with coal and rail strikes and low prices on our commodities, think of poor Europe. Dr. Gray of the Department of Agriculture, who has recently returned from there, tells some harrowing tales of the misfortunes of the people and the unpromising winter before them. Austria, he says, will scarcely survive the beginnings of cold weather and Germany faces the certainty that if her process of currency inflation is continued she will soon be a recognized bankrupt.

Nearly all hotter countries are equally as unfortunately situated. Many crops are a drug on the market, due either to vast over-production or inability of the people to buy. In England and Scotland potato prices are too low to even pay the expense of shipment to market.

Whatever may happen in America her people are reasonably sure of enough to eat and to wear and to keep the hearthstones warm. Our greatest national disturbances do not at the worst more than inconvenience our people. We make a great ado about them, but after all they do not amount to much, and seem so trivial beside the disasters which have visited our neighbors across the seas.

Misery is always fond of company, and no matter how discouraging our own outlook may become, we can always get a crumb of comfort from the sadder plight of the people of Europe.

T. B. Eradication

COUNTY after county is appropriating funds to aid the state and national departments of agriculture to eradicate bovine tuberculosis in this state. In some respects Michigan is far ahead of the other states in this work, and the only drawback now is lack of funds. Were sufficient funds available or in sight Michigan could be completely rid of bovine tuberculosis within the next five years, thereby putting her in the front rank as a producer of tuberculosis-free cattle. That would mean a great deal to the Michigan dairy and livestock industry. Up until the past few months testing of cattle for tuberculosis was not compulsory except that various city ordinances have made it a condition of the sale of milk within their confines. Last summer, however, the attorney general of Michigan rendered an opinion making the testing compulsory. The opinion was predicted on the assumption that all cattle must be suspected of being tuberculous until a test had proven them otherwise. Under this ruling the State Department may as a matter of public health quarantine the herd of any cattle owner who refuses to permit a test being made. Through this power the submission of cattle to the test is virtually compulsory when the state department of agriculture so rules.

NOTICE TO SUBSCRIBERS.

Rather than curtail departments and print incomplete issues, as some farm papers have been forced to do, we have preferred to issue The Michigan Business Farmer, every-other-week temporarily.

Each issue missed has been credited to the subscriber, so that in the end no one will lose a single issue for which he has paid. We respectfully ask your patience and thank you for your loyalty to

"The Only Farm Weekly Owned and Edited in Michigan!"

Waste

THE American farmer is the greatest waster in the world. He wastes his soil. By constant cropping and unscientific methods of farming he dissipates its fertility. He wastes his labor. He spends as much effort in raising 25 bushels of grain to the acre as is required to raise 50 bushels.

"Of every 100 bushels of corn that farmers set out to grow", says the Department of Agculture, "only 64 bushels are realized, Were it not for the elements that tend to reduce the size of the crop the average for the 13-year period would have been about 4,374,000,000 bushels instead of 2,805,000,000."

What are these elements? Weather conditions, defective seed, plant diseases, and devastations by insect and animal pests. All of these elements, excepting the weather, are controllable. And even the weather man can often be outdone by judicious planting and cultivating.

The same crops which were raised this year could have been raised from two-thirds of the acreage. The other third represents gigantic, and in a measure inexcusable, waste. It is this waste of effort and money that keeps so many farmers only two jumps ahead of a mortgage foreclosure and causes such hardship in years of poor crops or low prices.

The Income Tax

ON November 7th the farmers of Michigan will be given a weapon to strike away the bonds of oppressive taxation which have fettered them so long. It will be an amendment to the state constitution instructing the legislature to enact a tax on profits on net income.

Should the farmers vote for it? Yes. For two reasons. First, on the broad general grounds of principle. The income tax is the only form of taxation which can never burden those who have to pay it. If the farmer's crops are a failure and he has no net income at the end of the year, he pays no tax. If the business man has a bad year and his losses eat up his profits he pays no tax. The present system of taxing land is no respector of one's ability to pay. The tax must be paid in bad years as well as good.

Second, for a purely selfish reason, the farmer should vote for the income tax. It would lower his state taxes. The farmer who now pays a federal income tax will probably have to pay the state income tax. If his net income is not large enough to bring him within the federal tax, he will probably not be taxable under the state income tax. This conclusion is mere conjecture as the amount of the exemptions and the size of the tax are left entirely to the legislature. It is supposed, however, by the friends of the income tax that the legislature will be guided by the federal income tax in these respects.

Pres. Friday of the M. A. C. estimates that a 4 per cent tax on net income will raise $20,000,000 in poor years and twice as much in good years. In that case a tax levy against real and personal property for state purposes can probably be entirely done away with. If the farmers will consult their last tax receipt and compare their state tax with what they would have to pay at 4 per cent on all net income above exemptions of $2,400 for married men and $400 additional for each child, they can soon tell whether it would be to their advantage to vote for the income tax. We again assume, of course, that the legislature will adopt the provisions of the federal law.

When agriculture is properly taught in the rural schools nine out of ten farmer boys will stay on the farm. You couldn't coax them to take up any other profession. Early in life they will learn that farming is a great business and a great science combined.—Farm and Ranch.

An investment in a purebred sire yields dividends with every calf.—California Cultivator.

Uncle Rube Spinach Says

I'M SORRY LUCILE BUT—?

YOU know that ev'ry once in a while, an' some times oftener, I get a letter from some of my friends—some agree and some don't—no matter, I'm glad to get the letters just the same. An' just recently I got a nice little letter from a reader of M. B. F., a friend I hope, that kinda raised my hair an' set me to thinkin' where I was at.

Now I'm not givin' the lady's name, only the first name which seems to be Lucile or somethin' like that. Well, anyway, Lucile intimates that I'm purty nigh a degenerate an' unless I mend my ways I'll be down shovelin' coal in the next world an' I must change my ways or go beggin' in the life to come.

Now my dear Lucile, I know better'n you can tell me all my short comin's. I know I'm bad—have always been bad. I 'member onct when I purty nigh kicked the life out of a cat 'cause he was eatin' up chickens I'd spent weeks to hatch. An' later on in life, when I wuz a young man an' I thought I wuz purty cute, I kicked a hole in a mirror jest 'cause it showed a villainous face where my face or't to be.

An' only jest in the last year or two I've busted a feller in the beezer fer beatin' up a little kid an' then found out afterwards that the kid wuz his own.

Yes my dear Lucille, I am jest as bad as you painted me—I wish I could be diff'runt but you see I'm old and habits seem to be strong an' I may go on my crooked way—mebbe to the end.

Lucile you took me to task jest 'cause I said that clothes does not make a woman. I take from your letter that you think clothes does make the woman. Alright then, I don't care to argue the question with you but will say this much—if clothes makes the woman then clothes must make the man an' if I'm nicely dressed I'm a man no matter what I do or what I say. Now dear Lucile, I wear all my clothes long—longer 'an most of the fellers wear 'em an' yet you tell me I'm lackin' in grace that I must be born ag'in an' a lot of things like that an' yet you know absolutely nothin' about me—you only guess that I'm bad 'cause I wrote a little article kinda stickin' up fer women wearin' short skirts.

I am glad Lucile that you're livin' the right life. There are hundreds of thousands of women doin' the same thing an' we love 'em all. God created women to be loved—he never intended them to be censors of their brother. I don't jest remember whether I read this or if some one told it to me, but any way I think you'll find it in the book yor speak of so often—"Judge not lest ye be Judged!"

My dear Lucile, I sure enjoyed your letter—you commenced about women's dress and ended with an exoneration for me to give my heart to God. Long years ago Lucile, I gave my heart to a girl, she has had it in her keeping since that time an' it is not mine to give at the present time. You commenced your letter in a funny way—to the "so called Rube Spinach"—Why the "so called" Lucile? I've used the name for a long time an' nobody has ever claimed it from me so why ain't it mine? An' now my dear Lucile jest read the good book you've quoted so freely to me an' 'specially that part of it 'at speaks of charity—you know in speakin' of the 3 graces it sez the greatest of these is charity. Charity does not mean givin' pennies to the blind entirely, more 'an all it means to overlook the short comin's of our neighbors—those with whom we come in contact from day to day. Yes Lucile I am bad an' I feel my weakness but I don't believe that God will condemn me for what I said 'bout womens clothes. Cordially.—UNCLE RUBE.

Sense and Nonsense

Hans Schmidt was reported to be the meanest man in the neighborhood. He died. His body was placed in the grave, and according to an old Pennsylvania German custom the people stood around the open grave, waiting for some one to say some good thing about the deceased before filling the grave. After a long wait, Gustave Schultze said: "Well, I can say joost one goot thing about Hans; he wasn't always as mean as he was sometimes."

BACK IN 1890

The world's most famous automobile manufacturer was working in a bicycle shop.

A millionaire hotel owner was hopping bells.

America's steel king was stoking a blast furnace.

An international banker was firing a locomotive.

A President of the United States was running a printing press.

A great merchant was carrying a pack on his back.

A railroad president was pounding a telegraph key.

There's always room at the top—where'll you be in 1954?—Ad points.

ONE WAY TO GET YOUR PICTURE PUBLISHED

A young school teacher had just arrived at the home of a country school director where she was to board. The director desired to make his importance known.

"You probably seed my pitcher in this here county's paper, ain't you?" he began.

"I believe I have," replied the young woman. "I think you were among the political candidates, were you not?"

"Naw; I been takin' Dr. Pain's Cureall."—Everybody's.

Hiram came out of the general store and deposited an suspicious looking package at the feet of his wife in the buggy.

"What's in that?" she asked with some asperity.

"Never mind, it won't hurt you, replied Hiram.

"Hiram, that's a box of dynamite," said his wife, excitedly.

"Well, what if it is? It won't do any harm unless it explodes."

"Hiram," shrilled the woman, "if you think I'm going to ride six miles in a buggy with fifty pounds of dynamite at my feet you're a bigger fool than I thought you were! You take that stuff right out and put it in the back part of the buggy under the seat!"

IT CAN'T BE DONE

Cholly—Do you think it would be foolish for me to marry a girl who was my intellectual inferior?

Dolly—More than foolish—impossible!

GOVERNMENT BULLETINS OF INTEREST IN NOVEMBER

THE following list of Farmers' Bulletins and Circulars are of general interest during November. Copies may be obtained free by addressing the Division of Publications, United States Department of Agriculture, Washington, D. C. Specify number and name and whether Farmers' Bulletin or Department Circular.

STRENGTH

The strength of a company is determined by the men who compose it, and the knowledge that the men who offer you an investment are responsible is its strongest recommendation.

The Officers and Directors of this company are known throughout the State. The First Mortgage Bonds we sell are safe, conservative investments, "as good as the men who sell them."

Every bond is a part of a first mortgage on improved, income bearing, Detroit real estate worth at least double the amount of the mortgage. They pay 6½% interest, a higher return than any other investment of equal safety will pay.

This Company has the strength to make good every obligation it creates. Conservative investors find in these bonds a safe and profitable investment.

Write to the Business Farmer about our Company. Mail the coupon and let us tell you how to get 6½% and safety.

FLORIDA LAND FRAUD PROTECTED IN Florida courts, exposed in a book sent upon receipt of 25c in coin. H. WEEKE, 428 S. Halsted St., Chicago, Ill.

THE POTENTIAL CURE

Then one of them, which was a lawyer, asked Him a question tempting Him, and saying:

"Master which is the great commandment in the law?"

Jesus said unto him, "Thou shalt love the Lord thy God with all thy heart and will all thy soul and with all thy mind. This is the first and great commandment. And the second is like unto it, Thou shalt love th neighbor as thyself. On these two commandments hang all the law and all the prophets."

ON these two commandments hang also the peace of the world, as between individuals, as between organizations and as between nations. Force was long the ruling power but in the late war, it was shown that it could not claim a victory; in a civilized world the compelling power of force has its limits. Law, the other governing power must have behind it a respected authority, the government you say. Correct, we must then have respect for that government for lack of it means anarchy and disruption. History shows that governments become corrupt and pass away. What quality then is it that makes for stability in governments?

Recognition of God, there is no getting away from that fact. In a world of materialism we must return to spiritual values. Let me quote, "Who said, 'I am the Light of the world?" Remember a beacon guides, it does not compel. If nations walk by that Light, they will be in the way of Peace, if not—look at the world today."

THE SEVENTH OF NOVEMBER

CHILDREN will be taught young that it is the part of every patriotic citizen to vote, if an elderly lady in Texas can have her way. She has sent a small sum of money to the National League of Women Voters to to be awarded as a prize for the best nursery rhyme inculcating a conscientious and patriotic attitude toward the exercise of the franchise. She suggests that suitable verses be insered in future editions of Mother Goose and in kindergarten and primary songbooks so that the boys and girls will grow up knowing their duty to their country. Incidently, she has given the eague, which has not yet received the report of the committee on the selection of the twelve greatest living Amreican women, another question to decide and the headquarters staff is to decide it. Verses are already beginning to come in for the competition and the first received read, paraphrasing Mother Goose:

Remember, remember the seventh of November,
A date that must not be forgot,
Non-voting is treason
And that is the reason
Good people must be on the spot.

BEET SUGAR TO THE FRONT

There has been some discussion among women as to whether beet sugar is as good a preservative for use in canning as cane sugar. Having used both indiscriminately with equally good results I have felt that it made no difference but to satisfy useveral readers who have asked me about the matter I will pubilsh the following communication from Mr. Robert Tweed, Bacteriologist, Mich. Agricultural College.

—In regard to beet sugar we wish to advise you that it makes no difference whether the sugar is beet or cane. If your fruit is properly sterilized it will keep regardless of whether you have used cane sugar or beet. Trusting this gives you the information you desire, I am Robt. L. Tweed, Res. Asst. in Bacterology.

THE SCHOOL LUNCH

Planning the school lunch. Many mothers are faced with the problem of preparing school lunches every day during winter, and it is hard to prevent sameness from creeping into the menu. Besides, many foods which children enjoy cannot be carried in a lunch basket. The metal container, with ventilation holes, is best for carrying to school because it can be scalded daily. Parafin paper should be used for wrapping moist foods, as cake and sandwiches. Ice cream containers are useful for packing salads, baked beans or baked apple.

These suggestions, made by home economic experts, are suitable and appetizing lunches for school children: Sandwiches with sliced meat filling, baked apple, cookies or a few pieces of candy. A crisp roll hollowed out and filled with chopped meat or salmon, and orange, cookies and a few dates. Hard boiled or deviled eggs with brown bread and jam, apple sauce and pices of cake. Nut or cheese sandwich with piece of maple sugar and fruit. Baked bean sandwich, sweet pickle, handful of raisins and a nougat bar. All these combinations are tasty and healthful, especially if a small thermos bottle with milk is provided for each lunch.—South Dakota Agricultural College.

The Farm Home
A Department for the Women

Edited by MRS. GRACE NELLIS JENNEY

DEAR READERS—One of our subscribers is in need, this winter, of some of the things which some of us may be able to spare. I will name the articles and if you can help out just drop me a line asking for her address, then you may communicate with her direct. She will willingly pay all delivery charges.

She has a large family; one little boy has tuberculosis, he is only 2 years and seven months old. For him she needs a cot, a mattress and some old blankets.—Children's clothes would be gladly received and also a rug for a bed-room floor. We have never yet failed to help one another and I am sure we will not this time. If you could read her letters, you would surely feel that you would find something to send.

FERNS NOT DOING WELL

I have a large Boston Fern and do not seem to be able to make any success in rearing it. The leaves grow about 18 to 20 inches long and then die on the ends, also a few of the peals will die. Does smoking hurt it? It is in a window facing the west; also I watered it with rain water every other day. I have been told that tobacco tea is good for it. Will be glad of your advice. —A Reader of M. B. F.

—Examine your Boston Fern to ascertain whether there are any insects on it, if so would throw it away before it infects other plants. If it is clean, follow this method. Dip a whisk broom in luke warm soft water and sprinkle the fronds well, laying the plant on it's side so that the water will reach all sides of the leaves, clip off all dead ends and loosen the soil on the top of the crock so that it will ventilate. Water the fern about once a week by standing the crock in a basin of water for half an hour. Ferns do not stand hot or direct sunshine. Their nature is to require a moist cool atmosphere. As for soil they prefer a soft black muck mixed with good garden soil. Cared for after this method any healthy fern will do well.

CROCHETS TAMS

I am a regular reader of the M. B. F. About a year ago I told the readers of this nice little paper, I'd crochet tams of the best wool at $2 00 each. I had quite a number of orders last winter and will make the tams for the same price this year if any of the readers would like a tam, also truck caps from $1.50 to $2.00 according to age. Thanking Mrs. Jenney kindly my address is Mrs. Tony Motz, R. 1, St. Johns. Mich.

ATTENTION MRS. HAYNES

I have received a pattern order from Mrs. F. E. Haynes but cannot send the pattern to her because she failed to give me her address. If she will write at once I will be pleased to forward the pattern to her.

SEND SAMPLES

Will someone kindly send me samples of crochet edgings? I'll send some if they ask for them. I have several but I've made them over and over. None of my friends know how to crochet.—Mrs. J. Hanisek, Ramsay, Mich, Box 215.

TO KEEP GERANIUMS

Will you please tell "Another Subscriber" that I always pull my geraniums from the ground before frost and hang them up by the roots in the cellar.

This way they need no water. In the earl spring about March I take them down, cover the rootsy in dirt in a small basket and keep them slightly moistened until warm enough to set in the beds out of doors, of course they will have to be trimmed and cut back a little but the keep nicely.—Mrs. A. J. B.

SOUPS

A reader in the last issue asked for recipes for soups. These I found in a recent Deleniator and publish them for the benefit of those interested.

Alwas have a soup-pot going. Never throw out the bone from the steak or ham. Never thown out the end of beef that is tough or the left-over chop. Put them into the soup-pot and add the water from boiled potatoes, cabbage, boiled onions and from every vegetable that you use except spinach and beet-tops.

The backs of chicken or any kind of game should go into the soup-pot. Add plenty of pepper to the pot when you hae game in it, and another bay leaf and little more onion than usual. Let our pot simmer, but don't boil, as boiling destroys the flavor of your soup foundation.

About once in three days empty the soup-pot. To keep it simmering longer than three days will make it sour. Don't hesitate to put the smallest bit of stuff in it when you start it again. A spoon of gravy will help; a few peas will add their flavor; a small bone will give strength.

To your soup foundation add a handful of rice and thicken with flour and milk; or chop up some watercress or spinach, cook for thirty minutes and slightly thicken with flour and milk; or use rice and the green and the thickening.

In one cup of your stock and four cups of water cook four good-sized potatoes. When they are done, mash them through a colander and return them to the same pot. Add six peeled and shredded leeks, and cook for fifteen minutes. A lump of butter the size of a walnut and half a cup of milk complets an appetizing and nourishing soup.

A variation of this soup is made by substituting a pinch of garlic for the leeks and serving with croutons. night and cooked with a ham-bone or with a quarter of a pound of bacon make a good plain soup. Half an onion, added in thin rings half an hour before the meal, or the onion

L'ENVOI

When Earths last picture is painted, and the tubes are twisted and dried,
When the oldest colors have faded, and the youngest critic has died,
We shall rest and faith, we shall need it, lie down for an aeon or two.
Till the Master of All Good Workmen shall set us to work anew.
All those who were good shall be happy, they shall sit in a golden chair
They shall splash at a golden canvas with brushes of comets hair.
They shall find real saints to draw from * * * Magdalene, Peter and Paul.
They shall work for an age at a sitting and never get tired at all.
And only the Master shall praise us, and only the Master shall blame.
And no one shall work for money, and no one shall work for fame,
But each for the joy of the working, and each in his separate star.
Shall draw the Thing as he sees It for the God of things as they are.

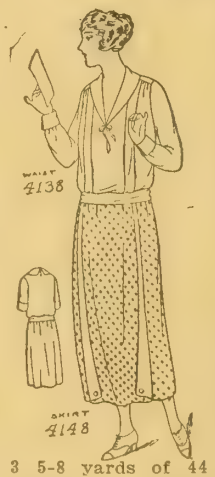
—RUDYARD KIPLING.

AIDS TO GOOD DRESSING

For Simplicity, Service and Style

Address all orders to Mrs. Jenny, Pattern Department.

Send 15c for the New Fall and Winter Catalogue.



A Stylish "Waist and Skirt" Combination

4138-4148. Very desirable for business or sports' wear is this costume. The waist. may. be. of linen, crepe or silk, and the skirt of sports' material, serge or prunella. The panel on skirt may be omitted.

The Waist Pattern 4138 is cut in 7 Sizes: 36. 38. 40. 42. 44. 46 and 48 inches bust measure. It requires 2 3-8 yards of 40 inch material for a 38 inch size. The Skirt Pattern 4148 is cut in 6 Sizes 25. 27, 29. 31. 31. and 35 inches waist measure. A medium size requires 3 5-8 yards of 44 inch material. The width of the skirt at the foot is 2 3-8 yards. To make a girdle and the facings on the panel of contrasting material will require 1 1-4 yard 40 inches wide.

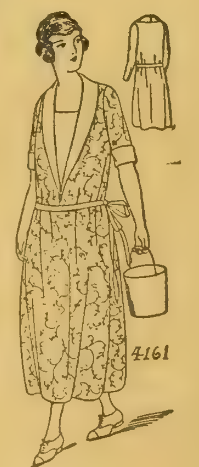
TWO separate patterns mailed to any address on receipt of 12c FOR EACH pattern in silver or stamps.

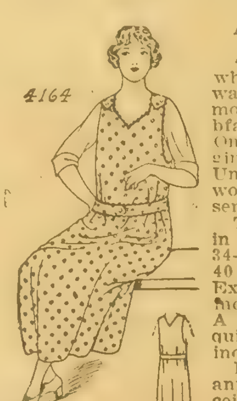
For Porch or Kitchen Wear

4161. Trim and neat is the style here portrayed. The development and adjustment are equally simple. Figured percale was used in this instance. combined with white linine.

The Pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38 inch size requires 5 yards of 40 inch material. To make vest. collar and cuffs of contrasting material requires 1¼ yard. The width at the foot is 2¼ yards.

Pattern mailed to any address on receipt of 10c in silver or stamps.





A Simple Apron Model

4164. Percale in white and brown was chosen for this model. with rickrack braid for trimming. One could have gingham. or cambric. Unbleached muslin would be strong and servicable.

The Pattern is cut in 4 Sizes: Small 34-36: Medium 38-40: Large 42-44: Extra Large 46-48: inch bust measure. A Medium size requires 4 yards of 36 inch material.

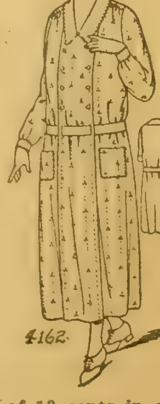
Pattern mailed to any address on receipt of 12c in silver or stamps.

A Good Service Dress for Slender or Stout Figures

4162. Comfortable fulness and slenderizing lines mark this desirable model. The back extends over the fronts to form yoke sections to which the fronts are gathered. This is a good style for percale, gingham. gabardine, and flannelette. The sleeve may be in wrist length or short. as illustrated.

The Pattern is cut in 7 Sizes: 36. 38. 40. 42. 44. 46 and 48 inches bust measure. A 38 inch size requires 6 1-8 yards of 32 inch material. The width at the foot is 2 3-8 yards.

Pattern mailed to any address on receipt of 12 cents in silver of stamps.



and a couple of carrots, or a sprinkle of chili pepper, or shredded lamb or pork, add an interest to this soup.

Nourishing barley soup can be made from any "bone" stock. Add two chopped onions, a sprig of parsley, one stalk of celery and a cotrot. Cook one cup of barley to two quarts of liquid.

For tomato soup, use the juice and the soft parts of canned tomatoes to be stewed. On a foundation of a bone or two, an onion and a bay-leaf, you can make a vegetable soup with one carrot, one celery stalk, a little tomato left from dinner and a sprig of parsley.

Onions, cut and simmered in a stock for half an hour, can be thickened with flour and water or milk. Or add to the stock a small dish of lefe-over peas, a few dried potatoes, mashed, a little baked macaroni, mashed, and ashredded chop. This makes a very good soup.

shank from your roast lamb, simmer it for an hour and then add a pound of dried Lima beans soaked overnight. Cook all day, mashing the beans through a colander when you are almost ready for dinner.

HALLOWE'EN PARTY

The rooms or rooms in which most of the games are to be played should be decorated as grotesquely as possible with Jack-o'-lanterns made from apples, cucumbers, squash, pumpkins, etc., with incisions made for eyes, nose and mouth and a lighted candle placed within.

Jack-o'-lanterns for the gas jets may be made of paste board boxes about the size of a shoe box. Cut holes in all four sides of the box and cover the holes with red or green tissue paper. A black box with the openings covered with red tissue paper or vice verse or white and green make good combinations.

Cut a hole in the botton of the box just large enough to fit over the gas jet, turning the gas low enough to not burn the box.

In addition to this Jack-o'-lantern made from pumpkins, etc., should be placed around an tables, mantles, corners, etc.

A skull and cross bones placed over the door entering the house would be very appropriate. The hall should be in total darkness except for the light coming from the Jack-o'-lanterns of all shapes and sizes in various places.

Autumn leaves, green branches, apples, tomatoes and corn should also play an important part in the decorations. Black and yellow cheese cloth or crepe paper makes very effective and inexpensive decorations.

The dining-room should be decorated with autumn leaves, golden rod, yellow chrysanthemums, strings of cranberries, etc. For a table center piece a large pumpkin could be used with the top cut off and partly filled with water in which a large bunch of yellow chrysanthemums or golden rod could be placed. Bay leaves can be scattered over the table

Another idea for a center piece is a large pumpkin Jack-o'-lantern, the top cut in large points with small chocolate mice in the notches and scampering down the sides of the pumpkin (held in place by long pins or a little glue) and over the table.

Place cards representing pumpkins, black cats, witches' hats, witches brownies, etc., are appropriate

If one is not an artist in water color painting, some of the cards could be cut from colored bristol board or heavy paper. The witches' hats of black or brown paper with a red ribbon band; the cats of black paper showing a back view may have a red or yellow ribbon necktie; the pumpkins of yellow paper with the sections traced in ink or notched a trifle and black thread drawn between the notches.

Any of these designs could be used for an invitation for a children's party, by writing on the revesre side: "Will you please come to my party on Wednesday, October 31st" with the name and address of the little host or hostess, using white ink on black paper.

The dining-room should be in total darkness, except for the light given by the Jack-o'-lanterns, until the guests are seated, when they should unmask. The supper could be served in this dim light or the lights turned up and the room made brilliant. After the supper is over and while the guests are still seated a splendid idea would be to extinguish all the lights and to have one or more of the party tell ghost stories.

Have a large pumpkin on a stand or table from which hang as many ribbons as there are guests. Have one end of the ribbon attached to a small card in the pumpkin on which may be a little water color sketch of pumpkin, apples, witch, ghost or other appropriate design together with corresponding number. Have red ribbon for the girls and yellow ribbon for the boys, with corresponding numbers. Let each guest draw a ribbon from the pumpkin and find their partner by number.

Another suggestion is to have the hall totally dark with the door ajar and no one in sight to welcome the guests. As they step in they are surprised by some one dressed as a ghost who extends his hand which is covered with wet salt.

PERPLEXING HUNT

In this game the seeker for a prize is guided from place to place by doggerels as the following, and is started on his hunt with this rhyme:

"Perhaps you'll find it in the air;
If not, look underneath your chair."

Beneath his chair he finds the following:

"No, you will not find it here;
Search the clock and have no fear."

Under the clock he finds:

"You will have to try once more;
Look behind the parlor door."

Tied to the door-knob he discovers:

"If it's not out in the stable
Seek beneath the kitchen table."

Under the kitchen table he finds another note, which reads:

"If your quest remains uncertain,
You will find it 'neath a curtain."

And here his quest is rewarded by finding the prize.

ACTING RHYMES

For this game, half of the players go outside the door, whilst those who stay in the room choose a word of one syllable, which should not be too difficult. For instance, suppose the word chosen be "flat," those who are out of the room are informed that a word has been thought of that rhymes with "cat," and they have to act, without speaking, all the words they can think of that rhyme with "cat." Supposing their first idea be "bat," they come into the room and play an imaginary game of cricket. This not being correct, they would be hissed for their pains, and they must then hurry outside again. They might next try "rat," most of them going into the room on their hands and feet, whilst the others might pretend to be frightened. Again they are hissed. At last the boys go in and fall flat on thier faces, while the girls pretend to use flat-irons upon their backs. Tre loud clapping that follows tells them they are right at last. They then change places with the audience, who, in turn, become the actors.

An asbestos mat may be used for toasting bread.

Grind your coffee yourself for the best results.

HEALTH HINTS

OR

HOW TO CURE YOURSELF

BY

DR. T. N. ROGERS

TOOTH POWDER

Please tell me what to use to make a good tooth powder.

—Chalk percipitated, 2 drams; Orris root, powdered, 2 drams; white sugar, 4 drams; oil of gloves, 5 drops; oil of lemon, 8 drops. Mix well in a mortor.

BOY COUGHS CONTINUALLY

What can be done for a boy two years and seen months old that coughs continually?

—You should have this child examined thoroughly. Cough does not always mean T. B. but keep the child out-of-doors as much as possible, give lots of good nourishing food and give the following: Oil of Eucalyptus, 5 drams; Emulsion of Petrolium, 8 ounces. Give one teaspoonful every 4 hours. Give this for 3 months. Have the throat examined.

Lily White
"The Flour the Best Cooks Use"

A GOOD RECIPE FOR WAFFLES
1½ cups Lily White Flour, 2 teaspoons baking powder, 1 tablespoon melted butter or fat, ¼ cup of corn starch, 1 cup rich milk, 3 beaten eggs. Sift dry ingredients together. Beat eggs, add milk and stir in flour. Add butter. Cook in hot greased irons and serve.

Makes Wonderful Waffles---
There is a difference in waffles just as there is a difference in breads, because there is a difference in flours. Waffles made with Lily White Flour are crisp, tender, wholesome and delicious. But when a flour of quality such as Lily White is used for all general bread-making, baking successes are not accidents. The results of one trial will convince you of its superiority.

Why You Should Use Lily White
REASON No. 8
Cleaned, Washed and Scoured Eight Times, Absolutely Pure.
When a flour is milled from the choicest portions of the wheat berry of the finest grain grown in America, its goodness is only increased by perfect milling and absolute cleanliness in preparation. Lily White is cleaned, washed and scoured eight times and milled by the six break system. Every process in the making of Lily White is done to produce a better flour.
Phone Your Grocer NOW!

Our Guarantee
We Guarantee you will like Lily White Flour, "the flour the best cooks use" better than any flour you ever used for every requirement of home baking.
If for any reason whatsoever you do nor, your dealer will refund the purchase price.---He's so instructed.

Aspirin

Say "Bayer" and Insist!

BAYER

Genuine

Unless you see the name "Bayer" on package or on tablets you are not getting the genuine Bayer product prescribed by physicians over twenty-two years and proved safe by millions for

Colds Headache
Toothache Lumbago
Earache Rheumatism
Neuralgia Pain, Pain

Accept "Bayer Tablets of Aspirin" only. Each unbroken package contains proper directions. Handy boxes of twelve tablets cost few cents. Druggists also sell bottles of 24 and 100. Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid. (2).

Rheumatism
A Remarkable Home Treatment Given by One Who Had It

In the year 1893 I was attacked by Muscular and Sub-Acute Rheumatism. I suffered as only those who are thus afflicted know for over three years. I tried remedy after remedy, but such relief as I obtained was only temporary. Finally, I found a treatment that cured me completely and such a pitiful condition has never returned. I have given it to a number who were terribly afflicted, even bedridden, some of them seventy to eighty years old, and the results were the same as in my own case.

I want every sufferer from any form of muscular and sub-acute (swelling at the joints) rheumatism to try the great value of my improved "Home Treatment" for its remarkable healing power. Don't send a cent; simply mail your name and address, and I will send it free to try. After you have used it, and it has proven itself to be that long-looked for means of getting rid of such forms of rheumatism, you may send the price of it, One Dollar, but understand I do not want your money unless you are perfectly satisfied to send it. Isn't that fair? Why suffer any longer, when relief is thus offered you free. Don't delay. Write today.

What Have You to Offer?

The Children's Hour

DEAR Nieces and Nephews: Last isssue I told you a boy was leading in our bird contest. Well he continued to lead and when the final reading took place his letter was chosen as the best and he was declared winner of the prize, a leatherette pencil case containing four pencil, a penholder and point. The name and address of the winner is Harold Pernie, Ossineke, Mich. The prize was mailed last week and undoubtedly by this time Harold is putting the pencils and pen to very good use.

All seemed to be interested in the bird contest and many showed they knew more about their feathered friends than I thought they did, so I am going to tell several things about birds. Some of you may know many of these interesting facts but I'll bet most of you do not.

Of course all of you know that most of the birds are great destroyers of injurious insects and that hardly an agricultural pest escapes them. But do you know that the alfalfa weevil has 45 different bird enemies? Or that the wireworm is anxiously sought by 168 different kinds of birds. Other bugs and insects are constantly pestered by the birds. 42 different birds are enemies of the army worm; the cinch bug is killed by 24 different birds; codling moth by 36; cutworm, 98; horseflies, 49; seven year locust, 38; potato bug, 25; white grubs, 67; clover-root borer, 85 and clover weevil, 25.

You have heard and talked about the robin and other birds going south in the fall but did you ever wonder how far they flew south? The average robin migrates 3,000 miles southward, taking about 78 days for the trip. Another bird that winters a long distance from Michigan is the bobolink. He spends his winters in southern Brazil.

Some birds are called half-migrating, because, while they usually spend their summers with us and their winters in the south, sometimes they remain with us all winter, especially in sections where food is plentiful during the winter. The robin can be mentioned in this class. Also the bluebird, meadowlark, nuthatch, woodpecker, chickadee, goldfinch and certain of the sparrows. The average person may not observe them but the bird lover often discovers one of our feathered friends who failed to take the annual trip south. Keep your eyes open this winter and see how many of these birds you can find. Where you find them scatter food because many times it is very hard for them to find enough to eat during the winter months when the ground is all covered with snow. They will repay you when spring comes with their pretty songs. Also they will protect our next winter's supply of food by killing the insects that attack crops.

Although I am unable to publish all the letters I received regarding the bird contest I am printing parts of some of the letters. Some wrote such interesting letters about their favorite birds that I feel space should be spared for the publishing of them.—UNCLE NED

OUR BOYS AND GIRLS

Dear Uncle Ned—Please may I join your new contest. I think it is a very good idea to learn about the different kinds of birds.

I am interested in studying the value and the uses of the bird. I am writing a description of one of the Michigan birds which I like very much, and am also sending a list of birds which I have often noticed on my way to school and other places around the school. Here are the following birds that I have noticed.

Sparrow, crow, eagle, robin, snowbird, swallow, bluejay, whip-poor-will, nightingale swallow, owl, blackbird, honeybird, thrush, pigeon, partrich, chickens, geese, ducks, turkey, cuckoo, dove, bobwhite, canary, parrot, meadow lark, snipe, woodpecker, bob-o-link, peacock, chickadee, kingfisher, killdeer, wood cock, turtle dove, goldfinch, quail, sea fowl, cherry picker, seagull, wren, water thrush, ring dove, night hawk, wild geese, chicken hawk, wild duck, mourning dove, yellowbird, bluebird, red wing and the bird hawk.

The bird that I like best of all the birds is the sky lark for he can sing so beautiful, and he is a pretty color. His back is brown, edged with bronish white, and is streaked with black, brown and cream colors. And he has a beautiful black crescent upon his breast and dark brown lines on his head. Larks usually build their nests on the ground and they make them from grass only. The eggs in the nest are beautiful oval eggs they are about an inch long and a beautiful rosy white color, speckled with reddish brown spots. Larks eat many different worms and insects which is a great help to the farmers, that is why I like the lark the best. For the good of all, do not destroy the birds.—Master Harold Pernie, Ossineke, Mich.

Dear Uncle Ned and Cousins—I am sending a list of birds that I know. They are as follows:

Eagle, nightingale, snowbird, peacock, meadow lark, canary, robin, crow, hawk, dove, condor, stork, thrush, pigeon, pheobe, owl, kingbird, bat, sparrow, kingfisher, blackbird, ostrich, woodpecker, chickadee, crane, quail, bluejay, swallow, catbird, blue heron, green heron, bluebird, hummingbird, wren, groundbird, killdeer, mudhen, parrot, magpie bob-o-link, bittern, snipe, graybird, mourning dove, yellowbird , skungbird, highholder, aimless robin, cowbird, whip-poor-will, and the bird of paradise.

I like the bird of paradise best because it is the colors of the rainbow. I think it is the prettiest bird there is. I am thirteen now. I wish some of the girls around my age would write to me. Your niece.—Eleanor D. L. Stovel, Hubbard Lake, Mich.

Dear Uncle Ned—Here is a list of the birds that I know of and a description of the one I like best:

Robin, sparrow, hawk, crow, wren, canary, bluebird, blackbird, bob-o-link, whip-poor-will, killdeer, brown thrush, bat, mourning dove, bob-white, bluejay, sea-gull, owl, woodpecker, oriole, chickadee, catbird, crane, stork, swallow, pigeon, meadow lark, ring-neck pheasant, ground bird, pheobe, parrot, hummingbird, snipe, partridge, swan, sap-sucker, snowbird, kingfisher.

The best bird that I like is the robin. It's breast is a pretty red, with a pretty brown back. It is about four inches long and about two and one half inches high. After the long winter the first signs of spring is the robin, and how happy it makes everyone feel. You hear the old and young say "The robins are here." I take some crumbs and throw them on the porch and then watch them come and eat their breakfast. These make their nest in the lilac bush beside our house. It is made of lint, feathers, and hairs and they lay from three to five light blue eggs. I am your little niece—Berl McKenzie, Emmett, Mich.

Dear Uncle Ned—Here are the names of the birds and the description of the one I like best:

Thrush, catbird, mourning dove, mudhen- canary, bluebird, quail, partridge, pigeon, sparrow, swallow, stork, whip-poor-will, dove, king bird, owl, hawk, crow, cowbird, turkey, sand-piper, goose, duck, hummingbird, eagle, wood-pecker, robin, oriole, kingfisher, snowbird, chickadee, yellow-throated vireo, meadow lark, killdees, brown thresher, mockingbird, crane, bat, groundbird, bob-o-link, golden-winged warbler, marsh hen, pheasant.

I like the robin the best of all of them because every year one comes and builds its nest in our apple tree. We always look for it in the spring to come back and sing a very sweet song. It lays pale blue eggs. It is about five inches long. It has a nest about three inches wide. It has three or four eggs in its nest. It has a red breast and the rest a very dark brown, under its wings are white. We should never take the bird eggs because the bird would cry.—Miss Goldie Leukel, R. F. D. 1, Fostoria, Mich.

Dear Uncle Ned—As I had a few moments of spare time I thought I would drop a few lines to Uncle Ned. I am a girl 13 years old and in the eighth grade at school. I live on a farm of eighty acres one and one-fourth miles east of the town. I am also going to try my luck in the picture puzzle.—Mary Arens, R. 3, Fowler, Mich.

Dear Uncle Ned—The bird I like the best is the quail. This bird is very pretty. The color of it is light brown and on the top of its head the feathers resemble a cap and it is striped with white. On a still summer night you can hear them calling "Bob-white" for some distance. I'm sure that if I were a hunter I never would kill them. They destroy insects that are enemies to the farmer. I think that they ought to be called the "Farmers' Friends." Just now there is a flock of them here in our yard. They nested beside the driveway in front of the house this year. One day when papa was mowing hay beside the road he mowed right over a nest with eight eggs in it. It frightened the little bird so that she did not come back again, and I have seen several places where they had nested. I forgot to tell you about there nest. Most of them are in the most delightful places you ever saw. They are in the tall grass where it is warm and snug and are made out of dead grass.

In the winter time they will scamper across the yard and sometimes eat with the chickens, and if you throw out grain they will come and eat. They are about eight inches tall and are always very plump and fat. If some of the little boys and girls try to tame them like I said they may have a flock to stay at their home.—Violet Hopkins, Stockbridge, Mich.

Dear Uncle Ned—The whip-poor-will is my favorite bird. Perhaps you will guess why I like this bird. I love to hear his cry on summer evenings; and he also sings early in the morning. He is of a brown color, with some white and black spots. He is about ten inches long, and has long wings, he flys with the same flapping motion as pigeons or hawks do. He has a beak formed somewhat like a hawk's, very slightly bent. He has a short neck end head something like a hawk's. There is nothing very nice in the color of his plumage, but his cry, in the night when there are no other sounds, how sweet it rings, echoing among the hills and trees

He feeds on flying insects, and is a very harmless bird. He does not build a nest like other birds, he selects a place on the ground similar to a nest, a kind of small low place. Their eggs are a brownish color, to match the earth and leaves around them.

During the day whip-poor-wills retire to the darkest woods, until the sun sinks behind the hills, and then again, "whip-poor-will, whip-poor-will," we can hear. Sometimes we see him at the top of our house, sometimes he is on a tree, stump, or the ground, sitting in a stooping position while singing. Whip-poor-wills are related to the night-hawks.

Good-luck to Uncle Ned and cousins, I remain.—Miss Milda Baravyx, R. 2, Branch, Mich.

Dear Uncle Ned—I am sending you a description of my favorite bird.. The pigeon is my favorite bird.. I have one caged up that I caught and tamed. The color of pigeons is blue, dark blue, white, red, black and white, red and white, and blue and white. Mine is pink and white. They eat corn, oats, worms and bugs. Their nests are made of hay and straw. Their eggs are white. Your nephew.—Kenneth Mercy, R. 3, Wheeler, Mich.

VACUUM CLEANER AT CIRCUS

Johnny came back from the circus very much excited.

"Oh, mamma," he cried, as soon as he got in the house, "Kate spilled some peanuts, and what do you think the elephant did? He picked them all up with his vacuum cleaner."—Everybody's Magazine.

FRUIT and ORCHARD

EDITED BY FRANK D. WELLS

MICHIGAN ORCHARDIST BELIEVES IN SPRAYING

"I HAVE found spraying and fertilization to be the most important factors in fruit growing," says Robert Anderson, a successful orchardist of Covert, Michigan. Without spraying, you might as well give up, for no other practises will make up for spraying. After spraying comes fertilizers. You must feed the trees if you want big crops. A lot of orchards don't pay because they are half starved."

"How about pruning?" was a question put to Mr. Anderson. "Isn't that one of the most important factors?"

"I don't want to minimize pruning," was the answer, "but I feel that it is often overdone in the effort to make up for the omission of other practises. The success of pruning is not measured by the amount of wood you remove, but the amount you can properly leave. I can illustrate this by the fraction, six over two, in which six represents the trees and branches, and two the productive power of the soil. It's no use to have more wood than the soil will support to produce the fruit, so you take four away from six by pruning, and have the fraction two over two. But another way is to add four to the two below by fertilizing, and then you have six over six—more fruit because you have the wood and the plantfood to make the fruit. That's the system I practise.

Mr. Anderson has a sixteen acre peach orchard on which he has applied 375 pounds of ammonium sulfate and 400 pounds of acid phosphate or bone meal per acre for the last three years. Also in 1921 he applied in addition 500 pounds of a 10-10 fertilizer per acre (10% phosphoric acid and 10% potash). Rye is seeded each fall and plowed under in the spring, by which system the organic matter in the soil is increased.

GROWING MICHIGAN'S CHAMPION POTATO CROP

(Continued from page 3)

would far rather leave my machinery out the year around than my manure. We don't waste a bit of manure here. Come down to the barn." A visit to the Parmalee barn is a revelation in efficient manure handling. A section of the barn nearly as large as the stable is devoted to manure storage. Overhead tracks conduct the litter carrier from the stable to all parts of the room. A smooth concrete floor makes cleaning easy.

Back of the barn is a small yard for the cattle to exercise in—they are never pastured.

"Doesn't look very filthy, does it?" Mr. Parmalee inquired. "All the cows have run in that little lot for thirteen years."

It was as clean as a dooryard!

"We clean it every night same as the stable." Mr. Parmalee explained.

Foolish? Perhaps, but remember Cherry Rill Farm is producing money-making potato crops every year.

"I put on all the manure as a top dressing while preparing the seed bed." Mr. Parmalee continued. "We spread the manure at the rate of five tons per acre, and at the same time put on acid phosphate with a fertilizer distributor set at 300 pounds per acre. That is disced in just before planting!"

Green manure, as everyone knows, is a crop, preferably a legume, plowed under in the interest of soil improvement. Possibly some farmers think it is a stunt often talked about, but never actually done. They would know better after looking over Mr. Parmalee's next year's potato ground.

"I don't know just how to handle this crop." Mr. Parmalee admitted. as we walked into a knee-deep field of alfalfa-clover mixture. "I want to turn it all back, as I have enough hay without it. Selling hay is a poor policy, I think. In my opinion, a dairy farmer should never buy or sell hay. But to get back to this field, I think I'll try cutting once but take nothing off and if the second crop starts to smother, go over it with a hay tedder. I hope then it will turn under in fair shape in the fall. I want to turn under a hay crop every year to fit the land for some record potato crops. I can easily raise the yield way above last year's."

The last, yet by no means the least, of the soil amendments for Cherry Rill Farm is lime. Mr. Parmalee gives it full credit for the nearly perfect catch of clover and alfalfa which he is reasonably certain to get every year. One and one-half tons of finely ground limestone an acre is applied at the time of seeding down.

Once upon a time lime was not used on Cherry Rill Farm. The complete failure of a twenty acre seeding of alfalfa was the bitter experience which taught the lesson of lime. It will never happen again.

Good drainage was the last straw needed to break the back of the poor crops camel on the Parmalee farm. After several years of "spare time" spent in ditch digging, Mr. Parmalee has realized his ambition of a farm tiled throughout.

While the soil is the prime factor in the production of record potato crops, methods are quite important. Mr. Parmalee still selects his seed potatoes. From the potatoes thus obained, he again picks the choicest for a seed plot, and uses the rest for the regular planting. All seed is treated in formaldehyde solution for scab.

Early Petosky potatoes, planted 17 inches apart in 34 inch rows produced in 1921 top-notch Michigan potato crop. One piece, averaging wo eyes, was placed in a hill. The field was spike-toothed after plantng, gone over with the weeder just after the spuds were up, and cultivated four times later on. One day of hand work kept the rows free of weeds. The crop was sprayed eight times during the summer with 5-5-50 Bordeaux (5 pounds of lime and 5 of copper sulphate to 50 gallons of water.

True, it was consderable bother, but it paid. Two thousand bushels of the crop brought $1.53 a bushel as certified seed, and the rest were sold around 90 cents. Big league prices, you see, go along with big league potato growing.

A few other features of Cherry Rill Farm are well worth mentioning. Probably they are not factors in raising money-making potato crops, but then, maybe they are. Labor troubles are almost unknown at Cherry Rill, and there's a reason.

"I pay all my hired help by the hour, have for eighteen years" Mr. Parmalee explained. "All Sunday work and overtime is paid for. I keep two men the year around, and have extra help in the summer. The men seldom leave, so there is little trouble in getting labor."

The farm is the home of the farmer and his family, as well as their place of business. Electric lights and running water make life worth living on the Cherry Rill Farm. The neat house with wide lawns, nestling behind gigantic maples, reminds you of the country estate of some millionaire. A plentiful supply of farm papers keeps Mr. Parmalee on the latest wrinkles of the farming game, and he gleans many a hint from college extension men and the county agent, who are frequent visitors.

NEW LAMP BURNS 94% AIR

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94 per cent air and 6 per cent common kerosene (coal-oil).

The inventor, A. R. Johnson, 609 W. Lake St., Chicago, is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month. (Adv.)

Every Housewife

Should Know These Facts About Baking Powder

—that a big can at a low cost many times results in bakings that are unfit for food.

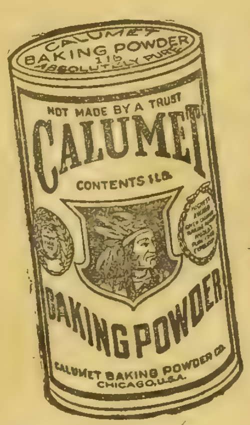
—that lack of proper leavening strength means failure and disappointment on bake-day.

—that one cent's worth of inferior Baking Powder many times ruins one dollar's worth of other ingredients.

—that millions depend on

CALUMET

The Economy BAKING POWDER



CALUMET BAKING POWDER ABSOLUTELY PURE

H. E. LIVERMORE & SON, Romeo, Mich.

DAIRY and LIVESTOCK

LARGE INCREASE IN NUMBER OF PUREBRED FEMALE ANIMALS

When farmers adopt purebred sires to head their herds and flocks it is not long before the percentage of purebred females increases noticeably. This encouraging tendency toward more rapid improvement of live stock has been brought out by the United States Department of Agriculture in the Better Stock campaign. Of a total of more than 300,000 female animals listed by farmers who have agreed to keep nothing but purebred sires, more than 35 per cent are of pure breeding. On these farms scrubs have practically disappeared. For the larger animals the reports show that only 2.4 per cent of the females are scrubs and, of course, the males are of pure blood as that is the basis on which the farms are listed.

The poultry flocks owned by these farmers are particularly well bred, only 1.3 per cent of the female birds listed as scrubs. More than 68 per cent of a total of 610,000 birds are entered on the list as standardbred. Among the herds of swine there are very few scrub sows—only 1.1 per cent. Nearly two-thirds of them are purebred.

This Federal-State effort to improve the livestock and poultry of the country has now brought in a membership campaign that represents nearly a million head of animals and poultry. Farmers who have become members have sent in interesting accounts of their experiences in improving their animals and their bank accounts. Other farmers who are taking part in the work are invited by the department to send in their individual experiences as well as those of community organizations engaged in the improvement of live stock. Definite facts and figures should be included whenever possible.

COOLING TANKS

Every farmer who milks a few cows should have a cooling tank of some kind. It makes little difference whether he patronize a creamery, cheese factory, sells milk or keeps it for his own use: a cooling tank is a necessity.

Why not capitalize the great store house of cold which lies in the ground! This can be done by simply passing the water designed for live stock first thru a tank which will serve as a refrigerator for all products which need chilling. Well or spring water in most of the dairy states has a temperature varying from 55 degrees to 65 degrees F. This is about as cold as the average domestic refrigerator. By utilizing this cold water to chill down the milk, cream or other products we are getting refrigeration at the lowest possible cost.

Millions of dollars are lost annually to the cow-keepers of this country purely on account of the neglect of milk and cream while it is held at the farm. Butter and cheeses would be greatly improved if every patron used a cooling tank. As a matter of convenience it is worth while for every farmer to be thus equipped, for it is necessary to have a place to keep the milk and cream, and where a refrigerator can is put into use the housewife will find it very efficient and convenient.

A cooling tank is needed in both winter and summer, in winter to prevent freezing and to retain the cream or milk at the uniform and favorable temperature, while in summer it is needed to prevent extreme souring and the development of undesirable flavors. Cold is a wonderful preservative. We are told that the prehistoric mammoth has been preserved in the ices of the Polar region for fifty thousand years. When dairy products or perishable foods are kept at a low temperature, decomposition is retarded, and with dairy products this means much in the way of better quality and price. A can of cream kept in a good cooling tank is worth a dollar more than the same can kept outside and exposed to the heat of average summer weather. The producer is more interested in this dollar than anyone else. He may not feel that he is losing the dollar simply because he gets the same price for his product, but this is only a temporary condition; the industry is losing the dollar and he is the most important and biggest part of the industry. As a matter of satisfaction it should be worth while to turn out a good product when it is nearly as easy to do so.

The grading of cream and paying a differential for quality is rapidly coming into general use. In a little while the cream producers will either have to get cooling tanks or suffer a big loss due to producing second grade cream. The cooling tank is sound, sensible, economical, and demanded by decent and progressive farming methods, and we should all be for anything that has so much merit.—A. L. Haecker.

GOOD DEMAND FOR SHROPSHIRES

Dan Booher of the Brookside Farm, the "Home of the Shropshire Sheep," was in our office Saturday to arrange for some printing. Mr. Booher is one of the celebrated breeders of Shropshire sheep, and has in his flock ninety-seven registered animals, headed by an imported sire, and no better specimen of the breed are to be found anywhere. He has been in the business about ten years, careful attention to breeding has been his constant aim, and he has sheep where wool is grown on all parts of the body except on the "tip of the nose and on the hoofs." During the past year he has sold and shipped to various farmers and breeders in Michigan and Wisconsin, over sixty animals, and the demand is constant and increasing.—Evart Review.

VETERINARY DEPARTMENT

TREATMENT FOR COW GIVING BLOODY MILK

Can you tell me what to give a cow that gives bloody milk? Only one teat is affected. She has not been hurt that I know of.—E. B., Frankfort, Michigan.

—Undoubtedly the reason the cow is giving bloody milk out of one quarter of her udder is that she has injured this quarter at some time or other. She may have stepped over something that was too high and the udder dragged over some rough object or she might have hurt herself when she laid down or in some other way. We usually find that a small blood vessel in the udder has bursted. After the first few days you will notice that the first part of the milk is not bloody, but the last part of the milk is, showing that the wound is partially healed but as the milking progressed and the stripping process began the wound was reopened and therefore the last part of the milk was bloody.—O. E. Reed, Professor of Dairy Husbandry, M. A. C.

FEED SOWS SCORCHED CORN

I have two sows that do not come in heat and would like to know what to give them. They had their litters last June. They are in fair condition and well cared for.—S. M., Charlotte, Michigan.

—A young sow that had her first litter last June might not have come in heat since without there being anything wrong with her. Unless one has conditions for handling pigs in real cold weather, it would not be advisable to breed these sows before late in November.

If they do not show a heat period withn the next two or three weeks, it would be well to feed them on scorched corn for a few days, giving them all they will eat. This often proves effective in bringing sows in season. When this fails, we have used a preparation known as Vetol, put out by the Lehn & Fink, 124 Willams Street, New York, which proves effective.—Geo. A. Brown, Professor of Animal Husbandry. M. A. C.

FARM MECHANICS

YOU BET, I COULD USE A WELDING TORCH!

THE editor received a large number of interesting and instructive letters in reply to his query about the need on the farm for a cheap and practical welding torch. The information thus received is going to help pave the way for the introduction of such a torch in the near future at a price which almost any farmer can afford to pay. We are learning day by day that we must produce more economically if we are going to make any money out of farming. That means that we must constantly guard against loss of time during the busy season and too rapid depreciation of farm machinery. According to our readers a welding torch would save many a trip to town at times when it is costly business to leave the work in hand.

The letters which we considered gave the best variety of uses for which a torch could be used was from Mr. E. Eaton of Ingham county, and to him will be awarded the torch.

AMOUNT OF DYNAMITE NEEDED TO BREAK BOULDERS

EVERYONE admits that large rocks in fields that are cultivated are bad from every standpoint. Yet we see big boulders on farms wherever we go.

"How much dynamite would it take to break up that rock?" (pointing out a stone in one of his fields), is a question often asked by a farmer of someone he thinks has had experience in blasting.

This is a question that can be answered with some degree of accuracy. Different kinds of rock are of varying degrees of hardness. The shape of a boulder also has a bearing on the subject. For instance, a smooth, round stone is harder to break than a flat one.

There are three methods employed by practical blasters to break boulders: Mudcapping, which means laying the explosive on the stone and covering it compactly with stiff mud; snakeholing, meaning to tunnel or bore under the boulder, loading the charge in the dirt up against the under side of it and blockholding, which means drilling into the stone itself and loading the charges in the hole.

Mudcapping requires the least labor, but the most dynamite; blockholding, vice versa. Snakeholing is the 50-50 method as betwen labor and dynamite.

As a general rule, it may be stated that a boulder of average hardness, 1 1-2 ft. in diameter, may be broken with a pound of 50 per cent straight N. G. dynamite, if mudcapped; with 1-2 pound in a snakehole or with 1-8 pound in a block hole. A 2 ft. boulder could be snakeholed or blockholed as economically as the 1 1-2 ft. stone, but it would probably take 1-2 pound more dynamite to mudcap it. A 3 ft. stone would take about 2 pounds for a mudcap, 3-4 pound for a snakehole or 1-4 pound for a blockhole. A 4 ft. rock is usually too big to break with a single mudcap shot, and will take about 2 pounds of dynamite or a snakehole blast or 3-8 of a pound for a blockhole. A 5 ft. boulder would need about 3 pounds for a snakehole shot and 1-2 pound for blockholing.

It is best for a "green hand" at boulder blasting to make trial shots. For instance, try a stone with the charges suggested above. Watch the result. It may show it is necessary to increase the charge somewhat or may be that less dynamite can be used.

Tamping is the important feature of boulder blasting. If the tamping is compact, the minimum amount of dynamite will be necessary and the work is most certain to be successful in every way.

PAINT AND KEEP YOUR CREDIT GOOD.

A PROMINENT banker makes the statement that he is influenced in lending money to people by the appearance of their property. If their houses, barns, and other buildings are painted as often as necessary in order to give them a spick and span appearance, he feels that they are a better risk than those who do not paint their buildings and let them go to rack and ruin through neglect.

It is a condition in most all mortgages on buildings that the buildings shall be insured, for the protection of the lender, against fire. Some lenders make the stipulation also that the buildings shall be kept painted at regular intervals. This is a wise precaution, as a building can deteriorate from lack of paint so as to lose a large part of its value in just a few years. In a way, paint is also a fire protection, since it is the slow combustion of oxygen and other elements in the air that causes the decay of building material.

Besides, of for any reason it is desired to sell a property, the prospective purchaser can easily be induced to pay a higher price for a well painted house than for a shabby one. A good buyer looking over a shabby property is quick to assume that the owner is bankrupt or badly in need of money if his property has a run down appearance and makes his offer accordingly. If it is neatly painted, however, he assumes that the owner is prosperous and hesitates to make an under-value bid. In short, in case of a sale a coat of paint will bring a price for a house enough higher than could be obtained for an unpainted building to more than cover the cost of painting.

Therefore, any way we look at it, painting is a good investment for a property.

HARD FACTS ABOUT CONCRETE

THERE is a right and a wrong way to handle concrete. Used rightly it is one of the most useful and economical of available building materials. But handled wrongly it is a source of trouble and expense. There is scarcely a farmer who has not had occasion to use concrete in one or more of the multitudinous forms it can be employed on the farm. But the average farmer's knowledge of the chemical properties of concrete, correct mixture, etc., is somewhat meagre. With this issue we innaugurate a series of articles under the heading, "Hard Facts about Concrete," which will anticipate and answer most of the question with which the farmer is bothered when he works in concrete. The articles are written by one of the foremost concrete authorities in the country, and will, we believe prove of value to all who employ cement in any form. Any question which readers may desire to ask about cement and concrete will be gladly answered.—Editor.

THE EXPERIENCE POOL

Bring your everyday problems in and get the experience of other farmers. Questions addressed to this department are published here and answered by you, our readers, who are graduates of the School of Hard Knocks and who have their diplomas from the College of Experience. If you don't want our editor's advice or an expert's advice, but just plain, everyday business farmers' advice, send in your question here. We will publish one each week. If you can answer the other fellow's question, please do so, he may answer one of yours some day! Address Experience Pool, care The Business Farmer, Mt. Clemens, Mich.

REMEDY FOR WARTS ON COW'S TEATS

IN your issue of Sept. 16th I read where Mr. R. C. D. of Rose City asked for a remedy for warts on cow's teats. Here is what I have used for nearly forty years and never knew it to fail. Some warts are harder to remove than others but it will remove them all in time. Some will come off in a few weeks, seed warts take more time.

Take fresh hog lard and apply freely every day after milking. Rub in well.—David A. Bennett, Dewitt, Mich.

A boy of 12 years, dining at his uncle's ate such a good dinner that his aunt observed:

"Johnny, you appear to eat well."

"Yes," replied the urchin, "I've been practicing all my life."

Poultry for Profit

MY POULTRY EXPERIENCE

In response to the invitation extended some time ago in these columns to readers to contribute stories of their experiences with poultry, a number of interesting them and profit by what others have learned about the successful raising of poultry.—Editor.

IS THERE MONEY IN HENS?

I CHOOSE chickens as my hobby as I found the work pleasant and profitable.

I am just a farm woman. I started on February 12, 1920 with 210 birds. I made a net profit, during the year of $544.90. Then I had 230 birds, had sold $785.20 worth of eggs and birds, and spent for feed and numerous small things $240.30. the difference of $544.90 and $240.30 was the pay for my labor.

I began keeping complete records. I wanted to know how to take better care of my chickens as I realized better care meant more profit.

We have to keep records of cost of feed also number of eggs laid, sold and consumed and chickens sold or consumed.

I have found out that the proper housing of chickens is important. Do not keep more chickens than you have room for. If overcrowded it will mean disease and loss.

Ventilation must be so arranged that there wlil be no draught on the chickens. Every house should have a system of ventilation so the chickens will receive the benefit of the fresh air.

Too many chickens in your house will lower the vitality of the flock.

Having had my flock culled I know and feel it has been a factor in making a profit. Give the well-housed, vigorous hen proper food and a full egg basket is the reward. We keep a dry mash before the chickens the year around. 100 lbs. of ground corn and 200 lbs. ground oats and 100 lbs. meat scraps.

Scratch grain is fed in litter, oats and wheat in morning and corn at night. Through the winter I give green food for variety. I plan to have green food that is most easily raised. Pumpkins are the main green food as long as they keep. In feeding pumpkins, cut them in halves, remove the seeds and the chickens will do the rest. Cabbage and potatoes are also good used in this way.

My experience has been that eggs are the most profitable part of the poultry raising business. In order to have pullets lay in winter I hatch early. Good healthy vigorous stock with cleanliness and proper feeding and housing will bring pleasing results. In my opinion there is money in chickens.—Mrs. Charles Everts, Kalamazoo County, Mich.

A PLEAURE AS WELL A PROFIT

POULTRY raising is a pleasure to to me as well as profit. It seems to me there is nothing better than a flock of poultry to eliminate waste on the farm.

My chicks have free range as soon as old enough. I add to their feed as they grow. I find a feed that will make a young pullet grow and make her lay. A grain mixture that will make a chick grow will make a plump brioler. The chick will be healthy if given a good mixture, liberal feeding and exercise.

There is no economy in feeding poultry to be sold beyond the time when they weigh 2 to 3 pounds. If they have been well fed from the time they are hatched, the broilers will be plump and juicy and bring the best price at the least expense. The best plan, I find in caring for the flock, large or small, is to select the pullets and cockerels you want to keep and sell the rest as soon as they are ready.

I always aim to keep down the cost. My hens have free range all summer and get most of the green feed they need. I give lettuce, onion tops, waste from the kitchen, anything I have with a little grain, sour milk and plenty of water to drink. We have to house poultry early, as it is cold here. We live between lakes. Hens like a change of rations.

In winter I give scratch feed in deep litter, which consists of a change of grain, corn, wheat, oats and barley, as much as they will clean up, oyster shell, grit made from pounded stone and charcoal. This is kept by them all the time with plenty of sour milk and water to drink. At noon they are fed a mash feed such as they feed cattle, with cheese made from sour milk. Every few days in cold weather I give the mash moist with a little cayenne pepper. They have vegetables for green feed, cabbage, beets, boiled potatoes, celery tops, and occasionally apples for a relish. In the evening they get a good feed of grain, going to bed with full crops. I have lots of eggs to sell all winter when the prices are good.

I only aim to keep two breeds, the Plymouth Rock for meat and White Leghorns for eggs.

My surroundings for poultry raising are far from ideal, I have no nice coops, patent feed hoppers, drinking fountains, or trap nests. Just troughs for feeding and drinking, boxes for nests, and a box of ashes for dusting. This is so arranged it takes little time and labor to care for them. My methods are not the best, but I get results.

To me it is not a question whether poultry pays but how could we get along without. I think there is no better meat than a nice juicy broiler, and the eggs play an important part in our meals being of high nutrative value. Care, management, selection, breeding, culling and proper feeding methods mean success or failure in the poultry business.

Much has been said of the cow, the pig and the hen being kept on the farm for profit. I think all things considered the hen ranks first. Hens do a business each year large enough to be rated among the big industries of the world, yet some people speak of poultry raising as the "woman's end of farming." It is said the fowls kept on American farms number nearly three hundred millions; the eggs they produce nearly two billion dozens. When it comes to poultry raising I am enthusiastic and will continue to praise the hen.—Mrs. A. J. B., Presque Isle County, Mich.

IMPROVE YOUR FLOCK

IMPROVE your flock—it will pay. We don't mean by this that you should spend money for a lot of standard-bred poultry and then give it the kind of treatment some of you are now giving your hens. Standard-bred poultry couldn't stand it—they aren't used to it. You'd better keep what you have.

But if you are really in earnest about getting the best profit from your hens, if you are willing to give a little attention to housing them, feeding them, and caring for them, then it will pay you to think about the kind of hens you have, and to take steps to improve your flock as soon as possible.

Cull—Get rid of the poor stuff. Weed out the weak, sickly, undeveloped hens that never lay at all, the old hens that lay only two or three dozen eggs in the spring, and the surplus roosters that are star boarders all the year around. Why feed these when they are producing little or nothing? Get rid of them —the sooner, the better. Culling is the basis of a good flock. Cull, and keep continually culling.

Begin now to build a better flock. Don't put it off until next year or some other time. Start now, even though you start in a very small way.

Eight or 10 hens will produce all the eggs you need for hatching. Select the very best hens you have and mate them with the best cockerel on the place.

In order to do this you will have to make some arrangement for keeping the breeding stock separate from the rest of the flock for three or four months during the breeding season.

If you have no shed which will do the breeding stock, a pen can be built for $5 or $10. In the summer this pen can be used as a brooding house for young chicks. in the fall as a fattening pen for cockerels. It is one of the best investments you can make on the farm.

You go to a little trouble and expense to get the best seed corn there is. Why not take the same pains with your chickens?

The male is half of the flock. If you can spend a little money on improving your flock it will pay you to buy a well-bred male. You know that the quickest way to improve your dairy herd is to put a good male at the head. The same is true of chickens—only you get results quicker. Mate a good male with the best hens you have and in two or three years you can grade up your flock to quite a degree of perfection.

Results will be more quickly attained if you buy a setting of good eggs. Keep the best pullets hatched from these eggs and mate them with a well-bred male, and you will have a standard-bred flock in a short time.

The quickest way to get a good flock is to buy two or three good hens and mate them with a well-bred male. Two or three hens will produce enough eggs in one season to give you quite a stock of chicks. Breed from the best of these the next year. In two years' time you will have a good-sized thoroughbred flock.

In buying eggs or breeding stock buy from some one who trap-nests his hens. The trap-nest gives you a record of the number of eggs each hen lays in a year. It is to the poultry industry what the Babcock tester is to the dairy industry. You haven't time to "fool" with trapnesting our hens, but if you are going to spend some of your hard-earned money for breeding stock insist on having the best there is. The trap-nest is positively the only test there is of the laying quality of any strain of chickens.

Finally keep one breed only. A mongrel flock cannot be as profitable as the pure-bred flock, provided both are given the same care and attention.

A thoroughbred flock is more profitable because the products are uniform. The eggs are the same size, shape, color and texture of shell. The chickens are more uniform in shape and size of body, and in color of skin and shanks.

You will take pride in a pure-bred flock and give it better care than you would a flock made up of any old kind of chickens. Your flock is more attractive in appearance. Your neighbors will notice it and will want to buy eggs and breeding stock from you. It is good for you to know that you have the best there is. It stimulates an interest in our work, and the man who is interested and satisfied is the man who is getting the most out of life.

ON RAISING GOSLINGS

I HAVE raised goslings with success. I started with 6 eggs and hatched 5, the other was infertile, I kept over 2 hens, and bought a pure-bred gander. The main thing in poultry of any kind is good breedstock. Get the best at any price, it is cheaper in the end, also get unrelated stock. I have raised 35 this year. After they are 48 hours old I feed hard boiled eggs (sparingly) mixed with poultry tonic, and dandelion blossoms. They prefer the blossom to the eggs I find. I also put a few grains of Permangnate of Potash in the drinking water from the start and feed sour milk. Never let young goslings get into water. I keep them penned up for one week cleaning the runs and sleeping quarters daily.

Second week I allow them out a little every day; third week I let them run at large and have no trouble.

Second week I feed brand and do so till they mature. I find this very essential. Change the feed to bread rung out of sour milk, a little cat meat, dutch cheese, and some small grains, and some Statrite. I find a change of feed daily keeps their appetite in good shape.

The only fault with geese is that if you have any corn planted near you will never harvest the corn, they will run it right down.—Wm. B. B. Smatts, Charlevoix county, Mich.

A PLAN FOR THE REHABILITATION OF AGRICULTURE

(Continued from page 4)

quantities of rich dessert, when, as a matter of fact, the "average farmer" is starving for substantial food. It is a case of "too much" specialist, and not enough constructive, practical, nation-wide vision.

An analysis of the last annual appropriation for the Extension Service will show that the Department of Agriculture is spending more on overhead and specialists than it is on county agents, both men and women. The total allotment of all extension funds for the current year was $18,497,360, including appropriations from the Federal government, state governments and from county authoritites. When the county wants an agent it is required to put up at least half the money. The salaries and the expenses of the more than 4,000 county agents total $11,740,657, of which one-half is provided by the Federal and state governments.

When the Bureau of Markets of the Department of Agriculture was established nine years ago, it was hoped that the bureau would work out a comprehensible national marketing policy. But no comprehensive program has been envolved.

The farmers' isolation, the necessity for independent or family unit production, the wide variety of products grow upon the average farm, the seasonable production and marketing of staple crops, resulting in market gluts, and the uncertainity of income, are the factors, taken together, which constitute the inherent weakness of agriculture.

Generally speaking, I do not advocate the entrance of government into private business. In agriculture, I believe that the time has come when the government should provide machinery on a nation-wide scale, through which farmer co-operative marketing associations may organize and function.

Taken through a series of years, the American farmer does not, and need not fear the normal functioning of the law of supply and demand, but for many years this law has not been permitted to function normally. The more compact and cohesive tendencies of urban peoples has made possible a system of middlmen, so thoroughly intrenched that they now maintain themselves in open defiance of the laws of supply and demand.

It would seem on its face, that the carrying out of a program of sufficient magnitude to effect the results I suggest would prove a tremendous undertaking. It would impose the test of sincerity and statesmanship upon Congress. However, I am convinced that the most drastic action is justified.

The principal points of my plan involve:

1. A reorganization of the Federal and state co-operotive demonstrative service, affecting principally the character of work expected of the county agent. (The Extention Service should in its entirety be adminstered directly by an assistant secretary of agriculture.)

2. A reorganization of the Bureau of Economics (formerly the Bureau of Markets)' leaving a portion of the work of the present organization under the Department of Agrirculture, placing the balance under the control and direction of an independent board to be kown as the "Federal Board of Co-operative Farm Marketing and Finance."

The reorganization suggested will be more particularly a matter of revitalizing the organization, and diecting its course back into the channels originally outlined by its founder, the late Dr. Seaman A. Knapp, to wit:

(a) Economic production.
(b) Standardization of products.
(d) Stimulation of co-operative effort among farmers
(d) Application of demonstration principles to rural homes.
(e) And of vital importance, encouraging the production upon the farm of as much as may be possible of the food consumed thereon.

Following the above general outline, assuming that it would be administered with due regard to varying conditions, the personal of this organization, if once more imbued with the idealism and inspiration of the original workers when headed by Dr. Knapp, will accomplish their full part.

COUNTY AGENTS HAMPERED

It should be said for the Co-operative Demonstration Service, as now constituted, that it is doing much in an unofficial way to aid the farmers in their attempts at organization long co-operative marketing lines. The county agent in extending this aid, however, is placed in a class with the "lawbreaker", for he is under instructions from headquarters not to participate actively in this work, as it is contrary to the interpretation given the organic law establishing the Demonstration Service. I would recommend the establishment of this new agency under the name of the "Federal Board of Co-operative Farm Marketing and Finance," under a board of practical men, representing the marketing interests of co-operative associations, organized along commodity lines, two representatives for each group, namely: grains, cotton, tobacco, live stock, dairy products and perishables, with the Secretaries of Agriculture and Commerce members ex officio of the board.

I would suggest that all market work, together with the administration of the Warehouse Act be transferred to the board as above outlined, leaving in the present Bureau of Economics all economic investigations, and crop and live stock statistical work. A part of the regulatory work since the first of July has been placed directly under the Secretary of Agriculture, and should remain there.

The functions of the Federal Board of Co-operative Farm Marketing and Finance should be separated into two divisions—first, the Division o fCo-operative Farm Organizations, and second, the Division of Finance. The Division of Co-operative Farm Organizations would be that contructive force in the organization and operation of farm organizations.

THE FINANCING PLAN

Under the Finance Division would be established a corporation, the operating capital to be provided from the Federal Treasury, through the issuance of long-term government bonds, these bonds to be sold, in os far as may be practical, in the rural sections. The sale of these bonds should be made through national farm loan associations, country banks and farm organizations. This corporation should be empowered with the authority to purchase build, lease or license warehouses, elevators and cold storage plants in all primary and export centers where available facilities are either inadequate or controlled by interests which operate same on a basis discriminatory to the co-operative commodity associations seeking to do business with them. Warehouse receipts should be issued for produce stored as provided for under the Warehouse Act, said certificates to be acceptable as collateral security for advances to the co-operative association controlling the product for which the certificate is issued. It is contemplated that a large part of the capital of the finance coporation would be available as a revolving fund which may be supplemented by collateral loans from the Federal Reserve System. In fact, the finance corporation should be a member of the Reserve System, authorized by law to do business direct with any one of the 12 Reserve banks. Be it understood, that the finance corporation should seek in every way possible, through cash advances and the providing of storage facilities, to bring about an orderly marketing of crops, seeking by these means to maintain prices against the serious and ofttimes runious breaks resulting under the present system from the periodical market gluts and from market manipulation.

The country as a whole has come to recognize that the complexities of the present-day civilization, considering the interpendent relationship existing as between industries, render it unthinkable for our government to permit the disintergration and failure of any fundamental industry. I insist that the plight of agriculture is the concern of the whole nation, and that action along fundamental lines is justified and imperative.—Reprinted courtesy of Dearborn Independent.

Dr HESS POULTRY PANACEA

Help your MOULTERS MOULT

If you want your hens to moult naturally—

If you want them back on the egg job promptly—fall and winter laying—

Then you must make sure that your moulters are healthy and hungry.

They must eat lots, and be able to digest what they eat.

That's just what

Dr. Hess Poultry

PAN-A-CE-A

does for your moulting flock.

It's a tonic that begins with the appetite—improves a hen's whole system.

It has Iron that keeps the paleness away, makes the combs and wattles red—the blood rich.

Pan-a-ce-a starts the food the egg way as soon as the moult is over.

No time lost.

No dormant egg organs after the moult, where Pan-a-ce-a is fed.

Tell your dealer how many hens you have. There's a right-size package for every flock.

100 hens, the 12-lb. pkg. 200 hens, the 25-lb. pail
60 hens, the 5-lb. pkg. 500 hens, the 100-lb. drum

For fewer hens, there is a smaller package.

GUARANTEED

I spent 30 years in perfecting Pan-a-ce-a.

THE AUTO-OILED AERMOTOR

A Real Self-Oiling Windmill

A year's supply of oil is sent with every Aermotor

Oil an Aermotor once a year and it is always oiled. Every moving part is completely and fully oiled. A constant stream of oil flows on every bearing. The shafts run in oil. The double gears run in oil in a tightly enclosed gear case. Friction and wear are practically eliminated.

Any windmill which does not have the gears running in oil is only half oiled. A modern windmill, like a modern automobile, must have its gears enclosed and run in oil. Dry gears, exposed to dust, wear rapidly. Dry bearings and dry gears cause friction and loss of power. The Aermotor pumps in the lightest breeze because it is correctly designed and well oiled. To get everlasting windmill satisfaction, buy the Aermotor.

Aermotor Towers are Towers of Strength

MARKET FLASHES

MARKET SUMMARY

Wheat quiet to strong. Corn and oats firm. Rye steady. Beans active. Potatoes easy to lower. Butter and eggs in demand. Poultry not wanted. Cattle active and higher. Hogs higher. Sheep easy. Provisions follow trend of hog market.

(Note: The above summarized information was received AFTER the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press.—Editor.)

TRADE AND MARKET REVIEW

THE approach of winter finds business in a generally prosperous and optimistic mood. The increased movement of coal, under government direction, has gone a long way to alleviate the fear of the large industries that they would have to close down for lack of it and because of their inability to pay the exorbitant prices charged. Employment is at high tide. People are not skimping on their purchases to puite the extent they did two years and a year ago. Yet, caution and good sense are being used.

Perhaps the greatest single influence in the upturn of business is the gradually ascending of prices on farm products. Certainly this factor has given the farmers new hope despite the fact that a considerable part of their grain has gone to market at lower prices. Farmers who still hold their grain are looking forward with a good deal more encouragement than they have felt for a long time. The low price of potatoes and milk is still a discouraging factor, but the production of the latter has taken a great slump and there is a tendency toward better prices. The future of potatoes, however, is still very problematical

The foreign situation does not greatly improve and the great swing of public sentiment in this country against the proposal to cancel the war debts has plunged the European countries still further into the slough of despond, though they have never really received any encouragement here in their fond hope that America would cancel her obligations aganst them.

The Turkish situation has improved, and although the danger of hostilities has not been entirely removed, there is little liklihood now that war will eventuate. France seems blind to her duty in the crisis and refuses to be drawn into the comprising position. A goodly number of people of the United States, incensed at the Turks' treatment of the Armeninas, are quite ready to take up arms against this notorious disturber of the world's peace and wipe him and his race from the map. Strange to say, among these who would avenge the wrongs of the Armenians, we find a considerable number of the very same folks who said that the United States should not belong to the League of Nations and had no business to assume a mandate over Armenia. They must be blind, indeed, if they cannot perceive such a mandate, established at the close of the World War would have been a constant and effective warning to Turkey to behave herself. We cannot help but feel that the refusal of the United States o perform her duty at that time, has been a contributing influence in bringing about the present situation.

Despite the predictions to the contrary Europe continues to buy large quantities of goods in this country and is apparently having no difficulty in financing her purchases. France, Italy, Spain and Great Britain are apprently bringing their financial problems to a slow solution and will continue good patrons of the United States, but Austria, and Germany are rapidly approaching the verge of economic downfall, and sooner or later must disappear from the list of America's customers.

WHEAT

We are frank to confess that we have under estimated the strength of the bull movement in wheat which began the latter part of September and is still in full swing. Where and when it will end no man can say. That it will go on for some time to come and that prices will continue to improve now seems certain. The action of this market the last six weeks once more illustrates what very little control the average farmer has over his maket. The first of September no man dared to predict that within another sixty days wheat would advance nearly twenty cents a bushel. It was the wrong time for an advance, if natural factors were the only influence. The movement of wheat from farms was at its height. Farmers were anxious to sell.

Reports from other countries indicated good crops. But in the face of all these bearish factors the market suddenly took on life and started briskly upward. Those who grope in the dark for the reasons for the ups and downs of the market can only conclude that the speculators forced the price of wheat down and bought it cheap and are now forcing it up to make their profits, using the war scare as their excuse. This theorie is supported by the fact that the removal of the responsibility of the war never caused a flicker in the market.

Last reports from other wheat growing countries are to the effect that the total crop is short about 200,000,000 bushels. If these figures are correct then we may expect very much higher prices on wheat. As we go to press the eastern sections find themselves low on wheat, with elevators and farm bins in the west still bulging. Movement is slow from west to east because of the freight tie-up resulting from the strike and should winter arrive a little ahead of his usual time it might take considerable time to bring about a balance between the east's demands and the west's supply.

Most of the export business is being done by Canada who is offering her wheat freely and at somewhat lower prices than the United States. Canada has encountered no difficulty with transporation and the wheat crop of the Northwest has moved steadily and in volume to the eastern sea-board.

Mr. Foster, the M. B. F. weather man, predicted some time ago that we would see $1.50 wheat by Jan. 1. If wheat values continue to gain as they have the last thrty days he won't be far fom the mark. But that's a doggoned big "if."

Prices

Detroit—No. 2 red, $1.22; No. 2 white and No. 2 mixed, $1.20

Chicago—No. 2 red, $1.17@$1.17½; No. 2 hard, $1.15 @$1.16.

New York—No. 2 red and No. 2 hard, $1.26.

Prices one year ago—Detroit—No. 2 red, $1.24; No. 2 white, and No. 2 mixed, $1.21.

CORN

Corn followed the trend of wheat the greater part of the past couple of weeks prices for the former grain being more sensitive to changes working for higher prices than in the latter grain. Total gains at Detroit during the two weeks amounted to 7c at the close on Saturday of last week while at Chicago the advance aggregated slightly less. Demand has been good and trading active. Chicago reports there has been considerable investment buying of the grain at that point because of acive demand for cash corn and belief that supplies next season will be in good demand. Receipts are fair and buyers say if it were not for the shortage of cars receipts would be large as farmers seem to be willing to sell at least a part of their holdings, at the present price levels. Export business is not as good as it was a year ago. Receipts at Chicago last week amounted to 3,780,000 bushels, while 3,365,000 bushels were shipped.

Prices

Detroit—No. 2 yellow, 78½c; No. 2 yellow, 77½c; No. 4 yellow, 76½c.

Chicago—No. 2 yellow, 70¼@71¾c.

New York—No. 2 yellow, [illegible] No. 2 white, 91c; No. 2 mixed, 92½c.

Prices one year ago—Detroit, No. 2 yellow, 52c; No. 3 yellow, 51c; No. 4 yellow, 48c

OATS

Best grade of oats at Detroit as we go to press readily bring 48 to 50 cents per bushel which is quite an advance over the September 1st. price. Oats have shown little independent strength despite the growing scarcity, acting almost entirely in sympathy with wheat. We have been bullish on oats from the start and still are. Prices have not, in our belief, reached their zenith for the season.

Prices

Detroit—No. 2 white, 49c; No. 3 white, 47½c; No. 4 white, 45c.

Chicago—No. 2 white, 42¾@45c; No. 3 white, 41¾@43½c.

New York—No. 2 white, 56@57c.

Prices one year ago—Detroit, No. 2 white, 39c; No. 3 white, 36c; No. 4 white, 33c.

RYE

Rye continues upward the price advancing 6c at Detroit during the fortnight ending Saturday, October 21. The price on the Chicago market advanced about same amount. The grain seems to be in a strong position at the present time and possibilities of higher prices in the near future are good.

Detroit—Cash, No. 2, 84c.

Chicago—Cash, No. 2, 78¾@79c.

Prices one year ago—Detroit, 85c.

POTATOES

The black sheep in the crop family this year are potatoes. The October 1st estimate shows a drop of 5,000,000 bushels from the September, but that means nothing. As long as the estimate remains over 4,000,000 bushels prices must remain low. However, several factors enter the situation, which if unhampered will mean better prices to Michigan growers. Many thousands of acres have not been dug. We believe that this fact alone will knock at least 10,000,000 more bushels off the latest estimate. Also, there are thousands of farmers who swear they will never sell potatoes for 30 cents a bushel. And they mean it. Farmers of the western states won't get a chance, because it costs them more to ship to their market than the market is paying. Chicago potatoes can go to $1.50 per cwt., which would mean 50 or 60 cents a bushel for Michigan spuds, before the competition of the far western states will be seriously felt. Daily shipments took a slump about the middle of the month resulting temporarily in a slight strengthening of the market, but with little improvement in price. However, it goes without saying that supplies cannot be held back for very long without higher prices at consuming points. But prices have got to be considerable higher at consuming points before the local buyers will raise their prices, as none of them care to chance a sudden drop in price which would follow the release of any considerable number of potatoes. Prices are abnormally low notwithstanding the size of the crop, and we have the feeling that farmers who can afford to hang tight have more to gain than they have to lose.

Prices

Detroit—$1.20 per cwt.

Chicago—$1.10 per cwt.

Prices one year ago—Detroit, $2.28.

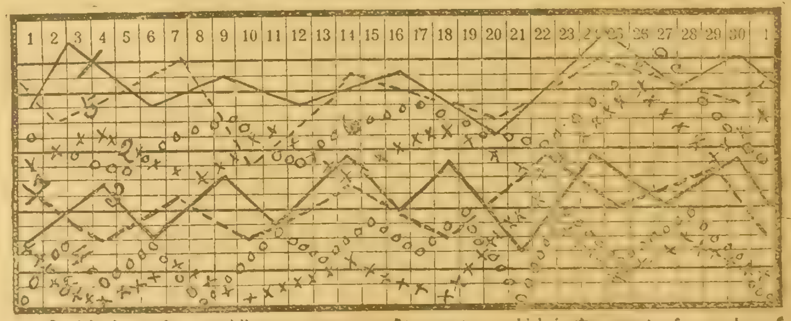
BEANS

The bean market continues very active and substantial price advances are registered every other day or so. The Detroit market on beans, for instance, advanced 75 cents per cwt., from Oct. 12th to Oct 23rd. While we have believed all along that beans would bring substantially higher prices before the winter was over, we hardly expected to see so great an improvement in such a short period of time or in that particular period in which they have advanced. We know now that the efforts of

THE WEATHER FOR NEXT WEEK

As forecasted by W. T. Foster for The Michigan Business Farmer

FOSTER'S WEATHER CHART FOR Nov. 1922.



Straight, heavy, horizontal lines represent normal temperature which is the average of same days of the year for forty years. Crooked lines above normal lines mean warmer; below, cooler; that marked 1 is for section 1, north of latitude 47, between meridian 90 and Rockies crest—2 for section 2 on my section map is for east of meridian 90, north of latitude 47—3, between latitudes 39 and 47 and between meridian 90 and Rockies crest—4, east of meridian 90, between latitudes 39 and 47—5, south of latitude 39, between meridian 90 and Rockies crest—6, east of meridian 90, south of latitude 39—7, north of latitude 43½, west of Rockies crest—8, south of latitude 43½ to Mexican line and west of Rockies crest.

Washington, October 27, 1922.—A very important feature of cropweather is the severity of the storms. I class that feature as moderate, severe and very severe. The latter includes dangerous stoms. I am making good on these. Cropweather forecasts are the very best kind for all purposes; they cover everything that is useful; they are long in advance, called long range; all other forecasts are only a few days in advance and are called short range. The former are scientific, based on well-known causes and mathematically calculated. All the short range forecasts are mere guesses, no [illegible] in them. The authors of the short ra[illegible] the weather is in all parts of the co[illegible] be tomorrow. Official science calls i[illegible] two systems have their separate spheres. [illegible] petes nor interferes with the other; [illegible] is room for improvements in both; the long [illegible] the short range does not.

The last storms of the October center on 27, in the middle northwest, classed as severe; next will be moderate and center on November 12. That has the appearance of two weeks' shortage of percipitation and warmer than usual, covering first half of November.

certain bean jobbers te bear the price that they might be safe on future contracts met with failure. We also know that the damage which the crops suffered from heavy rains during the height of the marketing season has cut the yield. But perhaps the greatest factor in the strength of the market haa been careful manner in which the growers have done their marketing. They have wisely acted upon the advice of the Business Farmer and others and at no time since the harvesting have the elevators been offered more beans than the market could really absorb. We do not believe that bean prices have reached their crest for the season.

Prices

Detroit—C H. P., $6.60 per cwt.

Prices one year ago—Detroit, C. H P., $4.55.

HAY

In general hay markets are in a strong position due to the car shortage which has curtailed shipment so that receipts are very light at all terminals. The quality of hay on the market seems to be improving.

Prices

Detroit—Standard timothy and light clover, $16.50@$17; No. 1. clover, $15@$16.50 per ton.

Chicago—No. 2 timothy, $20@$21; No. 1 clover, $16@$18.

New York—No 2 timothy, $24@$25; No. 1 clover, $23@$24.

Pittsburg—No. 2 timothy, $16@$17; No. 1 clover $17.50@$18.

Prices one year ago—Standard timothy $19@$20 per ton; No. 1 clover, $14@$15; No. 1 clover, mixed $15@$16 per ton.

CHICAGO LIVE STOCK MARKET

A series of strong to higher markets elevated cattle prices in general last week. Advances in the beef class amounted to from 25c to 50c. General improvement in industrial conditions, including healthy markets for the dressed products as well as higher prices for hides and leather, aided in boosting the market last week at Chicago. Receipts at 73,700 were approximately 10,400 larger than the week previous and practically the same as compared with the corresponding week last year. Included in the daily receipts were several loads of long-fed cattle, some of which had been culled out of herds being prepared for the fat stock show next month. Half-fat cattle, warmed up with a 60 to 90 days' feed, predominated in the run. The largest run of western steers for the year to date helped swell the offerings of steers. Higher prices for prime beef reflectd a scarcity of finished steers on the live market. Strength was noted on all grades, but the better kinds advanced sharply at some of the eastern markets.

Total arrival of hogs at Chicago last week at approximately 127,700 were comparatively small for this season of the year, being smaller than seven of the corresponding weeks during the past eleven years. Last week's supply shows a decrease of 7, 900 as compared with a week ago, 8,200 as compared with a year ago, being 9,600 larger than two years ago and 12,500 below eleven-year average. Although offerings were very small comparing with corresponding periods, they were second largest for any week since the middle of August. Shippers absorbed nearly a fourth of the week's supply, taking about 33,000 head, the largest number during any one week since July.

Average weight last week, estimated at 239 lbs, equals the lightest average weight since first week in March, being 1 lb. lighter than previous week, 4lbs. heavier than a year ago, 2 lbs heavier than two years ago and 11 lbs heavier than the eleven-year average. Although compared with recent weeks the average weight last week seemed light, in reality it was heavier than normal for this season of the year, being above any corresponding week's average weight in over eleven years.

There was a slight price reaction after midweek, which forced top to the highest point of the week $9.70. During the past two weeks top hogs have slumped 75c, being 40c below previous week's high time, 85c above a year ago, $6.05 below two years ago and within $1.15 of the eleven year average.

Barring the week ending October 14th, offerings last week in the sheep market exceeded any one week's supply this year, with the past two week's totals being the only weeks passing the 100,000 mark since week ending Jan. 15. 1921. Receipts last week at approximately 105,700 show a decrease of 14,500 as compared with the previous week, being 48,200 smaller than a year ago and 10,700 larger than corresponding period two years ago. Although arrivals from both the native and range states during the past two weeks passed general expectations, supply was below local trade requirements on practically every session, forcing all fat classes to the highest level in some time. Aged and yearling sheep reflected the extreme advance, with choice light native ewes selling at the highest level since Aug. 25 at $7.50. Only a few were offered, carrying desirable enough quality to reach that figure. Receipts from the west carried a liberal proportion of fat aged and yearlings wethers. Several bands of choice handy weight fat Montana aged wethers during the week cashed at $8.00, while fancy killing yearlings ranged upward to $12.75. Sheep values ruled on an upward trend throughout the week, with gains at the close, comparing with a week ago, ranging unevenly 50c to $1.00.

WOOL

Strength continues in the midwestern wool markets, with a recent 1c advance scored in quarter blood wools and sales made at top prices in several other grades, notably 3-8 blood wools. The market is strong and active, with dealers able to dispose of about all the wool they care to sell. The tendency is upward, not only in the midwest but in the east as well, several advances of 1c having been chalked up on the Boston market week before last.

Quotations on midwestern or so-called "native" wools in large lots—such prices as are obtained by the farmers' pools—are as follows: (f. o. b. Chicago): Fine and medium staple, 52@53c; ½ blood staple, 49@51c; ½ blood clothing, 46@47c; low ¼ blood, 33@34c; braid, 29c. Western ("territory") wools sell mostly 2@3c below these levels, Chicago basis.

MICHIGAN CROPS

SEVERAL CHANGES IN NAMES OF SOYBEANS

AT a recent meeting of the National Soybean Growers Association the duplication of variety names of soybeans was carefully considered and several changes made. The changes effect the Ito San, Midwest, Wisconsin Black, Ebony and Peking. The first three varieties are early to medium in maturity and are grown in Michigan.

At the meeting it was shown that the Mongol Medium Yellow, Roosevelt and Hollybrook (northern) were the same varieties and should be known by one name only. Since none of the old names were entirely satisfactory a new name "Midwest" was suggested and adopted.

Also the Early Yellow, Medium Early Yellow and the Ito San are the same variety and will be known as Ito San. The Wisconsin Black, Wisconsin Early Black, Wisconsin Pedigreed Black and the Early Wisconsin Black are the same and shall be known as the Wisconsin Black. Further announcements at the meeting were that the Ebony and Black Beauty varieties would be known hereafter as the Ebony variety, and grouped under the name of Peking would be the Peking, Sable and Essex.—C. R. Megee, Associate in Farm Crops, M. A. C.

MAKING MONEY WORK FOR YOU!

"Conservative Investment" is the title of a booklet that tells how to make your money work for you, with safety. We recommend its reading to every man or woman with any amount of money seeking investment. The First Mortgage Bond Co., Farwell Building, Detroit, Michigan, will send you it free any reader of The Business Farmer who mentions this paper or sends the coupon from their announcement on page 2 of this issue.

CLAIMS PAID

$1,176,132.85

Covering Fire, Theft, Liability and Collision

AUTOMOBILE owners have been using greater care this year in selection of the company carrying their insurance. The Citizens' Mutual Automobile Insurance Company of Howell, has a state-wide organization of attorneys, agents and adjusters to assist the policy holder in trouble. The company has settled over ten thousand claims and has paid during this year over $200,000.

When your car is damaged by fire, theft or collision, or when a damage suit of liability is brought against you, you will be glad that you have a policy in a substantial company. Automobile losses are complicated and it takes men of experience to assist in the adjustment or the settlement of the liability claims. You can obtain this service for a small cost. Do not take chances on a new or untried company but insure in a company strong enough to stand the test of heavy losses.

Total assets, October 1, - - $254,746.33
Gain over a year ago - - 88,338.68

The cost of insuring a Ford car covering fire, theft and liability in the country districts is only $9.60, and other cars in proportion.

See local agent or write to

The Citizens' Mutual Automobile Insurance Co.

Current Agricultural News

THE STORY OF A SUCCESSFUL COW-TESTING ASSOCIATION

THE first cow-testing association in the United States was organized at Fremont, Michigan, in 1906. The association engaged in active testing for a period of 12 consecutive years or until 1918 when it was temporarily disbanded. It was reorganized January 1st, 1922, with eighteen members which later increased to twenty-six. An average of 260 cows have been tested each month since the reorganization.

Hoyt D. Shisler, well known Oceana county farmer, is the official tester of the association, qualifying for the position after a short course at the M. A. C. Clair Taylor, county agricultural agent, has played an important part in bringing about the reorganization of the association and is now working on plans for a second association. The majority of dairymen belonging to the association express themselves as highly pleased with the result and will undoubtedly continue the work for another year.

Concrete evidence of the value of cow-testing was shown at a recent horticultural exhibit at Fremont, when Mr. Shisler put on an exhibit illustrative of cow-testing results.

One of the exhibits showed 581 pounds of butter produced by a Guernsey from the herd of Herman Zerlaut, which showed a profit of $107.33 above the feed cost of $71.63. Another display was of 172 pounds of butter produced by a grade Holstein at a loss of $22.96. Both cows from Zerlaut's herd.

Exhibits of different kinds of feed showed the differences between balanced and unbalanced rations, the latter costing almost as much as the former.

Photos were exhibited of two cows, showing where the poorest cow in the herd, but not the most unprofitable, was the mother of the best cow and also the highest cow in the Association at the present time. Likewise two heifers that had just freshened. Both are of like parentage, but No. 2 refused to eat grain and drink skim milk as long as No. 1. No. 1 produced 55.9 pounds of fat in her first month while No. 2 produced only 30.7 pounds.

GRAIN SHOW AT BRECKENRIDGE

FARMERS in the neighborhood of Breckenridge, Gratiot county, are busy preparing for the grain show to be held in the basement of a church at Breckenridge on November 20th. The show will include 10 ears of corn of each variety shown by each exhibitor, 3 quarts of wheat, oats, barley. Judging will be by a M. A. C. representative on afternoon of November 20th.

ANNUAL MEETING OF FARMERS CLUBS

THE annual meeting of Michigan State Association of Farmers' Clubs will be held in the Assembly Room of the State Office and Library Building, Lansing, on Tuesday and Wednesday, December 5-6.

A program that will discuss from every angle the betterment of Agriculture is being prepared and every one interested is invited to be present.

Every club in the state is asked to send delegates to this meeting and become a member of the Association. A great work has been done by our Association and a much greater work could be done if every club in the state would become affiliated with us.

We must educate, we must agitate and we must organize if we will have agriculture take its rightful place among the industries of our country.

Let every club member become a part of this organization and work for the betterment of agriculture.

That the Association may get in touch with every club in the state not affiliated already with us, it is asked that the name of the club and also the name of the secretary of the same be sent to the associational secretary at once.—Mrs. I. R. Johnson, Secretary and Treasurer, Rushton, Michigan.

GLADWIN FARMERS' SHIPPING ASSOCIATION MEETS

THE annual meeting of the Farmers' Shipping Association Gladwin, held Saturday, October 28, was attended by 100 of the 600 members. After reading and revising the by-laws the following directors were elected: George Roy, Roy Foor, Rufus Card, L. W. Easton, and J. E. Willford.

EMPHASIZES VALUE OF GOOD ROADS

C. J. GILPIN, economist in charge of Rural Life studies of the Bureau of Agricultural Economics, was one of the principal speakers at the recent Highway Transport Education Conference held in Washington. Dr. Galpin emphasized the value and necessity of roads to take the elements required to maintain a satisfactory standard of living to the farmer, as compared with the value of the roads to haul produce away from the farms. Roads to haul produce, decrease costs to the consumers while roads to bring social, educational, religious benefits and food and clothing to the farms mean better and happier people on the farms. He emphasized the need of terminal towns, adequately connected with proper roads to all the farms surrounding such towns.

WET WEATHER HURTS EUROPEAN CROPS

REPORTS from the Government's representatives in Europe indicate that wet weather has considerably injured the quality of the crops in many of the countries. In Poland large amounts of rye are reported as being used for cattle feed. In Austria, wet weather during the harvest did considerable damage to the grain. The same kind of report is received from Denmark and Sweden. In the latter country some of the grain contains as much as 20 per cent moisture. Reports from France indicate a similar condition of the crops. On the other hand the corn crop of Rumania has been almost ruined by the long dry spell prevailing during July and August in nearly every section of the country.

ONLY ENOUGH FOOD FOR NEEDS

AGRICULTURE in Central Europe is changing from a commercial basis to one of producing food to meet individual needs, according to Dr. L. C. Gray, of the U. S. Dept. of Agriculture, just returned from Europe. The new land policies in the Balkan States of cutting up large estates into small farms is having the effect of reducing surplus food production at least temporarily.

PRODUCERS OPEN NEW COMMISSION COMPANIES

TWO new producer-owned and controlled co-operative live stock commissioin companies were opened on November 1—one at Buffalo and the other at Fort Worth. This makes six companies operating as units of the National Live Stock Producers Association, set up by the Farm Bureau to improve the marketing of live stock.

The Producers Co-operative Commission Association, 965 Williams Street, East Buffalo, N. Y., has employed "Ernie" Prentiss, of the Buffalo yards, as cattle salesman; P. C. Flournoy, of St. Joseph, Mo., as hog salesman, and "Joe" Quinn, of South St. Paul, as calf and sheep salesman.

General Manager F. M. Simpson of the National Live Stock Producers Association is in East Buffalo to assist in starting the new company.

The new "Producers" company at East Buffalo is supported by the New York Farm Bureau Federation, the Michigan Live Stock Exchange, the Michigan State Farm Bureau, the Ohio Live Stock Shipping Association, the Ohio Farm Bureau Federation, and the Indiana Federation of Farmers' Association.

The Cattle Raisers and Producers' Commission Company at Fort Worth, Texas, is sponsered by the Texas & Southwestern Cattle Raisers' Association, one of the oldest live stock associations in the United States, starting in 1847 to protect honest cattlemen from thieves. Co-operating in the establishment of the producer-owned and controlled company are the Texas Farm Bureau Federation, the Texas Swine Breeders' Association, the Texas Sheep and Goat Raisers' Association, and others. The Fort Worth co-operative has taken over Hamm Bros., the biggest old-line commission firm on that market.

COUNTY AGENTS MEET DEC. 6

THE annual meeting of the National Association of County Agricultural Agents will be held during the week of the International Live Stock Exposition in December. The general meeting of the county agents will be held on Wednesday, December 6, with a morning and afternoon session, in the rooms of the Saddle and Sirloin Club at Union Stock Yards. The headquarters of the National Association of County Agents will be the Atlantic Hotel on Wednesday evening, December 6. There will be a preliminary meeting of the National Association on Tuesday afternoon, December 5, at two o'clock, at which time all the delegates from the various state associations are requested to be in attendance. H. C. McWilliams, of Ebensburg, Pa., is secretary-treasurer of the National Association of County agents.

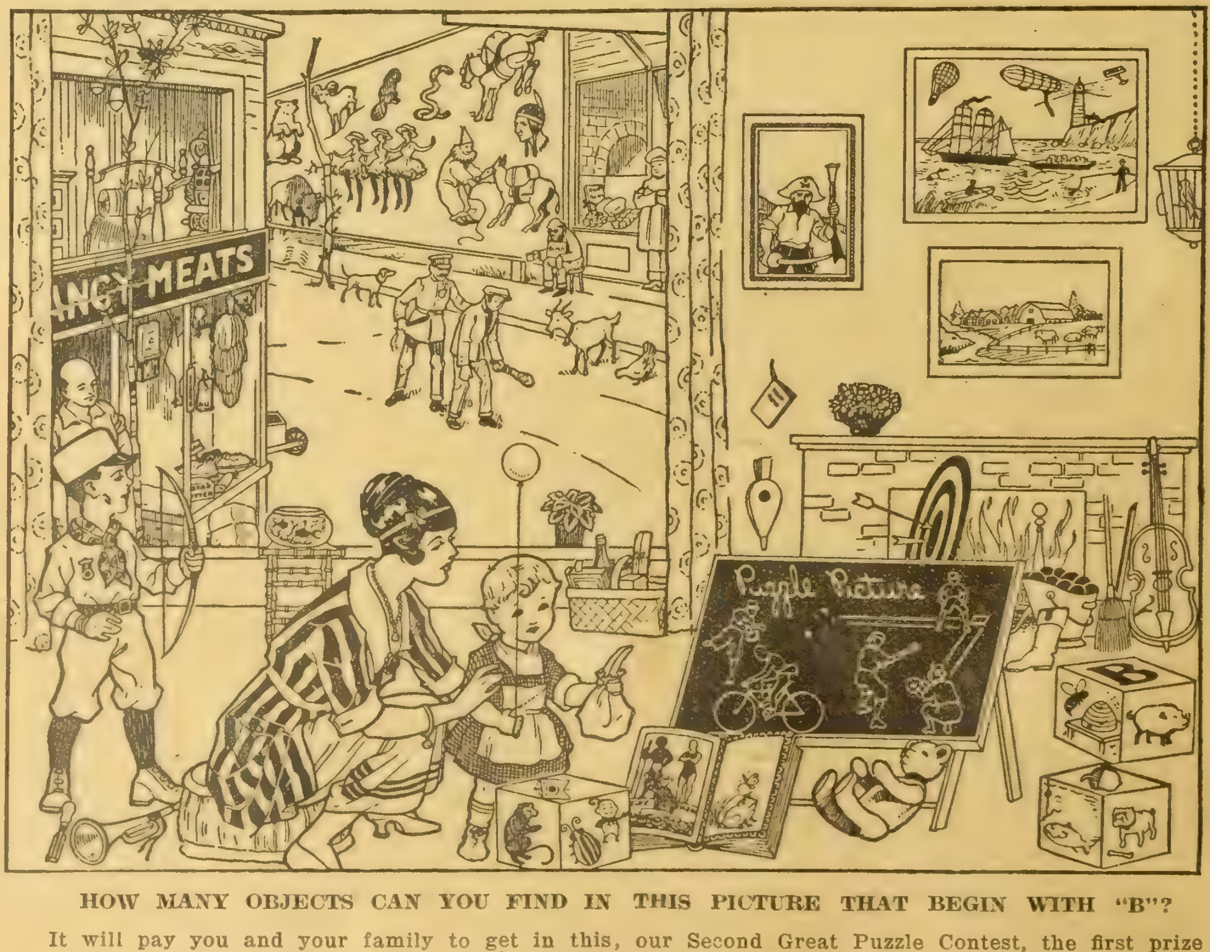
County agents attending their annual meeting may travel to Chicago on special rates, good for both the International and the annual meeting of the American Farm Bureau Federation the week following.

PLAN FUEL WOOD POOL

The Minnesota Farm Bureau is pooling orders for fuel wood. Farm Bureau township units are grouping orders so that farmers in the northern section of the state can ship carloads direct.

Only 15 Days Before the Great $500 Contest Closes

All Lists must be mailed by November 25th, 1922.



HOW MANY OBJECTS CAN YOU FIND IN THIS PICTURE THAT BEGIN WITH "B"?

It will pay you and your family to get in this, our Second Great Puzzle Contest, the first prize in which is $500 in cash! If you have not read our full announcement of this contest, which appeared in the September 30th. issue, look it up or write us a postal today for a copy of it, which we will gladly send Free! But you need not wait, start looking up the objects in the picture above right away. Your family and friends can help find them, but each list must be sent by one person. Still plenty of time, 15 days, but you should read the full announcement before you send in your list. Write: Contest Manager, The Michigan Business Farmer, Mt. Clemens, Mich.

Are the Railroads Managed Economically?

Can Economies be Effected in Management Which Would Permit Reduction of Rates?

BY RICHARD OWEN

MANY charges have been made that the railroads are mismanaged. The railway workers charge it and witnesses before congressional investigations have repeated the charge. The rail heads, natural to say, generally deny it, and claim that for a business of such magnitude it is conducted with remarkable efficiency. Here we have a writer who re-opens the question and cites to specific instances coming to his attention which seemed to show that proper regard is not given to many minor details of operation which in the aggregate cost the railway companies large sums of money. Of course the farmer is interested. His annual freight bill is a mighty big item. This year it is so big in comparison that it costs more to ship stuff to market than the market will pay. The railroad question is still uppermost and the accompanying article contains food for serious thought for the man who patronizes the railroads—Editor.

ONE morning a few months ago a passenger train was speeding over one of the railroads which crosses Michigan. The big Pacific type engine was making about forty-five miles per hour when something gave way on one side of the drivers. Almost instantly a side-rod snapped and plunged into the roadbed, a spring-hanger broke and the engine lurched over to one side, but still clung to the rails. At the first indication of trouble the engineer applied the air brakes and a few seconds later the train came to a standstill, a country woodland on one side of the track and a wheatfield on the other. The engineer whistled out the flagman and with the fireman rapidly descended from the cab and inspected the damaged engine. In addition to the broken side-rod and spring-hanger they found the connecting-rod pins were snapped off and the eccentric demolished. A few minutes later the conductor and baggageman walked up to the disabled locomotive.

"She's stripped herself," announced the engineer. "Can't go any farther with her. Got to have another engine."

"Can you get her to the next siding?" asked the conductor.

The engineer shook his head. "No. I'd be afraid to try it in the shape she's in. Only working on one side—and with that broken spring-hanger she's liable to climb the rail any second."

"Jack," said the conductor to the baggageman, "get the portable telephone out of the baggage car."

When the baggageman returned with the phone the conductor "plugged in" at a phone connection on a telegraph pole and called the train dispatcher.

"Engine 5342 on No. 74 is disabled," he told the dispatcher, "and we've got to have another engine before we can go any farther. She's stripped herself on the left side. We can't move our train—and we'll have to be shoved to the next siding. Better send out some mechanics to take the side-rods down on the 5342 and get her in shape to be towed back to the shops."

An hour later a light engine came up behind the standing train and slowly shoved it to the next siding. Two mechanics and the roundhouse foreman were on the engine besides the engineer and fireman who brought the engine out. The engine crews changed places on the engines, the disabled engine was uncoupled from the train and the relief engine coupled on and the train proceeded one hour and thirty minutes late.

The two mechanics and the roundhouse foreman examined the disabled engine and announced that they would take down the broken side-rod; make temporary repairs on the broken spring-hanger and would be ready to leave with it in tow of some other engine within an hour and a half. When they imparted this information to the train dispatcher he informed them that an extra would be along within an hour and if the 5342 was ready to move when it came the engine would be moved. Otherwise they would have to stay with the engine until the next extra came along as the first extra would not be held a half an hour for the purpose of towing the disabled 5342 in to the shops.

The roundhouse foreman and his two mechanics worked as rapidly as possible but before they could finish the job the freight which might have towed the disabled engine to the division terminal had passed.

Now note what happened: The engineer and fireman, the two mechanics and the roundhouse foreman waited from 9:30 a. m., until 7:30 p. m., for a train to pick them up with the engine and take them to the terminal. Eventually they were picked up but were not relaesed until nearly midnight and all of them except the roundhouse foreman drew pay with time and one-half for all hours after the first eight—until they were back to the terminal.

In other words the officials of the road would not hold the first extra train half an hour so that it could pick up the disabled engine and the five employees, the company paid out approximately 14 or 18 hours extra time to each mechanic and engineman—a total of at least 68 hours.

At this time the mechanics rates were 77 cents per hour. The enginemen's rate was figured in mileage and was ever higher.

Which brings us to the question: Are the railroads managed in an extravagant manner?

During one of the hearings in Chicago before the Labor Wage Board the labor unions purported to set forth possible economies in railroad management. The railroads replied that while the economies were possible it would cost so much to put them into effect that they could not afford them. In other words, they were too poor to be economical in the way the unions suggested. But in the instance just related there was no necessity of any expenditure of capital to save the cost of 68 hours of labor. And this only one of innumerable instances where money has needlessly been expended in operation.

In the maintenance departments of the railroads much the same condition prevails. Take the matter of fencing. Along one stretch of ten miles of track the right of way fences are so poorly maintained that within the past four days over a dozen valuable farm animals have been killed by trains after straying on the tracks through the railroad company's fences. The toll included over six horses, a calf, a dog, and a pure-bred bull which was said to be worth nearly one thousand dollars. In some instances law suits resulted because of differences in the valuation placed on the animals by the farmers and the railroad company.

"What is the company's policy regarding fencing?" was asked the roadmaster one day after a 200 pound hog had been killed by a train.

"They have no policy," he replied somewhat disgustedly.

"But their trains are killing farm animals every month," it was pointed out. "It is costing them more to pay for cattle and horses than new fencing would cost—many times over."

"I konw it," he answered. "But they won't give me the fence so I can do nothing about it."

What the roadmaster said concerning fencing is illuminating. In very many instances subordinate officers recognize defects in the policies of the management but because their superiors will not or possibly cannot give them assistance in cor-

Secretary Wallace Says Farmer is Coming Into His Own

BY C. E. JOHNSON

(SPECIAL CORRESPONDENT MICHIGAN BUSINESS FARMER.)

WITH Secretary of Agriculture Henry C. Wallace as the principal speaker, the business of the day, the cornerstone laying for two new buildings under construction at East Lansing, Tuesday, October 31, was the largest Gala Day at the Michigan Agricultural College since President Roosevelt's visit there in 1907. The corner stone for the New Home Economics and Library buildings were laid in the morning and Secretary Wallace addressed one of the largest crowds assembled in the College Gymnasium for sometime.

"We have come to the time when equal attention must be given to the marketing end of farming as well as the production phase of the business" declared the Secretary of Agriculture. "The financial reward offered the farmer must be fairly comparable with that offered men of the same intelligence and abilities in other walks of life," he went on to say.

"A breakdown in civilization, the same as has followed similar periods in the past, is inevitable unless something is done to equalize conditions," Mr. Wallace declared.

Then he went on to show what the Department of Agriculture has been doing to meet these demands. First, the bureaus of the department have been reorganized and their work co-ordinated to form the Bureau of Agricultural Economics. "The statistical work, the backbone of a good knowledge of conditions throughout the country and the world, has been materially strengthened. Seventy thousand dollars are being added to the livestock work this year alone, in order that the Department may be able to tell the number of livestock on the farms twice a year."

"More is being done to keep track of what other countries are going to do so far as planting crops and how the crops are to be sold. Foreign demand and how much of a salable surplus of American products the other countries will need will be closely watched.'

"The Department of Agriculture should place itself in the position of a man owning all the farms in the country and then study how to make all pay out well' asserted Secretary Wallace. "Colleges must give more attention to the economics of agriculture; economy in procduction and the business side of farming."

Wallace reviewed some of the achievements of the nation in bringing agriculture out of the worst depression that this country has ever witnessed. The Emergency Tariff Act and the extending of the War Finance Corporation Act to its present scope were named as two of the most important measures enacted to put agriculture back on its feet. In speaking of the War Finance Corporation Act, Secretary Wallace said that "it was recognized by aall as a wise piece of emergency legislation."

Doubling the capital of the farm land banks, which "were not functioning properly before," until today a million dollars a day is loaned through these banks, was the third piece of legislation put into effect to aid the former. Allowing joint stock land banks to increase the rate of interest on bonds but not on loans came in for its share of praise.

In speaking of these four acts, Mr. Wallace stated "these are the four most powerful forces which finally stopped the downward trend in prices and started them on an upward movement."

New acts of a constructive character are those regulating the packers and stock yards and those regulating the grain exchanges. The Secretary is given full power to make a complete investigation of each of these and make such changes as he deems best. "This," declared Secretary Wallace is the greatest authority given any government agency except in times of war."

The act placing a farmer on the Federal Reserve Board was mentioned by Mr. Wallace as a forward step.

In concluding the Secretary said, "If there is going to be a prosperous nation, there must be a symetrical building up of all industries; the nation must organize as a city fire department where all pull together. The day of cheap land is past and agriculture must be put on a sound business basis year after year."

Governor Alex J. Groesbeck laid the first corner stone of the New Library Building, the first of the two stones to be put in place. The college cadet corps escorted the members of the State Board of Agriculture, Secretary of Agriculture H. C. Wallace and other dignitaries of the day, to the site and assisted in the ceremonies of the day. L. Whitney Watkins, Chairman of the State Board of Agriculture presided at the Library corner stone laying, while Mrs. Dora H. Stockman, the woman member of the board, was in charge when the stone was set for the New Home Economics Building.

The honor of laying the second stone was given to Secretary Wallace. The ceremonies were marked by their simplicity and every thing passed off with the greatest smoothness.

Michigan Cow Wins World Honors as Producer

Holstein in Northern Michigan is Second Highest Yearly Milk Producer in the World.

ON the twenty-sixth of last month a new honor came to Michigan and particularly to Loeb Farms of Charlevoix. This day marked the close of a 365 days' test for butter and milk production of the Holstein-Friesian cow, Kolrain Marion Finderne, owned by Loeb Farms and the establishing of a record showing this cow to be the highest yearly milk cow east of the Rockies and second highest in the world. Her total production for the year was 35,339.7 pounds of milk containing 1,278.58 pounds of butter. During the 365 days there were 178 in which Marion produced over 100 pounds of milk per day. During the test no less than 15 state supervisors officiated.

This great cow is a beauty, almost all white in color and is royally bred, being sired by Finderne Pride Payne, dam Kolrain Eleanor Pontiac Korndyke. She weighs 1,680 pounds and was seven years old on the 16th of last September. This is her second full year on test. She made on her previous test as a "4½ year old" 28,851.8 pounds of milk containing 1,036.3 pounds of butter.

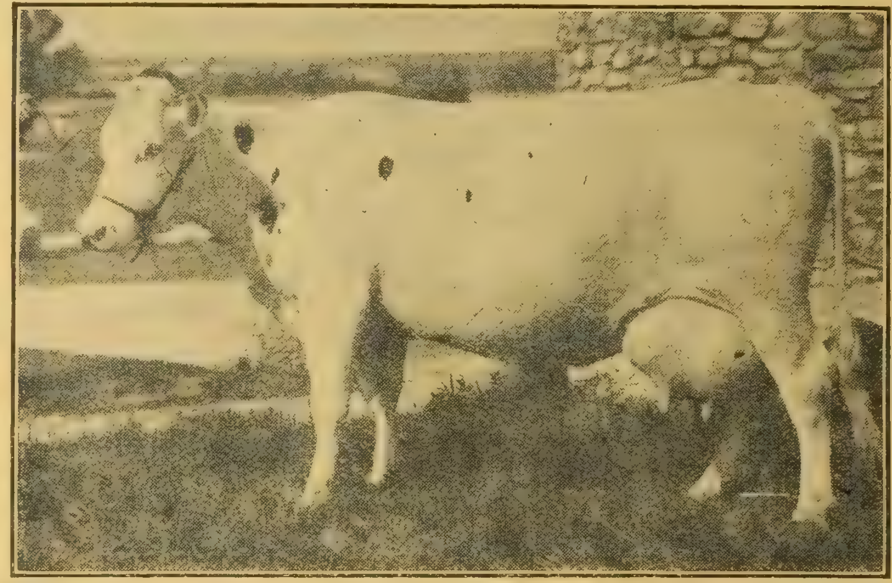
When their great Holstein cow, Kolrain Marion Finderne, completed her year's production record October 26th at Charlevoix, Michigan, Mr. and Mrs. A. H. Loeb, owners of Loeb Farms, saw the beginning of the realization of their plans for a model farm in Northern Michigan.

Early in 1917 Mr. Loeb saw the possibilities that Northern Michigan offered the dairy industry. On his trips to Charlevoix he had become familiar with stump land and vast cut over tracts, but his forecasting eye saw beyond these. A tract of 1,600 acres three miles South of Charlevoix, picturesquely located on the shore of Pine Lake, was purchased. The idea was to build a model farm, breeding cattle, Belgian horses and Duroc-Jersey hogs.

RECORD OF KOLRAIN MARION FINDERNE

Month	Days	Test	Milk	Fat	Butter
Oct.	5	3.25	385.0	12.513	15.64
Nov.	30	3.25	2675.0	86.938	108.67
Dec.	31	2.91	3299.2	96.013	120.02
Jan.	31	2.65	3188.7	84.585	105.73
Feb.	28	2.49	2964.5	73.816	92.27
Mar.	31	2.75	3377.0	92.892	116.12
Apr.	30	2.97	3125.8	92.836	116.05
May	31	3.04	3127.2	95.067	118.83
June	30	2.98	2919.3	86.995	108.74
July	31	2.80	2971.4	83.199	104.00
Aug.	31	2.836	2775.4	78.716	98.40
Sept.	30	3.104	2540.8	78.872	98.59
Oct.	26	3.035	1990.4	60.418	75.52
	365		35,339.7	1,022.86	1,278.58

Much of the land couldn't grow corn two feet high. Fields were cleared of stone, which were used in the construction of all buildings, stumps blasted and sod broken. The soil included clay, muck, sandy loam and sand, but even the lightest soil under fertilization is now producing heavily. About 750 acres are now under cultivation.



Kolrain Marion Finderne of Loeb Farms, the 7-year-old Holstein cow that has brought a world record to Michigan.

In 1918 five head of Holsteins were purchased, all of the famous Finderne strain, and also a son of the greatest of all Holstein bulls, Sir Pieterje Ormsby Mercedes. This wonderful foundation quintet of cows included Kolrain Marion Finderne, who produced this year 35,339.7 pounds of milk containing 1,278.58 pounds of butter, the marvelous record making Marion the highest yearly producer east of the Rocky Mountains and the second highest producer in the world. On her last test before making this wonderful record, she made 28,851.8 pounds of milk containing 1,036.3 pounds of butter. Combining these two records gives her a total for two consecutive years production of 64,191.5 pounds of milk containing 2,314.88 pounds of butter, which is the world's second highest combination two-year record.

Corn, rye, buckwheat, alfalfa, timothy, clover and all root crops, apples, pears, cherries, plums, berries and garden truck grow well in Northern Michigan. The winters are long and there is usually considerable snow, but the air is dry. Holstein cattle in particular do well in this climate.

At the recent state fairs at Columbus, Ohio, Detroit, Grand Rapids, and at Bay City and Saginaw, Michigan, Loeb Farms won $2,500.00 in cash and 275 ribbons on Holstein cattle, Belgian horses and Duroc-Jersey swine.

And now while farmers are undergoing troublous times financially, and farm products are low the organization of Loeb Farms in continually improving its stock and looking hopefully to a bright future, firmly believing the American farmer as the provider for a hungry world will come back into his own.

More Money For Farmer Who Slaughters and Cures His Own Meat

"THE progressive farmer can make meat production one of his most profitable activities," says E. H. Wright, an authority on the home slaughtering and curing meats. "He can save money by producing meat for market. Hams and breakfast bacon equal or superior to the best packing house products can be produced by the farmer easily and at little expense. There is a large and rapidly growing demand for these and other farmer-prepared meat products. Reflect just a minute about the difference between the price you get for meat animals on the hoof and the price the consumer pays for dressed or cured meat. Then you will perceive some of the possibilities in the production of meat on the farm—possibilities that have hardly been touched. The farmer receives too little for his meat. The consumer pays too much. He is more than ready to buy your products. All you need to do is let him know you have them." The accompanying article describes briefly the best ways for slaughtering animals on the farm. Additional information on the home dressing and curing of meats will be supplied free upon request.—Editor.

ANIMALS should be kept off feed 18 to 24 hours before slaughtering, but should have plenty of clean water to drink. There are two reasons for this. One is that it empties the intestines, making it easier to clean the carcass and prepare casings for sausage. The other is that if the animal is slaughtered when gorged with feed, the small blood vessels will not drain readily and the meat, consequently, will be darker and more likely to spoil. Keep feed away from your meat animals 18 to 24 hours before killing—but don't forget the water.

When ready for the slaughtering, handle the animals carefully. See that they are not whipped, kicked, chased or overheated. The carcass of an animal killed when excited or overheated is difficult to cool and the meat is inclined to sour or decay. Bruise marks will show in the meat and hasten spoiling. Do not overlook the importance of cautious handling if you wish to produce the finest quality of meat.

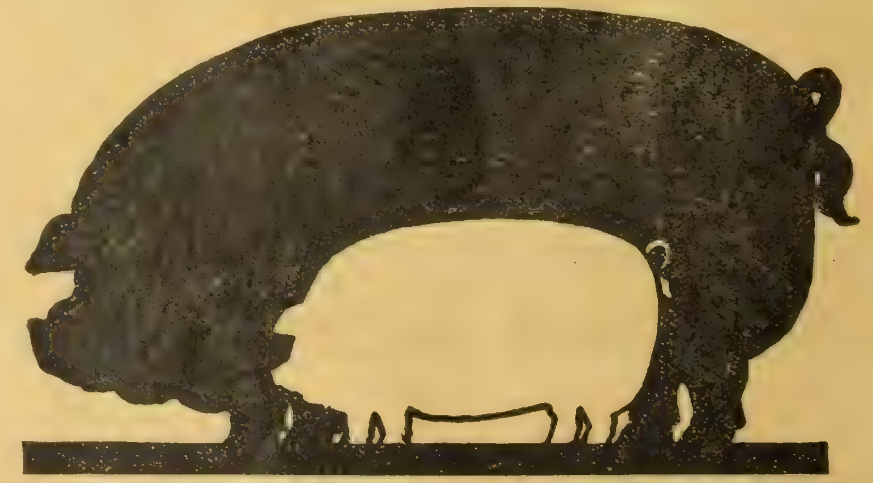
Be prepared before you start killing. See that all necessary supplies are at hand. Above all else, be certain that your killing methods are quick and effective. Half measures are dangerous to the slaughterer and may result in a poor grade of meat. Take every possible precaution so that first shot or blow will make the animal helpless and the bleeding can be immediate and complete. If a rifle is used, it should be handled by a good marksman. If an ax or sledge is used, care should be taken to place the blow properly. The practice of sticking animals without first stunning them is an abominable and unnecessary cruelty. A stunned animal can be bled perfectly if handled promptly and properly.

Carcasses should be cooled as rapidly as possible. Large ones should be split immediately and the halves cut up without delay. The meat, however, should not be permitted to freeze. The best results are obtained by chilling meat 36 to 48 hours at a temperature of more than 32 degrees and less than 40 degrees, Fahrenheit.

Pork and Pork Products

The hogs most suitable for meat are those from 8 to 12 months old. The meat of hogs less than three months of age is likely to be somewhat watery and lacking in flavor, while that of old hogs, as a rule, is tough. In the latter case, the difficulty can be overcome to some extent by fattening the animals heavily, preferably on corn, just before slaughtering.

How fat should a hog be when slaughtered? On this point, experts disagree. It's the old story of Jack Spratt and his wife. Some persons "can eat no fat;" some can't get too much of it. A certain amount of fat is necessary to make meat juicy and give it flavor. An excess of it, however is not desirable. The pork in favor is that well-marbled, fat and lean being blended in "the happy medium"—plenty of each and not too much of either. Such meat when properly cured, commands the highest price in any market and pays the producer a maximum profit.



When you sell animals on the hoof, you get only part of their value, represented by the white hog in this picture. When you sell them as meat, you get their full value, represented by the black hog.

The ideal meat hog is the smooth-bodied, rather small-boned animal of medium condition but gaining weight rapidly. Never kill a hog—or any other animal—that is losing weight. This rule is observed strictly by all producers who cater to a select market.

Slaughtering

Be ready before you start, because speed is important. Have all necessary implements at hand, and a plentiful supply of hot water for scalding. If possible, there should be a block and tackle or other device for hoisting the animals so they will bleed freely.

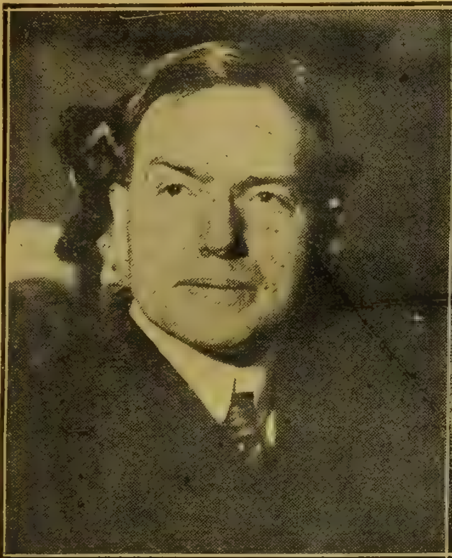
In general, it will be found more satisfactory to shoot or stun the animals before sticking. When this is practicable, perform the sticking operation as follows, two men being required:

Place the hog squarely on his back. One man stands astride the hog's body with his legs just back of the hog's shoulders, grasps the hog's forelegs firmly by the first joint and draws them backward and downward. A hog thus held is helpless. The other man, using a narrow, straight-bladed knife eight or ten inches long, makes a thrust directly in front of the hog's breastbone, pointing the blade exactly in line with the backbone toward the root of the tail.

The knife should be held perfectly straight until the cut is completed.

(Continued on page 19.)

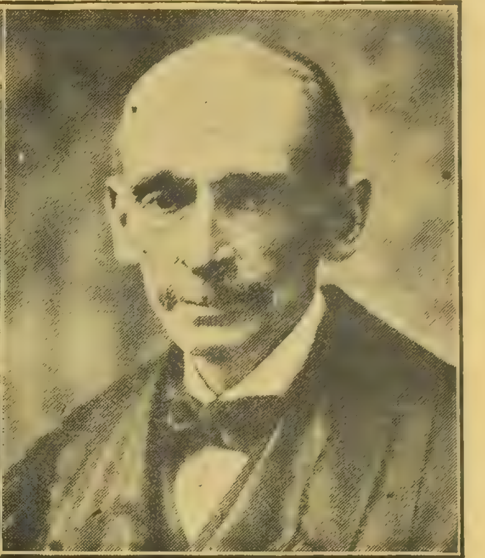
PICTURES FROM FAR AND NEAR



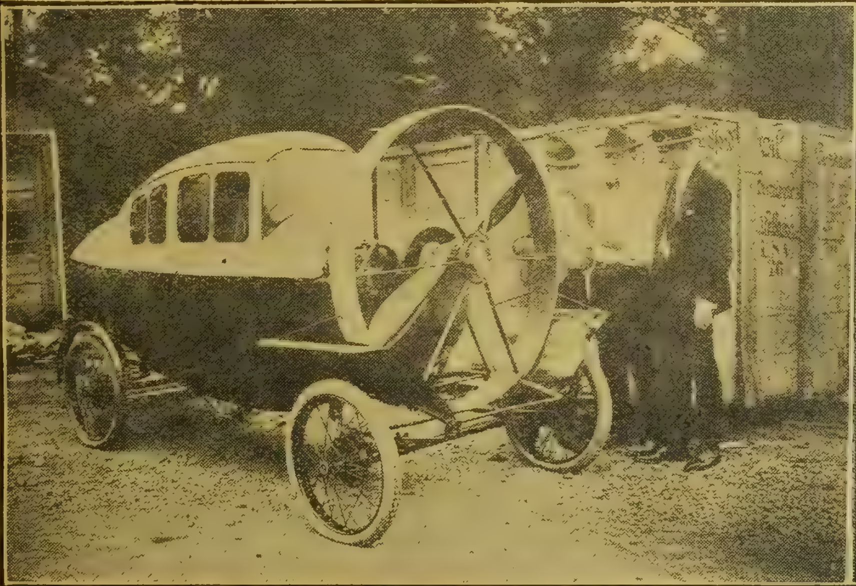
No wonder John D. Rockefeller, Jr., looks pleasant for the camera. We would too if we owned several hundred shares of Standard Oil Company stock for the past couple of years. Recently the company declared a 400 per cent dividend for the past year and Rockefeller's holdings increased in common shares alone, slightly more than $52,000,000 in value. Last year shares were worth $125, on October 11th this year they were $241.

¢ LB.
ROASTING VEAL 10

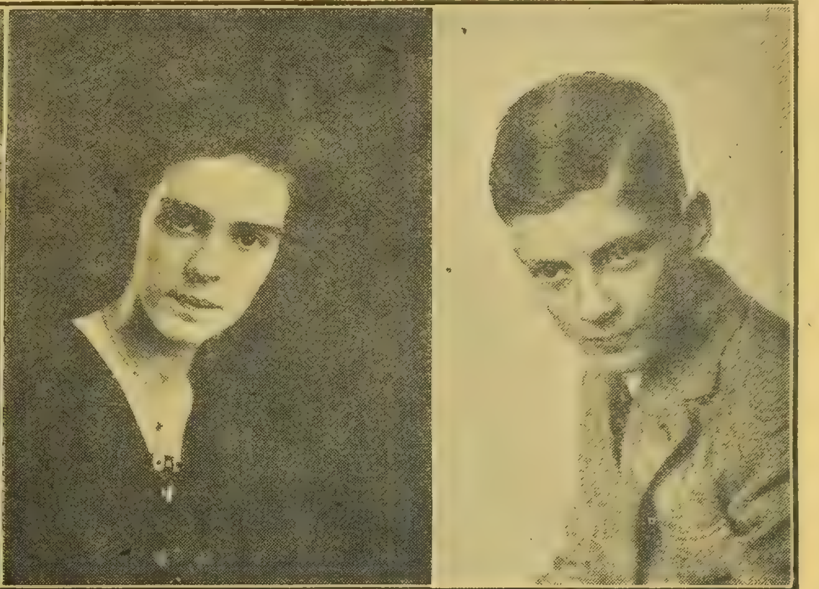
"John, stop at the 5 and 10 cent store on your way home from work this afternoon and get some meat for supper." That is what housewives in Brooklyn, New York, are saying since a new butcher store opened in that city where prices range from 5 cents to 15 cents, no higher. When asked how they could sell meat at such cheap prices the manager replied that a chain of 50 similar stores would be opened shortly, and the meat thus bought in such quantities can be sold cheaper than any individual butcher shop, with almost as much profit. Another reason for the cheapness is the fact that women butchers will be in attendance.



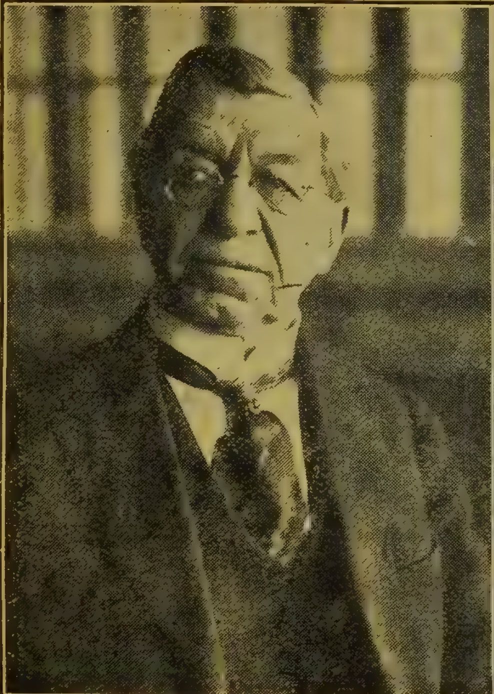
Associate Justice William B. Day, who has resigned as a member of the Supreme Court. He is over seventy years old and has served for more than ten years. This places him automatically on the retired list, and his salary of $14,500 continues during life. He will devote his attention to serving as arbitrator on the German-American Claims Commission at a yearly salary of $15,000.



Are you looking for the latest thing in automobiles? This car is a propeller-pulled two passenger auto and has just been imported by an oil company in Birmingham, Ala., from abroad. The car carries a two cylinder motor, two blade propeller, metal chassis, torpedo body and four-wheel brakes. It has steam-line body and cozy cabin and carries two passngers in comfort at the speed of 55 miles per hour.



Here are two prodigies from one family. Lois A. De Vore (left) and Henry B. De Vore, children of Mr. and Mrs. H. C. De Vore of Monongahela, Penn., are the youngest girl and the youngest boy ever admitted to the Pennsylvania state college. Henry owns up to 14 years and 8 months while Lois has reached the mature age of 16. Henry is studying natural science and his sister is taking up the more classical courses.



"General" Jacob S. Coxey wants to again march to Washington, but this time he wants to go, not as the head of his "Commonweal Army" but as a member of the House of Representatives. He is an independent candidate for Congress from the 18th Congressional District of Ohio, at Clairsville.

The "Miracle Man" from the Orient. Prof. Narukichi Nakemura recently arrived in New York City and his presence brings hopes to thousands of nearly hopeless cripples. He calls himself a "masseur". His method is a cross between Jiu Jitsu and massages of the nerve centers, and he has cured thousands. He wants to aid the poor that cannot afford to pay for cures.

This American beauty decided that being famous at home as a beauty was not enough so she started out to conquer new worlds. Her first victory was at Carlsbad, Austria, famed European watering place, where she recently won first prize. Her name is Miss Ada Johnson and she lives in St. Louis. Mo.

Westclox

Pedigreed Clocks

THE name of a champion in the pedigree of an animal pretty nearly settles the question of its value.

In the same way certain trade marks on merchandise settle all doubt of its worth.

You'll find that the name Westclox on alarm clocks and watches indicates a championship strain which the timepieces themselves bear out both in appearance and performance.

For a slight difference in price you'd choose the pure bred over the scrub every time. It will cost you very little if any more to own a Westclox with its record of faithful timekeeping and punctual calling.

The name Westclox is on the dial and six-sided, orange-bordered tag. Priced from $1.50 to $4.75.

EARN BIG MONEY
LEARN THE AUTOMOBILE BUSINESS

—the world's greatest industry. Millions of cars, tires, batteries, etc., need constant service. Thousands of trained men wanted. Wonderful opportunities open to men who "know how." Come to Michigan State Auto School and get this training now. Our course fits you to fill any automotive job. Our graduates always in demand. More than 18,000 graduates thruout world holding good jobs or in business for themselves.

Make $2000 to $10,000 Yearly

Our graduates are able to step into good jobs as soon as course is completed. Many go into business for themselves. Edwards (Mich.) was offered $40.00 per week a few days after completing our course; Nelson (N. Y.) took our course when 17,—now has five men working for him; Tirb (Mich.) gets $50.00 per week; Wolf (Iowa) making about $75.00 weekly in business of his own; Anderson (Minn.) made $300 per month in garage of his own. Hundreds more like these in our files.

Complete Course—Endorsed by Big Auto Factories

Every branch of the auto business is taught:—construction, operation, upkeep, and repair of autos, tractors, trucks, farm lighting plants, and gasengines. We teach by actual experience on each machine. No guess work Students visit auto factories, meet executives and service men, and learn factory methods right where 75% of automobiles are made. In fact, the big auto factories helped to outline our Courses and heartily endorse our School. M.S.A.S. training is complete, practical and profitable. IT PAYS TO LEARN THE M.S.A.S. WAY.

DETROIT THE HEART OF THE AUTO INDUSTRY

Special Courses In Battery Repairing, Tire Repairing, Brazing, Welding and Machine Shop Practice. All teaching done by actual practice.

Good Positions Await Our Graduates

Factories, garages and service stations continually ask for our graduates. Positions offer good pay with excellent opportunities for advancement, or go into business for yourself.

Write Today, for free catalog. Gives complete information about courses and opportunities in automobile business. Be a go-getter! Train for Success—let us help you. Write today

Farmers Service Bureau

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you. All inquiries must be accompanied by full name and address. Name not used if so requested.)

TENANT HAS NO FURTHER INTEREST IN PLACE

I wish to know if I rent my farm for three years and give a contract for the same and the renter notifies me in July that he will not keep the farm, he has had the farm two years, but will not keep it the third year and he leaves in July and goes to No. Dakota and leaves a man on the farm to work it and now writes to the man he will keep it and for him to go and plough and put in rye. Can I take the farm from him? He is a bachelor and I have been offering the farm to others to rent. Can he stay on the farm?

This same man had my sheep on shares for three years and he gave them up and gave me his contract. He got the sheep the 15th day of April. Can I make him leave hay enough to winter the sheep, providing I sell the sheep, can I get the amount of hay they would have eaten, providing I had kept them? He wrote he would be back next week. —J. W. F., Glennie, Mich.

—I would be of the opinion from your statement that the offer of tenant to surrender the lease and your acceptance of the offer would terminate any interest or right he had in the premises. That you would not be obliged to accept his choice of tenant nor allow the previous one to retake the premises. If you did not bargain with him about hay you would have no right to lay claim to hay you did not bargain for.—Legal Editor.

LOST RELATIVES

I am writing to you to ask you if you can find my relatives. My father's name is John Sullivan and my mother's name is Lillian Sullivan. I have two brothers and one sister. My brothers' names are Ira and Frank and my sister's name is Roilte. I was taken from home when eight years old and I am now thirty-eight. I was born in Bay City.—Mrs. Maud Walker, R. 1, Ellsworth, Mich.

MAY REMOVE PROPERTY

I rented a farm for cash and took my stalks and straw and made manure and when I went to move it off the party forbid me. It is mine, it did not grow on the rented land, only what the cattle made in the yard from the pasture they ate on the rented farm, but my stable manure I made with my own bedding brought to the rented farm.—C. F. F., Swan Creek, Mich.

—You do not ask what you want to know from your statement of the facts. I belive the manure formed as you describe is your property and that you might remove it as you please.—Legal Editor.

CAN VEGETABLES BE EATEN?

Will you please advise if the disease of the cucumbers and watermelons would affect the vegetables any to eat them?—W. L. G., Emmet County, Mich.

—There is probably no disease of the cucumbers and watermelons which affects the fruits in such a manner as to make them dangerous or injurious to eat them. Usually the fruits from diseased plants do not ripen or mature properly on the plant so that they are very unpalatable and therefore seldom eaten.—R. E. Loree, Department of Horticulture, M. A. C.

MUST HE DO THE THRESHING?

I went to see a thresher who was threshing for my neighbor and asked the engineer who was contracting the jobs, and he said he was the man who contracted for the jobs and I asked if he would come and thresh for me and my nearest neighbor and he said he would. He did thresh for my neighbor and when he finished I asked him to come to my place and he said no, that he was running the machine for another man who claimed I owed him for threshing. I only had that man thresh for me once and that was about eight years ago and the man's brother told me to pay the bill at the First State Bank at Gladwin and I did as he ordered me and got a recipt for it. After this thresher who promised to thresh refused I offered him the cash for threshing just as soon as he was through with the job, yet he said he would not do it unless I paid the other man's bill that he claims I owe. What I want to know is there a state law to compel a thresher to come in and do your threshing when he is offered the cash as soon as the job is done or can he do all the other jobs of my neighbors and pull out, leaving mine?—J. R. H., Gladwin, Mich.

—I do not know of any statue requiring a thresher of grain to accept every job offered him. However I believe that if the agent of the owner of the machine accepted an offered job a contract was formed to do the work and the failure of the man to do the threshing would make him liable to breach of contract.—Legal Editor.

MUST FURNISH WATER SUPPLY FOR SCHOOL

If a school takes water from the farm does the Board of Education pay for it?—T. I., Saline, Mich.

—I would say that 5681, Sec. 14 of the 1915 Compiled Laws, provides that the school board, or boards of education of a school district must furnish a water supply to the school. Further, the law provides that the school board shall vote a tax sufficient for furnishing the water supply. In general, the board would be expected to have the well right on the school grounds. However, they must have a supply of water on the school grounds. If they can make satisfactory arrangements with the farmer for supplying this water they have legal authority to do so. Of course, no farmer could be compelled to furnish the water supply without compensation if he saw fit to ask compensation.—Dept. of Public Instruction, Lansing.

DEPENDS UPON AGREEMENT

I rented a farm for three years and I have broken the contract by notifying the owner I leave the place by the first of December and he has agreed to have me leave. I have tried to rent different places this winter but cannot on account of wild mustard being in my corn fodder and straw. Now the owner wants me to leave straw to feed his cattle this winter but I have but enough for my own stock. Could owner take any straw off the place and would I have to pay him rent for the time I am on the place after the first of December? The straw was not mentioned in our contract. —C. H., Harrisville, Mich.

—If it was agreed at the time you leased the farm that the owner should have part of the straw he would be entitled to his share. When you agreed to leave if you also agreed to leave part of the straw he would be entitled to the amount agreed upon. If you paid money rent for the farm you would be entitled to all of the straw. This would be the case whether you stay on the place or move away. As you have agreed to terminate your lease and the landlord has accepted the agreement you have no right to possession after the first of December you may be removed at any time thereafter. If you stay after the first of December you are liable for rent for whatever the rent is reasonably worth if you do not agree upon the price. If you desire to stay and not be removed you should make an agreement with the landlord as time and amount of rent to be paid. A verbal bargain if for less than one year would be binding; but witnesses of the agreement should be had. —Legal Editor.

CANNOT WEAR SCOUT UNIFORM

If a boy joins the Boy Scouts, buys a uniform and then drops out, could he wear the uniform or is there a law against his wearing it if he is not a member of the Scouts? —A Reader, Evart, Mich.

—The national constitution and by-laws of the Boy Scouts of America states that only boys registered in good standing at headquarters in New York City are eligible to wear the official uniform of the organization. The Boy Scouts of America are incorporated under an act of Congress and the wearing of the uniform by non-scouts is a violation of the federal law. Any boy who ceases to become a member of the Scouts should dispose of his uniform to some other member.—Editor.

INSTALLING HEATING SYSTEM IN SCHOOL

Will you please advise me at once if the State Board of Education can compel a school district to buy a stove or heating system at their direction? Would like to know if the State Board of Education has the authority to demand where such heating system shall be purchased, and if they have a right to reject a system purchased by a school district.—F. T., Alma, Mich.

—The State Board of Education cannot compel a school district to buy a stove nor have they any authority to demand where such heating plant shall be purchased nor reject any heating system purchased by said district. The law provides that before a heating plant can be purchased or installed, plans and specifications must be submitted to the Superintendent of Public Instruction and approved by him. The Superintendent of Public Instruction has no authority and never makes any attempt demanding where such heating plants are purchased. The superintendent cannot approve a system that does not meet with the requirements of the state code.—Dept. of Public Instruction, Lansing.

NO CLAIM ON A

A purchased a team of pure bred mares from B for which he gave two property notes, one for $200 for one year and one for $300 for two years. One of the mares had a fistula about a year privious to this transaction. It broke out when the mare was two and a half years old and before she had been worked. B cured this and worked her lightly, selling her to A when three and a half years old. A knew that this mare had had a fistula and asked B if this trouble would return. B said it would not but there was no written guarantee to this effect. A purchased her as a perfect animal and gave property note for $200 at 6 per cent payable in one year. Before the year was up a fistula broke out on this mare in the same place as the former one. A does not feel that this could have been due to any neglect on his part as he had given the mare very good care. He had used the same collar on her that B had worked her in. She had not been worked for a month previous to this and in fact had been out to pasture the entire week privious. When the bunch was first noticed a local veterinary was called. A bad fistula developed and the mare was under the care of the veterinary for nearly four months during which time she required daily treatment from A. She was unable to do any work for about two months longer and has been favored during the entire summer. When the $200 note for this mare was due, $100 and interest was paid and the balance extended for one year. The remainder will soon be due. A feels that he is entitled to an adjustment of $100 on the price of this mare which would mean that the first note would be cancelled. He bases his claim on the facts given above, big veterinary bill, cost of keeping and extra care given mare during sickness and the fact that the mare is not now a salable animal and was not a perfect animal when he purchased her. The fistula is apparently cured and she seems to be in good condition but A would not sell her as a perfect animal for fear this trouble might some time return. The second mare was a larger animal and imported. The note for $300 will be due at the same time that the remainder of the first note is due. She has a colt 6 months old, bred, reared and registered while owned by A. Now, when these notes come due, A will ask B for $100 reduction in price. If B refuses this and takes the mares back could he lawfully claim any other property owned by A? Could he hold any claims on the colt? Could he start suit against A? Do you consider A entitled to this adjustment and if so is this the best method of procedure?—F. M., Caledonia, Mich.

—The purchase of the mare by B with knowledge of the fistula and the absence of a warranty of soundness puts B upon his guard and if he wanted to protect himself from loss in case of return of disease he should have required a warranty. While he might have purchased the animal as a perfect animal and A might have stated that the fistula would not return it was the expression of opinion only and for which A would not be liable. If the title note calls for the mare and her colt it would hold them both. If it only calls for the mare then the colt would not be included in the title. In the usual form of title clause notes the owner of the note may waive his title clause and sue upon the note. As if the mare died the purchaser would still be liable for the purchase price even though the holder of the note could get nothing from the dead body. B would have the right to sell the mare afflicted with fistula by disclosing to the prospective purchaser all the facts; and, if he believes so he would have the right to say to such prospective purchaser that he believes that it will not return. In order to make himself liable for damages by its return he must warrant that it will not return. As the contract appears to have been made open and above board, without any deceit, I can not see where B could claim any moral or legal right to a reduction in the price. Had the price of either of the horses greatly increased during the time of his ownership there would be no moral nor legal right for A to ask B an increased price above what was agreed upon.—Legal Editor.

RABBITS AND WOODCHUCKS EAT CABBAGE PLANTS

Is there anything that might be put on cauliflower and cabbage so that the rabbits and woodchucks would not eat them up?—R. F. P., Hastings, Mich.

—There is absolutely nothing known which will protect these plants short of covering them with wire netting which, of course, is out of the question on account of the expense. The simplest thing is to kill the rabbits and woodchucks before they do any damage.—W. B. Barrows, Professor of Zoology, M. A. C.

Waiter—"Sir, when you eat here, you need not dust off the plate."
Customer—"Beg pardon, force of habit. I' an umpire."—Lemon Punch.

Will Your Child Be Next?

Here are some startling facts:

"The New York State Health Department," says a leading national farm journal, "has found that twenty-one percent of the country school children have defective vision as compared with five percent of city children."

Four times MORE eye trouble in the country than in the city—*WHY?*

The farm journal gives its own conclusion: POOR LIGHT IN MANY COUNTRY HOMES!

Install a Colt "Gas Well" and Get Sunlight After Dark

How is your home lighted? Preserve good vision by installing a COLT "Gas Well." Live, work and read indoors under sunlight!

The COLT generates carbide gas which gives a clear, steady light exactly the color of sunlight. A *white* light—not a *yellow* one. A light that rests and soothes the eyes instead of taxing and straining them—"Artificial Sunlight."

Goes on at the twist of fingers, too—no matches.

Generated automatically by the COLT from carbide and water—no bother. Simple and economical—nothing to fuss and tinker with.

Use the gas also for cooking—a city refinement brought to the country home.

You Insure Your Life, Home and Car —*Now Insure Your Family's Eyes*

From Factory to Farm

The COLT comes to you complete and ready for installation from the factory—no dealers. Sold direct by COLT solicitors. Easy to install—within reach of all.

Poor eyesight is a lifelong handicap. Don't burden yourself and children with it—*install Carbide gaslight NOW, before Winter with its long nights sets in.* Easy and quick to do. Dependable and preferable—a half million in rural communities, use it. Just drop us a postcard and we'll give you full particulars.

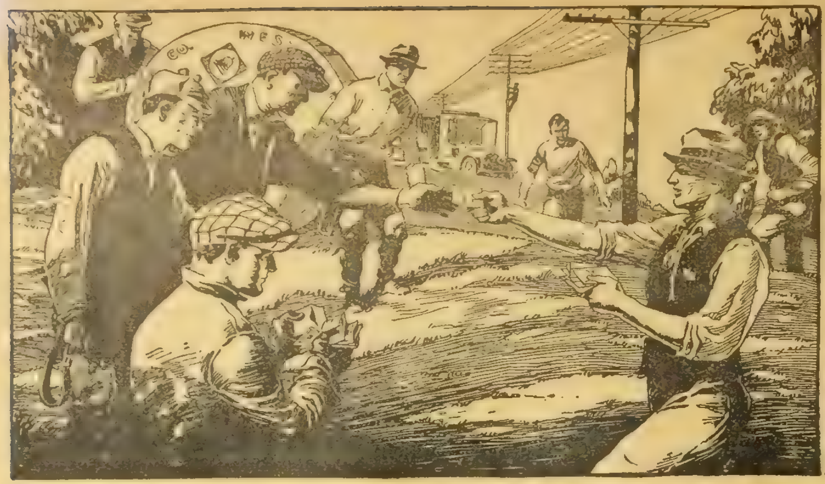
8th and Brannan, San Francisco

COLT TRADE MARK

Oldest and largest manufacturers of Carbide Lighting-and-Cooking Plants in the World

31ST SUCCESSFUL YEAR



The Dollar

The daily actions of most of us are influenced by the messages received over the telephone, and yet few of us stop to think of the men and women, and the mechanisms, which help to make that daily service possible.

Maintenance, repairs, and the work of handling calls, must constantly be carried on in good times or in bad, and they must be paid for, in order that your telephone service may be continued.

The average dollar will buy to-day less than two-thirds of what it would buy before the war. This means that it costs, on the average, half as much again to buy most of the things that are necessary for keeping the country going; but the advance in telephone rates is far less than this average.

In fact, gauged by the present purchasing power of the dollar, telephone service in the country as a whole is costing the subscriber less than it did in 1914.

The Bell System generally has been able to meet higher commodity prices and increased wages by means of new economies in operation and the increased efficiency of loyal employees.

MICHIGAN CROPS

RUSSIAN VETCH

How much Russian vetch should one sow to the acre? When is the best time to sow Hubam clover and how much to the acre? Can it be sown in March?—C. W. C., Custer, Mich.

—Russian vetch, commonly called hairy vetch, when grown with rye to be plowed under or for soil improvement is usually sown at the rate of from eighteen to twenty pounds of seed per acre. If hairy vetch has been grown on the land previously and the crop is to be used for seed, from ten to twelve pounds of seed is sufficient.

Vetch may be sown either during the late summer or early spring. Best results are secured by sowing during August. If sown after the first of September considerable winter killing. If sown during the spring, the yield of seed is so great as from August seedings. However, good yields are usually secured. Vetch is a viney, weak stemmed plant, and should be sown with a cereal crop such as rye or oats.

The Michigan Agricultural College has just issued a bulletin on "Hairy Vetch," which can be secured from the Director of the Experiment Station, East Lansing, Mich.

Hubam clover or annual white sweet clover should be sown during the early spring. If the seed can be covered, March is none too early. Better results are usually secured, however, by waiting until the seed can be covered with a light application of spike tooth harrow, or the Hubam seeded with a grass and clover seed drill. Late spring and summer seedings do not usually produce a satisfactory growth.

In tests conducted at the Agricultural Experiment Station, the biennial white sweet clover and Hubam sown on the same day have given practically the same yields of dry matter per acre when the biennial sweet clover was harvested the first of the season. The Hubam being an annual would not last over the second season.

The same cultural methods apply to Hubam as to the biennial white sweet clover. Both are quite sensitive to soil acidity should be inoculated, if neither sweet clover nor alfalfa have been grown on the soil previously, and should be seeded only on a well firmed seed bed.

It is impossible to distinguish between the seed of the Hubam and the white biennial sweet clover, so that seed of Hubam should be secured from a reliable source.—C. R. Megee, Farm Crops Department, M. A. C.

IS CHESS INJURED WHEAT?

Will you please tell me if chess is injured wheat? If not, where does it come from?—R. B.

—Chess is a weed and grows from seed the same way that many other weeds are spread by seed. Chess is usually much more prevalent when wheat has been injured by winter killing, tramping, poor germination, etc. This poor stand of wheat gives the chess a chance to grow or in other words the chess comes in to replace the missing wheat plants. Wheat never turns to chess. While chess seed and shrunken wheat kernels resemble each other slightly upon first observation a very marked difference will be noticed if the two are examined carefully.—C. R. Megee, Farm Crop Dept., M. A. C.

FACTS ABOUT FALL PLOWING

SEVERAL reasons recommend fall plowing to the experienced farmer and on a great many farms it is desirable to plow at least part of the corn ground in the fall. While fall plowing is not to be recommended on land that is subject to washing, it is however, advantageous on most of the level prairie lands and gently rolling areas, according to P. F. Schowengerdt, soils extension specialist of the Missouri College of Agriculture.

There are several advantages to fall plowing. It gives a better distribution of farm work, relieving the spring rush. Soils that are inclined to be wet and cold will warm up and be ready for working earlier in the spring if fall plowed. Where sod, coarse litter or a heavy growth of vegetation is to be turned under the material will partly decompose during the winter, thus making it possible to prepare a better seed bed in the spring. Fall plowing also helps destroy certain insects. Soils that are heavy and inclined to be cloddy will often improve in tilth with fall plowing.

Where it is desired to deepen the seed bed slightly by plowing somewhat deeper than usual fall plowing will allow the weathering of any new sub-soil that may be turned up.

Fall plowed land should be left rough in practically all cases. If is not desirable to disk or harrow it down until spring because this would tend to make it pack or run together too much.

NO DANGER IN PASTURING SUDAN GRASS

Could you advise me as to the danger of pasturing Sudan grass. I was planning to sow some next summer but have heard that it is poisonous for cattle.—R. G., Washtenew County.

—There is very little danger in pasturing Sudan grass; in fact, the only cases of poisoning from Sudan grass have been reported from the dry regions of the western states. No cases have ever been reported from the humid region east of the Mississippi River. The poison develops only when Sudan is severely injured by drought. When cured and made into hay the injurious effect is practically done away with. Sudan is a good emergency crop to sow when pasture and hay are short. It is an annual and will not live over the second season.—C. R. Megee, Farm Crops Dept., M. A. C.

FARM MECHANICS

AIR CHAMBER IN BUILT-IN REFRIGERATOR

Can you tell me where the air chamber should be in a built-in refrigerator, size 8 ft. 9 inches long by 7 ft. high and 42 inches wide inside, 4 inch air space all around, about 1 inch covering of cement in top and front and cement floor. Where should the ice be placed in a refrigerator of this kind, and also air chamber? Should latter run outdoors? We are having trouble keeping it cool with a great deal of ice.—L. S., Winters, Mich.

I would suggest that it does not make any material differences about where the air chamber or chambers are located in the wall of this refrigerator, which I suppose is being built up of several layers of material.

It is not necessary to use a 4 inch thickness of air chamber as an air chamber of one inch will answer practically the same requirements because it does not allow as much circulation of air as the 4 inch air chamber. However, if the 4 inch air space is filled with some material such as shavings or charcoal its value as an insulator would be increased. This air space or chamber should surround the entire refrigerator as fully as possible as should the insulation which is used with it.

I might also suggest that one layer of flax fibre or cork will aid very materially in the insulating properties of the wall. For example,—if the space of 4 inches thickness between the studding is filled with granulated cork with two thickness of seven-eighths inch board with tar paper between on each side it will transmit less than one-half as much heat as four thicknesses of board and two of tar paper.

Another modification is to use several thicknesses of hair quilts or deadening felt with about two thicknesses of board with tar paper between on each side of this hair quilt.

A cement covering could, of course, be put both outside of the refrigerator and inside in construction of this kind, which would serve to keep the materials dry. In any refrigerator the ice is usually put near the top so that heat circulating over it will allow the cold air coming

(Continued on page 19)

PUBLISHER'S DESK

"Some time ago you entered a puzzle contest. We are glad to inform you that the same is now closed, and you are one of the successful ones selected. Your prize consists of a most elegant eight piece Im. Silver Set, or an (Im. Egyptian Diamond apparently worth $10.00 in Jewelry stores.) Either prize belongs to you, and upon receipt of 98c in cash or money order (no checks) to cover all costs mailing, packing, etc, we shall be glad to forward your prize at once. Kindly return this card to us with the required amount within 15 days so we can have the prize shipped to you promptly from the U. S. A. factory. Be sure to remit charges direct to us. Congratulating you on your good fortune, we beg to remain, very faithfully yours, Canadian Silverware Co."

A reader from Holton, who sent this card, evidently will not be trapped by these slick Candian grafters who are just outside the jurisdiction of the U. S. Postoffice Department, but I am reprinting it here with the hope that I can save others from losing their "98c in cash or money order, no checks." I do not doubt but what if our reader has sent the amount required she would have received an "elegant eight piece imitation silver set or an imitation Egyptian diamond" but on the other hand, I am equally sure she would be able to duplicate either of these articles in any five and ten cent store.

It is a safe rule to follow not to send money by mail to any house which is not advertised in good reliable publications. The Business Farmer could be filled from cover to cover with cheap catch-penny schemes to trap our readers, but we try to investigate any questionable advertiser, and no one gets in our columns with whom we could not do business ourselves.

FRUIT and ORCHARD

EDITED BY FRANK D. WELLS

THE RASPBERRY SITUATION

DISEASES among raspberries are of a more serious nature than is commonly supposed. Reports from the important berry growing sections prove that leaf curl and mosaic among the reds, blue-stem among the blacks and root-gall among both have already destroyed a high percentage of canes.

These diseases are not easily described so as to be detected with certainty. A little field work however, with one who understands them will unable one to recognize diseased plants.

Leaf-curl is seen on the new canes. Few or no branches, and dark colored wood; leaves along the canes dark green, more or less crinkled and curling downward, are signs to look for. The younger growth at the end of the canes is lighter colored, but small, crinkly and curled, a condition especially noticable on the sprouts.

Mosaic is similar to leaf-curl. It has not yet been determined that the two are not the same under different conditions.

Fruit on infected plants is small, crinkly and of little value. Pickers avoid such plants and usually the fruit is a loss.

Blue-stem attacks black raspberries. It shows itself in small, puffed and mottled leaves near the base of the canes, where the wood has a dark, unhealthy color.

Root or crown-gall is sometimes seen at the base of the cane, but is more often out of sight on the roots. It kills the roots, so starves the plants. Weak, sickly, unproductive canes are to be expected where there is root-gall.

Now what is to be done? So far as a cure is concerned there is none. Dependence must be upon preventive measures.

First of all is the soil. Plants should be set where no raspberries have been grown for at least one, better two, years. Since the roots are infected as well as the tops in case of all three diseases, the ground becomes full of spurs which may inoculate new plants. So to dig out a diseased plant and set in a new one, though it may be healthy, is labor for nothing.

Next in importance is the plant. It should be taken from a healthy cane, since the disease is transmitted from the parent stock.

A plant showing signs of leaf-curl or blue-stem should be dug out. Even though there be only a single stalk or shoot, the whole plant, root and top is inoculated. This, if rigidly followed out; will aid in keeping the disease from spreading.

All weak, sickly plants should be dug out. They are unprofitable anyhow and sooner or later become the prey of some disease, unless they die to save themselves.

The present is not cheerful to many fruit growers, but the one who wins is the one who stays in the game. Considering the recent prices for raspberries and the shortage promised for the immediate future, it would seem as though those who have soil and location in their favor could do no better than to prepare for growing the fruit. Plant next spring.

NOTES AND COMMENTS

What will be better than an old-fashioned Russet, pitted this fall and taken out next spring? The public is finding it out, too. Orchard owners who not long ago could find no better use for Russet than for cider now say they have no difficulty to dispose of all they have by keeping them in pits till March or April.

* * *

If the high-bush cranberry had to be imported from China or Australia or South Africa, it might be ranked among the chicest of fruits. As it a native its excellent qualities are known to few. It is really not a cranberry at all, but one of the viburmums. A jelly may be made from it that once eaten is no soon forgotten.

* * *

The cherry trees shed their leaves before their time. The foliage turned yellow in mid-summer. Now the crop will be cut short next year and the trees are not well prepared to meet the winter. Timely spraying would have prevented it. No, fruit growing does not pay in such cases. Early cherries may ripen their fruit before the fungus gets in its work, but the late varieties suffer, the fruit being poor in quality, or may not be of any use at all.

* * *

Peter Gideon grew more than a thousand apple seedlings toproduce one variety of value, but that was the Wealthy. How much this variety has added to the apple production of the country is not to be estimated. It is a fitting monument to a worthy man.

* * *

Wild grape juice makes good jelly, but it does not appeal to many as a beverage. Mixed with elderberry, however, it seems to have a place in public favor. The acid flavor of the grape is toned down and the strong elderberry flavor is neutralized. The proportions are one of the grape to three of the berry.

"There is a story in this paper of a woman who used a telephone for the first time in eighty-three years."

"She must be on a party line."

GMC

A "Jim-Dandy" Truck

Model K-16, One Ton

$1295

Chassis only—at the factory

The Best Truck for the Farm

For general farm use, on hard roads or in rough fields, the Model K-16 one ton GMC provides more pulling power, more speed, and more economy than other trucks of the same capacity.

Moreover, this "Jim-Dandy" truck is built from truck parts exclusively—no passenger car parts used. Consequently it has the sturdiness and enduring performance that is demanded for hauling over all kinds of roads and in all kinds of weather.

The exclusive features of GMC construction, developed from more than ten years of successful truck building, have provided this truck with more continuous performance and lower operating and maintenance costs. Due to its advanced design there is not a single wearing part in this truck that cannot be replaced. Such refinements as Removable Cylinder Walls, Removable Valve Lifter Assemblies, Pressure Lubrication, and Instantaneous Governor action all give to this truck the dependability that is so vital in farm trucking.

In every detail of construction the Model K-16 has been built according to the most approved and most advanced practices.

Magneto ignition, electric lights and starter with conduit wiring entirely separate from the ignition wiring, radius rods, thermo-syphon cooling, oversized brake drums, interchangeable brake rods, complete instrument board, pressure chassis lubrication, cord tires—

All these are universally accepted as the best for motor truck use—all these are standard in this GMC.

Measured by any standard this one ton truck has no superiors—and its cost, considering its quality, is much lower.

Write for an illustrated booklet, "Motor Trucks on the Farm."

GMC Chassis list at factory as follows: One Ton, $1295; Two Ton, $2375; Three and One-half Ton, $3600; Five Ton, $3950; tax to be added

Rheumatism

A Remarkable Home Treatment Given by One Who Had It

In the year 1893 I was attacked by Muscular and Sub-Acute Rheumatism. I suffered as only those who are thus afflicted know for over three years. I tried remedy after remedy, but such relief as I obtained was only temporary. Finally, I found a treatment that cured me completely and such a pitiful condition has never returned. I have given it to a number who were terribly afflicted, even bedridden, some of them seventy to eighty years old, and the results were the same as in my own case.

I want every sufferer from any form of muscular and sub-acute (swelling at the joints) rheumatism to try the great value of my improved "Home Treatment" for its remarkable healing power. Don't send a cent; simply mail your name and address, and I will send it free to try. After you have used it, and it has proven itself to be that long-looked for means of getting rid of such forms of rheumatism, you may send the price of it, One Dollar, but understand I do not want your money unless you are perfectly satisfied to send it. Isn't that fair? Why suffer any longer, when relief is thus offered you free. Don't delay. Write today.

The Hunted Woman

By James Oliver Curwood

Michigan's Own and America's Formost Author of the Great Northwest

SYNOPSIS

JOANNE GRAY is one of the passengers on the train that connects "The Horde" with the civilized world. For eighteen hours she has been riding steadily bound for Tete Jaune Cache, the home of "The Horde", where she has no friends and all will be strange to her. The train stops at a town composed of several tents and learning that the train will not leave for two hours she goes in search of food and a bath. She is directed to "Bill's Shack" and it is here where she meets Bill Quade, who not only owns and operates "Bill's Shack" but is also leader of the lawless men of the town. Quade says he has a room she can rent and that he will show it to her. As they pass of the room a newcomer enters the doorway leading off the street. The newcomer is John Aldous, a well known novelist. He sees the strange girl enter the place and believes she has made a mistake and as he stands in the doorway his eyes rest upon the curtained doorway through which the girl and Quade have passed. In but a moment the girl steps out her face flaming and eyes flashing. Quade follows her apologetically. He starts to offer the girl some money but before he can do so Aldous steps to the girls side and floors Quade with a terrific blow. Aldous hurries the girl away from the scene to the home of friends. He then asks the girl to be his guest at supper in his cabin. She accepts. Joanne tells Aldous she is going to Tete Jaune to find her husband, Mortimer FitzHugh. Aldous decides to go with her to protect her from Quade and his partner at Tete Jaune, Culver Rann.

(Continued from last issue,)

HER words sent a warm glow through him.

"Nothing will happen," he assured her. "Quade will not come back."

"I don't want you to return to the cabin," she persisted. "Is there no other place where you can stay?"

"I might go down and console Stevens, and borrow a couple of his horse blankets for a bed if that will please you."

"It will," she cried quickly. "If you don't return to the cabin you may go to Tete Jaune with me tomorrow. Is it a bargain?"

"It is!" he accepted eagerly. "I don't like to be chased out, but I'll promise not to sleep in the cabin tonight."

Mrs. Otto was advancing to meet them. At the door he bade them good-night, and walked on in the direction of the lighted avenue of tents and shacks under the trees. He caught a last look in Joanne's eyes of anxiety and fear. Glancing back out of the darkness that swallowed him up, he saw her pause for a moment in the lighted doorway, and look in his direction. His heart beat faster. Joyously he laughed under his breath. It was strangely new and pleasing to have some one think of him in that way.

He had not intended to go openly into the lighted avenue. From the moment he had plunged out into the night after Quade, his fighting blood was roused. He had subdued it while with Joanne, but his determination to find Quade and have a settlement with him had grown no less. He told himself that he was one of the few men along the line whom it would be difficult for Quade to harm in other than a physical way. He had no business that could be destroyed by other's underground methods, and he had no job to lose. Until he had seen Joanne enter the scoundrel's red-and-white- striped tent he had never hated a man as he now hated Quade. He had loathed him before, and had evaded him because the sight of him was unpleasant; now he wanted to grip his fingers around his thick red throat. He had meant to come up behind Quade's tent, but changed his mind and walked into the lighted trail between the two rows of tents and shacks, his hands thrust carelessly into his trousers pockets. The night carnival of the railroad builders was on. Coarse laughter, snatches of song, the click of pool balls and the chink of glasses mingled with the thrumming of three or four musical instruments along the lighted way. The phonograph in Quade's place was going incessantly. Half a dozen times Aldous paused to greet men whom he knew. He noted that there was nothing different in their manner toward him. If they had heard of his trouble with Quade, he was certain they would have spoken of it, or at least would have betrayed some sign. For several minutes he stopped to talk with MacVeigh, a young Scotch surveyor. MacVeigh hated Quade, but he made no mention of him. Purposely he passed Quade's tent and walked to the end of the street, nodding and looking closely at those whom he knew. It was becoming more and more evident to him that Quade and his pals were keeping the affair of the afternoon as quiet as possible. Stevens had heard of it. He wondered how.

Aldous retraced his steps. As though nothing had happened, he entered Quade's place. There were a dozen men inside, and among them he recognized three who had been there that afternoon. He nodded to them. Slim Barker was in Quade's place behind the counter. Barker was Quade's right-hand man at Miette, and there was a glitter in his rat-like eyes as Aldous leaned over the glass case at the end of the counter and asked for cigars. He fumbled a bit as he picked out a half dollar's worth from the box. His eyes met Slim's.

"Where is Quade?" he asked casually.

Barker shrugged his shoulders.

"Busy to-night," he answered. "Want to see him?"

"No, not particularly. Only—I don't want him to hold a grudge."

Barker replaced the box in the case and turned away. After lighting a cigar Aldous went out. He was sure that Quade had not returned from the river. Was he lying in wait for him near the cabin? The thought sent a sudden thrill through him. In the same breath it was gone. With a half dozen men ready to do his work, Aldous knew that Quade would not redden his own hands or place himself in any conspicuous risk. During the next hour he visited the places where Quade was most frequently seen. He had made up his mind to walk over to the engineer's camp, when a small figure darted after him out of the gloom of the trees.

It was the Stevens' boy.

"Dad wants to see you down at the camp," he whispered excitedly. "He says right away—an' for no one to see you. He said not to let any one see me. I've been waiting for you to come out in the dark."

"Skip back and tell him I'll come," replied Aldous quickly. "Be sure you mind what he says—and don't let any one see you!"

The boy disappeared like a rabbit. Aldous looked back, and ahead, and then dived into the darkness after him.

A quarter of an hour he came out on the river close to Stevens' camp. A little nearer he saw Stevens squatted close to a smouldering fire about which he was drying some clothes. The boy was huddled in a disconsolate heap near him. Aldous called softly, and Stevens slowly rose and stretched himself. The packer advanced to where he had screened himself behind a clump of brush. His first look at the other assured him that he was alright in using caution. The moon had risen, and the light of it fell in the packer's face. It was a dead stonelike gray. His cheeks seemed thinner than when Aldous had seen him a few hours before and here was despair in the droop of his shoulders. His eyes were what startled Aldous. They were like coals of fire, and shifted swifty from point to point in the bush. For a moment they stood silent.

"Sit down," Stevens then said "Get out of the moonlight. I've got something to tell you."

They crouched behind the bush.

"You know what happened," Stevens said, in a low voice. "I lost my outfit."

"Yes, I saw what happened, Stevens."

The packer hesitated for a moment. One of his big hands reached out and gripped John Aldous by the arm.

"Let me ask you something before I go on," he whispered. "You won't take offence—because its necessary. She looked like an angel when I say her up at the train. But you know. Is she good, or—— You know what we think of women who come in here alone. That's why I ask."

"She's what you thought she was, Stevens," replied Aldous. "As pure and as sweet as she looks. The kind we like to fight for."

"I was sure of it, Aldous. That's why I sent the kid for you. I saw her in your cabin—after the outfit went to hell. When I come back to the camp, Quade was here. I was pretty well broken up. Didn't talk to him much. But he seen I had lost everything. Then he went down to your place. He told me later. But I guessed it as soon as he come back. I never saw him look like he did then. I'll cut it short. He's mad—loon mad—over that girl. I played the sympathy act, thinkin' of you—n' her. He hinted at some easy money. I let him understand that at the present writin' I'd be willing to take money most any way, and that I didn't have any particular likin' for you Then it come out. He made me a proposition."

Stevens lowered his voice, and stopped to peer again about the bush.

"Go on," urged Aldous. "We're alone."

Stevens bent so near that his tobacco-laden breath swept his companion's cheek.

"He said he'd replace my lost outfit if I'd put you out of the way some time day after tomorrow!"

"Kill me?"

"Yes."

For a few moments there was a silence broken only by their tense breathing. Aldous had found the packer's hand. He was gripping it hard.

"Thank you, old man," he said. "And he believes you will do it?"

"I told him I would—day after tomorrow—an' throw your body in the Athabasca."

"Splendid, Stevens! You've got Sherlock Holmes beat by a mile! And does he want you to do this pretty job because I gave him a crack on the jaw?"

"Not a bit of it!" exclaimed Stevens quickly. "He knows the girl is a stranger and alone, she won't be missed. Dammit, man, don't you know his system. And, if he ever wanted anything in his life he wants her. She's turned that poison-blood of his into fire. He raved about her here. He'll go the limit. He'll do anything to get her. He's so crazy I believe he'd give every dollar he's got. There's just one thing for you to do. Send the girl back where she come from. Then you get out. As for myself—I'm going to emigrate. Ain't got a dollar now, so I might as well hit for the prairies an' get a job on a ranch. Next winter I guess me'n the kid will trap up the Parsnip River."

"You're wrong—clean wrong," said Aldous quietly. "When I saw your outfit going down among the rocks I had already made up my mind to help you. What you've told me to-night hasn't made any difference. I would have helped you anyway, Stevens. I've got more money than I know what to do with right now. Roper has a thirty-horse outfit for sale. Buy it to-morrow. I'll pay for it, and you needn't consider yourself a dollar in debt. Some day I'll have you take me on a long trip, and that will make up for it. As for the girl and myself—we're going to Tete Juane to-morrow."

Aldous could see the amazed packer staring at him in the gloom. "You don't think I'm sellin' myself, do you' Aldous?" he asked huskily. "That ain't why you're doin' this—for me 'n the kid—is it?"

"I had made up my mind to do it before I saw you to-night," repeated Aldous. I've got lots of money, and I don't use but a little of it. It sometimes accumulates so fast that it bothers me. Besides, I've promised to accept payment for the outfit in trips. I'm going to take a good many trips before I die."

"Not if you go on to Tete Jaune, you ain't," replied Stevens, biting a huge quid from a black plug.

Aldous had risen to his feet. Stevens stood up beside him.

"If you go on to Tete Juane you are a bigger fool than I was in tryin' to swim the outfit across the river to-day," he added. "Listen!" He leaned toward Aldous, his eyes gleaming. "In the last six months there's been forty dead men dragged out of the Frazer between Tete Jaune an' Fort George. You know that. The papers have called 'em accidents—the 'toll of the railroad building.' Mebby a part of it is. Mebby a half of them forty died by accident. The other half didn't. They were sent down by Culver Rann and Bill Quade. Once you go floating down the Frazer there ain't no questions asked. Somebody sees you an' puts you under a little sand a bit later. If it's a white man he does likewise. There ain't no time to investigate floaters over-particular in the wilderness. Besides, you git so beat up in the rocks you don't look like much of anything. I know because I worked on the scows three months, an' helped bury four of 'em. An' there wasn't anything, not even a scrap of paper, in the pockets of two of 'em! Is that suspicious, or ain't it? It don't pay to talk too much along the Frazer. Men keep their mouths shut. But I'll tell you this: Culver Rann an' Bill Quade know a lot."

"And you think I'll go in the Frazer?"

"Egzactly. Quade would rather have you in there than in the Athabasca. And then——"

"Well?"

Stevens spat into the bush, and shrugged his shoulders. "This beautiful lady you've taken an interest in will turn up missing, Aldous She'll disappear off the face of the map—just like Stimson's wife did. You remember Stimson?"

"He was found in the Frazer," said Aldous, gripping the other's arm in the darkness.

"Egzactly. An' that pretty wife of his dissappeared a little later. Up there everybody's too busy to ask where other people go. Culver Rann an' Bill Quade know what happened to Stimson an' they know what happened to Stimson's wife. You don't want to let her go. I know what I'm talking about. Because——"

There fell a moment's silence. Aldous waited. Stevens spat again, and finished in a whisper:

"Quade went to Tete Jaune to-night on a hand-car. He's got something he wants to tell Culver Rann that he don't dare telephone or telegraph. An' he wants to get that something to him ahead of to-morrow's train. Understand?"

CHAPTER VIII

John Aldous confessed to himself that he did not quite understand, in spite of the effort Stevens had made to impress upon him the importance of not going to Tete Jaune. He was bewildered over a number of things, and felt that he needed to be alone for a time and clear his mind. He left Stevens, promising to return later to share a couple of blankets and a part of his tepee, for he was determined to keep his promise to Joanne, and not return to his own cabin, even though Quade had left Miette. He followed a moonlit trail along the river to an abandoned surveyors' camp, knowing that he would meet no one, and that in this direction he would have plenty of unbroken quiet in which to get some sort of order out of the choatic tangle of events through which he had passed that day.

Aldous had employed a certain amount of caution, but until he had talked with Stevens he had not believed that Quade, in his twofold desire to avenge himself and possess Joanne, would go to the extraordinary ends predicted by the packer. His point of view was now entirely changed. He believed Stevens. He knew that the man was not excitable. He was one of the coolest heads in the mountains. And he had abundant nerve. Thought of Stimson and Stimson's wife had sent the hot blood through Aldous like fire. Was Stevens right in that detail? And was Quade actually planning the same end for him and Joanne? Why had Quade stolen on ahead to Tete Jaune? Why had he not waited for to-morrow's train?

He found himself walking swiftly along the road, where he had intended to walk slowly—a hundred questions pounding through his brain. Suddenly a though to him that stopped him in the trail, his unseeing eyes staring down into the dark chasm of the river. After all, was it so strange that Quade would do these things? Into his own life Joanne had come like a wonderful dream-creature transformed into flesh and blood. He no longer tried to evade the fact that he could not think without thinking of Joanne. She had become a part of him. She had made him forget everything but her, and in a few hours had sent into the dust of ruin his cynicism and aloneness of a lifetime. If Joanne had come to him like this, making him forget his work, filling him more and more with the thrilling desire to fight for her, was it so very strange that a beast like Quade would fight—in another way?

He went on down the trail, his hands clenched tightly. After all, it was not fear of Quade or of what he might attempt that filled him with uneasiness. It was Joanne herself, her strange quest, its final outcome. With the thought that she was seeking for the man who as her husband, a leaden hand seemed gripping at his heart. He tried to shake it off, but it was like a sickness. To believe that she had been the wife of another man or that she could ever belong to any other man than himself seemed like shutting his eyes forever to the sun. And yet she had told him. She had belonged to another man; she might belong to him even now. She had come to find if he was alive—or dead.

And if alive? Aldous stopped again, and looked down into the dark pit through which the river was rushing a hundred feet below him. It tore in frothing maelstroms through a thousand rocks, filling the night with a low thunder. To John Aldous the sound of it might have been a thousand miles away. He did not hear. His eye saw nothing in the blackness. For a few moments the question he had asked himself obliterated everything. If they found Joanne's husband alive at Tete Jaune—what then? He turned back, retracing his steps over the trail, a feeling of resentment—of hatred for the man he had never seen—slowly taking the place of the oppressive thing that had turned his heart sick within him. Then, in a flash, came the memory of Joanne's words—words in which, white-faced and trembling, she had confessed that her anxiety was not that she would find him dead, but that she would find him alive. A joyous thrill shot through him as he remembered that. Whoever this man was, whatever he might have been to her once, or was to her now, Joanne did not want to find him alive! He laughed softly to himself as he quickened his pace. The tense grip of his fingers loosened. The grim, almost ghastly part of it did not occur to him—that fact that deep in his soul he was wishing a man dead and in his grave.

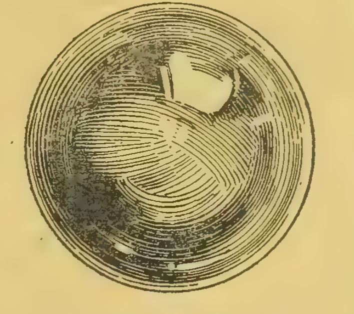
He did not return at once to the scenes about Quade's place, but went to the station, three quarters of a mile farther up the track. Here in a casual way, he learned from the little pink-faced Cockney Englishman who watched the office at night that Stevens had been correct in his information. Quade had gone to Tete Jaune. Although it was eleven o'clock, Aldous proceeded in the direction of the engineer's camp, still another quarter of a mile deeper in the bush. He was restless. He did not feel that he could sleep that night. The engineers' camp he expected to find in darkness, and he was surprised when he saw a light burning brightly in Keller's cabin.

Keller was the assistant divisional engineer, and they had become good friends. It was Keller who had set the first surveyor's line at Tete Jaune, and it was he who had reported it as the strategic point from which to push forward the fight against mountain and wilderness, both by river and rail. He was, in a way, accountable for the exstence of Tete Jaune just where it did exist, and he knew more about it than any other man in the employ of the Grand Trunk Pacific. For this reason Aldous was glad that Keller had not gone to bed. He knocked at the door and entered without waiting for an invitation.

(Continued on page 17.)

Now—BALL BEARINGS in the larger PRIMROSES!

The Highest Development in CREAM SEPARATOR Construction



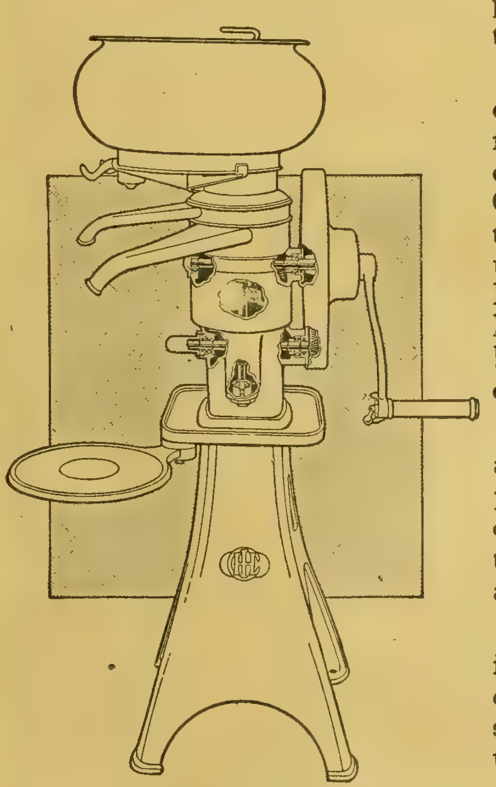
For forty-five years dairymen have struggled with hard-turning cream separators. Excessive friction caused them much trouble in the hand operation of the machines. Now the cream separator engineers of the Harvester Company, with this problem constantly in mind, and the satisfaction of the operator at stake, have designed and constructed a Ball-Bearing Primrose Cream Separator which reduces the power required to operate by approximately 35%.

In this latest Primrose, the ball bearings are located at points where the resistance is greatest in the operation of all makes of cream separators.

The Ball-Bearing Primrose is in no sense an experiment. It has been tested and proved a remarkable improvement in the hands of thousands of farmers and dairymen in New York, Wisconsin, California, Minnesota, and other dairy sections of the United States. The unanimous decision of all users is that it represents a development which has long been needed, especially in territory where large machines are in use, and where more would be profitably used were it not for the hard turning of the plain-bearing machines.

The International Harvester Company's broad and liberal guarantee stands solidly behind this product. Primrose deserves its high reputation, not only for its recovery of the greatest amount of butter fat when operated as instructed, but for its ability to do so with less labor.

The Ball-Bearing Primrose is one of the products in the McCormick-Deering line of farm operating equipment. It may be seen and studied at the store of your McCormick-Deering dealer. Write us for catalog if you prefer.



NEW PRIMROSE No. 5

BALL BEARINGS make it easy to operate this big 1,100-lb. capacity Primrose *by hand.* Cut out to show the six ball bearings on crankshaft, on pinion shaft and on spindle.

"The Farm Paper of Service"

HENRY FORD SAYS:

"THE chief injustice sustained by the farmer today is that, being the greatest producer he is prevented from being also the greatest merchandiser, because he is compelled to sell to those who put his products into merchantable form. If he could change his grain into flour, his cattle into beef and his hogs into hams and bacon, not only would he receive the fuller profit of his product, but he would render his nearby communities more independent of railway exigencies, and thereby improve the transportation system by relieving it of the burden of his unfinished product. The thing is not only reasonable and practicable, but is becoming absolutely necessary."—McClures, October, 1922.

THE FIFTY-FIFTY PLAN

SINCE the publication of Dr. Wendt's experience with the 50-50 partnership, we have had a large number of requests for copies of the contract blanks, and many inquiries concerning the operation of this plan of co-operation between land owner and farm worker.

> The following from one of our subscribers is a typical case: "Am writing you in regard to what would be right in a partnership deal. We rented here last spring. The landlord said, 'As you haven't anything, I will furnish feed, seed and everything. You take one-third of the increase on everything except the chickens and cream. I'll give you half on that.' We agreed to that, but after harvest the landlord insisted that we pay our share of the threshing and twine bills. That was the first he had even mentioned threshing or twine. He also furnished an incubator and some insect powder, and some feed of coarse, and now he wants to charge that up to the chickens and then take half. Our hogs needed a little attention by a veterinarian, and now the landlord is charging that up against the hogs with the first cost. We have no written contract, just verbal, but we have proof of it. Now if you will send us an answer and tell us what is right in that kind of a deal, we will appreciate it very much."

The fundamental trouble here is the lack of a written agreement. A verbal contract is not sufficient in real estate deals. The important thing is for owner and worker to get together in the beginning with a perfect understanding of every detail concerning each other's rights and obligations. "Have your quarrels before you sign up," is our advice in most cases of this kind. If you will do that you won't need to have any misunderstandings after you have begun operations.

In this particular case we feel that where the worker gets one-third of the crop or income, all the expenses should be paid by the landlord. One-third is simply wages for the laborer. This the rule and the landlord in the above case should in justice pay the threshing twine and veterinary bills. With that part of the fam operations where the worker gets one-half, he should also pay one-half of the expense.

The peculiar advantage of a definite written agreement is that it creates in the minds of the parties a feeling of mutual interest. They then become in fact and in spirit equal partners. Each is interested in the other's welfare. No sensible person would try to take advantage—even if he could do so for one year—for he knows that in the long run he would lose out. In brief, the prosperity of the individual is based upon the success of the "company."

In the above case, the wasteful feature is that while the landlord may gain a little advantage this year, he is likely to lose a good man who, if encouraged, would perhaps put the farm on a paying basis for years to come.

THE "LIVING WAGE"

> "The workman's lowest wage must be enough for comfort, enough to make his house a home, enough to insure that the struggle for existence shall not crowd out the things worth existing for."

PRESIDENT Harding said this to a group of organized labor leaders recently in Washington. They had come to complain of the proposed lowering of their wages. Most of them were representatives of the powerful railroad labor unions. They represent a class who have no money invested, work shorter hours and earn more money than the farm owners of any state through which their trains move.

Now we call upon President Harding to say—and where not only Wall Street, but the labor unions can hear him, plainly and positively:

> **"The lowest prices paid the farmer for his products, must be the cost of production plus enough for comfort, enough to make his house a home, enough to insure that the struggle for existence shall not crowd out the the things worth existing on an isolated farm for!"**

And this message must be born home to the congressmen who are blunder-busing with so-called Farm Blocs, which seem only to arouse the antagonism of the non-farming classes, (because class-legislation is not and never can be American) and therefore actually do "block" the urgent relief needed.

The farmers of America do not expect pampering, they are not looking for a soft place to lay their heads, but they do feel that they have waited about long enough for a re-adjustment of freight-rates and commodity prices which are directly reflected in the inflated prices still demanded by labor.

Selfishly perhaps, but nevertheless, Big Business, so-called, shows active signs lately of wanting to bring Bigger Business (which is the farming business) back to normal, but Labor Leaders have become so enamoured with "44 hour weeks," and "dollar-an-hour" wages, that they have failed to notice that oats are now worth 40c and wheat $1.10 per bushel on the farm.

"ALL BOUND 'ROUND WITH A WOOLEN STRING"

HENRY C. TAYLOR, Chief of the newly formed Bureau of Economics of the U. S. Department of Agriculture, defines the duties of the County Agent.

"It is not a part of their official duties to perform for individual farmers or for organizations the actual operation of production, marketing, or the various activities necessary to the proper conduct of business or social organizations. They may not properly act as organizers for farmers' associations; conduct membership campaigns; edit organization publications; manage co-operative business enterprises; engage in commercial activities; act as financial or business agents, nor take part in any of the work of farmers' organizations, or of an individual farmer, which is outside of their duties as defined by the law and by the approved projects governing their work.'

In other words the county agents may not do the very things which they have been doing most here in Michigan. They may still pass a farmer on the street, providing they do not rub elbows with him.

As we have said before, and say again, the county agent is an almighty useful individual when he's his own boss or takes his orders from the farmer, but he's no good if he's got to be tied to the apron string of the Department of Agriculture. And most of the county agents know it themselves.

BACK TO EVERY WEEK!

YOU, can help The Business Farmer get back on an every-week basis, by sending in your renewal NOW! One dollar means 52 issues, whether they come in one year or not, every subscriber who has paid for this weekly at our regular rates will get every single copy for which he has paid or pays now.

We prefer to get out a good, honest, independent farm paper every-other-Saturday, OWNED AND EDITED IN MICHIGAN, than get out every week at a financial loss which sooner or later would put control of this paper in the hands of out-of-state politicians or special interests.

As soon as we can afford to get out a complete paper retaining every department, we will publish every week and your renewal right now, will help hasten that day! In the meantime remember, every subscriber will receive every copy for which he or she has paid.—George M. Slocum, Publisher.

OUTWITTING THE MIDDLEMAN

THERE is no excuse for the middleman unless he can perform the functions of distributing products better and more cheaply than the manufacturer or producer of those products. When a farmer turns his products over to another to finish or carry to the consumer it is a confession that he prefers to pay for the service instead of doing it himself. Now there are probably times when it pays the farmer to do this. If he can make a fair profit out of what he grows at the price the middleman is willing to pay, he doesn't care to assume the risks of marketing for the sake of a little higher profit. But in years when prices are low and do not compensate for the cost of production, then it is probably to the farmer's advantage to finish and sell his products himself

Of all the branches of agriculture the opportunity for increasing profits is probably the greatest in the livestock history. In no other is there so large a spread between what the farmer receives and what the consumer pays. The reason is, of coarse, that the product must go through many processes and through many hands before it is ready for the consumer's table.

In other days, before the advent of the great packing houses, the farmers slaughtered and cured their meats. But their knowledge of curing was limited and their methods crude and unsatisfactory. It was a relief to many farmers when the efficient packing plant came into existence and took up the job of finishing their product off their hands. But each year the farmers pay a big price for the service and in years of low prices they pay more than they can afford to.

In quite recent years many farmers with small herds or flocks have shown a disposition to go back to the old way of doing their own slaughter and curing. Some, indeed, have made so marked a success at it that their meats are widely known and command fancy prices. Take, for instance, Jones' farm sausages. They are made on a farm in Wisconsin by an ordinary farmer. Their reputation and demand are nation-wide.

The Business Farmer believes that in many instances, particularly just now when livestock prices are low, that farmers can save money by curing meat for their own tables and make money by selling it out to a selected list of patrons. Many suggestions are available for those who desire to try it and the Business Farmer will gladly lend its counsel upon the subject if desired.

A GREAT COW

THE Loeb farms at Charlevoix, Michigan, have developed what is now the highest producing cow east of the Rocky Mountains and the second highest in the world. Kolrain Marion Finderne is a Holstein cow, seven years of age On official test, completed October 26th, she showed milk production of 35,339.7 pounds and 1,278.58 pounds of butter.

Naturally Michigan is proud to claim the ownership of this wonderful cow. For years Michigan's fame as a breeder of high producing cows has been national. The Loeb achievement will make it international.

The offspring of Michigan dairy herds may be found in nearly every state in the union serving as the foundation stock of other great herds. But the records of none of these, gratifying as they are, can even approach that of Kolrain Marion Finderne. This record stands alone in the annuals of the Holstein industry not only in Michigan but of the entire east as well. It is the culminating crown to Michigan's fame in the dairy world.

The line between failure and success is so fine that we scarcely know when we pass it; so fine that we are often on the line and do not know it. How many a man has thrown up his hands at a time when a little more patience would have achieved success.—Elbert Hubbard.

What the Neighbors Say

We like the Business Farmer very much and look for it to come but two weeks seem a long time. But we like the plan better than to have it cut down.—Mrs. Henry Ha[illegible], Emmet county, Michigan.

PRODUCERS VS. CONSUMERS

SUPERSTITION dies hard, especially when carefully nursed by powerful reactionary interests. It beats all how many otherwise intelligent farmers still hug the delusion that our economic interests conflict with those of organized labor.

You have already shown that each is the other's best customer and that a customer is no good as a customer, unless he is prosperous enough to pay for what he buys. Glenn Plumb, author of the Plumb Plan, goes further and shows that organized labor is as vitally interested in keeping reasonable prices on its products as in keeping wages up.

When the first union got its first boost in wages, says Plumb, their employers simply raised the prices enough to considerably more than cover the increased cost of labor. But the members of their union, buying but a few of their own products, were away ahead of the game. But as the workers in other industries followed their example and their employers in turn raised their prices enough to more than cover the increased cost of labor the time came when so many commodities were affected that the increase in the cost of living exceeded the increase in wages, and further increases in wages only aggravated the trouble.

"And so it went, clear around the circle, new organizations coming into existence until we have about 124 international organizations embracing in their membership over 6,000,000 men, representing over 300,00,000 people engaged in organized, industrial production, one-third of the people of the United States in organized labor, all workers, each one endeavoring to raise his wages. * * *

"For every increase which any one of these organizations gets, the public pays five times that in the price of commodities. * * *

"We have 30 per cent of the people in organized labor. Assume that all of them get a 25 per cent increase in wages. That means that the cost of commodities they produce advances 125 per cent. of the increase in wages, but remember the people in organized labor consume about one third of these commodities, and when the people in organized labor buy that one third they pay 37½ per cent. of the total increase in the cost of living, and they only got 25 per cent. of that increase in wages. They are one half of their increase behind, because the increase has cost them as a body 50 per cent. more than they received. * * *

"Our interest as consumers now exceeds our interest as producers. Your wage is worth to you just what it will buy, and no more. We have been working under a system where every increase which we receive has been added to the price of the commodities which we have to buy, and a profit added to that increase. We have paid no attention to the consumer's interest. When we get our increase we have been content to let the consumer pay it, and we are the consumers. We must find some way that protects our earning power without having an increase added to the price of the commodity we make or the service we render. That is protecting our consumer's interest as well as our producer's interest. If we can find that way, then we have an effectual means of reducing the cost of living, increasing the purchasing power of our wages, and benefiting ourselves and all mankind."

Organized labor knows as well as we do that strikes are a nuisance to all concerned. But before asking him to submit compulsory arbitration let us ask ourselves if we are prepared to let a bunch of corporation lawyers appointed by the President fix the market prices of our products. To fix wholesale commodity prices by an industrial court or commission and let the labor unions fix wages would be just as sensible as to fix wages by such a court or commission and leave the profiteers to fix commoditiy prices. The whole industrial problem, reduced to its lowest terms, is to fix and maintain such a definite, equitable relation between commodity prices and the price of labor that every citizen can afford to pay fair prices for all the commodities he or she can use.—Stacy Brown, Ionia County, Mich.

—And its some problem, isn't it, friend Stacy? With a goodly share of our industrial captains either unconcerned over the problem or opposed to any such equitable theory, a balanced condition between income and outgo seems a long distance away.—Editor.

THE GASOLINE TAX

I THINK there should be a large enough tax on gasoline to keep the highways in repair. At least 3 cents a gallon or 10 cents if necessary. Also have license plates that are good for the entire life of the car. No one would have to go to the bother of getting them every year, and the state would be saved the expense of making them every year. There are a lot of drivers who pay no tax except the license. There are a lot of tourists who never help pay for the roads they use. There are a lot of business men who ride back and forth from some lake to town, lots of busses that wear out the roads from town to town, that do no pay what they ought to for the upkeep of the roads. I am in favor of making the man who uses the road pay for it, and am for a gasoline tax of from 3 to 10 cents a gallon.—H. L. V., Ottowa County, Mich.

—It is an infernal nuisance, all right, getting new license plates every year but if the same license fee were charged as is now charged, it would be pretty expensive for the average man to pay the license at one shot for the life of his car. Anyway, license plates will not last the life of the car. They would have to be renewed occasionally. Sentiment is strong for the principle of making the man pay for the roads who uses them, but don't you think the tax you suggest is pretty stiff?—Editor.

KNICKERS AND BLOUSE

WE can not imagine why defenders of the present system of undress, instead of presenting its good (?) qualities, always hark back to high collars—chin rests which are sometimes useful—wasp waists and trailing skirts. And our editor raises another relic of the past—those nice long nether garments called pantalettes.

We advocated none of these ridiculous fashions. We drew no comparisons. We said nothing about spit curls, bangs or bobbed hair, knock knees, bow legs. or big feet, bony arms, or scrawny necks but since Aunt Betsey mentions those necessary appendages called legs we must say we've always wondered why so many of the fair sex had such a peculiar gait and we were enlightened when short skirts arrived. We have seen more bow-legs the past season than we ever dreamed existed.

If some of these dear deluded would take an inventory of their stock in beauty they would surely require more dry goods.

However, we are not caring about that. If we were to advocate any costume to meet the requirements of modesty and comfort, it would be knickers and blouse, a coat if needed, such as many tourists now wear.

Nothing doing. The long skirt looms close on the horizon and soon Eve's descendants will swish around as did others in days gone by, regardless of health, comfort, or freedom because "they're all the style."
—Mrs. B. O. R., Breckenridge, Mich.

—Wow, you've said it. Knickers and blouse are the sensible—modest, comfortable and withal attractive garb for women. We vote for 'em, without reservations. But will they meet with the approval of all who see any departure from established styles a shameless display of feminine charms?—Editor.

PROGRESS

The world progresses, and methods of safe investment also have progressed. Safer, more satisfactory investments can now be made than those of years ago and people who have progressed with the times prefer them to the others.

A good farm mortgage was and is a good investment, but should it have to be foreclosed the mortgagee may have to turn a friend and neighbor from his home and take over a property which he cannot operate successfully.

A First Mortgage Bond has no such drawbacks.

6½%

Our bonds are secured by apartment houses with a steady rental winter and summer, more than three times enough to pay the interest. We collect the interest and principle and pay the bond holders cash when due. Should foreclosure be necessary we care for all the details without trouble or expense to our clients.

Experienced investors prefer the First Mortgage Bonds, for they are safe, convenient and pay as high or higher a return. Mail the coupon and let us explain their advantages in detail.

IS YOUR FARM FOR SALE ?

AN ADD IN THE MICHIGAN BUSINESS FARMER WILL SELL IT!

HEALTH IS A HABIT

It is a fairly common thing for a farm to have its own water system, with running water in both houses and barns, to provide for the scientific disposal of its sewage, to have bathrooms and other facilities for keeping clean, for the farmer has not been slow to learn the fact that rural sanitation applies to the home as well as to the barn, that fresh air is as necessary to the health of his family as it is to the health of his chickens and his milch cows, and that supplying the human engine with plenty of fresh air means both a happier worker and a better one.

Country folks, like city ones, are beginning to learn that health—public as well as individual—is largely a matter, first of education and then of habit. They feel that they have a very decided advantage from the fact that the great essentials of health—fresh air, sunshine, plain nourishing food, and cleanliness—are so freely at their command.

The day of ignorance and carelessness is passing. It is growing less and less common to see farm houses banked up with manure and the windows stuffed with paper or cloth in the winter time, and with it will go one of the favorite jokes of a middle western state health officer:

"No wonder there's lots of fresh air in the country; country folks use so little of it."

Health and Habit

For health is a habit. The Functions of the body, both mental and physical, are rhythmic. Whatever mode of action is accepted today tends to be repeated tomorrow. Right practices, oft repeated, in the long run spell normal function. Personal hygiene sufficiently extended becomes community health. By the same token, rooms that are dark and corners that are musty, personal habits that will not bear repeating and imitation are not mere matters of individual concern. As a small focus of infection soon undermines the whole physical economy, so will an unthinking tolerance of insanitary domestic conditions breed a general indifference to community housekeeping.

When Health Suffers

In the fall of the year the human machins achieves the peak of its efficiency. Not the rigors of winter are its undoing, but indoor diseases, close air, burdensome clothes, and the eating of heavy foods, rich and perhaps too greasy. You will remember the old say, "An apple a day keeps the doctor away." You can finish it yourself, (perhaps).

This also reminds me of the story of the doctor who visited a Sunday school and in his talk to the children said, "Now children what do you do to get to Heaven?" There was a long silence and then the smart little boy said, "Get sick and send for you, doctor."

REMOVING RED INK

As we are subscribers to the Business Farmer and read so many helpful things. I just wondered if anyone had a remedy for removing red ink from silk. It is a new garment that has never been washed. Have tried a great many things but nothing seems to remove it. It is a white gown with dark brown and gold stripes, also a tiny stripe of lavender.—Mrs. B. H. T.

—Milk will often remove ink. It must be renewed from time to time and the article must soak in it for several days—Kerosene will remove ink from wash materials. Salts of lemon 1 tps to a quart of water. This is very poisonous. Care must be taken.

ATTENTION MRS. LEWIS

Mrs. Lewis sends for a pattern but does not give me her full address.

SOUP RECIPES

In the October 14th issue Mrs. John Vollmer of Jasper, Michigan, asks for soup recipes. Here is a tomato soup we like very much:

One-half bushel tomatoes, 14 stalks of celery, leaves and all; 12 stalks of parsley, leaves and all; 8 bay leaves; 12 teaspoon salt; 2 tablespoons mixed spices; ½ teaspoon white pepper; ½ teaspoon red pepper; 1 cup white sugar; boil until tender, then take seven onions fried in 1 cup of butter till tender and add to the mixture.

Then take 1½ cups flour stirred smooth in a little water, add to the whole when thoroughly scalded and put through collander, heat and can.—Mrs. M. L. S.

The Farm Home

A Department for the Women

Edited by MRS. GRACE NELLIS JENNE'

DEAR READERS—Have you a bit of clothing suitable for a baby, that you do not need? I know of a place where such articles would be appreciated very much. The mother is not able to run a sewing machine, not being in good health and needs help just now. Any small articles of clothing that have some wear in them still, will be welcome. If you will send them to me I will send them on their way. Nothing fancy is wished just something plain and durable.

RECIPES WANTED

I am interested in your paper and miss it since it only comes every two weeks

Would like it if someone would give a good bread and fruit cake recipe. We have been having trouble with heavy bread this fall. It seems light and all until it is baked. We have used this old recipe for years and never failed until now, and we wondered if it could be new flour from this fall's wheat. Auy recipes will be greatly appreciated. Thanking you in advance.—Nellie Isles.

HOME SPUN

Plays

For your Clubs and Debating Societies this year why not send to the National League of Women Voters, Peru, Indiana, for Citizenship Plays? One is entitled "How Maggie Taggart Became a Citizen.,, Senate Bill 575, and the Federal Convention are the others. They sell for 25 cents each.

Shoe Trees

If you keep your shoes on shoe trees, they will repay you for care by keeping their shape. Have a pair for each pair of shoes. If you have never used them you will be agreeably surprised to find how much longer your shoes will have that new look we all admire. Patent leather shoes should be kept in a warm place. A shelf in the closet is a most convenient place to keep shoes. Most of us have found that a pole fastened in the closet, with hangers on it is much more convenient and holds many more clothes than the old arrangement of hanging them around the sides on hooks.

Washing Windows

Never use soap for washing windows, a little ammonia added to the water is a good cleanser. Ammonia also dissolves the oil and grease in combs. Let them stand for a short time in water which a little ammonia has been added then brush well with a soapy nail brush. A hair brush is easy to clean, just soap and water and plenty of sunshine to dry it. Brushes and combs should be washed once a week, it only takes a few minutes.

These latter comments are all for the young housekeeper. We older ones "know it all" at least we won't admit it if we do not.

For the Boys and Girls

Brush the teeth four times a day. Before breakfast with clear water. After each meal with tooth powder.

The teeth should be free from food before going to bed as most of the decay takes place while we sleep.

Brush the teeth about two minutes that will stimulate the gums, they need brushing almost as much as the teeth.

Use a light fast stroke in brushing.

Arrange the brushes so they will never get mixed as disease germs could easily be carried from one member of the family to another.

Candies, cake, sugar, pastry and even bread will decay on the teeth if on or between the surfaces.

Dental silk is splendid for removing food from between the teeth.

An apple before going to bed is fine for both teeth and the stomach, to say nothing of the palate.

SISTER'S MUSIC LESSON

My sister's taking lessons of a famous music man,
Of course it is her duty to practice all she can.
She has a stack of music, I can't tell just how high—
I notice when pa looks at it he always draws a sigh.
When breakfast time is over sis looks up with a smile
"I'd love to help you mother but I'll practice for a while."
Then goes to the piano and makes what noise she can,
I would much rather listen to her drum upon a pan.
She plays a while on notes above and then on those below,
Sometimes it's going very fast and next it's very slow.
She makes it tinkle tinkle and then go ping, ping, pang,
Now makes the whole house rumble and ends up with a bang!
We could stand it all quite nicely and never want to jaw,
If shee'd play us "Yankee Doodle" or "Turkey in the Straw."
Someday she may be famous and fill us with delight,
But I'd rather sing the good old song than practice day and night.
—Written for our Department by Mrs. Nina Beckey Hall.

HOW TO CARE FOR LINOLEUM FLOORS

Properly treated, a linoleum floor is more easily cleaned than any other kind of floor. Linoleum has a smooth, unbroken surface, without cracks and crevices to catch dirt and germs.

When your new inlaid, jaspe, or plain linoleum floor is first laid, it should be washed immediately with warm water and pure soap. Then before it is "tracked up," wax it with a liquiid floor wax, rubbing the wax in very thoroughly, and polishing it with a weighted brush.

Wax Inlaid, Jaspe, and Pain Linoleum

The daily care of a waxed linoleum floor is simple. Ordinarily, all you need to do is go over it with a mop slightly moistened in liquid wax. At doorways, and where the traffic is greatest, the wax coating will wear away, and should be renewed as often as appearance demands. With this treatment it is necessary to scrub linoleum floors at frequent intervals. In rainy weather muddy footprints may be wiped up with a damp cloth.

Any good liquid floor wax, such as Johnson's Liquid Floor Wax or Old English Linoleum Wax, is suitable for linoleum. Most people prefer the liquid wax because it is easier to apply than paste wax, and permits evener distribution. Whether you use liquid or paste wax, apply it very sparingly and be sure to rub it in thoroughly. Wax used too thickly will not harden properly, and the excess wax will absorb dirt and darken the linoleum. The floor will look greasy and unsightly, and probably will be slippery.

Varnish Printed Linoleum

Printed linoleum usually wear better and holds its original freshness of coloring longer if given an occasional coating of varnish. It is most economical to use only the best-grade water-proof varnish, as the cheaper grades are likely to scratch and turn white. Varnishes such as Valspar are recommended.

For varnishing, linoleum must be clean and dry. The varnish should be applied as evenly as possible and allowed to dry at least twenty-four hours before the floor is used. Two coats should be applied on new linoleum; thereafter the varnish need be renewed but once or twice a year, according to the wear on the floor. Care should be taken in revarnishing to avoid streaked and spotty effects.

Washing Linoleum

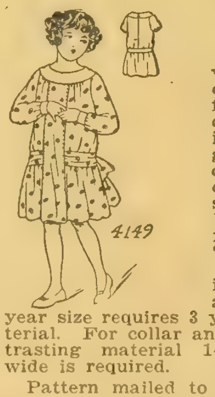
In the kitchen, pantry, and bathroom where water is likely to be spilled, washing the linoleum will be necessary more frequently than in other rooms. Warm, sudsy water, made with a mild soap, such as Ivory, will clean linoleum thoroughhly. It is best to wash and dry only about a square yard at a time, rinsing the linoleum with clean water, and drying it carefully. Never flood the surface of the lin-

AIDS TO GOOD DRESSING

For Simplicity, Service and Style

Address all orders to Mrs. Jenny, Pattern Department.

Send 15c for the New Fall and Winter Catalogue.



A Pretty Frock For Mothers' Girl

4149. Figured voile and organdy could be combined for this model, or crepe and challie. It is good also for gingham and percale. In crepe de chine or net with self frills or embroidery. It will make a pretty "party" dress.

The Pattern is cut in 4 Sizes: 4, 6, 8 and 10 years. An 8 year size requires 3 yards of 40 inch material. For collar and band cuffs of contrasting material 1-2 yard 32 inches wide is required.

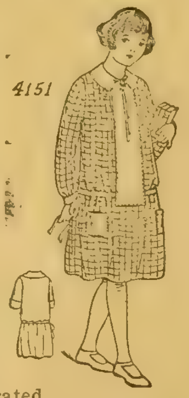
Pattern mailed to any address on receipt of 12c in silver or stamps.

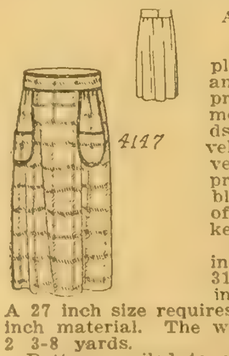
A Simple Dress for School

4151. Checked gingham and white linine is here portrayed This style will be good also for plaid suiting with serge for trimming. It is made to slip on over the head. The sleeve may be in wrist length or short as in the smaller view.

The Pattern is cut in 4 Sizes: 6, 8, 10 and 12 years. A 10 year size requires 3 1-4 yards of 32 inch material. 5-8 yard of contrasting material is required for trimming as illustrated.

Pattern mailed to any address on receipt of 12c in silver or stamps.





A Jaunty Sports' Skirt

4147. Tweed, plaid suiting, serge and prunella are appropriate for this model, which is also dsirable for silk and velvet A practical development would be prunella in brown or blue, with bindings of braid. The pockets may be omitted.

The Pattern is cut in 7 Sizs: 25, 27, 29, 31, 33, 35 and 37 inch waist masure. A 27 inch size requires 2 1-2 yards of 44 inch material. The width at the foot is 2 3-8 yards.

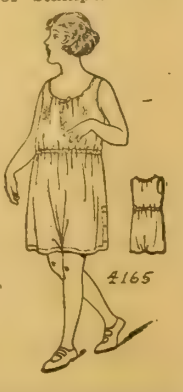
Pattern mailed to any address on receipt of 12c in silver or stamps.

A Comfortable Under Garment

4165. Crepe, long cloth, muslin, voile and crepe de chine could be used for this style. The garment is in "step in" style and the drawers portions have side openings.

The Pattern is cut in 5 Sizes: 4, 6, 8, 10 and 12 years. A 10 year size requires 2 5-8 yards of 27 inch material.

Pattern mailed to any address upon receipt of 12c in silver or stamps.



oleum, nor allow the water to stand around the edges or seams:

Certain advertised cleaning soaps and washing powders are not good to use on linoleum. These cleansers all show an alkaline reaction or contain caustics, and are positively injurious. More harm is done to linoleum by the use of such agents than in any other way. The chemical action of these substances disintegrates the oxidized linseed oil and cork in linoleum, just as it destroys varnish on hard wood.

A good rule is to avoid altogether the use of sodas, lye, or potash cleansing powders and strong scouring soaps.

After it has been washed, inlaid linoleum, particularly, should be polished with a soft cloth or brush. The wax finish may be dulled somewhat by water, but is quickly restored by a brisk rubbing. If the wax has been removed by washing, it should be renewed at once.

FOR A HACKING COUGH

Equal parts lemon juice and strained honey. Take one teaspoonful whenever coughing begins, stirring thoroughly before taking.

Also here is a recipe for the old-fashioned "white linament" for soreness sprains, rheumatism, etc., or to rub on throat for sore throat:

Equal parts sweet oil, ammonia and turpentine. Shake well before using.—C. H. Merrifield, Van Buren County.

HEALTH HINTS

OR

HOW TO CURE YOURSELF

BY

DR. T. N. ROGERS

MAY BE HIVES OR ACNE

What causes red swellings on the body, sometimes white welts appear and eyelids and lips swell?

—Cause the same, auto infection is the cause. Clear out the bowels by Calomel, 5 grains, and baking soda, 15 grains at bedtime. Then 2 teaspoonful of salts in the morning, twice a week. It may be due to too much acid from eating too much acid fruit. If so take one-half teaspoonful of baking soda in cold water 3 times a day.

ARE RAILROADS MANAGED ECONOMICALLY?

(Continued from page 3.)

recting the defects they are powerless to act to stop the leaks.

A section foreman and his gang of five men have been using a modern gasoline-motor car for transporting them over their eight miles of track. These motor cars have been in use for a number of years and so it was somewhat of an innovation to see this foreman and his trackmen slowly pumping an old-fashioned hand-car over their section one morning.

"What has become of your motor car?" he asked.

"I had to lay it up for repairs," he replied. "I've sent for them but they haven't come yet."

Five weeks passed and again the old-time hand-car passed over the track, the men straining at the handles to propel it.

"Isn't that motor car repaired yet?" he was asked by his astonished acquaintance.

"No. Haven't got the parts yet," the foreman answered. "You see its like this: The company has five different makes of motor cars in use on this division—and they can't afford to keep repair parts for all of them, so they figure. And so when anything goes wrong with a car they have to send for parts to the manufacturer through the different departments—purchasing agent, etc.—and it takes a long time. But it is an expensive way to manage. It takes myself and five men over two hours to pump this old hand-car over the section. With the motor car we could make it in 4 minutes—20 minutes each way. Every day the six of us put in around five or six hours extra time just pumping the hand car—and if we have to buck a head wind we're pretty well tired before we get to where we are to start to work on the track."

Which indicates another trouble with the railroads. They have no system, in many cases, for any standardization of material used. The result is that when repair parts are wanted either a large stock of parts must be kept on hand—or else they must be sent for directly from the manufacturer. When the red tape is all unwound a long delay with much unnecessary expense has resulted.

Right recently when the shopmen were on a strike a great many trainmen were seen packing hot boxes on cars; taking down brake rigging, etc. But even before the strike this was common enough. Almost everyone has witnessed a freight train stopping while a brakeman throws water on a blazing journal, digs the "dope" or packing out of it and then re-packs it with new "dope." The remainder of the train-crew—four men—are forced to lay at their posts in idleness waiting until the hot journal is again in condition to operate. Again they all wait while one man takes down a brake beam—or brake rigging. The trouble is that the system of train inspection at terminals is not rigid enough to detect and repair these defects before the trains start on their journeys. And after the trains are out in the country somewhere four men wait while one man works repairing the equipment. The net result is needless expense and unnecessary delay to train movement. Of course some journals are bound to run hot even under the best inspection—but the number can be greatly reduced if the railroads wish to reduce this defect.

Many other instances of extravagant management might be cited in the operating and maintenance departments of the railroads and, in fact, most other departments. But the foregoing incidents will be sufficient to indicate to some extent the trouble in the present railroad managements. There seems to be a decided lack of cooperation on the part of the "higher-up" officials to adopt suggestions from the minor officers who are nearest to the rank and file of employees. A suggestion from an ordinary employee is quite likely to be disregarded entirely and possibly the employee reprimanded as being presumptive.

Another phase of management wherein many unnecessary expenditures are made is shown in the maintenance of city ticket offices with high rentals and unnecessary employees; by the employment of innumerable "district freight and passenger agents" and other solicitors due to competition between the different railroad companies. And again in the unnecessarily long hauls made in an effort to keep freight on the rails of one line as long as possible. Another phase is the duplication of passenger train service between most of our larger cities. Usually the number could be reduced by one quarter or in some instances even one half without any inconvenience to the public and still afford ample accomodation for the number of passengers wishing to travel.

But perhaps you are wondering what all this has to do with the farmer. Why should he care if the railroads wish to squander their money? Simply because the farmer must, in the final analysis, pay a very big share of the money squandered when he moves his products and buys his supplies. Whether he wishes to concern himself with the management of the railroads or not he is compelled to foot the bills—and he ought to take a very great interest in the doings of the transportation agents of his state. Remember this: When the railroads wish an increase in freight rates they show their net earnings to the Interstate Commerce Commission—and that their net earnings depend in a large measure upon their operating, maintenance and other expenses. If extravagant management reduces their net earnings to a point where the railroads feel justified in asking for an increase in freight rates remember that the farmer is going to pay a big share of any increase in rates that may be granted. And so every farmer may well ask the question: "Are the railroads managed economically?" He is as vitally concerned as any other citizen—and more than most citizens.

Mr. Gotham—"I see the smallest cows in the world are found in the Samoan Islands. The average weight does not exceed 150 pounds. They are about the size of a merino sheep."

Mrs. Gotham—"Do you suppose, dear, that is where they get the condensed milk?"

THE SIGN For Your ROWENA OF QUALITY Protection

Lily White

"The Flour the Best Cooks Use"

Is Best for All Around Baking

Your grocer is supplied with Lily White flour. He will sell you a sack. Try it for all general baking. If you do not like it, your grocer will take the flour off your hands. Read our standard guarantee!

If Lily White flour could not prove to you that it is all we say it is, this guarantee would not be made. Think this over—then decide to use the best flour you can buy.

A GOOD RECIPE FOR BEATEN BISCUITS

1½ pounds Lily White flour, 5 ounces lard, 1½ teaspoons salt, 2 teaspoons sugar (dissolve the sugar in water), 1 cup water. Blend with flour, lard and salt. Mix into a stiff dough with water in which sugar has been dissolved. Work well. Beat or roll until dough blisters. Bake in moderate oven until light brown.

Our Guarantee

We Guarantee you will like Lily White Flour, "the flour the best cooks use" better than any flour you ever used for every requirement of home baking.

If for any reason whatsoever you do not, your dealer will refund the purchase price.---He's so instructed.

Why You Should Use Lily White

REASON No. 10

Insures excellent baking results.

Lily White is milled from the finest wheat grown in America. It is cleaned, washed and scoured eight times. It is milled by the most extensive and complete process known to modern millers. It comes to you a clean flour, properly balanced, of excellent color, volume and flavor.

For three generations women have found it the best flour for all general baking. You, too, will be delighted and surprised at your baking triumphs once you have used it.

Cured Her Rheumatism

Knowing from terrible experience the suffering caused by rheumatism, Mrs. J. E. Hurst, who lives at 608 E. Douglas Street, C-489, Bloomington, Ill., is so thankful at having cured herself that out of pure gratitude she is anxious to tell all other sufferers just how to get rid of their torture by a simple way at home.

Mrs. Hurst has nothing to sell. Merely mail your own name and address, and she will gladly send you this valuable information entirely free. Write her at once before you forget.

ABOUT IT

The Children's Hour

DEAR Nieces and Nephews:—I am going to conduct another contest. La Verdee Adolph of Union City, a winner of a needle case in the story contest we held last summer, suggests a contest that should be interesting to you all. The contest she suggests will be something different than all the others we have held—but I am not going to tell you all about it, just read La Verdee's letter on this page and then put your "thinker" to work. Be sure to explain everything in your letters so that others will readily understand what you mean. And the prize will be a Christmas present. I will not say what it will be, but I know, and to the one who guess what it will be I will send a duplicate of it. When you send in your letters just write at the bottom, "I think the prize you are giving away in this contest is" and then write what you think it is.

We have some very interesting letters this week, one from a niece and cousin that lives in Florida. Come on girls and boys, this is your department, the more interesting your letters are the more readers our page will have. Who can write a good Christmas story? I would like to have one of the nieces or nephews write one for our page. Who will do this?

Almost Thanksgiving, isn't it? If you give a party, attend one or go visiting write and tell me about it. —UNCLE NED.

OUR BOYS AND GIRLS

Dear Uncle Ned—I do hope that you believe in the old saying "better late than never" for I have never told you how much I appreciated my lovely needle case, though I think of it every time I use one from it.

Just after I received my package of needles we started for Jonesboro, Arkansas. We started on Saturday morning and arrived at my uncle's Tuesday afternoon. We had a fine time while there.

We passed through Williamson county, the heart of the coal strike. One morning we started out very early on what we thought was the right road which seemed to lead out past a coal mine, when we got quite near the mine our road began to turn back and we discovered we were on a race track.

Before entering Missouri we were warned by other tourists we met to be careful about pigs and cattle in the road. In Michigan we fence our live stock in but in Missouri they fence them out. You have to dodge pigs, chickens, cows and goats grazing on the side of the main roads or taking a nap in the center. We hit one pig. It was a common sight to see pigs on the main streets and sidewalks of good-sized towns and there was nothing to prevent them entering stores.

Just after we crossed the Mississippi River it started raining and rained most of the way back. It was raining when we entered Michigan.

Are we going to write Thanksgiving stories? I hops so. The issues between Thanksgiving and Christmas, why could not those who wish to have a contest send in the best group, say, of five Christmas presents that we could make? Illustrating them and giving a very short description of how to make them. Let the plainness, simpleness and cheapness count as much as the beauty of the article. I have several in mind, I am sure many other members have also. In this way we could get new and clever ideas for Christmas gifts.

I have received several excellent letters from M. B. F. boys and girls and hope to receive more.

I thank you again for the needle case. Your friend.—La Vendee Adolph, Union City, Mich.

Dear Uncle Ned—We take the M. B. F. I am sending you a picture of Hallow'en night. I drew it with a pencil. I have written to you before, but I did not see my letter in print. For pets I have 4 cats and a dog.

"Leslie," I believe is a girl. Don't you think so?

I have brown eyes and hair. I am 10 years and weigh more than 84 pounds. I am in the 6th grade. We had exams yesterday and the day before. I do not know yet whether I passed or not. Goodbye. Your neice.—Edna Wilkie, R. F. D. No. 2, Brown City, Mich., in care of Geo. Wilkie.

Dear Uncle Ned—I would have liked to joined in the bird contest but I did not have the time. I am 13 years old and live on a farm of 80 acres. I like to live on a farm.

The best of the birds I have seen is the robin. It has a red breast brown back, and is about five inches in length and about three inches high. Its nest is made of mud and grass. It sings a pretty song.

My father takes the M. B. F. and likes it very much. I like to read the children's letters. Good luck to Uncle Ned and all the cousins. From your nephew.—Francis stack, R. F. D. No. 4, Fenton, Mich.

Dear Uncle Ned—Well I am going to write a letter. I have lots of time today. We have a big farm and we raise lots of ducks. One morning my mother went out to the barn, where there was an old hen sitting on some duck's eggs, and what do you think she found? She found a duck with four legs. And we were so surprised we did not know what to say. We raised about 150 ducks this year.—Esther Mann, Mt. Clemens, Mich., R. F. D. 1.

Dear Uncle Ned—I am a new writer. I have wished to write to you a long time. I like to read the children's letters in the M. B. F. I will write a riddle and the one that guesses it will receive a letter. This is the riddle:

Guess a riddle now you must. Stone is fire and fire is dust, black is red and red is white, come view this wonderous sight. From your friend.—Francis, Fenton, Mich., R. F. D. 3.

Dear Uncle Ned—I would like to join your pleasant circle. I like to read the letters in the M. B. F. I live in Florida but I was born in Grand Rapids, Mich., but I do not remember it for we moved to Duluth, Minn., and lived there until I was nine years old when my father died and we then moved to Kalamazoo, Mich. We lived there until just recently when we moved down here. I like it alright but some way it isn't just like Michigan or Minnesota. We live about forty miles from Palm Beach, Fla., and about three miles from Lake Okeechobee. The land here is black and it called muck; it is rich, in fact almost too rich.

I have brown hair, blue eyes, freckles, I am four feet elven and a half inches tall. I am eleven years old and in the eighth grade. My name is Charlotte.

We enjoy taking the M. B. F. because it gives us valuable information about our crops as well as tells us about our native state.—Charlotte Gibson, Belle Glade, Fla.

GETTING READY TO BE PRESIDENT

WELL, and what do you know about that?" and Don Stuart looked up from the paper he had been readin gfor the last half hour.

"Guess I know all about it, if you will kindly enlighten me as to what you refer," and Rob, his older brother, smiled in the superior way that always vexed Don beyond endurance.

For a minute he did not answer, then he wanted to hear what Rob really would say, he explained.

"Here is an article in the paper, an interview with President Harding by a chap just my age, and what do you think he asked that man? Why, nothing less important than if he had ever been a boy, and if he had ever tied tin cans to dogs' tails? Wasn't that some question to ask a President? Huh!" and he snorted his disgust.

"Well," and Rob drawled as he usually did, when he wanted to be emphatic, "I think that was a pretty good question—a leading question, as the lawyers would say. Pretty smart he was, to think of that, I say," ruling off some lines for work on his tablet.

"Smart? I fail to see what was so wonderful smart about that, What does any trick like that have to do with being President? Tell me that."

"What did President Harding say to the question?" and Rob did what he usually did—answered one question by asking another.

"Why," wrinkling his brow as he looked up the exact words of the answer, "he said, 'Never in by life have I injured knowingly any person or animal.' He is President, but I must say I think he stretched that a bit, or else he has forgotten all about when he was a boy. If he didn't, he never had much fun."

"I guess, by looking at his twinkling eyes, that he had his fun all right, but I don't doubt for a minte, it wasn't what you call fun, the hurting and teasing of helpless dumb animals, or people, either. He is too big for that."

"Oh, of course, you would say that, for you are a regular mollycoddle, always afraid of hurting something or somebody. I believe in a boy being a regular fellow, I do." He straightened in his chair, throwing out his chest as he was sure a regular fellow would do.

"So do I belive in being a regular fellow, but I belive a regular fellow is a regular gentleman, and a gentleman, you know, is just a gentle man. See?" Don looked at him wanting to say something, but just then he lacked words. So Rob went on:

"You wanted to know what his lack of your so-called fun had to do with being President. Well, it had just this much to do with it. You remember the quotation, 'The boy is father to the man,' and right there lies the whole secret. A boy does not change his nature very much when he becomes a man, for usually as in the boy, so is the man, and the boy who finds pleasure in hurting and torturting the helpless, will carry that same spirit into manhood, and he will have the same carelessness for others when he has the greater power to hurt. And one with a cruel, selfish make-up would be a pretty poor specimen to be placed where he is expected to work for the good of others." Rob was very much in earnest, now, for he had begun to think of things that concerned the welfare of his country, as all boys do, sooner or later.

"You see, son, it is a pretty small mind that finds pleasure in things that hurt, and men of such small calibre usually stay down on their own level. It takes somethink different for Presidents, you see. So, I have no doubt whatever that President Harding did not forget, the least little bit, when he made that statement. And no doubt President Wilson could have made the same answer, for one with the desire for world happiness that he has, never could have attained that spirit if he had been given to torturing others. A man is just a boy grown large, you know."

Don still had not found words for argument, and Rob took advantage of his predictment.

"So, now, if you expect to be President, and you may—if I don't beat you to it—just change your ideas of fun, for there is no place in a President's life for acts of cruelty and harshness. So, I think now is a pretty good time to begin to get ready for being big enough to fill a big place. What do you say, son?"

Don answered only with "Huh, huh," but you could see he was doing some thinking.—Florence Jones Hadley.

Abe Martin says: "We often wonder if all the people we see rollin' along are as well fixed for a rainy day as they are fer a blowout?"

"THE HUNTED WOMAN"

(Continued from page 11)

The engineer stood in the middle of the floor, his coat off, his fat, stubby hands thrust into the pockets of his baggy trousers, his red face and bald cranium shining in the lamplight. A strange fury blazed in his eyes as he greeted his visitor. He began pacing back and forth across the room, puffing volumes of smoke from a huge bowled German pipe as he motioned Aldous to a chair.

"What's the matter, Peter?"

"Enough—an' be damned!" growled Peter. "If it wasn't enough do you think I'd be out of bed at this hour of the night?"

"I'm sure it's enough," agreed Aldous. "If it wasn't you'd be in you little trundle over there, sleeping like a baby. I don't know of any one who can sleep quite as sweetly as you, Peter. But what the devil is the trouble?"

"Something that you can't make me feel funny over. You haven't heard—about the bear?"

"Not a word, Peter."

Keller took his hands from his pockets and the big-bowled pipe from his mouth.

"You know what I did with that bear," he said. "More than a year ago I made friends with her up there on the hill instead of killing her. Last summer I got her so she'd eat out of my hands. I fed her a barrel of sugar between July and November. We used to chum it an hour at a time, and I'd pet her like a dog. Hhy, damn it, man, I thought more of that bear than I did of any human in these regions! And she got so fond of me she didn't leave to den up until January. This spring she came out with two cubs, an' as soon as they could waddle she brought 'em out there on the hillside an' waited for me. We were better chums than ever. I've got another half barrel of sugar—lump sugar—on the way from Edmonton. An' now what do you think that damned C. N. R. gang has done?"

"They haven't shot her?"

"No, they havn't shot her. I wish to God they had! They've blown her up!"

The engineer subsided into a chair.

"Do you hear?" he demanded. "They've blown her up! Put a stick of dynamite under some sugar, attached a battery wire to it, an' when she was licking up the sugar touched it off. An' I can't do anything, damn 'em! Bears ain't protected. The government of this province calls 'em 'pests.' Murder 'em on sight, it says. An' those fiends over there think it's a good joke on me—an' the bear!"

Keller was sweating. His fat hands were clenched, and his round, plump body fairly shook with excitement and anger.

"When I went over tonight they laughed at me—the whole bunch," he went on thickly. "I offered to lick every man in the outfit from A to Z, an' I ain't had a fight in twenty years. Instead of fighting like men, a dozen of them grabbed hold of me, chucked me into a blanket, an' bounced me for fifteen minutes straight! What do you think of that, Aldous? Me—assistant divisional engineer of the G. T. P.—bounced in a blanket!"

Peter Keller hopped from his chair and began pacing back and forth across the room again, sucking truculently on his pipe.

"If they were on our road I'd—I'd chase every man of them out of the country. But they're not. They belong to the G. N. R. They're out of my reach." He stopped, suddenly, in front of Aldous. "What can I do?" he demanded.

"Nothing,' said Aldous. "You've had something like this coming to you, Peter. I've been expecting it. All the camps for twenty miles up and down the line know what you thought of that bear. You fired Tibbits because, as you said, he was too thick with Quade. You told him that right before Quade's face. Tibbits is now foreman of that grading gang over there. Two and two make four, you know. Tibbits — Quade — the blown-up bear. Quade doesn't miss an opportunity, no matter how small it is. Tibbits and Quade did this to get even with you. You might report the blanket affair to the contractors of the other road. I don't believe they would stand for it."

Aldous had guessed correctly Quade's name with the affair would be. Keller was one of Quade's deadliest enemies. He sat down close to Aldous again. His eyes burned deep back. It was not Keller's physique, but his brain, and the fearlessness of his spirit, that made him dangerous.

"I guess you're right, Aldous," he said. "Some day—I'll even up on Quade."

"And so shall I, Peter."

The engineer stared into the other's eyes.

"You——"

Aldous nodded.

"Quade left for Tete Jaune tonight, on a hand-car. I follow him tomorrow, on the train. I can't tell you what's up, Peter, but I don't think it will stop this side of death for Quade and Culver Rann—or me. I mean that quite literally. I don't see how more than one side can come out alive. I want to ask you a few questions before I go on to Tete Jaune. You know every mountain and trail about the place, don't you?"

"I've tramped them all, afoot and horseback."

"Then perhaps you can direct me to what I must find—a man's grave."

(To be continued)

COLLECTION BOX

RECEIVES CHECK

I wish to inform you that yesterday's mail brought me a check of $5.49 from Dr. ——. I was rather surprised and also much pleased. Thank you very much. Am sure I would never got it if it had not been for you.—Mrs. G., Clarion, Mich.

THANKS FOR HELP

I wish first to apoligize for my seeming neglect in not writing before but an unexpected influx of visitors prevented my doing so and I am sorry that it made me appear ungrateful for the service you rendered me in securing a settlement for me from Dr. ——. His explanations are plausible enough to satisfy himself but I am confident that without your intervention I would never have received what he owed me and I thank you for your help.

As you do not accept any recomense for your valuable service I can only recommend your paper and continue our subscription and again express my thanks.

It is good to feel that you have let unfair persons realize that justice must be done even if the amount is small and the complainant merely a rule,—Mrs. G. J., Port Hope, Mich.

NEW LAMP BURNS 94% AIR

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94 per cent air and 6 per cent common kerosene (coal-oil).

The inventor, A. R. Johnson, 609 W. Lake St., Chicago, is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars, Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month. (Adv.)

CURED HIS RUPTURE

I was badly ruptured while lifting a trunk several years ago. Doctors said my only hope of cure was an operation. Trusses did me no good. Finally I got hold of something that quickly and completely cured me. Years have passed and the rupture has never returned. although I am doing hard work as a carpenter. There was no operation, no lost time, no trouble. I have nothing to sell, but will give full information about how you may find a complete cure without operation, if you write to me, Eugene M. Pullen, Carpenter, 210J Marcellus Avenue, Manasquan, N. J. Better cut out this notice and show it to any others who are ruptured—you may save a life or at least stop the misery of ruture and the worry and danger of an operation.

Would You

—throw away a dollar's worth of flour, sugar, butter, eggs and so forth to save 10 cents on a can of baking powder? That's what happens when you buy the "lots for the money" brands, and that's exactly what never happens when you use

DAIRY and LIVESTOCK

FEED POTATO CULLS TO LIVE STOCK

POTATOES may be fed to livestock in small amounts in connection with other feeds, suggests the U. S. Dept. of Agriculture to farmers who are interested in methods of utilizing cull potatoes. While they may be sliced and fed raw with dry feeds, it is best to cook them before feeding, as heavy feeding of raw potatoes will cause scouring. Under ordinary farm conditions, boiling or steaming is the most economical method of cooking the potatoes for livestock. Steaming increases their feeding value about 60 percent.

The low protein content of potatoes makes it advisable to feed them in connection with feeds that are relatively high in protein content. Feeding investigations indiacte that when potatoes are fed with other feeds to balance the protein requirements, from 350 to 450 pounds of cooked potatoes have a feeding value equal to about 100 pounds of corn, while from 500 to 600 pounds of raw potatoes are required to equal 100 pounds of corn.

Horses—Potatoes are palatable and well suited for use as a horse feed. It is safe to feed as high as 15 pounds a day to work horses. They are equivalent to about one-third their weight in hay. When potatoes are fed, a legume hay is a desirable supplement. If a grass hay, such as timothy is fed, the ration should contain feeds rich in protein, such as concentrates, legume hay, etc. It is advisable to chop the potatoes to lessen danger of chocking.

Cattle—Cooked potatoes may be fed to cattle at the rate of from 25 to 30 pounds a day per 1,000 lbs. liveweight. The allowance should be lessened somewhat if they are fed raw, on account of their tendency to produce scouring. A heavy allowance of potatoes, however, produces milk and butter of poor flavor.

SCUM FORMS ON MILK

I have a Holstein cow and when I milk her and let the milk stand a few minutes it forms a thick scum at the bottom of pail and when the milk sours it tastes salty. She seems well in other ways, is in good pasture and gets plenty of water and salt.—F. C., Cathro, Mich.

—We are at a loss to know just why the silk should thicken up at the bottom of your pail, but as far as the salty taste is concerned, will say that this is usually caused by the cow being in too good condition and particularly when cows are fed too heavily on grain. There is also danger when one is keeping a family cow and trying to get all the milk possible from her. If you have been feeding the cow quite heavily, I would suggest that you cut the grain down and then drench the cow with a pound of Epson salts, wait three days and give her another pound and repeat after another three days until three doses of Epson salts have been given and then gradually bring her feed back to the amount she ought to get. A pound of grain for each four pounds of milk per day is sufficient for a Holstein.—O. E. Reed, Professor of Dairy Husbandry, M .A. C.

HOLSTEIN SALE AT HOWELL

THE Howell Sales Company of Livingston county held their ninth annual sale, Thursday, October 19th, at Howell where members of the company disposed of over ninety head of choice Holsteins. Many of the animals were not in perfect sale condition and it appears that this was one of the main factors that held the average down to only $144.67. The crowd was there and bidding seemed to be active but most of the bidders apparently were unfamiliar with the history of the animals judging entirely by appearances. Sixty-nine cows were sold at an average of $144 per head with the top at over $300. Two cows sold for $130 each, around $200. Eleven yearling heifers were sold at an average of slightly over $130, with the top above $200. Six calves sold at an average of $85 each. Six herd sires changed owners at the sale. The highest price paid was $400. J. R. Crouse of Howell paid that amount for King Segis Lyons Butter Boy, one of the herd sires consigned by Wm. Griffin of Howell. Another herd sire consigned by Mr. Griffin sold for $350. The average price herd sires brought was $237.50. The auctioneer was Col. J. E. Mack and S. T. Wood was in the box.

DISPERSION SALE AT BIRMINGHAM SUCCESS

MR. ALEXANDER COPLAND, of Strawberry Hill Farm, Birmingham, held a dispersion sale at his farm October 18th that was a success in every way. The animals were led into the sale ring in perfect condition which made it easy for the well known auctioneer, Col. J. E. Mack, to induce the crowd to bid. An everage of $173 per thirty-two cows sold at an everage head was paid for forty-nine animals offered at this sale, while thirty-two cows sold at an average $194 each. The top price at the sale for a single animal was $400. Two animal sold at $400 per head. Eight yearlings were sold at an average of over $130 and eight calves average over $145 per head.

SOUTHERN MICHIGAN SHORTHORN BREEDERS SALE

ON Wednesday, October 18th, the Southern Michigan Shorthorn Breeders Ass'n held an auction sale at Hillsdale, Mich. The sale took place on the fair grounds.

The animals sold at this auction were the cream of the Shorthorn stock owned by the members of the Association and the prices received for them were very low, the top bid being only $255. The offerings were twenty-seven females, many with calves by their side, and six young bulls ready for service. All cattle offered had been tuberculin tested and were guaranteed breeders.

Breeders who consigned cattle at this sale were: W. C. Osius, Hillsdale; E. M. Steinniger, Three Rivers; Jay R. Rogers, Morenci; E. J. Frank, Montgomery; Fred N. Baker & Son, North Adams; G. P. Card, Reading; John Southworth, Allen; Wm. D. McMullen, Adrian; H. M. Maloney, Hudson; Gurn Baker, Jonesville; N. P. Bailey, Camden, Michigan.

Among the list of Michigan purchasers were the following breeders: C. R. Potts, Cadmus; Jay R. Rogers, and C. O. Brott, Morenci; Ed. Randall, Litchfield; F. J. Webb, Paw Paw; Isaac Eldridge, Hillsdale; Kelly & Son, Ypsilanti; Minard Steinniger, Three Rivers; E. C. Wellington, Springport; George Gill & Son Ypsilanti; Clyde Cady, Grass Lake.

Fellow breeders from Ohio were much in evidence at the sale and proved themselves good bidders. That they placed the highest bids in several instances was shown by the fact that numbered among the lucky purchasers were: E. W. York, Ed. J. Fix, and E. N. Bohner, all of Pioneer; and W. G. Weigle, Montpelier, Ohio.

The sale was cried by Col. Andy Adams of Litchfield, Mich.

SCHAFFER BROS. PURCHASE CHOICE HERD BOAR

BREEDERS of Duroc-Jersey swine in Michigan and Canada will no doubt, be pleased to know that the best son of "Marsi" is coming to Michigan. Fred J. Schaaffer of Schaffer Bros., Oxford, Mich., attended the National Swine Show at Peoria, Ill., and selected this pig to head their herd of fine Durocs. "Marsi" won first in the senior yearling class and reserve Grand Champion and his official weight is 779 lbs. "Sensation Marsi" 463703 is a wonderful young Boar. He was farrowed March 14th, 1922 and weighed 252 lbs. Oct. 5th and is a true Sensation type, lots of height and length. Schaffer Bros.' fine herd of Colonel type sows will make an ideal cross with this Sensation boar. They will hold a sale in March 1923 at which time they will offer fifty (50) gilts and sows to farrow early in April.

MORE MONEY FOR FARMER WHO SLAUGHTERS AND CURES MEAT

(Continued from page 4)

Otherwise a shoulder may be stuck, causing a blood clot which will necessitate waste trimming or result in a spot likely to spoil. After the knife has been driven in six or seven inches, it should be turned, which will cut the large arteries in the neck, and then quickly withdrawn. Too deep a thrust may pierce the heart, in which case the blood will not be pumped out.

If a hog is stunned before being stuck, it should be hoisted by the hind legs as soon as the blood stops gushing. This insures perfect drainage of blood. If the animal is not stunned, let it rise to its feet and stand as long as possible.

Scalding and Scraping

Water for scalding should be 145 to 155 degrees, Fahrenheit. Note that this is far below the boiling point. If the water is too hot, it may cause the hair to set, necessitating shaving. For this reason, the hind quarter should always be scalded first as they are easier to shave, if necessary, than the fore parts. If you have no thermometer, stick a finger into the scalding water three times in rapid succession. If it burns, severely the third time, the water is about right.

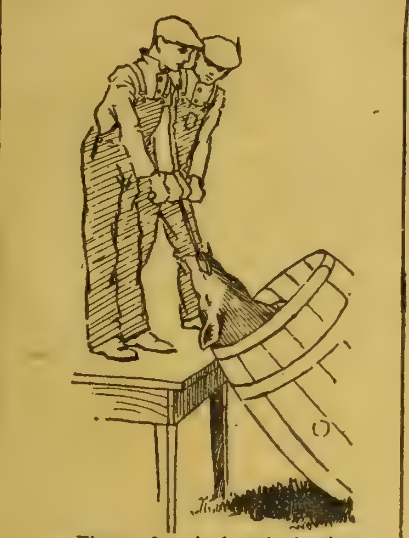

Figure 2. A barrel, leaning against the working platform, affords the best means of scalding.

To each thirty gallons of water add a teaspoonful of concentrated lye, a quantity of soft soap or a small shovelful of wood ashes. This will aid in removing the scurf.

A barrel inclined at an angle of 45 degrees is the best scalding vessel. Very large hogs, however, may be covered with sacks or blankets and hot water poured over them. The cloth will retain the moist heat until the hair is loosened. Uncover a portion occasionally and test the hair. If it does not come off easily, more water may be added, provided care is taken not to "set" the hair by too much heat.

When using a barrel or other vessel for scalding, keep the carcass moving in the water. To hold the carcass while scalding the hind parts, thrust a hog hook through the lower jaw. As soon as the hair slips easily, draw the carcass out to the cleaning platform and remove the hair and scurf from the feet and legs immediately by twisting the legs with both hands. Also take off the dewclaws with the hog hook. A bell-shaped scraper is the best for scraping the remainder of the hind parts, but dull knives may be used.

To hold the carcass while scalding the foreparts, cut slits in the hind legs just below the hocks, loosen the tendons (two in each leg) and insert a gambrel. When the scalding is completed, remove the hair and scurf from the forelegs, head and ears at once as these parts cool quickly. If the hair in any part does not yield easily, cover the part with a cloth and pour hot water over it until the hair slips. After the scraping is completed, shave off any remaining hair with a sharp knife.

Dressing the Carcass

With the carcass hoisted by the hind feet, begin at the top. Cut around the rectum and pull it forward. Then slit the carcass down the midline to the head, forcing the knife through the breastbone to where the cut was made for bleeding the animal. Be careful not to cut the intestines.

First, remove the fat surrounding the stomach. Then, in one operation, take out the gullet, stomach and intestines so their contents will not contaminate other parts. Next, cut away the diaphram (the membrane separating the chest organs from the stomach and bowels) and take out the heart, lungs and windpipe. When all good parts have been removed, prop the jaws open with a stick and wash the inside of the carcass with cold water.

Take out the leaf lard (kidney fat) at once and spread it out on a clean surface, membrane side down. This hastens cooling of the carcass. So does the removal of the head. Make a deep cut entirely around the head about an inch back of the ears. If the cut does not happen to strike the atlas joint of the spine, twist the head slightly and it will come off. Very large carcasses may also be cut in halves by splitting and sawing down the backbone. Do not make any further cuts until the carcass is cool.

As a rule, the carcass should be allowed to cool several hours. A good plan is to do the slaughtering in the evening and let the carcass hang all night in a cellar or cool room. Bear in mind, however, that the meat must not be frozen. Remember, too, that fresh meat absorbs odors readily and, on this account, should not be hung in a room where there is paint, tar, kerosene, gasoline or other substance likely to taint.

AIR CHAMBER IN BUILT-IN RE-REFRIGERATOR

(Continued from page 8)

from the ice to fall to the bottom of the refrigerator. A blue-print can be secured from the M. A. C. of one that was gotten up as a cheap ice box for use during the war. In this box the ice is put in the center of the box—on one side high enough above the bottom to allow articles to be cooled, or if set on the rack near the bottom.—H. H. Musselman, Prof. of Farm Mechanics, M. A. C.

BEAT THE HIGH PRICE OF MACHINERY

Do you have any machinery out out in the weather?

Drop the work you had planned for today and put it under cover. This part of the equipment for farming costs more today than ever before in history. This makes necessary greater care if we will avoid excessive cost. The machines which we buy today are much more intricate and complicated and thus more damaged by weathering than those of previous years. One-eighth of the total investment saved each year your machinery is properly cared for, is a very conservative estimate.

The added satisfaction and saving in operating tight-fitting, smooth-running machinery needs no argument for its proof. No machine can stand out in the weather and then operate efficiently the following season.

Figure up what a machine shed would be worth to you. Consult your lumber dealer, county agent, or agricultural college on the design and cost of a machine shed. Do it today, and your machinery costs will come back to normal.

From GRASS to DRY FEED

Now, the pasture field and range must give way
—to the stall and manger, the feed lot and self-feeder, the barnyard and fodder rack.

Include

DR. HESS STOCK TONIC
in the ration

You have often noticed stocking of the legs, roughness in the hair, highly colored urine—all on account of the change from grass to dry feed.

Not so where Dr. Hess Stock Tonic is fed. The Tonics, the Laxatives, the Diuretics, take care of all that. No worms; the Vermifuges settle them.

Then you are all set for heavy feeding, a good yield of flesh and milk throughout the winter.

Tell your dealer what stock you have. He has a package to suit. GUARANTEED.

25 lb. Pail $2.25 100 lb. Drum $8.00
Except in the far West, South and Canada.
Honest goods—honest price—why pay more?
DR. HESS & CLARK Ashland, O.

Poultry for Profit

THREE COMMON ENEMIES

RED mites are like bedbugs—in fact, they belong to the same family. They breed in cracks and crevices of the house, especially in places where filth accumulates. They are about one-twentieth of an inch long and are pale gray in color with dark spots on the back. They suck blood from the hen. After feeding they become reddish in color—hence the name red mites.

Sunlight and cleanliness are the best means of prevention. Don't breed mites. Keep the house so clean that mites cannot make a home there. Whitewash the coop in the spring and in the fall. Once a month, during the spring and summer, paint the roosts and nests with kerosene or kerosene emulsion.

Kerosene, if applied often enough, will keep mites from breeding. Crude oil is better than kerosene because it lasts longer. Kerosene emulsion is more trouble to make, but it pays because an emulsion stays on the job longer and does the work better.

Kerosene emulsion is made as follows: Dissolve one bar of laundry soap in a gallon of hot water, and then add two gallons of kerosene. Stir this with a stick, or churn it with a hand spray until the suds and kerosene are thoroughly mixed and look like thick cream. To this mixture add eight gallons of water and stir well. Apply to the coop with a brush or a common hand spray.

Various species of lice affect poultry, but the only one is common. The common hen louse is pale yellow in color with more or less darker marks on each side of the body. It is about one-twentieth of an inch long and slightly more slender than the chicken mite.

Lice live and reproduce on the body of the hen. They do not suck blood, but live on the scurf of the skin, and the fuff of the feathers.

Spraying will not be effective against lice, for any odor strong enough to reach up through the feathers and kill the lice will be strong enough to injure the hen.

Lice breathe through the pores of the body. Any fine powder or any greasy substance which will close the pores will kill them. You know how hens wallow in the dust. They do this to rid themselves of lice. Have a box of ashes and road dust in the chicken coop so that hens can go to it at any time.

Dust insect powder on the hen. No powder on the market is as cheap and effective as one you can make at home. Take three parts of gasoline and one part strong carbolic acid. Mix these together and add enough plaster paris to take up all the moisture. This makes a dry pinkish-brown powder. Dust this on the hen especially in the feathers under the wing and in the fluff below the vent.

This powder is know as the Cornell Lice Powder. The formula was worked out by Mr. R. C. Lawry, of Pacific, Missouri, when he was a professor in the Poultry Department of Cornell University.

Grease closes the pores as effectively as powder. Equal parts of lard and kerosene can be used. Rub well into the skin at the base of the feathers under the wing and below the vent.

The remedies mentioned will kill all lice, but will not kill the nits or, eggs. In a week or two you will need to repeat the process in order to kill the lice which will have hatched in the meantime.

Blue ointment will kill both nits and lice. It is a poisonous salve that can be purchased at any drug store for 30 or 35 cents an ounce. A small amount about the size of a pea should be rubbed into the skin of the abdomen just below the vent. Professor Phillips, of Purdue University, says that one application of this will remove the lice and keep them off for six months or a year. Be careful not to use too much and do not use it on little chickens or settting hens. It is best to use blue ointment early in the spring before the breeding season commences.

Gape worms are reddish looking, apparently double-headed worms about one-half of an inch long. They do injury by getting into the trachea or windpipe of chickens in such great numbers that the chickens cannot breathe. They never kill old hens, but young chickens often die from this cause.

It is fairly easy to get rid of gape worm if you know their life history. They live in the soil. Their eggs are eaten by chickens or angle worms. In either case the eggs hatch and the young gape worms work their way into the trachea.

It is much easier to prevent gape worms than to get rid of them after the soil once becomes infested. Young chicks should never be raised in the same place year after year. Change location of their coops each spring. If you do this and use lime and ashes on the ground where the chickens run, there will be little danger of gape worms getting a start.

If the land becomes badly infested, it should be plowed and put out to crops for a year or two.

MEETING OF MICHIGAN BABY CHICK ASSOCIATION

A LITTLE over a year ago the leading hatcherymen of Michigan joined together in an association to be known as the Michigan Baby Chick Association. The purpose of the association is to boost Michigan baby chicks and to co-operate with each other. On Sept. 29th at Lakewood Farm, Holland, Mich., they held a meeting and the work done in the past year was gone over. All members were greatly surprised and highly pleased at the rapid progress they had made in twelve months.

At this meeting the members adopted a new constitution and code of ethics. In article 5 of their new constitution they have a code of ethics. In this code they pledge their earnest co-operation with and protection of the public through: Honest, truthful advertising; honest, upright business methods; and honest production and sale of chicks as represented. In taking such a step the association has done much to place the baby chick business in this state on a higher plane and they will profit much by it.

In order to become a member of the association a hatcheryman or commercial egg man must cull the flocks he hatches his eggs from. After this culling is done he notifies the association who has the Extension Department of the M. A. C. approve and rate his flocks. If the M. A. C. man approve the flock then the association issues him a certificate of certification and by paying the membership dues of $10 he becomes a member of the association. All interested should write Mr. C. J. De Koster, Sec.-Treas.

FUR DEPARTMENT

EDITED BY A. R. HARDING

America's Foremost Author and Trapper

QUESTIONS ANSWERED

HARVESTING THE FUR CROP

CONTRARY to the general belief, it is not the valuable furs such as black, silver and cross fox, fisher, marten, etc., that yields greatest sevenue to trappers. True a single skin of those first mentioned may bring hundreds of dollars, but numbers secured are very small compared with the catch of skunk, mink, muskrat, opossum, coon, red fox, civet cat, wolves and weasel.

The annual value of the raw fur catch in North America varies considerably, but at prices ruling the past year means something like $30,000,000 to the catchers—the value of skunk, mink, and muskrat pelts being fully half of the total. Add to this coon, civet cat, opossum,

POULTRY BREEDERS' DIRECTORY

TRAPPERS!

Exactly fifty years ago Percey's Fur House was established at Oshkosh to barter with the Indians and other trappers. Percey's fair treatment and square deal policy built such a reputation that trappers went out of their way to secure Percey's prices. A man's word was as good as his bond in those days, and through the northwest Percey's word was "as good as gold." It still is.

Make sure your name is on our list. We will advise you of every change in market prices and conditions. Send us a postal Today Sure.

The Largest Fur House In the Northwest
Percey's
50 YEARS IN OSHKOSH

FUR SHIPPERS!

For fifty years Percey's Price List has been the standard of the northwest. These prices are bonafide, based on standard grading that insures you biggest returns—the most money for your season's work. Honest grading, highest market prices and a square deal to all Fur Shippers for 50 years has made Percey's the Leading Fur House of the northwest.

We Cater to Dealers' Lots and Will Send a Representative on Request.

red and gray fox, coyote and white weasel—all farm caught furs—and more than two thirds or $20,000,000 is caught largely by farmers, their sons and tenants.

Getting a little closer home let us see what the state of Michigan is doing. There are no figures, to my knowledge, giving the catch of each state. Suppose the catch averages $20.00 to the square mile which based on the total number of square miles, 58,915, would mean $1,178,300. This is perhaps much too low and some well posted think the catch last year was well up to $2,000,000.

Michigan for years has been known as one of the best of the fur state—both for quantity and quality. In fact most too well known for of late years the state has been overrun with trappers—far too many. Some years ago when the writer was deer hunting in the Upper Peninsula he met numerous trappers from Illinois, Indiana, Pennsylvania and other states looking up trapping grounds. Most of them after looking the grounds over found nearly all likely localities already occupied. Of recent years far more farmers, tenants, etc., are gathering the "Fur Harvest" themselves as they not only enjoy the "harvesting" but find the crop a paying one.

I have often wondered why land owners so long neglected the fur crop, for if they did not care to harvest it themselves, there are many glad to do so for a share of the "crop." In some localities the revenue from the fur crop is now worth more than any other.

Trappers, with little knowledge of the fur bearers, find it hard to distinguish between dens used by rabbits from other animals. Throughout much of Michigan, especially southern parts, fur animals such as skunk, mink, coon use dens in the ground much more than they do in the extreme northern portions of the Lower Peninsula and all of the Upper Peninsula. Rabbit hairs are short and of a greyish color. Skunk hairs are long—several inches long if out of the tail—and usually black on one end and white on the other, altho they may be all black or all white. There is no more odor at a skunk den, unless the animal has been disturbed, than there is at a rabbit den.

Steel traps are now largely used, being much cheaper than a few years ago, altho a good many home made traps or deadfalls are still used. The No. 1 of the regular spring trap is much used for skunk; other good traps for this animal are the No. 115X triple clutch and the No. 1 coil spring which is an under spring type of trap. There are of course numerous other sizes that are more or less used. Catalogues sent out by fur houses dealing in trappers supplies tell proper size for each animal.

The coil spring and jump traps have been used throughout the east for years. Jump traps of the Blake & Lamb pattern were largely used by muskrat trappers along the Atlantic coast twenty years ago—the others are of more recent make. These traps are so named "jump" from the fact that when sprung they "jump" catching the animal high on the leg. The spring is shorter, in fact do not extend beyond the jaws.

Trappers who use these traps report them very satisfactory, especially in narrow dens, or where space will not conveniently allow the setting of the regular long-spring kind.

The No. 1 trap, of most any make, will hold most any of the small fur animals, if properly fastened. A good fastening is to a bush, say an inch in diameter, and several feet long with numerous branches. The chain can be run through the ring and looped above a branch, or the staple driven near the large end. The animal when caught, cannot get a solid pull—the bush will give with every lunge or pull of the animal so not so apt to get away.

Staking traps, driving a stake through the ring, is one oft the most common mistakes of beginners, when traping land animals. Traps thus fastened allow the game a solid pull and in time are apt to get free. If traps are staked a larger size than No. 1 is best for skunk.

MARKET SUMMARY

Wheat and rye in good demand and firm. Corn and oats steady. Beans unchanged after recent advances. Butter and eggs firm. Poultry inactive. Dressed hogs and calves not wanted. Cattle dull. Hogs and sheep active and prices higher.

(Note: The above summarized information was received **AFTER** the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press —Editor.)

TRADE AND MARKET REVIEW

GENERAL business conditions continue on the up-grade, but coal and transportation still present some problems which may very likely cause a set-back before very long. The most recent cloud on the horizon is the threatening car shortage which promises to assume serious proportions. Orders have gone forth from Washington that all box cars in eastern states belonging to western lines must be shipped back at once to their owners without loading. Furthermore gondola cars must be immediately dispatched to the coal fields. Michigan is greatly concerned over this order which if carried out to the letter will mean a state-wide poverty of cars to move the bumper potato crop and the sugar beet crop. Already potatoes are congesting the local markets for lack of cars, and state authorities are beseeching the railroads to rescind or amend their orders, so that Michigan may have enough left to move her crops. It is said that Minnesota, also a large potato state, has received three times as many cars as Michigan, which if true, gives this state real grounds for complaint.

Prices on all important farm products have an upward trend, with the exception of potatoes. Impoverished as she is Europe continues to buy freely of our grain and many dealers look for sky-rocketing prices before the next harvest.

WHEAT

Wheat prices march steadily upward with only an occasional break. The market news is mostly of a bullish nature. Europe takes a few thousand bushels of wheat and rye every day. The great western crop is being held back because of the car shortage and quite frequently a scarcity of visible grain develops on the eastern markets. Breaks in the market are principally caused by profit-taking. Those who bought wheat at around $1 a bushel see no reason for waiting for higher prices when they can make 15 or 20 per cent on their investments. Few believe that the bull movement in wheat has run its course, and it is freely predicted now that $1.50 wheat is only a few weeks away.

As seems usually to be the case, only a comparatively small percentage of the actual producers of wheat will receive the benefit of the higher prices. The bear movement in late July and August was well engineered and frightened a lot of farmers into disposing of their grain. It is now estimated that over 50 per cent of the 1922 crop has left the farmers' hands and a good deal of that is in the hands of the speculators who are in a position to make huge profits on their purchases.

Prices

Detroit—No. 2 red, $1.31; No. 2 white and No 2 mixed, $1.29.

Chicago—No. 1 hard, $1.17½ @ $1.19¼; No. 2 hard $1.17½ @ $1.19.

New York—No. 2 red and No. 2 hard winter, $1.36½.

Prices one year ago—Detroit, No. 2 red, $2.20; No. 2 white and No. 2 mixed $2.17.

CORN

Trade in this market has been dull and there has not been much action to the market the past week. There has not been much desire to press the selling side, while new buyers were discouraged by the falling off in the demand for cash corn. In general buyers are confining their purchases to grain already on the market and ready for instant delivery. Receipts have not been heavy as country offerings continue to be small due to the car shortage. The quality of the new crop is reported to be fine, although the amount is much less than at the beginning of the 1921 season.

Prices

Detroit—No. 2 yellow, 80c; No. 3 yellow 79c; No. 4. yellow 78c; No. 5 yellow 77c.

Chicago—No. 2 yellow, 70¼c@ 71½c.

New York—No. 2 yellow, and No. 2 white, 89¾c; No. 2 mixed, 89¼c.

Prices one year ago—Detroit, No. 2 yellow, 55c; No. 3 yellow, 53c; No. 4 yellow, 50c.

OATS

The oat market has been very quiet the last week or so. The tone of the market is steady although trading is limited. Receipts from the country continue to be restricted by shortage of cars, but in most cases they are sufficient to take care of local demand. Domestic shipping demand is lighter than one week ago.

Prices

Detroit—No. 2 white, 49c; No. 3 white, 47½c; No. 4 white, 46c.

Chicago—No. 2 white, 43¼ @ 44¾c; No. 3 white, 42¼ @ 43¼c.

New York—No. 2 white, 55 @ 55½c.

Prices one year ago—Detroit, No. 2 white, 38c; No. 3 white, 34½c; No. 4 white, 31c.

RYE

Rye, like other grains, followed the trend of wheat the past couple of weeks and the market is steady at present. The closing days of last week saw the grain unchanged in some cases but prices at the close of the week were nearly four cents higher at Detroit than the close of the week previous. Demand is good for this grain, especially from the seaboard, and we look for considerable higher prices within the next ninety days.

Prices

Detroit—Cash, No. 2, 90c.

Chicago—Cash, No. 2, 85½@86c.

Prices one year ago—Detroit, No. 2 white, 81c.

BEANS

The Michigan bean market slumped rapidly the early part of last week, but near the close gathered new strength and recovered all that it had lost. There appears to be considerable speculation this year in beans and it is evident that the dealers have every confidence in the future of the market. The first year of the slump in the bean market taught the dealers to be cautious and the following two years they showed little if any inclination to speculate. This year, the situation is vastly different. Jobbers and elevators are eager to buy and do not worry greatly if there is no immediate outlet for their purchases. If beans are a good investment for the dealer, they are just as good for the farmer. We advise our readers not to be too hasty in disposing of their crop. We belive bean prices will be very much higher.

Prices

Detroit—C. H. P.,$7.00 per cwt.

Chicago—$5.50 @ $6.00 per cwt.

Prices one year ago—Detroit, C. H. P., $4.25.

POTATOES

The potato market is without life. What few sales were made last week by farmers in this state were at 25 to 35 cents per bushel: Selling by farmers has come to a virtual stand-still, the majority of those who are obliged to sell as soon as potatoes are dug having already dene so. Mild weather has added to the bearishness of the big crop. We do not see how potato prices can go much lower, because farmers will simply not sell at prevailing prices. We anticipate that as soon as cold weather sets in the market will liven up a bit. The car shortage is a factor that must be reckoned with. Should mid-winter find the western potato sections without cars there might be a sharp advance in prices. But no appreciable advance can hold long, If prices do not decline further and we hardly expect that they will, there are very good reasons for believing that winter will usher in slightly better prices than now prevail.

Prices

Detroit—$1.20 per cwt.

Chicago—75 to 90c per cwt.

New York—$1.67 per cwt.

Prices one year ago—Detroit, $2.08.

HAY

A steady advance in hay prices during October is reported by the United States Department of Agriculture. The average price of No. 1 timothy as reported by ten of the larger markets to the United States Department of Agriculture advanced about 75c per ton. Scarcity of cars is given as the principal market factor; the advance on timothy was attributed more to the scarcity of good hay in the markets than by an increased demand. The surplus to be marketed was reported to be larger than last year and the demand from consuming sections less because of the large quantities of local forage available. The marketable surplus of alfalfa was estimated to be less than for the previous year, while the drouth in certain sections of the West and South-west created a demand of sufficient volume to have absorbed already most of the market hay in nearby territory. Emergency rates equal to 50 per cent of the regular rates have been made by certain railroads on hay for Texas and New Mexico. This will make possible the movement of hay from Colorado, Utah, and Wyoming, from which states it has heretofore been almost impossible to move hay because of the high transportation charges, the Department says.

Prices

Detroit—Standard Timothy $16.50; light mixed $16.50 @ $17.50; No. 1 clover $15 @ $15.50.

Chicago—No. 1 Timothy $21 @ $23; No. 1 light clover mixed $20 @ $21.

New York—No. 1 Timothy $27; No. 1 clover mixed $23 @ $25.

Prices one year ago—Detroit, No. 1 clover $14 @ $15; No. clover mixed $15 @ $16.

CHICAGO LIVE STOCK MARKET

Last week was another week of gloom in the cattle market, following the irregular but sharp declines of the week before. It was a case of too many cattle on sale for the immediate needs of the trade. Buyers refused to take cattle except at substantial price reduction. Even the best steers showed weakness, and many choice and near-prime steers sold 25c to 40c lower than the high time two weeks previous.

Short-fed steers, which have been subject to more or less unevenness, whether on advancing or declining markets, suffered most in the last two weeks' slump, uneven declines of $1.00 to $2.00 being general, with extreme spots showing more loss. It was a game of chance at times. Neither buyers nor sellers could agree among themselves as to what these grades of cattle were worth. It was not uncommon for steers of similar quality and flesh condition to sell as much as 50c to $1.00 apart on the same day.

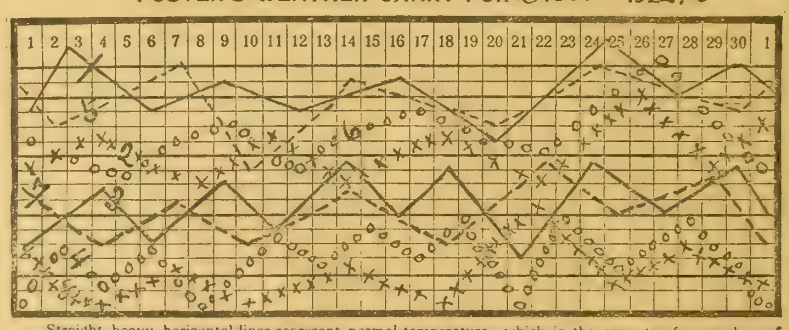
Receipts were liberal every day, and the week's total at 83,100 shows only a slight reduction from the total of the previous week of 84,373, which was the largest weekly run of cattle since the week ending Nov. 20, 1920. Nearly one-third of the receipts consisted of western range cattle, which came in direct competition with short-fed natives.

Chicago receipts of hogs last week at 159,700 stand the largest since week ending July 15, being 25,400 larger than previous week, 11,000 larger than a year ago and 8,500 larger than two years ago, when presidential election curtailed

THE WEATHER FOR NEXT WEEK

As forecasted by W. T. Foster for The Michigan Business Farmer

FOSTER'S WEATHER CHART FOR nov 1922



Straight, heavy, horizontal lines represent normal temperature which is the average of same days of the year for forty years. Crooked lines above normal lines mean warmer; below, cooler; that marked 1 is for section 1, north of latitude 47, between meridian 90 and Rockies crest—2 for section 2 on my section map is for east of meridian 90, north of latitude 47—3, between latitudes 39 and 47 and between meridian 90 and Rockies crest—4, east of meridian 90, between latitudes 39 and 47—5, south of latitude 39, between meridian 90 and Rockies crest—6, east of meridian 90, south of latitude 29—7, north of latitude 43½, west of Rockies crest—8, south of latitude 43½ to Mexican line and west of Rockies crest.

Washington, Nov. 10, 1922.—North American precipitation for the year beginning October 1, 1922 is expected to be less than the ten-year average. Of course some sections will get more, some less; the important thing for the producer to know is what the prospects are for his immediate vicinity so he may know what kind of crop to plant and sow. A shortage of rain means a shortage of crops as a general average and that means good prices for products in 1923. The absence of severe storms for about twenty days of October brought out complaints about dry weather. From near Nov. 10 to 30 sufficient severe storms are indicated to bring a good moisture that will be favorable to winter grain. My information is that the beginning of the next crop season indicates bad crops for Australia, New Zealand and the islands near them only fair crops in South Africa; good crops in Argentina. Shortage of wheat and rye crops in Europe is greater than heretofore reported. World conditions continue to indicate a world shortage of grain for 1923. Some countries will produce above normal crops but more below.

Michigan: East of 90, between latitudes 39 and 47; highest temperatures 11 and 15, lowest, 13 and 17; average much warmer than usual; most severe storms and most precipitation during week centering on 16.

supplies. Receipts were 2,200 above the 11-year average.

Average weight of hogs dropped 6 lbs. near normal for this season of the year, the estimate last week at 236 lbs. being 6 lbs. heavier than a year ago, 10 lbs. heavier than two years ago and 21 lbs. above the 11-year average. Average weight is still considerably "out of line" at 236 lbs., being above any corresponding week's average weight in over 11 years. However, comparing with recent weeks, last week's average weight of hogs stands lightest since the first week of March, showing a loss of 16 lbs. in six weeks' time.

Top price last week slumped off another 70c, now standing at the lowest level since first three weeks this year. Top last week at $9.05 shows a gain of $1.00 as compared with a year ago, being $5.45 below two years ago and within $2.25 of the 11-year average.

Sheep receipts last week at 104,000 were practically second largest of the year, being 16,400 larger than previous week, 6,600 larger than a year ago and 13,500 larger than corresponding week two years ago. Total shipments from Chicago last week at approximately 53,400 were also among the largest of the year, being 16,500 larger than previous week, 24,160 larger than a year ago and 27,700 larger than two years ago.

Practically all shipments of sheep and lambs leaving Chicago during the week carried feeding quality back to the country, very few fat lambs being shipped out recently alive. However, a few eastern orders were filled earlier in the week, buyers competing with city butchers and large local interests for the exceedingly few choice fat lambs available.

Active competition and a scarcity of aged sheep upheld values in this class with closing prices ruling steady to 25c lower than a week ago, while lambs and yearlings reflect sharp discounts. Handy weights sold unevenly comparing with a week ago, although weighty classes showed the decline.

Large country orders for feeding sheep were filled late in the week, a big string of Montana medium to good feeding ewes selling to go back to the country at $5.25@$5.35 mostly. A light "sort" sold for slaughter at $7.00. There was inquiry throughout the week for desirable breeding stock, but very few arrived. One deck of yearling breeding ewes brought $11.50 Monday.

CATTLE REACH HIGH PRICES IN OCTOBER

Receipts of cattle and calves during the first three weeks of October increased nearly 34 per cent over the same period last year, reports shows. Hog shipments were over 191,000 head heavier. Sheep and lamb shipments decreased. A large increase in the movement of stocker and feeder animals back to the country is reported, ranging from 41 per cent on cattle and calves to 110 per cent on hogs. Slaughter of cattle and hogs increased, but of sheep and lambs decreased.

MISCELLANEOUS MARKET QUOTATIONS

Detroit, Monday, November 6th.

BUTTER—Best creamery, in tubs 39@42c per lb.

EGGS—Fresh, current receipts, 38@44c; fresh, candled and graded, 40@48c; refrigerator firsts, 26@28c. per doz.

PEARS—Winter varieties, $1,25@$1.50 per box.

HONEY—Comb, 23@25c per lb.

CELERY—Michigan, 20@30c per doz; square, $1@$1.25.

DRESSED HOGS—90 to 100 lbs, 13c; 130 to 160 lbs, 11@12c, heavy, 6 to 10c per lb.

CHESTNUTS—38@40c per lb.

CABBAGE—Home grown 50@60c per bu.

POP CORN—4½@5c; Little Buster, 7½@8c per lb.

ONIONS—$1.75@$2 per sack of 100 lbs; Spanish $2.15@$2.25 per crate.

DRESSED CALVES—Choice, 14@15c; medium, 11@12c; large coarse, 5@10c per lb.

LIVE POULTRY—Best spring, 20@21c; medium, 19@20c; leghorns, 16@17c; large fat hens, 23@24c; medium hens, 20@22c; small hens, 14c; old roosters, 15c; geese, 20@22c; large ducks, 21@23c; small ducks, 18@20c; turkeys, 34@35c per lb.

WOOL NOTES

The Boston and Philadelphia wool markets may be described as very active. Prices have recently advanced to new levels for this year. There is a demand for all grades but fine wool commands most of the attention.

Sales of fine strictly combing Ohio wool have been made at about $1.35, scoured basis, which is equivalent to about 55c per pound in the grease. Prices of 3-8 strictly combing wool on a scoured basis have advanced about 10c per pound during October. At present there is a spread of 50c per scoured pound between fine and 1-4 blood strictly combing wool in favor of fine.

Recent activity in the wool market has been reflected in an advance by the men's wear manufacturers of from 5 per cent to 12 per cent in prices for next springs finished goods. One outstanding feature in recent developments is the fact that the major portion of the wool recently withdrawn from bond in the United States was for manufacturers' account.

LONDON WOOL MARKETS

Opening prices at the last auction sale in London advanced from 5 to 10 per cent over those prevailing at the close of the previous series. Prices are being maintained easily at the higher levels. Since the effective date of the 1922 Tariff Act purchases of wastes, including sales, in the English markets have been quite large for American account. While stocks of fine wool are limited, advices from commercial sources there indicate an abundant supply of lower grade wools. It is also reported through commercial channels that foreign manufacturers have lowered their prices about 10 per cent on some lines of finished goods suitable for export to this country.

HEAVY MOVEMENTS OF SHEEP AND LAMBS TO FEED LOTS

Despite marked decreases in receipts at markets, movements of sheep and lambs to feed lots have been relatively heavy for some time past, the United States Department of Agriculture reports. Considerable numbers of feeders are reported going into Colorado feed lots by the heavy movement through the Denver market. Feeder shipments from that point during September were almost double those of a year ago, the Department states.

Feeder shipments during the first three weeks of October from 12 important markets totaled 575,664 head compared with 390,853 during the same period in 1921. This is an increase of 184,811 head or 47 per cent. Receipts of sheep and lambs during September at public markets decreased 377,000 head compared with receipts during September 1921, but feeder shipments from these markets decreased only about 30,000. Feeder shipments during the first 9 months of this year increased 355,000 head, or more than 21 per cent, over shipments during the same period decreased 2,206,000 head or nearly 13 per cent.

CHICAGO APPLE MARKET

The market on apples has gone the route of the market on a good many other commodities recently and an easy tone prevails at present under liberal receipts but a moderate demand.

The supply of barreled apples has been liberal and the market was easy under a rather slow movement. Michigan "A" grade Wageners and Baldwins brought $3.25@3.50; Greenings and Snows $4@4.50; Kings and Spies $3.25@$4; New York "A" grade Greenings and Spies $4@$4.25; Baldwins and Hubbardstons $3.50@4; Illinois "A" grade Jonathans $5@6, and Grimes $4.25@4.50. Iowa and Missouri "A" grade Jonathans brought $5.50@6.

The supply of bushels also continued liberal and under an easy market Illinois and Missouri "A" grade Jonathans $1.50@1.75 and other varieties in bushels sold principally around $1, with some unclassified stock selling anywhere from 50 to 75c.

NEW MEAT CURING BOOK SENT FREE TO FARMERS
It Tells How To Sugar Cure, Smoke and Sell All Kinds of Meat and Meat Products

Every farmer should read "Meat Production on the Farm," a new illustrated book which is being distributed free to farmers only. It tells how to cure, smoke and sell every kind of meat and explains quick, easy methods that produce fancy high-priced sugar-cured meats with no more trouble than plain "salt stuff." It also tells how to save spare parts and make sausages, head cheese, pickled meat and other delicacies.

Send your name to the E. H. Wright Co., 850 Broadway, Kansas City, Mo., and this book, priced regularly at $1, will come to you free. write for it today.—a card will do.

NATIONAL
LIGHT
KEROSENE
Heat-Light
Power

Forty Years Ago

the first National Light Kerosene was sold for oil lamps. It gave a steady white, bright light with a clear chimney and clean wick. Almost immediately it lifted itself out of the ordinary Coal Oil class of oils and became famous as a Kerosene with no smoke or odor. People traveled miles out of their way to buy it.

Today National Light Kerosene is known as the highest quality Kerosene on the market.

Use it in your oil stoves and heaters. No impurities to clog wick or burner. No smoke or odor to cause ill health.

Use it in your Incubators, its uniform heat will hatch healthy chicks from every fertile egg. No poisonous fumes to clog egg shell pores when used in Incubators or fumes to kill little chicks in the Brooder.

Use it in your Tractor, it will develop more power than ordinary Coal Oil because every drop is consumed in the firing chamber, eliminating any chance of the unused portion diluting Lubricating oil in the crank case.

Use National Light Kerosene for your Lighting Plant, Lanterns, every purpose where Kerosene is used you will find "National Light" more satisfactory and economical.

You can use a drum or more. Mail your order if your dealer cannot supply you and we will ship from one of our 96 Distributing Branches nearest to you.

CHANGE IN MEETING PLACE OF FARMERS' CLUBS

LAST issue you published a notice regarding the annual meeting of Michigan State Association of Farmers' Clubs. Would you kindly note the change in the place of meeting which has been changed from the Assembly Room to the Senate Chamber, Capitol Building. Also would announce that the reunion of the Michigan State Automobile Tourists' Association will be held in connection with the banquet which will be held at the Baptist Church the evening of December 5th.—Mrs. I. R. Johnson, Secretary-Treasurer, Rushton, Michigan.

OTTAWA COUNTY HOLDS SUCCESSFUL FESTIVAL

THE fourth annual Ottawa County Farm Bureau festival held at Coopersville in co-operation with the Grange and the Coopersville Business Men's Association proved the best ever held. The corn show commanded the greatest attention, their being nearly 670 ears on display. Mr. Howard Rather, who judged the exhibit, writing to Mr. Hambleton, local chairman, stated "I wish to congratulate you and Mr. Milham very very much for the exceptionally successful corn and grain show which you had at Coopersville. I have never judged a better corn display of similar nature and I am frank to say that your exhibits were superior to many of those exhibited at larger county or district fairs."

Clyde Hollis from Hudsonville won sweepstakes 10 ears of Pickett Yellow Dent Corn. Frank Hambleton from Coopersville won on white dent corn and Stanley Kurek from Marne won the M. A. C. yellow dent in the amateur division. A number of these exhibits will be seen at the International Livestock Exposition and Grain Show on December 20 in Chicago.

Other exhibits consisted of 13 pecks of potatoes, six displays of fruit, 18 pecks of grain, 8 dozen eggs, 15 loaves of bread, 9 apple pies and many other smaller exhibits.

Interest is growing annually in these exhibits and next year the best winter show in the State outside of Farmers' Week is planned for Ottawa County.

EUROPEAN WHEAT CROP IMPROVES SOME

THE latest revised estimates of the European wheat crop are more favorable than shown by the figures made available a month ago, according to a cable from Alfred P. Dennis, special representative of the Department of Commerce at Vienna. The French 255,000,000 bushels which is 20,000,000 bushels more than was predicted at an earlier date, while the outturn in Spain is 14,000,000 bushels better than was last reported, the production being 126,000,000 bushels. The reports of the Rumanian wheat crop which last month showed a slight decrease as over the previous year, are now indicating an estimated excess of nearly 9,000,000 bushels. The corrected estimates for all Europe, exclusive of Russia, put the wheat crop at 190,000,000 bushels less than last year. Making allowances for economies effected through compulsory long milling, flour dilution with coarser grains, and the widespread substitution of potatoes for bread, together with further impairment of buying power through continued currency derangement, the Department's earlier estimates that Europe will have to import 160,000,000 bushels more wheat this year than last is amply confirmed.

The earlier estimates of the European rye crop must be revised upward to accord with the latest official figures. The shortage over last year's yield is now reckoned at 60,000,000 bushels. Based on estimates of all the principal producing countries, exclusive of Russia, the corn crop of Europe is 80,000,000 bushels short of last season. The harvest outturns are cut by the protracted drought in southern Europe, and approximate losses over last year stated in percentages are: Bulgaria, 52; Spain, 45; Yugoslavia, 35; Italy, 25; Czehoslavia, 5; Hungary, has an increase in its corn crop of 3 per cent, due to an increase of 23 per cent in the yield per acre.

BIG LIVE STOCK SHOW OPENS

THE twenty-fourth annual American Royal, classic of live stock show opens Saturday, November 18th, at Kansas City with premiums amounting to nearly $55,000. The event this year dedicates the new half million dollar exposition building. The new building contains an oval of 26,000 feet of floor space where the champions of more than 20 state fairs will parade and all kings and queens of the livestock world will be crowned.

The exposition opened with the choral society of Lindsburg, Kan., singing "The Messiah." The exposition will continue one week.

Hereford cattle will be one of the attractions. Premiums totaling $11,255 are offered for Herefords this year. This is the largest amount of Hereford prize money ever awarded and is expected to bring together an exceptional showing. In addition to the money prizes for Herefords, silver trophies will be awarded in various classifications.

Other breeds of beef cattle will be represented, with Angus, Shorthorns and Galloways exhibited by the leading producers. Shorthorn prizes total $6,260; Angus, $970; and Galloway, $940. In the carlot classes $5,180 will be distributed. These premiums, together with the $11,255 in Hereford prizes, make a total for beef cattle of $24,605.

In the hog department, $8.125 is offered for Spotted Poland-Chinas, Hampshires, Duroc-Jerseys, Poland-Chinas, grades, cross-breeds and carlots. Sheep premiums total $2,258, divided among Hampshires, Shropshires, Cotswold, Dorsets, Rambouillet, Southdowns, fat sheep and carlots. Premiums for heavy horses and mules amount to $6.805, divided among Percherons, Clydesdales, Belgian, Shires, grade and commercial horses and mules.

Thirteen thousand dollars is offered for saddle and show horses.

PRODUCERS IN FIRST PLACE AT BUFFALO STOCK MARKET

THE Producers Co-operative Commission Association is in first place all the live stock commission firms at the Buffalo market. The week ending November 11th the new company handled 79 cars (135 decks), or 18 per cent of the total receipts at the East Buffalo yards.

The producer owned and controlled co-operative was established at Buffalo on November 1 under the auspices of the National Live Stock Producers' Association. In 2 weeks the farmers' own company has nosed out the other 15 firms on the basis of business done. Live stock shippers in New York, Ohio, Michigan and Indiana are responding eagerly to the instructions from their county, state and national Farm Bureaus, to "say it with cars."

FOOD CARDS LIKELY TO BE RESTORED IN GERMANY

STRICT government control of foods and issuance of wartime food cards is expected momentarily in Germany, according to assistant Commercial Attache Breed, Berlin, in a report to the Department of Commerce. Officials of the Ministry of Food have made public announcement that rationing of bread, meat, and milk may be expected any day owing to the very poor outlook for winter food.

WILL ORGANIZE GRAIN POOL

THE Eastern States Farmers' Exchange is the largest co-operative exchange in New England, with headquarters at Springfield, Mass. It has undertaken to form a great pool of buying orders for grain, similar to the fertilizer pool which it formed last spring. The dairy professors of the agricultural colleges of the New England states and New York have formulated what they regard as an ideal, complete dairy ratior. This is to be sold by the Eastern States Farmers' Exchange under an open formula; that is, not only will the analysis be shown on the bag, but also the actual ingredients and their amounts.

BRITISH RECOVER THEIR APPETITES

GREAT BRITAIN has got back almost to its pre-war normal consumption of foodstuffs, says the Foodstuffs Division of the Department of Commerce in its quarterly analysis of British foodstuff consumption. Its consuption of wheat flour, particularly is, in terms of wheat, practically what it was before the war. Net imports of wheat in nine months of 1921 were 75.86 per cent of the pre-war average; those of the nine months of 1922 were 93.1 per cent of pre-war figures. Wheat flour imports for the nine months ending September 30, 1922, were 127.19 per cent of the average of 1910-14. Imports and consumption of other coarse grains, however, have decreased materially from pre-war figures, and the total importation of all grains and flour in nine months of 1922, (14,798,593,960 lbs.) has been only 85.61 per cent of the average importations of 1910-14.

FRANCE HAS GOOD SUGAR BEET CROP

THE sugar beet crop of France is expected to be very good this year, both with respect to quality and to quantity. M. Saillard, director of the laboratories of the French Syndicate of Sugar Manufacturers estimates that the production of white sugar per hectare (approximately 2 1-2 acres) of beets sown will average this year from 3,500 to 3,600 kilos (a kilo equals 2.2 lbs.) The yield for the period 1904-1913 averaged 3,125 kilos per hectare. The area in France sown in sugar beets this year is estimated by the syndicate of sugar manufacturers at about 125,000 hectares (roughly 312,500 acres), and total production of sugar this year will amount to approximately 475,000 to 500,000 tons according to estimates.

DATES FOR FARMERS' WEEK

FARMERS' Week, the annual winter round-up at the Michigan Agricultural College which has grown during recent years into the state's biggest agricultural conference, will be held from Jan. 29 until Feb. 2 this year, according to announcement made this week by Ashley M. Berridge, chairman of committees in charge.

That last year's record attendance of more than 5,000 for the week's meetings will be surpassed this winter, is the prediction of the college authorities. More state agricultural associations and groups than ever before are scheduling their annual meetings for East Lansing during Farmers' Week, and all signs point to a hugh attendance

New features in the way of entertainment and instruction are being planned, every effort being made to make the occasion one which will appeal as strongly to those who have attended the gatherings before as those who are attending their first Farmers' Week. The old standbys, such as the mile-long agricultural parade, the special farm exhibits, and a speaking program headlining some of the Country's leading agricultural authorities, will, of course, be found on the program again.

The Michigan State Farm Bureau will head the list of farm associations, which will meet during Farmers' Week. A dozen other leading state groups have also scheduled their meetings for the same dates, with more expected to follow suit during the next two months.

M. A. C. MAN HONORED AT SOIL WORKERS MEET

Dr. M. M. McCool, head of the department of soils, M. A C., was elected vice president of the American Association of Soil Survey Workers at the third annual meet in session at Champaign, Illinois, last week.

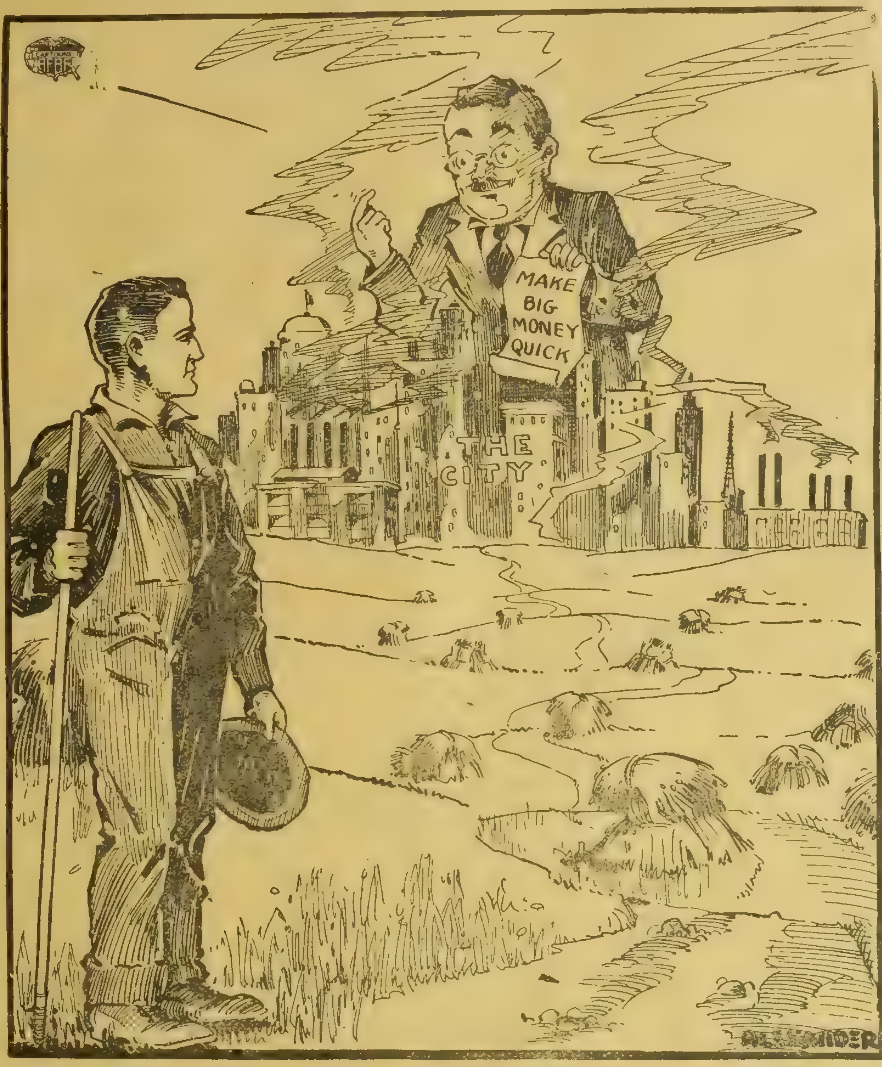
Once Again the City Siren Smiles Countryward

Shall the Farmer and the Farmer's Son Leave the Farm to Take up Work in the City Factories?



Shall John Rutledge Leave the Farm?—Read his story here.

JOHN RUTLEDGE is in no way an out of the ordinary individual. He is married, has one child, is midway between the years of thirty and forty. Years that he knows must be devoted to profiting from the experience of the past rather hectic and disconnected years, two of which were spent in the service of his country.

John Rutledge has been renting an eighty in Gratiot County and the past year has in no way encouraged him to go through with the same plans which he and Mollie (as he calls his faithful and chèerful little wife) had made. First, they were to make a payment down from this years earnings and then by hard work and pure-breds, John said the farm would be theirs in five years and perhaps the first payment made on an adjoining forty. That ought to be farm enough, unless—yes, sometimes he had even dreamed about the Burrows farm on the other side of the road, that would make two hundred and forty of "as fine acres as God ever left out of doors" as John would say.

But right now, it is nearly December. It has been a wonderful fall to get in all the crops and they were good ones too. Made some of John's neighbors who had no over-supply of confidence in John's ability as a farmer on his own hook, sit up and take notice. John, too, was pleased and if you could have heard him whistling when he went out to milk his one and only, any bright summer morning, you would have known he was pleased over his wife, his baby, his work and the world in general.

But as I said this is nearly December. John had to sell his stuff as fast as he could get it away from the thresher or out of the ground. Knew it wasn't the thing to do. Knew he ought to hold a part of it for the higher prices that were sure to come, when the glutted market began to get a little hungry again. But John had to sell, that was all there was to it. And then the blow fell! The prices at which he had to sell were John's disillusionment.

John, as you can imagine, altho I have not confirmed your suspicions, was a farmer-boy, born and bred with the smell of growing things in his nostrils. He was the boy-to-many on his father's farm and because the older boys had no ambition to leave the old folks and the old home, down in Lenawee County, John had started out for himself. Two years he had worked in the automobile factory at Flint. Money came pretty easy on pay-day. Lots of over-time at "pay-and-a-half." Of course, it cost a lot to live in Flint, in fact he spent pretty nearly all he made most weeks and a little more than he made some weeks, but that was until he decided to go back home and marry Mollie.

Mollie had taught John how to save and when they got married, thanks to her, he had a little nest-egg that made the first year all that it should be. But the time came when men were laid off in the automobile factories. One by one John saw his "buddies" at the near-by machines get the "blue-ticket" with their pay and go home with heavy hearts and aching heads.

Then winter came and John was laid off just as he had put a lot of coal into the basement of his rented house. He packed up, left Flint, went back home with Mollie and helped (?) the old folks for a while until he felt ashamed to be taking charity. In fact he had a few words with the brothers who had been working the old farm and both of whom showed signs of having prospered; one having married and the other bought a flivver!

So it was that John came north to Gratiot County, rented an eighty from a man who had moved into Alma and settled down determined to make a future for his family, for by now he had little thought for himself or his own comfort or pleasure, "its all for Mollie and the kid!" as he put it.

And there we found John this November on his rented eighty in the heart of Gratiot County, most of his produce sold, not all of his debts paid, with a cellar full of potatoes and probably enough eatables to carry him most of the way through the winter. He is not discouraged with his farming. He knows he has made a good job of it. His crops showed that he knew as much about it as his neighbors and "a lot more than some of them seemed too." But John is a discouraged man because he does not seem able to find the way out of his present dilemma.

Stories come to him now of the factories working overtime in Detroit, Lansing, Flint and the other manufacturing centers. Wages paid are high, though perhaps not what he received back in the year following his return from service. He knows the foreman under whom he worked in Flint and chances are ten to one that he can get his old job back. BUT—

If he goes back to work in Flint, he must give up his lease, move his household effects, and sell his team, cow, tools, poultry and other things he found necessary to buy this summer to get started. He could go to Flint to work and leave Mollie and the baby back on the farm, but is life worth living away from everything that you exist for?

Should John, who wants to farm, go back to factory work? Well, although John puts it in another way, it resolves itself into the question which is burning the minds and hearts of a good many thousand Johns and causing the lines and tears to come into the faces of a good many thousand Mollies in Michigan and every other agricultural state.

The question is: Does the farming business hold out enough inducements for the young man who is willing to sacrifice now, but who wants to know that the future holds a decent living, comforts and an education for his children that will in the end be better than what the city offers, now?

What do you think?

Editors Note:—The case of John Rutledge is typical, he and thousands like him in Michigan are perplexed over this problem. We want the opinions of our readers, particularly the older ones who have seen the markets rise and fall before. Have you a word of encouragement for John and Mollie? Lets have it for the December 9th issue!

Financial Needs of Farmer in Michigan Discussed at U. P. Meeting

THE relation of finance to agriculture as applied to the financial needs of the farmer, was the question given a thorough hearing before a joint meeting of Upper Michigan bankers, agricultural men, and other business men throughout the state, at a Rural Credits Conference held in Marquette, Friday, November 10th. The meeting was called jointly by the Michigan State Department of Agriculture and the Upper Peninsula Development Bureau for the purpose of determining, first whether or not the farmers of Upper Michigan particularly, are in need of more adequate financial assistance, and that being the case, to establish ways and means of effecting such legislation. The session is considered to be the most important meeting as concerns agricultural and industrial welfare of the Upper Peninsula of Michigan which has ever been held in that section, and approximately 150 delegates representing practically every phase of Upper Michigan's varied industrial activity, participated in the day's conference.

Among the notables who attended and addressed the gathering were John Doelle, Commissioner of Agriculture, Lansing; Ezra Levin, Director Bureau of Agricultural Development, Lansing; President David M. Friday of the Michigan Agricultural College, and E. G. Quamme, President of the Federal Land Bank of St. Paul.

Although the meeting was called primarily for the purpose given above, there developed during the day's conference, a variance of opinion as to the existing problems in agriculture today. In fact it seemed that each of the speakers voiced a different version.

Mr. Doelle declared that the solution of the problem rested, largely, with the institution of the long-term note, similar to regulations prevailing in other states where the land-settlement problem is similar to that existing in Upper Michigan. Mr. Doelle held that reduction of the "down payment," and extension of the terms for the balance would permit of an initial investment for live stock and equipment.

Mr. Quamme had another idea. He said that the trouble with the farmer of today was too much credit and lack of price. Mr. Quamme maintained that the price which the farmer receives for his product has not increased correspondingly with the price received for manufactured goods—to much one-way fluctuation, in other words.

President Friday expressed the sentiment that the removal of graft from agriculture would eliminate the problem of farmer—finance for all times. Devise some means for a more economic process of getting the product out of the field, onto the market and to the hands—or mouths—of the consumers, he said, and there you are.

Finally Mr. Levin presented a land settlement policy, as worked out by the state department of agriculture, which suggested considerable possibilities. It involved, first, a certification of all available agricultural lands—a system whereby

Survey of Wool Market Shows Outlook Good

Decrease in Production Offsets Decline in Consumption Resulting from European Financial Conditions

DID YOU GET YOUR EXCESS WOOL PROFITS?

THE Department of Agriculture requests the Business Farmer to announce that all farmers who believe they are entitled to excess profits on their 1918 wool sales and have not received them, should write to Mr. Wells A. Sherman, specialist in charge Domestic Wool Section of Bureau of Agricultural Economics, United States Department of Agriculture, to that effect. Letter should be accompanied by statement from dealer to whom wool was sold, showing the number of pounds sold and the amount received for the wool. If it is not convenient to secure a statement from the dealer, it will be satisfactory to the Department to have grower send sworn statement, showing the information. It is believed that there are a large number of farmers in Michigan who are entitled to additional profit on their 1918 clip. In one case in particular the government has collected $200 in excess profits from a Michigan dealer, for distribution to growers. In this case the dealer was unable to furnish the names of the growers from whom he bought the wool, so the government must wait until it hears from the growers themselves before refunding these excess profits.—Editor.

THAT the outlook for wool producers is favorable is indicated by a study of the most influential market factors.

1. The domestic clip provides less than 50 per cent of our annual consumptive requirements and has been declining in recent years. Production of fleece wools in 1919 as determined by the last census was 228,795 191 pounds compared with 289,419,977 pounds in 1909, a decline of 21 per cent. In the same period the population, and presumably, the wool consuming capacity of the United States, increased 11 per cent.

Annual production of wool in the United States, including both shorn and pulled wools, together with the net imports, or excess of imports over exports of domestic and foreign wool, and the total retained for consumption in each of the past ten years is given in the table below. The clip of the calendar year is combined with the net imports of the fiscal year in determining the yearly totals for consumption. For example, the clip of 1921 is combined with net imports in the fiscal year from July 1, 1921, to June 30, 1922. As an average of the 10 years, domestic production has been 46.4 per cent and net imports 53.6 per cent of the total.

(In millions of pounds, i. e., 000,000 omitted.)

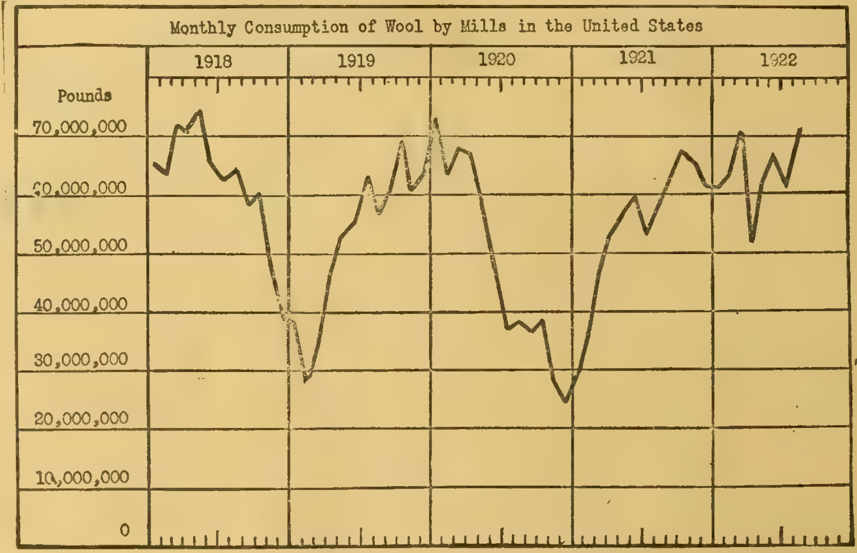
	Production	Net Imports	Retained for Consumption
1912-1913	304	191	495
1913-1914	296	247	543
1914-1915	290	301	591
1915-1916	289	533	822
1916-1917	288	368	657
1917-1918	286	377	663
1918-1919	300	421	736
1919-1920	314	407	710
1920-1921	302	307	580
1921-1922	372	251	524
10-yr average	294	340	635

2. The tariff of 31 cents per scoured pound upon clothing and combing wool and 24 cents per scoured pound upon carpet wools when used for clothing will tend to keep prices to producers in the United States materially above the world level.

3. Wool consumption in the United States is at a fairly high rate. Unfortunately there is some uncertainty over the monthly consumption as a few of the mills, including some of the largest interests, do not furnish data of this kind. Recently the Department of Commerce replaced the Department of Agriculture as the agency for collection of such reports. The complications now being issued are not strictly comparable with those which have gone before as non-reporting firms are excluded. However, assuming that these non-reporting firms have borne the same relation to the total in the last few months as they did before, the amount of wool consumed in the first eight months of 1922 and comparative figures for the corresponding period in the preceding four years all reduced to grease equivalent basis would be as follows:

	Pounds
1922	506,259,000
1921	394,121,000
1920	451,620,000
1919	372,975,000
1918	537,838,000

The accompanying chart shows the fluctuations in wool consumption by months since the beginning of 1918. Manufacturing operations fell off sharply immediately after the armistice, but the later boom brought them up to a high level until early in 1920 when the period of deflation started. Wool was one of the first commodities to be deflated and likewise one of the first to benefit from the industrial revival which increased employment, brought consumers into the market and compelled distributors to restock their shelves. The rate of manufacture in the last few month has been about as high as in either 1918 when war orders were a big factor, or in the post-war boom



Wool is greatly affected by general industrial and financial conditions. If the present revival should be interrupted for any cause, wool consumption would fall and prices would be affected adversely.

4. Stocks of wool, tops and noils in the hands of dealers and manufacturers in the United States on June 30 last as reported jointly by the Departments of Commerce and Agriculture were smaller than for the corresponding date in each of the four preceding years when the data were collected by the Department of Agriculture alone. The totals for earlier years include holdings by the United States Government. Reduced to a grease equivalent basis, the quantities in each year are as follows:

	Pounds
June 30, 1922	406,285,279
June 30, 1921	576,522,000
June 30, 1920	537,272,000
June 30, 1919	671,513,000
June 30, 1918	474,174,000

Presumably foreign wools held in bond on the Atlantic seaboard were not included. These would affect the situation to some extent as they were approximately 90,000,000 pounds at the end of last June, but were negligible or entirely absent in previous years.

Mills are obliged to maintain moderate stocks at all times in order to make proper blends so that manufacturing countries normally have reserves of from three-fourths to a year's supply. This fact is highly important in placing the proper interpretation on reports of wool stocks.

5. Statistics compiled several months ago by the Department of Commerce placed world production of wool in 1921 at 2,608,445,000 pounds compared with an average of

(Continued on page 19.)

Restricted Production Only Sure Key to Successful Agriculture

BY JOHN E. BELL

ANOTHER "SOLUTION"

MR. BELL, Lapeer county farmer takes the same position in his article published here, as the Business Farmer has often expressed. No amount of saving by the co-operative distribution of farm crops can possibly compensate growers for the inevitable losses that accompany over-production. While we are fully aware of the advantages of restricting production to meet probable demands we are also aware of the difficulties to be overcome because of the scope of the farming business and the many different classes of people with whom we have to deal. However, we believe the day will come when production of farm crops will be much more nearly adjusted to compensate than it is at present. Our readers views on the subject are invited.—Editor.

IN relation to the article in Business Farmer, Oct. 28, 1922 by George H. Stevenson, proposing a remedy for the low economic condition in agriculture, I would like to comment that, it can only be classed along with other quack remedies.

The plan is hazy and chimerical to say the least, and the outcome of an attempt to put into effect could only result in further delay, more expense and loss, and greater reduction of the farmers condition.

The Superintendent of the department of farm management, Department of Agriculture, published in the "News Letter" made it clear what should be done to clear up the situation, and remedy matters, when he said that, ninety per cent of the remedy for farmers troubles lay with the farmers themselves, in regulation of production, and that only ten per cent lay in organized co-operative marketing arrangements.

And Secretary Wallace also indicated the same remedy when he told the Chambers of Commerce that the first thing they should do in relation to the agricultural situation was to get out of their heads the notion that it be wrong or immoral for farmers to restrict production. That others were doing it.

The vital intention, and foundation stone of all organized industry and labor is to fix prices by regulation of production and service.

Manufacturers call it, "administration of production," but it means restriction of production. It is a form of strike. Every industry has organized for the chief purpose of restricting production, striking, to get better prices, except the farmers. And all the industries that have organized for regulation of production to fix prices have got what they went after, and they are all joined together to prevent the farmers from doing the same thing they do.

Everybody strikes but the farmers. When prices don't suit the manufacturers they shut down and throw their men out of employment, and although this quiting depresses farm prices, the farmer never retaliates, he goes right on producing and feeding the idle men at reduced prices until they see fit to go back to work again. Under the existing system and standard of morales, if the farmers want a square deal they can only get it by the direct method of the strike. All such proposals as Mr. Stevenson's are only a smoke screen, and deter the farmers from seeing the true course, and postpone the real remedy, and bring more loss and ridicule and laughter on the farmer.

All intelligent people know there is no way by co-operative associations to unload a big surplus at a profitable price. I don't say regulation of production can be worked by farmers, but everybody else has worked it successfully and it the only remedy in sight. It would at least bring the issue to a showdown, which is what is needed.

Sometimes organization, asks too much, in the strike. But labor, for instance would be object slaves without organization.

There are some true friends of agriculture in the Department and scattered about the country, but their voice and efforts are suppressed and sidetracked by the professed friends of the farmer who in fact represent the exploiting class and are bears on farm produce, and can't be depended on to do anything to equalize the exchange conditions.

Mere students of theory and patronized university professors of economics, without practice or experience, are not fit to direct the affairs of men schooled in hard practice and experience. And the farmers will have to get away from this horde of hypocites and make the fight themselves, or lose the game.

The metal, character, and good citizenship of the farmers are going to be put to test in a matter in which the welfare of the whole county is at stake.

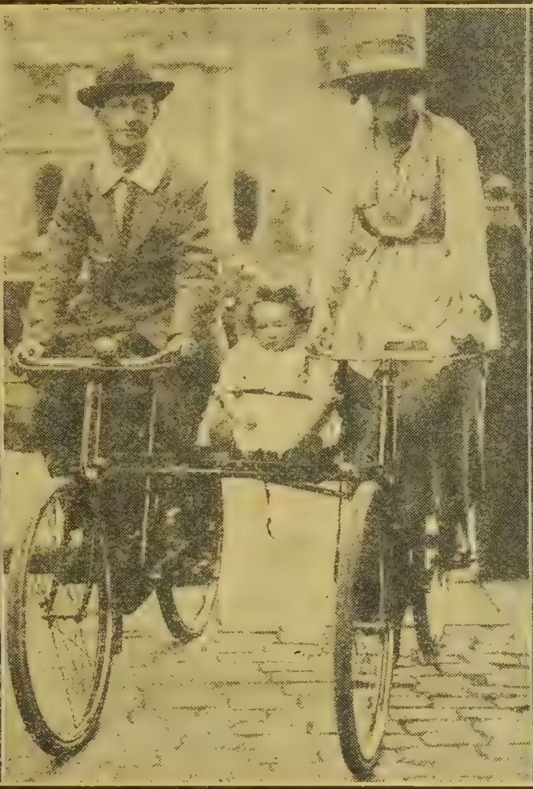
It is the farmers duty to himself, to his country and the future generations to use the means he has to command a square deal. But it must be a farmers' movement. This 50-50 sham mix-up with county agents is only an arrangement to make the farmers pay the cost of their own defeat and subjugation.
—Lapeer County, Mich.

PICTURES FROM FAR AND NEAR

Not a "bull in a china shop" but a bull in a bank. Mr. Corey J. Spencer of Grand River Stock Farms, well known Holstein breeder of Jackson county, recently placed on exhibit in Jackson's oldest bank his wonderful prize bull Spencer Count Segis Corndyke. This wonderful Holstein has as his grandsire Model King Segis Glista, considered one of the greatest sires of his breed, and present head of the Spencer herd.

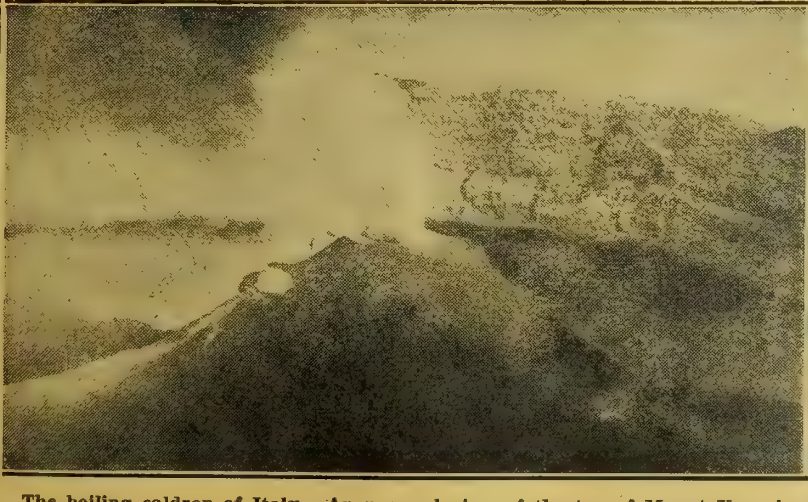
Copperhead snake about to spit poison into a glass. One hundred and twenty drops of poison were recently taken from 24 copperhead snakes in the Bronx Zoological Gardens, New York, as the first step in a process to be completed in Brazil and which will consume nine months for the making of a serum to counteract snake bites. The poison is dried and then shipped to Brazil where the bacteria is removed.

The supreme tramp of the world traveling in Korea. Harry A. Franck, czar of tramps, set out on his graduation from college to go around the world. For equipment he had a knowledge of French and German, a camera and $104. From his home at Munger, Mich., he has made many trips around the globe and often he returns home with more money than he started with, which he earned writing articles about his travels.

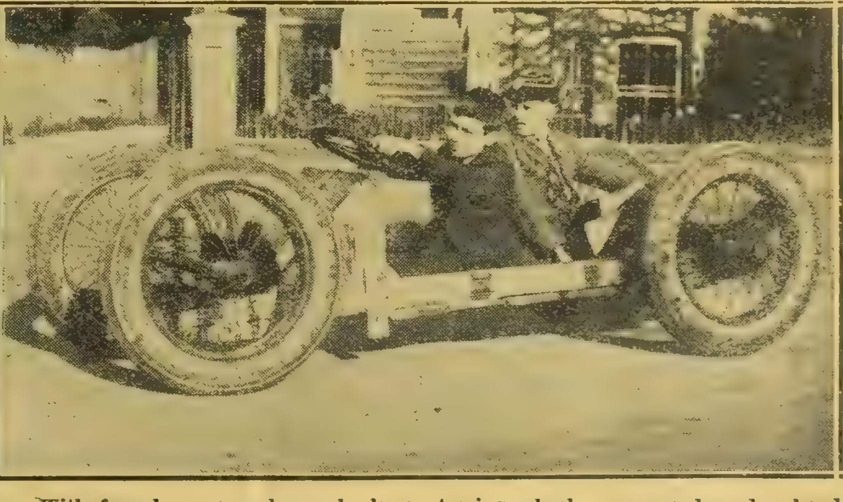


The newest thing in baby carriages. Mr. and Mrs. Diges succombed to an attack of the "wanderlust," but the chief difficulty was what to do with baby Diges, who is only ten months old. This novel method of carrying baby around was evolved. A hammock was firmly placed between the two bicycles and the baby fastened in, swinging to and fro as they cycled along. This picture was snapped in England.

Professor Charles J. Bullock, chairman of the Harvard Committee on economic research, states that the committee does not expect prices to decline much during the next ten years. He also states that the cancellation of all international war debts would obviously help the debtor countries to carry through policies of drastic deflation but would not necessarily mean that such policies would or could be adopted.



The boiling caldron of Italy. An unusual view of the top of Mount Vesuvius taken by a foolhardy photographer who wanted a close-up of Italy's "boiling kettle" that has boiled over so many times costing several thousands of human lives.



With four large aeroplane wheels, a steering wheel, some wood, and a band brake, two youthful motor enthusiasts have constructed a machine that is the "envy and peril" of Epsom, England. The junior speed merchants are shown above ready to start for a ride.

Farmers Service Bureau

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you. All inquiries must be accompanied by full name and address. Name not used if so requested.)

HAVE YOU SEEN THIS BOY'S FATHER?

Will you help me locate my father? His name is Clifford Robb. He was last heard of in Cincinnati. Ohio. I am 16 years old and among strangers and would like to hear from him.—Earl Robb, General Delivery. Jackson, Mich., Care of Marie Brockway.

UNCLE CANNOT MARRY NIECE

Is there any law in the state of Michigan to prohibit an uncle from marrying his niece, and if so what is the penalty? If this girl is a ward of the probate court and she runs away to Canada can she be brought back and punished? If so, in what way. This girl is 17. How long can the court hold her?—B. F. B., Morley, Mich.

—Section 11364 provides that an uncle shall not marry his niece. Section 11362 provides that males that are eighteen and females that are sixteen years of age are capable of contracting marriage if otherwise competent. A penalty of $500 or less may be imposed upon any justice or minister of the gospel for performing any marriage ceremony in violation of the provisions in the chapter cited. There may be found various provisions from section 11362 to 11369. I do not know what you mean by saying that "ward of the probate court." If it simply means she is under guardianship I know of no law prohibiting her marriage if she has the proper consent required by section 11378. If the marriage is not performed in Michigan then the contracting parties must comply with the laws of the state or country where the ceremony is performed.—Legal Editor.

DIVISON OF STOCK

Can you inform me through your paper the correct way to share stock such as this: Renter furnishes two-thirds of feed and owner furnishes enough cattle so as renter can feed all the roughage on the owner's farm.

—From the information furnished it is hard to make a satisfactory answer. Requests such as the above should state all the details of the agreement, the kind of stock, etc. The relation of investment to labor depends largely on the kind of stock kept.

If stock referred to were dairy cattle I would suggest that a fair basis for dividing the returns would be two-thirds to tenant and one-third to landlord ,taking into consideration sales of stock and stock products and stock increases.

So far as costs are concerned, the tenant's time plus two-thirds of feed are equal to about two-thirds of the total cost as against one-third of the landlord's costs which represented investment and risks in stock buildings and one-third feed costs.—F. T. Riddell, Farm Management Demonstrator, M. A. C.

WIFE CAN SELL COW

I wish to know if a wife has a right to sell her cow and use funds for clothes she needs after husband has given mortgage on same without wife's signature. Would it be safe for the buyer of the cow to hold her? Mortgage was given by T to H. Signed by G and wife and in presence of T. That is T signed in place of witness. G. was no doubt justice of peace.—A. E .H., Harrison, Mich.

—A wife has a right to sell her property and use the proceeds as she chooses. Neither has the right to sell the exempt cow without the consent of the other. A chattel mortgage upon a cow if an exempt one signed by the husband alone is void against the wife and she may recover it from any one who takes it under the mortgage. See section 12858 of Compiled Laws of 1915.—Legal Editor.

HAVE SIGNED STATEMENT OF OWNERSHIP

My husband and his brother own a farm in partnership. They go half and half in everything, cattle, machinery, furniture, etc. I have some money in my name and I would like to know if I would take that money to buy furniture with, and there should be any trouble and they should break partnership, how could I prove that that furniture was mine and my husband's? Our postoffice is in Michigan, but we live in Wisconsin, so of course would come under Wisconsin laws.—Mrs. M. E., Norway, Mich.

—As a precaution against change of circumstances or of death or dissolution of partnership it would be proper for you to take a written statement that such pieces of furniture as you buy should be in your name. This statement signed by your husband and his brother would furnish the evidence of the ownership where circumstances might prevent proof otherwise. If you have but a small amount of money in your name let me suggest that the best place is a safe investment in your own name. Old age brings many uses for ready money not thought of in youth and middle age.—Legal Editor.

REMOVING FENCE ALONG STATE ROAD

I would like to know who will have to move fences along a state road. They are building the state road past my place and some places fences will be in the way. The fence has been there for about 25 years. Will I be obliged to move this fence or are they supposed to move it? Any information you can give me will be appreciated.—C. D. K. Maple City, Michigan

—Section 7, Chapter 7 of the General Highway Law prevents property owners from gaining any rights in the highway by encroachment therein with fences, hence if property owner's fence stands in the limits of the highway it is his duty to remove the same back to the highway line within thirty days of receipt of notice by the Highway Commissioner or other person having jurisdiction over the highway in question and in default of removing the fence in accordance with said notice the highway commissioner or other authority having jurisdiction over the highway may remove the same and the expense incurred may be assessed against the property adjacent to where said fence was located and shall be collected as other taxes are levied and collected in accordance with the provisions of Section 12 of Chapter 7 of the General Highway Law.—State Highway Department.

PACKING COMPANY BUYS DIRECT FROM FARMER MEMBERS

Does the Detroit Packing Company buy live stock direct from the farmers if they truck it to the packing plant?

—We are buying lve stock direct from the farmers a great deal being delivered by truck, but this applies only to stockholders of the Detroit Packing Company and not to those who have not affiliated with the company. On such deliveries we are paying full Detroit Stock Yards prices with no charges accruing against the live stock.—Detroit Packing Company, Frank L. Garrison, Vice-President.

CONSULT YOUR ATTORNEY

I live in an incorporated village of about 600, with no town marshall no deputy sheriff, no one to see that the law is enforced, the county seat being 16 miles away. I own ten lots here in town inside the corporation, bought them last fall. Am going into small fruit. Tom, Dick and Harry runs across my lots and uses them as they please. I have three neighbors with just an alley between me and two of them and the street the other one, and they are determined to let their chickens run. I have told them to take care of their chickens and I saw the Prosecutor and he said the state law said they had no right to run at any time and I could shut them up and collect damages. Now they have an ordinance here that after Nov. 1st or about that time to May 1st they can run. The Prosecutor tells me that ordinance is of no effect that the state law rules. If I shut some of these chickens up and notify the owner and they do not appear to claim same, what course will I take?—H. S. W., Morley, Mich.

—I do not know of any law that permits any one to allow any animal or fowl to do damage and not be liable for the damage. The proceedings for impounding animals or fowls are so complicated that is not possible to give instructions in advance what to do. You had better follow the advice of your attorney for your protection.—Legal Editor.

WHERE ARE YOU, TITUS?

I am writng to you to see if you could find my nephew, Titus Chaulklin, whose home address is Ensign, Mich. When I last heard from him he was at Muskegon working for a motor company. That was June 30, 1922. He did not give a retnrn address as he was about to change his residence in that city. We are afraid something has happened to him otherwise he would have written before now. He is 5 feet 5 inches tall, 21 years old and dark complexioned.—Mrs. John Bergman, R. 1, Gulliver, Michigan.

CAN NOT FORECLOSE

My wife and I owned a farm here jointly. I had a chance to trade this farm for a small one valued at $2,000 and I offered to give or take $1,800.00. She backed out and later decided to take the $1,800.00. By that time the deal was off for the small place. There was a $700 mortgage on the farm due November 6th. I gave her a mortgage for $1,800.00 payable on or before five years from April 1st, 1922, and the $700 mortgage was to be paid by April 21st, 1923. Now the way things look I can't make it and don't know but what it will be best to keep what I have and stay as long as I can. How long can I stay after April 1st if I don't pay anything? I have the personal, that we had, but not enough to pay the $700 with interest and interest on $,1800 and taxes.—D. J. D., Lake City, Mich.

—A mortgage sale by advertisement takes about fifteen months from the time proceedings are commenced to the expiration of the equity of redemption. A forclosure in chancery may be shortened a little but most of the foreclosures of mortgages are by advertisement and I presume this is the information. Forclosure can not commence until there has been a default.—Legal Editor.

GO TO PROSECUTING ATTORNEY

I own 80 acres of land in Iosco County. My farm is one mile north of county line. 14 years ago the township commissioner put a ditch past my place to the county line. Next year a forest fire came through and burnt all timber, filling up the ditch, which the township has never cleaned out since, only as far as my place. Can the township run the water as far as my place and leave it? I have notified them but they have taken no action. Can I collect damages for leaving the water on my place and what steps will I have to take to force the township to take this water off?—J. J., Turner, Mich.

—Upon the refusal of the County Drain Commissioner to clean out the drain, the matter should be referred to the Prosecuting Attorney of your county.—Charles J. De Land, Secretary of State.

NOTIFY BANK NOT TO PURCHASE NOTE

On the 13th of Sept. I gave my note to the Peoples Coal Mining Co., of Albion, Mich., to the amount of $500 for stock in the company with a verbal agreement with the vice president that the note was to be used as collateral by the company and that the note was to be renewed by the company every six months until the profits of the stock paid the note without any cash payments made by me. Now I am in receipt of a letter from the company that no subscription would be accepted with an agreement of that kind. Now I have just received a letter from the state bank of F. W. Hubbard & Co., Bad Axe that the vice president wants to sell the note

FARM MECHANICS

SCALES OFF BALANCE 100 POUNDS

A and B have an argument as to how a sugar company scales weigh. A maintains that if the scales weigh 100 pounds they will weigh 100 pounds regardless of how big a load is weighed on them up to their capacity. B says that if they weigh 100 pounds on every ton weighed. For example: B's correct weight of a load should be 4,000 pounds on a wagon weighing 2,000 pounds. B maintains that the scales weight 100 heavier on every ton that he weighs, there 4,000 pounds of two ton would weigh 4,200 pounds plus the wagon weight of 2,000 plus 100 pounds or a total of 6,300 pounds, load and wagon. Now weighing out the empty wagon, whose correct weight is 2,000 pounds, would weigh 2,100, therefore he gains 200 pounds on two ton load. A says that by weighing in 100 pounds his wagon will weigh out 100 pounds on the same scale with nothing gained. Please advise how scales would weigh 100 pounds every whole load or 100 pounds on every ton.—H, E. K., Essexville, Michigan.

—If I understand your question correctly the scales in question show a weight of 100 pounds with no load on the platform, if such is the case and the scales are not broken or out of adjustment, then they should continue to show 100 pounds heavier than the actual weight on the platform of all loads up to the rated capacity of the scales. Thus: a load of 4,000 pounds on the platform would be registered as 4,100 pounds.

I believe that so long as the scales show 100 pounds too great in both cases weighing in and weighing out the net weight is the correct one.

So far as I can see there seems to be no good reason why scales should show 100 pounds with no load. Provision is usually made on the scale beam for balancing the scales so that they read zero with no load on the platform. in case such an adjustment is not provided for, weights could be read on the scale beam with scales balancing as suggested above.—H. H. Musselman, Professor Farm Mechanics, M. A. C.

THE STORAGE BATTERY

IT is the intention of this article to give every auto owner some practical and sound advice concerning his storage battery. We spend a lot of time tinkering with the motor, the driving parts, etc., but unfortunately entirely overlook the storage battery. In too many automobiles it is placed in an out of the way corner, where mud and dirt accumulate, and where it is subjected to much abuse.

There is one general type of battery used, the lead plate battery, for automobile service it is encased in a rubber jar, and for farm lighting plants in glass jar.

Electricity is not stored in a cell as generally supposed, but the flow of current from the charging source, through the cell from the plate to plate performs a certain mount of chemical work. This stored energy in the form of electricity, finds its way out, whenever it is called upon, thru an external circuit.

The solution in a lead cell is a 20 percent solution of dilute sulphuric acid and distilled water. This solution is called electrolyte, and it must be always borne in mind that the acid does not evaporate. If the battery is accidently overturned, or the battery jars teaks, it would then be necessary to readjust the strength of the solution, repair or renew the jar, which should not be attempted by an amateur. Distilled water must always be used or rain water for the reason that they are free from all mineral contents, and when not in use should be kept in a closed jar. Metal receptacles and untisels

(Continued on page 17)

to the bank and they will buy if I have no objections. Will you let me know what I can do to get the note or the agreement in writing?—J. A. S., Austin, Mich.

—You should notify the bank not to purchase the note as the company ill not carry out the agreement of the vice president. You should demand the note of the vice president; and, if he has it to replevin it or file a bill and ask the court for an injunction to prevent his disposing of it before it becomes due to an innocent purchaser.—Legal Editor.

LAND CLEARING SCHOOLS

Please state how much land the M. A. C. Land Clearing Schools has cleared, the cost and who payed the bill. I am a pioneer reader of the M. B. F. Think that I have read a copy of every issue that went over the press.—W. G., Montcalm County, Mich.

—These schools were held at thirty-eight points in the Upper Peninsula and twenty points in the Lower Peninsula. Their object was to acquaint those who have land to clear with the most modern methods of land clearing by means of pullers and explosives. Each school was conducted in a field where from two to four acres were actually piled ready for burning. The expenses of the schools were borne by the counties, the farmer whose field was being cleared, the railroads and the college. The only expense borne by the college was for the salaries and traveling expenses of Mr. Livingston and two of his assistants.

The measure of the value of this effort is not so much shown by the acres actually cleared at each school as in the land clearing done in these areas as a result of this educational campaign. In the Upper Peninsula, data gathered indicates that approximately 50,000 acres have been cleared this season. This acreage is mostly in small additions to farms already established to round out fields and to secure sufficient acreage to make it possible to operate the farm on an efficient basis.—R. J. Baldwin, Extension Director, M. A. C.

COW AT LARGE AT OWNER'S RISK

Some time ago I took a ride with my family in our car and on the road we met a number of cows. I blowed the horn and slowed down to 5 miles an hour. The cows scattered to both sides and when I reached the last cow she swung around and jumped in front of my car. I stopped but hit her with my left fender and broke her leg. Nobody was around so I had to call a child to ask whose cow it was and started back and told the owner I had accidently hit his cow so he came with me and we found the left hind leg broken so we butchered her. I helped him and after we were finished I drove away. A few days after he served papers for damage. Am I liable when the cow was to blame by jumping in front of my car? I drove my car over 11 years and never had an accident before.—W. J., Pequaming, Mich.

—Cows running at large in the highway are at the owner's risk. If you exercised every care that a reasonable man would exercise when you observed the stock in the road to avoid the accident I am of the opinion you are not liable for damages. If you did not exercise the care a prudent man would exercise to avoid the injury then I think you are liable for the damage.—Legal Editor.

ROAD WORK

In changing districts of this township I have been appointed to do my road work two miles from home on a road that none of us travel more than twice a year. Formerly I did my work on the roads around the farm I rent. Has the town board a right to change me into the other district and is there any way I can get changed back? Part of my work I did in this district before they told me of the change. Now I must work out my work in the other district. Can I draw any pay for the work done before I knew of the change?—J. C., Elsie, Mich.

—Section 9 of Chapter 2 of the General Highway confers upon the township board and the Township Highway Commissioner full authority to divide the townships into one or more districts without any limitation as to the division. They would therefore have a right to change the district, placing you in another or different district than the one in which you formerly was located.

You would not be entitled to compensation for work done on the highway which was not authorized by highway commissioner or overseer.—State Highway Dept.

CAN SECURE AID

I am writing you in behalf of my sister-in-law. She is the wife of my brother, a Michigan soldier, and lives in Rochester, New York. He left her three months ago and did the same thing a year ago. She cannot find him. She and others say they think his mind is not right. He was wounded three times and gassed once, and we think that is the reason. When he left she had no money, with which to buy food for herself and babies. She has two, aged three years and five months, so you see she is tied down and unable to do much. She applied to some charitable organization at Rochester, and they allow her three dollars per week for food while another ays her rent. You know that $3.00 will not only half feed one person for a week, let alone taking care of three. She has nothing to do with and not even a stove and what would she do for fuel if she had a stove? The little baby is now ill. Her people are in France and we in-laws are unable to do much for her, although have tried to provide them with clothes through the summer, I am not able to do much as I am a widow myself with two small children and my mother and father have a large family and my mother is not well, so don't feel she can ask them to come there for she is not able to do the work for more and if she did my sister-in-law would work and mother could not stand up under the strain. Will you tell me if anything can be done for her either through the state or government? If she were in Michigan would she be allowed a mother's pension? If the state helped her would she have to come to Michigan. On account of her husband being a Michigan soldier would the state help her?—M. E. J., Ada, Mich.

—I believe the commissioners of the poor or a similar title in Rochester, N. Y., would render aid upon the case being called to their attention. Were your sister-in-law a resident of Michigan I believe the "Mother's Pension Law" would apply and she be entitled to an allowance but I do not believe she would be entitled to such an allowance if she was a resident of N. Y. The name "Mother's Pension Law" is not used in the sense we use the word "pension" for soldiers. It is possible the Federal Government may have some provision for such unfortunate cases. Inquire of Congressman C. E. Mapes, of Grand Rapids. I know him personally and believe he would do or advise anything within his power. If you would send me the names of the parties, the indentity of the soldier, the location of his family, I would be willing to try different sources to see if aid can be procured from some source.—Legal Editor.

FIRE PROTECTION IN SCHOOL

They are building a consolidated school house here and school is in session under crowded conditions in old school house and church without any fire drill. We have one 12-year-old boy attending school and a girl will soon be going. Please tell me the state law on this condition.—H. S. W., Morley, Mich.

—If your inquiry is directed to the want of fire protection for the children in your district, Act 285, of Public Acts of 109 provides that a factory inspector has power to order fire escapes. As to the crowded condition I suggest that this is not unusual in many places. If the public authorities are building as fast as can be done it is good evidence that they are providing for the education of the children as fast as can be done. You can't make improvements all at once.—Legal Editor.

A Practical Reminder for Everyday Farmers

You know your farm like a book. Whether it covers 80 acres or 320 acres, you are perfectly familiar with every corner of every field. You know the lay and contents of the buildings that make up your homestead. With your eyes shut you can tally the livestock and all the items of farm equipment. To be well posted on these things is a matter of pride with you and a matter of careful management besides.

This policy could well be carried a step further. Profitable, economical farming is so largely a matter of modern, improved machines that every good farmer should keep posted also on the equipment on the market so that when occasion arises he may invest to the very best advantage by the purchase of new machines.

We are therefore printing here for your information the list of standard, reliable, most popular farm equipment—

THE McCORMICK-DEERING LINE *of* FARM OPERATING EQUIPMENT

Grain Binders
Threshers
Harvester-Threshers
Headers
Push Binders
Mowers
Hay Rakes
Tedders
Hay Loaders
Side-Delivery Rakes
Sweep Rakes and Stackers
Combined Side Rake and Tedder
Baling Presses
Corn Planters
Listers
Corn Cultivators
Corn Binders
Corn Pickers
Corn Shellers
Ensilage Cutters
Huskers and Shredders
Huskers and Silo Fillers
Beet Seeders
Beet Cultivators
Beet Pullers
Cotton Planters
Grain Drills
Lime Sowers
Broadcast Seeders
Tractor Plows
Walking Plows
Riding Plows
Disk Harrows
Spring-Tooth Harrows
Peg-Tooth Harrows
Tractor Harrows
One-Horse Cultivators
Culti-Packers
Kerosene Engines
Tractors
Motor Trucks
Cream Separators
Manure Spreaders
Stalk Cutters
Feed Grinders
Stone Burr Mills
Cane Mills
Potato Diggers
Wagons
Twine

This equipment is always available for you at the store of the McCormick-Deering dealer. In the list are many items for farming in winter—such as engines, various belt power machines, cream separators, motor trucks, etc. Make the McCormick-Deering dealer's store your headquarters. Use the service for which his establishment is famous. Write us direct for information on any of the above machines.

The Magic Carpet

YOU could sit on the fabled carpet of Bagdad and view the world. In the whisk of an eyelash it would carry you any place you wanted to go. All you had to do was wish.

ADVERTISING is a sort of magic carpet. Read it and in the twinkle of an eye you can review the merchandise of the world, pictured and displayed for your benefit.

The advertisements introduce you to the latest styles—the newest comforts for the home—the best of the world's inventions. They tell you how to buy, where to buy and when to buy. They keep you posted on things necessary to feed and clothe you and your family and make you comfortable and happy. Read the advertisements as a matter of education. Read them to keep abreast of progress.

Read the advertisements regularly.

MICHIGAN CROPS

THE VALUE OF ALFALFA IN MODERN FARMING

THE successful farmer of today is a good business man. Following his vocation primarily for the purpose of making money, he must make every dollar of his investment yield a maximum return. Briefly, his problem is how to increase his net profits per acre. One of his greatest aids in accomplishing this result is the raising of alfalfa.

There is no common farm crop that can begin to compare with alfalfa in producing economical and digestible food for livestock. One ton contains as much digestible protein as 1600 pounds of wheat bran. At the same time, properly grown of course, it fixes and adds to the farm more than twenty dollars worth of nitrogen per year-acre.

Now as every farmer knows, nitrogen abundantly and economically applied, is absolutely essential to the maintenance of fertility. Perhaps the greatest value of alfalfa is its ability to convert atmospheric nitrogen into organic nitrogen. In its roots and successive growths of tops it stores far more nitrogen within a few years than is possible to any other legume. And it may be added that on the average a ton of hay contains more nitrogen than four tons of fresh barnyard manure.

Many farmers have found that the best plan for alfalfa is a six years' rotation with corn and oats. This plan insures a rich sod for the corn. And the manure made from the hay helps to solve the general fertility problem.

All in all alfalfa brings to the farm a large amount of plant food which can be distributed over the land in the manure. In addition the roots and stubble store away enough nitrogen in the ground to feed a successive corn crop and a small grain crop which may follow the corn. Finally, the condition of the soil and the subsoil is greatly improved, having been filled with organic matter by the roots.

The practical dollars-and-cents value of alfalfa is now an accepted fact. But in many parts of the United States great difficulty is experienced in getting good yields of this crop and in maintaining permanent stands. This is true even on the best soils abundantly supplied with phosphorous and lime and inoculated with the proper root organism. The chief difficulty is that the soil lacks sulphur, alfalfa being a plane of very high sulphur requirement. The remedy for this condition is the regular application of a fertilizer of high sulphur contents. In this connection it should be noted that alfalfa is also a great lover of calcium.

Agricultural gypsum supplies sulphur in an immediate available and neutral form. An untreated, ground, natural rock-fertilizer, it is composed mainly of hydrated calcium sulphate. It therefore bears two essential plant foods—calcium and sulphur.

The experience of practical farmers, not only in California, Washington and Oregon, but also in various sections of the great Mississippi Valley, has proved conclusively that the systematic use of agricultural gypsum increases the tonnage of alfalfa several hundred per cent.

The time to apply gypsum is in the early spring, about the time growth begins. It should be used as a top dressing and applications should be repeated every two or three years. Sow gypsum on your alfalfa seeding this spring, leaving a few strips untreated. Then let the comparative results speak for themselves.

LIFE OF GERMINATION OF SEEDS

Will you give me the life of germination of different field seeds and oblige?—A. E.

—The table given below taken from Piper's "Forage Plants and Their Culture" gives the viability of various seeds stored in paper bags in a dry, airy room during eleven years.—C. R. Megee, Farm Crop Department, M. A. C.

"My Experience in Growing Potatoes"

I SAW in a recent issue you want to know who raises a good crop of potatoes. I always sit up and take notice when I see any thing pertaining to potatoes—that's my specialty.

I have just finished harvesting a nine acre field or Late Petoskeys for pedigreed seed—I mean certified seed. This 9 acres produced 2112 bushels, field run. Only a small percentage of culls. The field is mostly clay soil—not an ideal soil for potatoes. Last year it was in clover—mostly sweet clover. I cut it early and took only a part of it in for hay and left the balance on the ground for fertilizer. I let the second growth go down on the ground for fertilizer.

During the winter I covered it all over lightly with stable manure, direct from the stable.

I plowed it early in the spring and drilled broadcast about 450 pounds per acre of 20 per cent phosphoric acid. Planted potatoes last of May. Harrowed it over 2 or 3 times after planting with a spring tooth harrow. Gave it good cultivation and but little hoeing.

Sprayed seven times with Bordeaux, using Kedzie mixture added for bugs. Use a power sprayer, three nozzles to the row—one downward and two upward.

Dug with a 4-horse elevator digger and had the potatoes sorted as they were picked up. I raise the Petoskey potatoes and make a practice of hill selection for seed plot. I believe it pays to plant good seed.—A. L. Dnulap, Lupton, Michigan.

—We are certanly glad to have your experience, Mr. Dunlap, and hope to hear from other growers.—Editor.

Clean, dry potatoes, uninjured and stored in a dry bin do not rot unless disease is present in the tubers.

Make $13 More Per Cow

Free Book for Dairy Farmers Tells How to Cut Out Waste; Gives Valuable Building Hints

Do you know that the manure produced by one cow in twelve months contains fertilizing elements valued at $39? And do you know that one-third, or $13 of this amount is lost in the course of a year through improper handling? By providing a simple easy-to-build pit outside the barn, this loss can be prevented.

Write for this Free Book, "Concrete on the Dairy Farm" and see the many money-saving suggestions it gives on the use of concrete in making permanent improvements. Properly housed dairy cattle return greatest profit on the investment. This free book is recognized as a simple guide to 100% efficiency and economy in building on the dairy farm.

Fully illustrated with diagrams and pictures. Shows how to build barns, milk-houses, silos, icehouses, cooling tanks, paved barnyards, manure pits, water supply systems, etc.

Slaughtering and Curing Meat on the Farm

(Continued from Nov. 9th issue.)

Beef and Beef Products

IN selecting beef animals, be on the lookout for tuberculosis. If glands along neck are enlarged, the indications are that the animal is tubercular. Have an examination made by the veterinarian, or sell the animal on the hoof in order that it may be slaughtered under competent inspection. Slight traces of tuberculosis do not necessarily condemn a carcass as food, but judgment in such cases should be left to experts.

Should an unexpected tubercular condition be revealed in the carcass of a slaughtered animal (in which case the glands in the neck, lungs and intestines may be filled with hard, cheesy or slimy matter), let a competent veterinarian pass upon the fitness of the carcass for food. If possible, a veterinarian's judgment on all animals—particularly beeves and sheep—should be obtained before slaughtering.

Beeves should be completely stunned before bleeding. To do this properly, fasten a rope around the animal's neck, loop it over the nose, and pass it through a ring in a post, close to the ground. Then draw the animal's head down into position to be stunned by a heavy blow with an ax. Strike the point where a line drawn from the left eye to the right horn would intersect a line drawn from the right eye to the left horn. Be sure the animal is thoroughly stunned before the rope is removed from its neck and the animal placed in a position for bleeding.

Bleeding may be done by slashing the throat of the animal just back of the jaw bone, but a far better method is to cut the arteries from the heart just in front of the breastbone. The blood will drain out much more quickly and thoroughly.

To do this, place the back to the animal as shown in Illustration No. 9. Draw the skin of the neck tight by holding back the head with one foot and the forelegs with the other foot. Then insert the knife in front of the brisket, deep enough to lay open the windpipe, and cut toward the throat, striking the vertebrae. This severs the arteries from the heart.

Be careful not to cut too deep too far back or you will puncture the chest cavity, allowing the blood to drain back into it and make a bloody carcass.

Skinning

Begin skinning at the head. Cut from the poll down to the nostrils. Skin down each side as far as possible, leaving the ears on the hide. Split from the chin down to the incision made in bleeding. Skin away the head and cut it off, from back of the jaws to the back of the poll. Cut out the tongue at once.

Roll the carcass on its back and block and prop it up. Split the skin of the foreleg from the dewclaws up to a point three or four inches above the knee. Skin around the knee and the shin. Cut off the leg at the knee, as low down as possible, and skin clear down to the hoof. Do not touch the rest of the leg for the present.

Cut the cord of the hind shin to relax the hind leg. Split the hide from the dew claws up, over the hock, to a point from four to six inches back of the udder. Skin out the hock and shin, removing the leg at the lowest joint of the hock. Be careful not to cut the flesh when skinning over the thigh—lay the knife flat. When the legs are skinned, split the skin straight down the middle from the brisket to the tail.

Now, beginning at the flanks, lay away the skin from each side of the midline. When it is well started, hold the skin in one hand, the knife flat against the carcass in the other, and work down over the sides and rump as far as possible. If any blood is left on the outside of the carcass, wash it off with hot water immediately, but no more water than is necessary.

Removing of Viscera

Next, open the abdominal cavity just back of the breastbone. Hold the knife upright and insert the free hand into the abdominal cavity to prevent cutting the viscera as you cut back toward the tail. Split the breastbone through the middle with the saw. Loosen the windpipe by cutting it away on both sides.

The carcass is now ready to raise. Place an evener or a beef tree between the hind legs, inserting the ends under the tendons. Raise the beef just enough for convenience in removing the hide from the thighs, rump and hips. Then cut loose the rectum and loosen the small intestines, allowing them to drop down over the paunch. Do not disturb the bed fat that lines the pelvis, nor the kidney fat. Cut the intestines away from the liver and separate the paunch by forcing down upon it. Let it all roll out on the ground and pull or cut out the gullet.

Raise the carcass a little higher. Take out the liver and cut away the gall bladder immediately, being careful not to break it. Remove the diaphram, lungs and heart. Then finish skinning.

Open the hide by cutting in a straight line from the center of the brisket to the forearm. Take care here, as a cut made too far back will be considered a hole and make the hide a No. 2.

Wipe off all the blood and dirt from the carcass with a little hot water. Split the carcass in halves with a saw and wash out the inside of the chest cavity, wiping it dry. Trim off all the ragged places and leave the beef to cool before cutting up into quarters.

Spread the hide out on the ground, flesh side up, and allow it to cool. If the weather is warm, sprinkle it with a little salt before rolling it up. Fold in the legs and head, fold the body once each way and roll up from the front. Tie securely with strong cord.

Mutton and Mutton Products

Sheep should be dressed on a platform a few inches above the ground. This allows the head of the sheep to hang over the edge while bleeding and keeps the pelt clean.

In killing sheep it is common practice to simply stick them, because they are easily to handle. However, it is more humane to stun them previous to bleeding.

Care should be taken not to grasp the sheep by the fleece at this time, or a disfiguring bruise will show up on the carcass. Hold it by the nose and at the tail, or by the leg. And remember that much of the sheepy flavor in mutton is due to stomach gases which form quickly after killing. So work fast.

Place the sheep, after stunning, with its head hanging over the edge of the platform, your knee on its fore shoulder and left hand grasping the nose. Stick it just back of the jaw bone aid close to the backbone, forcing the knife clear through to the opposite side and cutting out through the fleshy part of the throat. Put the left hand on the poll at once and, with the right hand on the nose, give a quick twist of the head upward and to the side. This breaks the neck and exposes the spinal cord, which should be cut off at once. Then cut out the tongue.

When animal has bled out, place it on its back and split the pelt over the knee of the foreleg down to the hoof. Then split it upward along the foreleg, meeting the first split at the front of the brisket. This leaves a V-shaped section of the pelt over the brisket that can be easily removed from the flesh. Be careful, in splitting the pelt, not to cut into the flesh.

How to Remove the Pelt

With clean hands, begin "fisting" away the pelt. This is done by grasping the edge of the cut with one hand and with the doubled fist of the other hand working the pelt away from the flesh. In fisting, be careful to work downward over the front quarters and upward and backward over the hind quarters. This prevents tearing the membrane that covers the flesh and making an unsightly appearing carcass.

When you have fisted down over the sides of the fore quarters and back over to the side to the hind quarters, replace the pelt over the fisted portions and open the pelt on the hind quarters. Split down over the back of the hind legs, cutting toward the tail, and skin out the hocks. Remove the toes at the last joint and fist away the pelt from the inside of the thigh and over the

(Continued on page 19)

The Hunted Woman

By James Oliver Curwood

Michigan's Own and America's Formost Author of the Great Northwest

SYNOPSIS

JOANNE GRAY is one of the passengers on the train that connects "The Horde" with the civilized world. For eighteen hours she has been riding steadily bound for Tete Jaune Cache, the home of "The Horde", where she has no friends and all will be strange to her. The train stops at a town composed of several tents and learning that the train will not leave for two hours she goes in search of food and a bath. She is directed to "Bill's Shack" and it is here where she meets Bill Quade, who not only owns and operates "Bill's Shack" but is also leader of the lawless men of the town. Quade says he has a room she can rent and that he will show it to her. As they pass of the room a newcomer enters the doorway leading off the street. The newcomer is John Aldous, a well known novelist. He sees the strange girl enter the place and believes she has made a mistake and as he stands in the doorway his eyes rest upon the curtained doorway through which the girl and Quade have passed. In but a moment the girl steps out her face flaming and eyes flashing. Quade follows her apologetically. He starts to offer the girl some money but before he can do so Aldous steps to the girls side and floors Quade with a terrific blow. Aldous hurries the girl away from the scene to the home of friends. He then asks the girl to be his guest at supper in his cabin. She accepts. Joanne tells Aldous she is going to Tete Jaune to find her husband, Mortimer FitzHugh. Aldous decides to go with her to protect her from Quade and his partner at Tete Jaune, Culver Rann.

(Continued from Nov. 11th issue)

PETER KELLER paused in the act of relighting his pipe. For a moment he stared in amazement.

"There are a great many graves up at Tete Jaune," he said, at last. "A great many graves—and many of them unmarked. If it's a Quade grave you're looking for, Aldous, it will be unmarked."

"I am quite sure that it is marked—or was at one time," said Aldous. "It's the grave of a man who had quite an unusual name, Peter, and you might remember it—Mortimer FitzHugh."

"FitzHugh—FitzHugh," repeated Keller, puffing out fresh volumes of smoke. Mortimer FitzHugh—"

"He died, I believe, before there was a Tete Jaune, or at least before the steel reached there," added Aldous. "He was on a hunting trip, and I reason to think that his death was a violent one."

Keller rose and fell into his old habit of pacing back and forth across the room, a habit that had worn a path in the bare pine boards of the floor.

Theres graves an' graves up there, but not so many that were there before Tete Jaune came," he began, between puffs. "Up on the side of White Knob Mountain there's the grave of a man who was torn to bits by a grizzly. But his name was Humphrey. Old Yellowhead John—Tete Jaune, they called him—died before that, and no one knows where his grave is. We had five men die before the steel came, but there wasn't a FitzHugh among 'em. Crabby—old Crabby Tompkins, a trapper, is buried in the sand on the Frazer. The last flood swept his slab away. There's two unmarked graves in Glacier Canyon, but I guess they're ten years old if a day. Burns was shot. I knew him. Plenty died after the steel came, but before that—"

Suddenly he stopped. He faced Aldous. His breath came in quick jerks.

"By Heaven, I do remember!" he cried. "There's a mountain in the Saw Tooth Range, twelve miles from Tete Jaune—a mountain with the prettiest basin you ever saw at the foot of it, with a lake no bigger than this camp, and an old cabin which Yellowhead himself must have built fifty years ago. There's a blind canyon runs out of it, short an' dark, on the right. We found a grave there. I don't remember the first name on the slab. Mebby it was washed out. But, so 'elp me God, the last name was FtzHugh!"

With a sudden cry, Aldous jumped to his feet and caught Keller's arm.

"You're sure of it, Peter?"

"Positive!"

It was impossible for Aldous to repress his excitment. The engineer stared at him even harder than before.

"What can that grave have to do with Quade?" he asked. "The man died before Quade was known in these regions."

"I can't tell you now, Peter," replied Aldous, pulling the engineer to the table. "But I think you'll know quite soon. For the present, I want you to sketch out a map that will take me to the grave. Will you?"

On the table were pencil and paper. Keller seated himself and drew them toward him.

"I'm damned if I can see what that grave can have to do with Quade," he said; "but I'll tell you how to find it!"

For several minutes they bent low over the table, Peter Keller describing the trail to the Saw Tooth Mountain as he sketched it, step by step, on a sheet of office paper. When it was done, Aldous folded it carefully and placed it in his wallet.

"I can't go wrong, and—thank you, Keller!"

After Aldous had gone, Peter Keller sat for some time in deep thought.

"Now I wonder what the devil there can be about a grave to make him so happy," he grumbled, listening to the whistle that was growing fainter down the trail.

And Aldous, alone, with the moon straight above him as he went back to the Miette Plain, felt, in truth, this night had become brighter for him than any day he had ever known. For he knew that Peter Keller was not a man to make a statement of which he was not sure. Mortimer FitzHugh was dead. His bones lay under the slab up in that little blind canyon in the shadow of the Saw Tooth Mountain. Tomorrow he would tell Joanne. And, blindly, he told himself that she would be glad.

Still whistling, he passed the Chinese laundry shack on the creek, crossed the railroad tracks, and buried himself in the bush beyond. A quarter of an hour later he stole quietly into Stevens' camp and went to bed.

CHAPTER IX

Stevens, dreaming of twenty horses plunging to death among the rocks in the river, slept uneasily. He awoke before it was dawn, but when he dragged himself from his tepee, moving quietly not to awaken his boy, he found John Aldous on his knees before a small fire, slicing thin rashers of bacon into a frying pan. The weight of his loss was in the tired packer's eyes and face and the listless droop of his shoulders. John Aldous, with three hours between the blankets to his credit, was as cheery as the crackling fire itself. He had wanted to whistle for the last half-hour. Seeing Stevens, he began now.

"I wasn't going to rouse you until breakfast was ready," he interrupted himself to say. "I heard you groaning, Stevens. I know you had a bad night. And the kid, too. He couldn't sleep. But I made up my mind you'd have to get up early. I've got a lot of business on to-day, and we'll have to rouse Curly Roper out of bed to buy his pack outfit. Find the coffee, will you? I couldn't."

For a moment Stevens stood over him.

"See here, Aldous, you didn't mean what you said last night, did you? You didn't mean—that?"

"Confound it, yes! Can't you understand plain English, Stevens? Don't you believe a man when he's a gentleman? Buy that outfit! Why, I'd buy twenty outfits to-day, I'm—I'm felling so fine, Stevens!"

For the first time in forty-eight hours Stevens smiled.

"I was wondering if I hadn't been dreaming," he said. "Once a long time ago, I guess I felt just like you do now."

With which cryptic remark he went for the coffee.

Aldous looked up in time to see the boy stagger sleepily out of the tepee. There was something pathetic about the motherlessness of the picture, and he understood a little of what Stevens had meant.

An hour later, with breakfast over, they started for Curly's. Curly was pulling on his boots when they arrived, while his wife was frying the inevitable bacon in the kitchen.

"I hear you have some horses for sale, Curly," said Aldous.

"Hi 'ave."

"Twenty-nine, 'r twenty-eight—mebbe twenty-seven."

"How much?"

Curly looked up from the task of pulling on his second boot.

"H'are you buying 'orses or looking for information?"

"I'm buying, and I'm in a hurry. How much do you want a head?"

"Sixty, 'r six——"

"I'll give you sixty dollars apiece for twenty-eight head, and that's just ten dollars apiece more than they're worth," broke in Aldous, pulling a check-book and a fountain pen from his pocket. "Is it a go?"

A little stupefied by the suddenness of it all, Curly opened his mouth and stared.

"Is it a go?" repeated Aldous. "Including blankets, saddles, pack-saddles, ropes, and canvasses?"

Curly nodded, looking from Aldous to Stevens to see if he could detect anything that looked like a joke.

"Hit's a go," he said.

Aldous handed him a check for sixteen hundred and eighty dollars.

"Make out the bill of sale to Stevens," he said. "I'm paying for them, but they're Stevens' horses. And, look here, Curly, I'm buying them only with your agreement that you'll say nothing about who paid for them. Will you agree to that?"

Curly was joyously looking at the check.

"Gy've me a Bible," he demanded. "Hi'll swear Stevens p'id for them! I give you the word of a Hinglish gentleman!"

Without another word Aldous opened the cabin door and was gone, leaving Stevens quite as much amazed as the little Englishman whom everybody called Curly, because he had no hair.

Aldous went at once to the station, and for the first time inquired into the condition that was holding back the Tete Jaune train. He found that a slide had given way, burying a section of track under gravel and rock. A hundred men were at work clearing it away, and it was probable they would finish by noon. A gang boss, who had come back with telegraphic reports, said that half a dozen men had carried Quade's handcar over the obstruction about midnight.

It was seven o'clock when Aldous left for the Miette bottom. He believed that Joanne would be up. At this season of the year the first glow of day usually found the Ottos at breakfast, and for half an hour the sun had been shining on the top of Pyramid Mountain. He was eager to tell her what had passed between him and Keller. He wanted to see her.

He always liked to come up to the Otto home very early of a morning, or in the dusk of evening. Very frequently he was filled with a desire to stand outside the red-and-white striped walls of the tent-house and listen unseen. Inside there was always cheer: at night the crackle of fire and the glow of light, the happy laughter of the gentle-hearted Scotchwoman, and the effectionate banter of her "big mountain man," who looked more like a brigand than the luckiest and most contented husband in the mountains—the luckiest, quite surely, with the one exception of his brother Clossen, who had, by some occult strategy or other, induced a sweet-faced and aristocratic little woman to look upon his own honest physiognomy as the handsomest and finest in the world. This morning Aldous followed a narrow path that brought him behind the tent-house. He heard no voices. A rew steps more and he emerged upon a scene that stopped him and set his heart thumping

Less than a dozen paces away stood Mrs. Otto and Joanne, their backs toward him. They were gazing silently and anxiously in the direction of the thick, low bush across the clearing, through which led the trail to his cabin. He did not look toward the bush. His eyes were upon Joanne. Her slender figure was full in the golden radiance of the morning sun, and Aldous felt himself under the spell of joyous wonder as he looked at her. For the first time he saw her hair as he had pictured it—as he had given it to her that Joanne in the book he had called "Fair Play." She had been brushing in the sun when he came, but now she stood poised in that tense and waiting attitude—silent—gazing in the direction of the bush, with that marvellous mantle sweeping about her in a shimmering silken flood. He would not have moved, nor would he have spoken, until Joanne herself broke the spell. She turned, and saw him. With a little cry of surprise she flung back her hair. He could not fail to see the swift look of relief and gladness that had come into her eyes. In another instant her face was flushing crimson.

"I beg your pardon for coming up like an eavesdropper," he apoligized. "I thought you would just about be at breakfast, Mrs. Otto."

The Scotchwoman heaved a tremendous sight of relief.

"Goodness gracious but I'm glad to see you!" she exclaimed thankfully. "Jack and Bruce have just gone out to see if they could find your dead body!"

"We thought perhaps something might have happened," said Joanne, who had moved nearer the door. "You will excuse me, won't you, while I finish my hair?"

Without waiting for him to answer, she ran into the tent. No sooner had she disappeared than the good-natured smile left Mrs. Otto's face. There was a note of alarm in her low voice as she whispered:

"Jack and Bruce went to the barn last night, and she slept with me. She tried to be quiet, but I know she didn't sleep much. And she cried. I couldn't hear her, but the pillow was wet. Once my hand touched her cheek, and it was wet. I didn't ask any questions. This morning, at breakfast, she told us everything that happened, all about Quade—and your trouble. She told us about Quaade looking in at the window, and she was so nervous thinking that something might have happened to you last night that the poor dear couldn't even drink her coffee until Jack and Bruce went out to hunt for you. But I don't think that was why she cried!"

"I wish it had been," said Aldous. "It makes me happy to think she was worried about—me."

"Good Lord!" gasped Mrs. Otto.

He looked for a moment into the slow-growing amazement and understanding in her kind eyes.

"You will keep my little secret, won't you, Mrs. Otto?" he asked. "Probably you'll think it's queer. I've only known her a day. But I feel—like that. Somehow I feel that in telling this to you I am confiding in a mother, or a sister. I want you to understand why I'm going on to Tete Jaune with her. That is why she is crying—because of the dread of something up there. I'm going with her. She shouldn't go alone."

Voices interrupter them, and they turned to find that Jack and Bruce Otto had come out of the bush and were quite near. Aldous was sorry that Joanne had spoken of his trouble with Quade. He did not want to discuss the situation, or waste time in listening to further advice. He was anxious to be alone again with Joanne, and tell her what he had learned from Peter Keller. For half an hour he repressed his uneasiness. The brothers then went on to their corral. A few minutes later Joanne was once more at his side, and they were walking slowly over the trail that led to the cabin on the river.

He could see that the night had made a change in her. There were circles under her eyes which were not there yesterday. When she looked at him their velvety blue depths betrayed something which he knew she was struggling desperately to keep from him. It was not altogether fear. It was more a betrayal of pain—a torment of the soul and not of the body. He noticed that in spite of the vivid colouring of her lips her face was strangely pale. The beautiful flush that had come into it when she first saw him was gone.

Then he began to tell her of his visit to Peter Keller. His own heart was beating violently when he came to speak of the grave and the slab over it that bore the name of FitzHugh. He expected that what he had discovered from Keller would create some sort of a sensation. He had even come up to the final fact gradually, so that it would not appear bald and shocking. Joanne's attitude stunned him. She looked straight ahead. When she turned to him he did not see in her eyes what he had expected to see. They were quiet, emotionless, except for that shadow of inward torture which did not leave them.

"Then to-morrow we can go to the grave?" she asked simply

Her voice, too, was quiet and without emotion.

He nodded. "We can leave at sunrise," he said. "I have my own horses at Tete Jaune and there need be no delay. We were to start into the North from there."

"You mean on the adventure you were telling me about?"

She had looked at him quickly.

"Yes. Old Donald, my partner, has been waiting for me a week. That's why I was so deuced anxious to rush the book to an end. I'm behind Donald's schedule and he's growing nervous. It's rather an unusual enterprise that's taking us north this time, and Donald can't understand why I should hang back to write the tail end of a book. He has lived sixty years in the mountains. His full name is Donald McDonald. Sometimes, back in my own mind, I've called him History. He seems like that—as though he'd lived for ages in these mountains instead of sixty years. If I could only write what he has lived—even what one might imagine that he has lived! But I cannot. I have tried three times, and have failed. I think of him as The Last Spirit—a strange wandering ghost of the mighty ranges. His kind passed away a hundred years ago. You will understand—when you see him."

She put her hand on his arm and let it rest there lightly as they walked. Into her eyes had returned some of the old warm glow of yesterday.

"I want you to tell me about this adventure," she entreated softly. "I understand—about the other. You have been good—oh! so good to me! And I should tell you things; you are expecting me to explain. It is only fair and honest that I should. I know what is in your mind, and I only want you to wait—until to-morrow. Will you? And I will tell you then, when we have found the grave."

Involuntarily his hand sought Joanne's. For a single moment he felt the warm, sweet thrill of it in his own as she pressed it more closely to his arm. Then he freed it, looking straight ahead. A soft flush grew in Joanne's cheeks.

"Do you care a great deal for riches?" he asked. "Does the golden pot at the end of the rainbow hold out a lure for you?" He did not realize the strangeness of his question until their eyes met. "Because if you don't," he added, smiling, "this adventure of ours isn't going to look very exciting to you."

She laughed softly.

"No, I don't care for riches," she replied. "I am quite sure that just as great education proves to one how little one knows, so great wealth brings one face to face with the truth of how little one can enjoy. My father used to say that the golden treasure at the end of the rainbow in every human life was happiness, and that is something which you cannot buy. So why crave riches, then? But please don't let my foolish ideas disappoint you. I'll promise to be properly excited."

She saw his face suddenly aflame with enthusiasm.

"By George, but you're a—a brick, Joanne!" he exclaimed. "You are! And I—I——" He was fumbling in his breast pocket. He brought out his wallet and extracted from it the bit of paper Stevens had given him. "You dropped that, and Stevens found it," he explained, giving it to her. "I thought those figures might represent your fortune—or your income. Don't mind telling you I went over 'em carefully. There's a mistake in the third column. Five and four don't make seven. They make nine. In that correction will make you just thirty-two thousand five hundred dollars richer."

"Thanks," said Joanne, lowering her eyes, and beginning to tear the paper into small pieces. "And will it disappoint you, Mr. Aldous, if I tell you that all these figures stand for riches which someone else possesses? And won't you let me remind you that we're getting a long way from what I know—about your trip into the North?"

"That's just it: we're not on the trail," chuckled Aldous, deliberately placing her hand on his arm again. "You don't care for riches. Neither do I. I'm delighted to know we're going tandem in that respect. I've never had any fun with money. It's the money that's had fun with me. I've no use for yachts and diamonds and I'd rather travel afoot with a gun over my shoulder than in a private car. Half the time I'm doing my own cooking, and I haven't worn a white shirt in a year. My publishers persist in shoving more money my way than I know what to do with.

"You see, I pay only ten cents a plug for my smoking tobacco, and other things accordingly. Somebody has said something about the good Lord sitting up in Heaven and laughing at the jokes He plays on men. Well, I'm sitting back and laughing now and then at the tussle between men and money over all creation. There's a whole lot of humour in the way men and women fight and die for money, if you only take time to stand out on the side and look on. There's nothing big or dramatic about it. I may be a heathen, but to my mind the funniest of all things is to see the world wringing its neck for a dollar. And Donald—old History—needs even less money than I. So that puts the big element of humour in this expedition of ours. We don't want money, particularly. Donald wouldn't wear more than four pairs of boats a year if he was a billionaire. And yet——"

He turned to Joanne. The pressure of her hand was warmer on his arm. Her beautiful eyes were glowing, and her red lips parted as she waited breathlessly for him to go on.

"And yet, we're going to a place where you can scoop gold up with a shovel," he finished. "That's the funny part of it"

It isn't funny—it's tremendous!" grasped Joanne. "Think of what a man like you could do with unlimited wealth, the good you might achieve, the splendid endowments you might make——"

"I have already made several endowments," interrupted Aldous. "I believe that I have made a great many people happy, Ladygray—a great many. I am gifted to make endowments, I think, above most people. Not one of the endowments I have made has failed of complete success."

"And may I ask what some of them were?"

"I can't remember them all. There have been a great, great many. Most conspicuous among them were three endowments which I made to some very worthy people at various times for seven salted mines. I suppose you know what a salted mine is, Ladygray? At other times I have endowed railroad stocks which were very much in need of my helping mite, two copper companies, a concern that was supposed to hoist up pure asbestos from the stomach of Popocatapetl, and a steamship company that never steamed. As I said before, they were all very successful endowments."

"And how many of the other kind have you made?" she asked gently, looking down the trail. "Like—Stevens', for instance?"

He turned to her sharply.

"What the deuce—"

"Did you succeed in getting the new outfit from Mr. Curley?" she asked.

"Yes. How did you know?"

ELECTRICITY from the WIND!

A complete electric light plant that generates current by wind power alone. AEROLECTRIC—invented and perfected by Perkins—a leader for 60 years in windmill manufacturing.

FREE Fuel!

Consider this! From the AEROLECTRIC you get all the "juice" you want for light and power and it doesn't cost you a cent for fuel. Wind is as free as the air you breathe and there is no engine to fuss with and care for.

Current for 11 days without wind

No fear of wind shortage with the AEROLECTRIC. Charges on faintest breeze, as low as 6 miles an hour. Big batteries have ample storage for enough "juice" to last 11 days even if no wind blew for that length of time. And the government says this never happens.

AEROLECTRIC has 14 ft. Perkins Wind Wheel with a Westinghouse Generator built in. Hyatt Roller Bearings and finest equipment throughout. Current is carried along a wire to the batteries where it is ready for instant use for either light or power at the touch of a button and at no expense.

"The Farm Paper of Service"

FARM PRICES ADVANCE

"THE general trade situation has developed in an orderly manner during the month, without any exciting or disturbing features. The weak spot to which we alluded to a month ago, to wit, the relatively low prices of most agricultural products, has been strengthened by advances in grain, dairy products and cotton, which sentimentally and practically are of great benefit."—National City Bank, New York, "November Review."

POLITICS

IT was not so long ago, was it, that we printed on this page a letter from an earnest friend of The Business Farmer, who said he liked us all but our politics, he "knew we were Democrats." So this week when three letters have come to us, with reference to the paid advertisement which appeared in the last October issue, asking why we supported "Townsend and the Newberry gang", we were perplexed.

We have now been accused of being partisan to both old parties. Will you call it a draw? The facts are of course, that The Business Farmer is true to just one party and that is the farming business of this state of Michigan in particular and the nearby states in general.

We believe in clean politics and sound-thinking statesmen. We believe in the American system of government, that it takes two parties, one to watch the other and one to curb the other from too long a hold on the reins of state. A change of party in control now and then is as valuable as crop rotation and just as necessary.

We will be just as quick to attact a measure we believe unjust to farmers, whether it spring from one side of the house or the other. We will be just as willing to commend safe and sound government, no matter which party is in power. Only by being independent, unhampered and non-partisan can a farm paper best sarve the interests of its constituency.

HAVE WE DONE OUR DUTY?

ON November 11th, the nation commemorated Armistice Day. A trifle over four years, it has been, since Germany laid down arms. In the swiftly flying cycle of time four years are but a footstep. Yet in that brief interval the trials of the human race seem to have undergone some miraculous transformation from the sublime to the sordid.

If anything good can be said of war it is that it brings men closer together and to God. War puts the soldier on a pedestal and nations worship him. In the defense of a greater and common cause, nations forget to quibble. War arouses in men that deep passion for brotherly understanding and comradeship which in the last great conflict melted the barriers of race between American, Briton, Frenchman, Spaniard and Italian, and sent them forward to battle as children of the same household. And finally, war is the great leveler and destroyer of selfishness and pride, the two greatest obstacles to international friendship.

Carnage is not the worst thing about war. For the dead are buried and flowers grow up to hide their graves. And time soon heals the hearts of those who are left to mourn. The hideous ruin of the cities and the devastation of the plain are terrible to look upon, but they, too, are soon restored.

The worst thing about war is its disillusionment. For everyone who dies, ten thousand live. They live to witness the crucifixion of justice upon the cross of selfishness. They live to see the inspiring ideals which held men together in time of war crumble to dust at the feet of peace. The pedestal upon which the soldier stood crashes to earth and the fragments are swept into the gutter. Promises are forgotten, charity is imprisoned and selfishness enthroned; the thin veneer of patriotism rubs off in the scramble for the dollar.

True the dead are cherished; they ask no bread nor bonus. But the living are spurned, or given husks when they ask for grain. It is enough that God permitted them to live.

And nations soon unclasp their hands to grasp each other's throats.

It is well on the anniversary to pause a moment in silent tribute to the dead. Yet they will not sleep the sweeter.

It is better to pause and contemplate our duty to the living.

Have we paid our debt to the disabled soldier?

Is there a solitary ex-service man in all these United States who is left to nurse his wounds alone without the help of the hands that applauded him in battle?

Is there a solitary ex-service man who is out of a job and begging alms or stealing to feed himself and family because he can find no job at a living wage?

If America has failed to do her duty to the ex-service men in any of these respects, then the observance of Armistice Day and ideals associated with it is a sham and mockery.

THEY GAVE IT A BAD NAME

GIVE a dog a bad name, says the Michigan Manufacturer and Financial Record, and the whole neighborhood will throw stones at it. That's how the enemies of the income tax brought about its defeat in the recent election. They gave it a bad name.

'Tis a good way to destroy anything. Give it a bad name. Be careful not to mention any of its good qualities for that might incline some to charity. Just smear it over with odium and the deed is done.

An organization of Detroit capitalists defeated the income tax. They spent thousands of dollars in posters and newspaper advertising urging the people to vote against it. "Beware the dog," said its warning signs, "it is vicious. It will bite."

The people were fooled. They were afraid of the dog. They had bitten so many times before that they didn't want to take another chance. And so those who should have befriended the poor "dog" helped to slay it.

In a post mortem statement, Rep. George Lord, who is chairman of the special tax investigation committee, and supposed to be the best informed man in the state on taxation matters, said:

> "The defeat of the income tax will make it necessary for our committee to revise its program for tax returns. This program was based on the supposition that the income tax amendment would carry. Had it carried, it would have reached HUNDREDS OF MILLIONS OF PERSONAL AND INTANGIBLE PROPERTY IN THE STATE NOW EVADING TAXATION. The committee will now devise methods for getting this hundreds of millions of property in other ways than by an income tax."

This may explain why the wealthy people of the cities, holding millions of dollars of untaxed securities, opposed the income tax. But why, Mr. Farmer, did YOU oppose it?

BACK TO EVERY WEEK!

YOU, can help The Business Farmer get back on an every-week basis, by sending in your renewal NOW! One dollar means 52 issues, whether they come in one year or not, every subscriber who has paid for this weekly at our regular rates will get every single copy for which he has paid or pays now.

We prefer to get out a good, honest, independent farm paper every-other-Saturday, OWNED AND EDITED IN MICHIGAN, than get out every week at a financial loss which sooner or later would put control of this paper in the hands of out-of-state politicians or special interests.

As soon as we can afford to get out a complete paper retaining every department, we will publish every week and your renewal right now, will help hasten that day! In the meantime remember, every subscriber will receive every copy for which he or she has paid.—George M. Slocum, Publisher.

A FIRE IN THE COUNTRY

THE barking of dogs. A glare of red against the black. An excited cry of "fire!" that tumbles everybody out of bed at once. Two thoughts come first: Glad it isn't my place! Wonder whose place it is?

Must be poor Simpkins' barn! Or worse, it may be his home and him with a paralyzed mother! Hurry, bring a kettle of water. this flivver is frozen up tight! Cars from all directions. We are so near now we can hear the crackle and see the flames leap skyward like hungry wolves' tongues between shining teeth. Gee, what a smell! Burning flesh. Makes the goose-flesh creep out all over you. Can it be—no—still it might!

We are there. We shield our faces from the heat. Black hurrying forms silhouetted against the great blaze. The well has gone dry. A man is cursing and a woman is crying. The barns are already down. They are trying to save the house. Blankets are taking the place of water. Here and there a fresh blaze springs up. The front lawn is strewn with household effects. The unimportant things were hauled out first. Now they are throwing good furniture out of the upper windows. No use! The barns are gone. The steel stanchions still white hot glow like incandescent lights. A sorry sight!

And the next morning. Barns gone. Horses gone. Cows gone. Harness gone. Tools gone. Seems like everything Simpkins wanted was burned and what was no longer of use to him was saved. And he was just beginning to see his way out. Black discouragment!

Who is this coming? It is the man from the mutual. Simpkins didn't think very much about it when he renewed his policy last fall. Just another expense when he needed the money. Never had had a fire. Always paying out insurance money, never getting anything back.

But this morning! No man on earth looks so good to him. Makes Simpkins feel like a new man when he goes for the inventory. Mighty glad he made out a list of things in the barns, you bet! Agent hopes to get the insurance check by the end of the week. Go ahead and get some help to clean up! A new lease on life for Simpkins!

* * * *

Either a death, a fire or an accident are bad, but they come. Insurance is man's way of softening the unexpected blows of life. Keep up all of your insurance! Some day you'll be thankful.

REMEMBER THE KIDDIES

ALONG about this time of the year folks in general and kiddies in particular begin to look forward to Christmas. Stories of Santa Claus are revived and the little ones ask all sorts of questions and speculate among themselves about the grey-whiskered old gentleman who drives down from the north behind flying reindeer and steals down the chimneys when good little girls and boys are in bed, to fill their stockings or load their trees with toys and candies.

Santa Claus is a dear old fellow. We all loved him when we where kids. But he has one very bad fault. He is extremely absent-minded and every year misses a lot of folks he has on his list. A peculiar thing about his memory is that he always remembers the children whose daddies are rich or have good jobs. But, oh. so many times, he never sees the flickering lamp in the homes of the poor or the little ragged stockings which eager baby hands have pinned near the chimney to catch his eye the minute he drops in. So we mortals have to help him out. But we, too, some times make a miserable job of it, and the children come trooping down the stairs on Christmas morning with cheeks aglow and their hearts filled with expectancy, only to find their stockings as empty as the night before.

Can there be any sight more pathetic that that of a child examining its stocking on Christmas morning for the gifts that are not there?

If each one who can afford to do so would assume the responsibility of making some little child happy at Christmas time, none need never be forgotten. It costs so little in time and money and it means so much for the little ones who are thus remembered. Look about your community. Think of the ones who have passed through recent hardship or sorrow, and ask yourself what Christmas will mean to them this year, unless kind friends and neighbors remember them. Your own Christmas will be far happier if you have helped to make someone else happy too. Try it and see.

What the Neighbors Say

ANOTHER WAY OF LOOKING AT THE GAS TAX

IN your October 28th issue I read article by Detroit Auto Club, opposing the gasoline tax. The writer seems to forget that the majority of improved Michigan highways are not so-called permanent. There is a stone road by my farm and I notice that in wet weather, it does not take a million Fords to wash it full of holes in a short time. And it cost $700.00 per mile per year to maintain it. On the theory that an automobile does not cause any appreciable damage to a hard surfaced road the members of this club of automobile fans would have the farmers and home owners of this state construct and maintain them without any extra expense to the owners of automobiles. To carry the same theory farther, these automobilists could reasonably expect to ride free on the railway coaches.

These excellent citizens, who evidently enjoy to the fullest extent the improved roads of this state, the tax for which have played a large part in bankrupting many Michigan farmers, would say that measurement of gasoline consumed bears no relation to destruction of the highways. I would reply to them that a large truck causes more wear than a small one, the large one also consumes more gasoline. A truck causes more wear than an auto. The truck consumes more gasoline. To travel one hundred miles with an automobile wears the roads more than to travel one mile and consumes one hundred times as much gasoline. That's the reason the members of the automobile club are opposed to the proposed tax.

The members of this club, who evidently have much time for the enjoyment of the improved roads of the state seem to have no compunction in saddling posterity with insurmountable burdens. The fact that our yearly interest on bonded endebtedness equals the whole state tax of a few years ago, evidently has no weight with them. The farmer's slogan is "pay as you go." The slogan of the automobile enthusiast seems to be "mortgage the future." For some time past and at the present time "mortgage the future" seems to be the popular slogan. If the voice of those who are mortgaging their homes and their farms to pay their taxes is not listened to soon, the day of vengeance will swiftly overtake us.

Our present horse-power tax may be excellent as a flat tax, but it is far from being adequate. It could not be greatly increased without great injustice to those who do not use their cars much. A gasoline tax is just because it measures the extent to which the roads are used.

The Standard Oil Co. may raise the price of gasoline two cents and the wandering members of the automobile club pay it and go their way rejoicing. But let the state propose to add one half cent to help build and maintain the highways for their benefit and we immediately hear from them.—Howard Smith, Saginaw County, Mich.

SUMMING UP AFTER ELECTION

NOW that election is past it seems we might form some idea of just what has happened and what it means.

As far as I can see it was just an expression of vast blind discontent. No issues were involved, no question settled.

The President and Congress have no mandate from the people.

Now the farmers have grievances that can and should be righted and they can get legislation they want provided it is just and reasonable and they go after it as a unit. They can never get anywhere by voting for individuals and not issues.

We have just passed through the most costly war in history. The cost of this war must be paid and every person should know that it entails a certain amount of hardship and that each person should stand his share of the burden. A person who's income hasn't been reduced since the close of the war is as well off and possibly a little bit better off than he was at that time, consequently he isn't helping pay for the war at this time

Now the farmers have suffered a reduction of 50 per cent in their income and are therefore not only bearing their own share of the burden but the other fellows share as well.

The present exorbitantly high tariff was passed for the express purpose of maintaining wartime wages, and prices of manufactured articles throwing the greater part of the burden on the shoulders of the farmers.

The farmers should demand at once, not free trade but a reduction of the tariff to reasonable rates.

A million men were idle, out on strike, nearly all summer with the direct result that prices and wages have increased in nearly everything except what is directly connected with the agricultural industry. Not only that but agriculture has suffered direct loss of millions in interrupted transportation and loss of perishable products.

The farmers have a right to demand continuous operation of essential industries and transportation and at reasonable rates.

Transportation charges are entirely too high but I see but little chance for a reduction while wartime wages are maintained and unreasonable working rules are in force.

One of the grevious burdens the farmer have to bear is the present excessive taxation.

The federal administration has made a fine record for economy but our State administration has done nothing of the kind.

While they claim to have reduced the state levy $3,000,000 they say nothing about the extra $5,000,000 corporation tax.

The fact is from the highest to the lowest administrative unit excessive, extravagant and dishonest expenditure of public money is entirely too common, if not the rule.

The governor has the administration board and the legislature hogtied and seems to care more about building up a political machine than reducing taxes. The only initiative the legislature is capable of is to pull off a petty salary grab.

We have a great economist at the head of the M. A. C. but the best solution he can offer for the former difficulties, while thousands of farmers are being driven from the land by high taxes, is to spend immense sums on research work, a part of which is that fool proposition of a soil survey. A year or so ago the M. A. C. had a scheme to hold schools to learn the farmers bookkeeping, "Ye Gods, what fools these mortals be."—K. S. Wood, Charlevoix County, Michigan.

TAXING AUTOMOBILES

AS a basis for a fair automobile and motor traffic tax to build roads, I would suggest the tax should be based on horse-power, weight, value and amount of travel and speed. To make it as nearly fair as possible I would suggest the license tax be $2.00 plus 10c per each horse-power and each hundred pounds weight and a valuation tax for 5 years, first year 2½% of purchase price, each succeeding year to be ½% less or 7% for the five years after which there would be no valuation tax.

Considering the value of the improved roads for motor traffic 3c per gallon tax on gasoline does not seem too high to be used for road construction and retire state bonds. —Earnest S. Allen.

"NO TAX ON GASOLINE"

The gasoline tax article by the president of the Detroit Automobile Club, printed in your valuable paper on page 8, October 28th is right to the point. I think a tax on gasoline would be unjust and make an added and unnecessary expense in collecting taxes, as the more articles you tax, the more expense in making collections.—V P. Smith, Kalamazoo County, Mich.

Being ignorant is not so much a shame as being unwilling to learn. —Benjamin Franklin.

An investment recommended by these men must be good.

SAFE AS THE LAND ITSELF

Good First Mortgage Bonds are a better investment than even a good farm mortgage, for the property pledged as security has a steady income from rentals, winter and summer, more than three times as great as the interest charges and retirements on the principle.

We act as trustee for the mortgage, looking after the bond holders interests in every way, and you are never forced to foreclose on a friend and neighbor.

6½%

We all must reach the time when the "End of the Trail" approaches, strength declines, and we can no longer earn as much as in the prime of life.

Will you then have safe investments to carry you along in ease and contentment?

Let us explain how First Mortgage Bonds will provide a steady income and leave you free from worry and inconvenience. Mail the coupon and it will be a pleasure for us to be of service.

Diogenes Out of a Job

DIOGENES, the Greek cynic and philosopher, was a successful advertiser. He lived in a barrel to advertise himself. At high noon he was wont to light his lantern and stroll about the streets of Athens, "In search," he said, "of an honest man." In this way he advertised one of the prevailing failings of the classic Greeks For among the ancient, the most successful merchant was the biggest skinflint. The cleverest buyer the loudest haggler. There's no room for a cynic in modern advertising. Advertising, today, calls attention to the open-faced honesty of business. It has standardized almost very article you can buy. You know what to expect and what to pay. You don't have to dicker, bargain and haggle to know that you are getting as good as you give.

That is why it pays to read advertisements and buy advertised goods. A product's advertising is the best guarantee of its faithful performance, its lasting usefulness or its definite quality.

If you value constant satisfaction—if you want to get your full money's worth every time—read the advertisements.

To take advantage of an advertisement is to get full value.

THE FIRST THANKSGIVING

THE earliest Thanksgiving in America was kept by the Pilgrim Fathers in 1621:

The previous winter, the first one in the new country had been a hard one, full of privation and suffering, food was not plentiful, their houses or huts illy kept out the vigorous weather and death had been a frequent visitor. Carrying away almost half the little colony—homesickness too had been prevalent and caused almost as much suffering as disease. It took stout hearts and grim determination to carry on the battle against all these foes. The second fall showed a better condition, the barley and corn crops were good, fish had been caught and dried for winter use, wild fowl were quite plentiful and the hearts of the Pilgrims were full of gratitude to a kind Providence who had prospered them. To show this a great feast was made lasting three days, the Indians, Massasoit and his tribe, came bringing with them five deer a not unwelcome addition to the feast.

And thus the first Thanksgiving was celebrated by the first American colony, a God-fearing, law-abiding, sturdy lot of men and women breathing in love of God and Country with every breath of good New England air.

Would that today we were as loyal, patriotic and united a people.

Below you will find the last clause of the first Presidential Thanksgiving Proclamation, had space permitted I would like to have printed it entire.

AND ALSO—that we may unite in most humbly offering our prayers and supplications to the great Lord and Ruler of Nations, and beseech Him to pardon our National and other Transgressions;—to enable us all whether in public or private Stations, to perform our several and relative Duties properly and punctually;—to render our National Government a Blessing to all the people, by constantly being a government of wise, just and Constitutional laws, DIRECTLY and FAITHFULLY OBEYED,—to protect and guide all Soverigns and nations, (especially such as have kindness to us) and to bless them with good government and peace and concord;—To promote the Knowledge and Practice of true religion and Virtue, and to increase of Science among them and us;—and generally to grant unto all mankind such a degree of Temporal Prosperity as He alone knows to be best.

Given under my hand at the city of New York, the third day of October, in the year of our Lord One Thousand Seven Hundred and Eighty Nine.—G. Washington.

BUSINESS INVESMENTS

I was informed to write to you in regards to loaning money on farms, what per cent to ask and what payments to demand. I remain,—Mrs. E. T.

—Use the Revised Committtee Form Mortgage of 1904. It has such provisions in it as will protect your interest. 6% is the usual rate charged on farm mortgages but in some localities 7% is obtainable. You do not need to require any payments, as if interest on taxes are not kept up the whole amount of the mortgage becomes due, that is, according to the form of mortgage recommended. Make the mortgage run for a period of from 3 to 5 years.

Any other questions along this line will be gladly answered. Do not take the word of friend or stranger when it comes to investments. The friend may be mistaken and the stranger unscrupulous. Go to your banker or seek reliable information thru your paper.

CORRESPONDENTS' COLUMN

Who can send me the song entitled "The Battle of Lake Erie"? I want to print it in this column.

Mrs. L. E. T.—the catalog has the patterns for stuffed animals. The book costs 15 cents.

A reader asks for the song called "Beautiful Guardian Angels.

The Farm Home

A Department for the Women

Edited by MRS. GRACE NELLIS JENNE

Children to Board.—Have any of the readers of the Business Farmer small children (up to 12 years of age) that they would care to have boarder in a private home in the country? If so please write to me. —Mrs. J. P. Sumner, Indian Lake Farms, Rt. 2, Linden, Mich.

—Why not write to the Children's Home at St. Joseph, Mich? They often wish to place children in good homes for short periods.

A subscriber writes that she will make sleeveless sweaters for $1.00 each, wool to be sent. If any one wishes her address I will send it.

Mrs. B. L. F.—I do not think the coin you mention would have any more than the face value. Museums are generally glad to accept such coins but as a rule do not pay for them. Write to the Public Library, Woodward Ave., Detroit, Mich., and tell them about your coin. They have a collection.

I would like to know if any readers of the Business Farmer can give me a recipe for dill pickles, one that will prevent their spoiling? Can you tell me why they spoil? My pickles get soft and then hollow and have a bad odor. My recipe is as follows:

Dill Pickles

For 10 gallons—3 3-4 lbs. salt, 2 1-2 lbs. dill, 1-2 pint mixed spices, 2-3 pint of vinegar. Fill up with water.

Is it necessary that the keg in which they are put in be headed up while they are working? Would the disease that has attacked cucumbers the last two years cause them to spoil? Any information on the subject will be gladly received.—Mrs. N. L. Elwell, Mich.

—I would like the experience of several readers on this subject. There would be a very possible danger of letting the pickles work too long. Many housekeepers do not let them work at all but put them in jars and seal them immediately. Any diseases that affect the cucumber would affect the pickles. Please let me hear from some of you.

Attention Mrs. H. E. Hines—There are two patterns on my desk addressed to you. The wrapper says wrong address. Will you please send me the correct one and I will mail them to you immediately.

Who will send me a recipe for liver sausage such as is found in the butcher shops?

English Boiled Pudding

Here is a recipe that my grandmother gave me: 2 cups of beef suet ground fine, 2 cups of raisons, 1 cup of English currants, 2 cups of sugar, 1 tps. cloves, 2 tps. cinnamon, a little candied citron, 2 cups of buttermilk, a rounded spoon of soda and a little salt. Flour a large strong cloth and mix enough flour in to make a good solid loaf and tie in cloth with plenty of room so the batter may swell. Put a small rack in the bottom of a large kettle and fill half full of boiling water and boil steadily for 8 hours, keep well covered. You may put this in the paper if you like. I hope the ladies will have good success as it is very good. —Mrs. Chas. Rust.

COOKIE RECIPES

I will send a few cookie recipes as I have never seen any like them in your paper. It is the best paper I ever get hold of. I get lots of good hints and recipes out of it.

Oatmeal Cookies

1 cup lard, 1 cup butter, 2 cups sugar, 1 white, 1 brown, 1 tps soda put in 8 tbls hot water, 2 eggs, well beaten, ¼ tps salt, 6 cups oatmeal put thru food chopper, 2 cups white flour.

Mix in order given; roll out and fill with the following: 1 pound of raisins put thru chopper, 1 cup sugar about 1½ to 2 cups of water, cook to a jelly.

Hermits

1 cup shortening, 2 cups brown sugar. 1 cup sour milk, 1 tps soda, 2 eggs, 1 cup chopped raisins, 1 cup chopped nut meats 1 tps cinnamon, 1 tps nutmeg, flour to make stiff dough, drop with teaspoon

I like to make these cookies as I can do all my mornings work while I bake them.—Mother of five.

SCHOOL CONSOLIDATION

CONSOLIDATION has proved itself to be one of the best ways of changing very poor schools into very fine ones. It has not yet failed where it has been intelligently planned and worked out. There are 12,000 or more successful consolidated schools, and new ones are being established in considerable numbers every year.

Here is what the consolidated school of the better class may, and in many cases does, offer:

A school term of 180 to 200 days with a considerable amount of interest in the children and his activities maintained during the vacation period. This time element is one of the first and most necessary factors in maintaining an equality in the amount of training given children.

A considerable choice of subjects, in addition to the essential ones, so that the child may follow the lines of his own interests or necessities.

A group of professionally trained, experienced and supervised teachers ith whom he may become acquainted. By the simple mathematical law of chance, if nothing else, he is sure apt to find in a number of teachers than in the individual teacher the things necessary for his growth. There are more minds brought to bear on his problem.

School buildings and grounds designed to safeguard and promote the children's health, supply them with an abundance of mechanical means necessary for work and recreation, and develop in them an idea of the aesthetic. In this respect the consolidated school of the country has many natural advantages over even the best of the city schools. More room for play space, gardens, and outside laboratories may be had for less expense. There is greater freedom from annoying noises and much less danger from traffic.

Acquaintance and companionship for each child with a considerable number of children of his own age and stage of development to train him in ready social adjustment and

THANKSGIVING ODE

Along the hills that Autumn's grace
Hath lit with sudden tints of flame,
One comes, with sweet, unlifted face,
Singing her praises in His name,
Whose hand the ready blessing heap,
Whose endless love a world doth keep.

A spirit of thanksgiving born
Of grateful people, blessed of God,
Whose barns He fills with golden corn;
Whose level fields of lifeless sod,
His sunshine and His fragrant rains,
Have quickened into fruitful plains.

E'en should the angry clouds uplift
Dark faces on the trembling days,
The seeming ill is yet God's gift,
But of shadows lift His praise.
Calm as the child, who smiling, hears,
The footsteps of advancing years.

—Mrs. L. B. Hall.

AIDS TO GOOD DRESSING

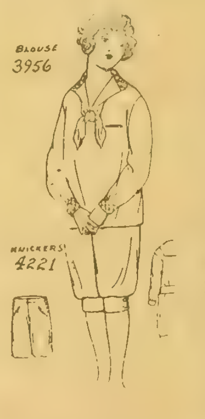
For Simplicity, Service and Style

Address orders to Mrs. Jenney, Pattern Department, M. B. F.

Catalog 15c—Pattern 12c

I am showing this week a pretty "knicker" design for school girls. It was designed for our department at my special request for we have had some requests for such a pattern. One sees them in the stores made up in black and white check and with them are worn middy blouses of scarlet, green or blue. Does it not seem an attractive dress for girls? I like it because it is so neat, comfortable and warm and the girls "just love" the freedom of them. This pattern may also be made up in khaki and your daughter is ready for her Girl Scout Troop.

Our girls are going to be more athletic, they are going to have stronger bodies, brighter eyes, rosier cheeks and larger feet. Let us give them a chance to be rally comfortable.



An Up-To-Date Costume

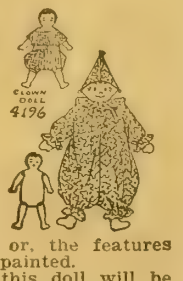
3956-4221, Knicker and bloomer suits appeal to the active girl as much as to "grown ups." This model is ever so servicable and pleasing. It may be worn with or without a skirt. Serge, flannel, jersey cloth and other knitted materials, as well as linen, khaki and gingham are good for its development.

The Blouse Pattern 3956 is cut in 5 Sizes: 8, 10, 12, 14 and 16 years. The Knickers Pattern 4221 is also cut in those sizes. To make the costume for a 14 year size will require 5 yards of 32 inch material.

TWO separate patterns mailed to any address on receipt of 12c FOR EACH pattern in silver or stamps.

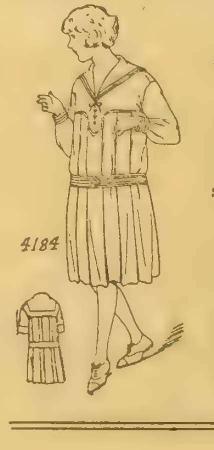
A New Doll Set

4196. The little doll mother maay not only make dolly's clothes but also the doll, from the models supplied herewith. The body may be of drill, unbleached muslin, oil cloth or sanitas, with a stuffing of bran, kopak or cotton. Eyes of shoe buttons, nose and lips of yarn, or, the features may be embroidered or painted.



Dressed as a clown this doll will be very attractive. The suit may be of calico, cretonne or scraps of silk or satin. One or two colors of materials may be used. For the Rompers—cretonne or gingham is pleasing. Dolly will be so glad of the dear little pockets in her rompers, and "Pierrot" the clown will do all sorts of tricks in his comfortable costume, if his arms and legs are fastened so as to be movable.

This Pattern comes in 3 Sizes: 12, 16 and 20 inches.



A Popular Comfortable Dress for the Growing Girl

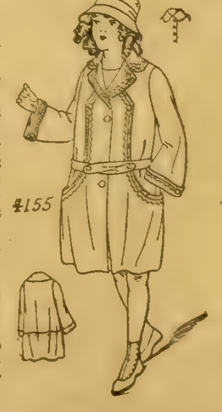
4184. Linen linene, serge, tricolet, homespun and prunella would be good for this style. The sleeve may be wrist or elbow length.....

The pattern is cut in 4 Sizes: 8, 10, 12 and 14 years. To make the dress for a 12 year size, requires 3 1-2 yards of 44 inch material. Pattern mailed to any address on receipt of 12c in silver or stamps.

A Jaunty Coat for the Growing Girl

4155. Velours was used for this model, with fancy braid for decoration. This model has pockets extensions below the belt. The collar is convertible.

The Pattern is cut in 5 Sizes: 6, 8, 10, 12 and 14 years. A 10 year size requires 2 1-2 yards of 54 inch material. Pattern mailed to any address on receipt of 12c in silver or stamps.



give him the confidence that arises from competition with equals.

Contacts for each child with groups of children in the natural stages of development immediately succeeding his own. They rouse his spirit of emulation and furnish incentives to the effort necessary to make him active and self-reliant.

The services of a physician or nurse or both to prevent or stop in its inception any sickness among the children.

Means of interesting the community in the betterment of its own life to keep pace with the ideals set before the children.

Transportation, sanitary and safe, to and from school for all children residing any great distance from the school plant.

These things, characteristic of the better consolidated schools everywhere, are the hall marks of the best schools now known. Consolidation has not yet taken over the psychological clinic. Perhaps the natural freedom of the country makes that to some extent unnecessary. It has adopted much of the best along other lines and developed, because of its inherent advantages, some fine qualities of its own that it may be difficult for the finest of largest city schools to equal or improve upon.

And remember, the consolidated schools, standard in type, is rapidly coming to be counted among the strongest features of our educational system, have all been the result of an attempt to equalize from the bottom up. They have been created by concentrating the wealth and energy of areas that before consolidation dissipated their efforts on a very poor kind of schools. The consolidated schools withdraw nothing from the top of t he system. On the contrary, they have added much to it. They equalize by bringing the poorest up not only to the average but to the best.—Public Instruction Bureau.

LITLE ROSEWOOD CASKET

(Published by request.)

1.
In that little rosewood casket.
That is resting on the stand
Is a package of love letters
Written by a true loves hand.

2.
Will you go and bring them sister,
And do read them o'er to me
For I oft times tried to read them
But for tears I could not see

3.
Now you brought them thank you darling
Will you sit down by my side
And lift gently to your bosom
This poor aching, throbbing head.

4.
Read those blessed words distinctly
So I lose not even one
For the passion hand that penned them
His last words for me is done.

5.
When I'm dead and in my coffin
And my shroud about me wound,
And my little bed is ready
In that pleasant church yard ground

6.
Place the basket and the letters
Both together on my heart
And this little ring he gave me
From my finger never part.

7.
Tell him in the years that follow
And no tidings of him come
Of his absence and his silence
Was I ever the one to blame?

8.
Read them o'er again dear sister
While I gently fall asleep
Fall asleep to wake in Jesus
Gentle sister do not weep.

To make an unusually tasty apple whip, whip the whites of 2 eggs to a stiff froth and add 1 c. sugar and a cup of grated apple.

When anything boils over on the stove, cover it at once with salt; the odor will be killed and the spilled food can be cleaned up easily.

Rub a little melted paraffine on the inside of your screw top can covers when sealing then during the winter when you wish to open them pour hot water over the tops. It melts the wax and the cover unscrews quite easily.

A little salt added to the whites of eggs makes them beat into a froth much more quickly. Beating them in a strong draft or before an electric fan also helps. The latter is most effective but not always at hand.

—HEALTH HINTS—

OR
HOW TO CURE YOURSELF
BY
DR. T. N. ROGERS

The formula for catarrh will be published in the next issue. In the mean time use the following three or four times a day. 2 drahms Darpin (dark). Commonly called Golden Seal. 2 oz. Listerine. 8 oz. H29, which is sterilized water. Put a tbls. in a glass and add same amount of water and use to gargle with. Do this several times a day and watch for your remedy in the next issue.

Plenty of fresh air and cold baths will tone up the system and help to eradicate the catarrh.

FALLING HAIR

You failed to mention the condition of your scalp or your general physical condition. Your health must be good in order to have good hair. If you have a dry scalp with dandruff you will find a hot oil treatment very benficial.

Heat olive oil and rub well into the scalp, wash with water using plenty of castile soap. Keep this treatment up every two or three weeks for several months. Each night massage the scalp with the finger tips, keep the hair well brushed with a soft brush.

Bobbing your hair was a very good thing to do.

Your abscessed tooth was the cause of your headache.

Book Review

(Books reviewed under this heading may be secured through The Michigan Business Farmer, and will be promptly shipped by parcel post on receipt of publisher's price stated.)

Rural Michigan, By L. A. Chase—In a book of over 400 pages, the author who is head of the Department of History, Northern State Normal School, has given us a complete and graphic picture of Rural Michigan, its history, climate, crops and living conditions. That our home state should have been selected as the second in the series by Macmillan following only New York, makes us a little proud. It is a book that should be in the library of every man or woman interested in the farming business in our state. (Macmillan, $2.50)

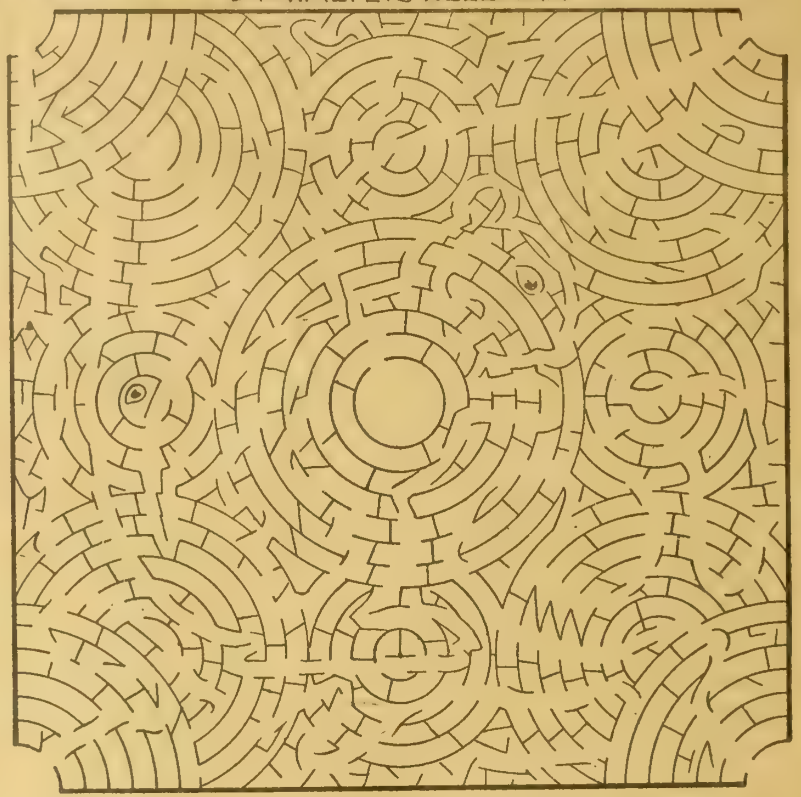
The Children's Hour

WHO ATE THE NUT?

BY WALTER WELLMAN



Bobbie left a nut he'd found, on the window sill. When he next looked for it, it was gone. Who ate it?

A path leads into a maze from each corner. One path leads to the center of the maze. Find this path—then trace it with a soft pencil (colored) preferred. You will have drawn the outline of the culprit.

Pies of pumkin, apple, mince,
Jams and jellies, peaches, quince,
Purple grapes and apples red
Cakes and nuts and ginger bread,
That's Thanksgiving.

Turkey Oh! A great big fellow,
Fruits all ripe and rich and mellow,
Everything, that's good to eat,
More than I can now repeat,
That's Thanksgiving.

Lots and lots of jolly fun,
Games to play and races run,
All as happy as can be,
For this happiness you see,
Makes Thanksgiving.

We must thank the One who gave,
All the good things that we have,
That is why we keep that day,
Set aside our Mammas say
For Thanksgiving.

DEAR Nieces and Nephews—Have you decided what you are to be thankful for on Thanksgiving Day? On that day when you are giving thanks for the many things you have to be thankful for I want you to make a resolution. Resolve that each day from that day on you will take the time from your work and play to give thanks for your many blessings. If you have sisters or brothers try to see who can think up the largest number. It will be fun and you will find that the world looks brighter and better to you each day.

Again one of the members of the Children's Hour has helped me very much. And this member did not know it. You see it was like this: I have been searching high and low and everywhere for a nice poem on Thanksgiving to publish at the head of our page this issue, and, while I found many Thanksgiving poems, none of them seemed to be just what I wanted. and this morning I had just about given up in despair when I opened a letter from Tawas City and in that I found just what I wanted. There was a nice letter from Stanley Rescoe and he enclosed the poem on Thanksgiving published above. (Thank you, Stanley.)—UNCLE NED.

OUR BOYS AND GIRLS

Dear Uncle and Cousins—Rap! Rap! Rap! Oh! excuse me for walking in, but as there was so much ercitement in our corner this week that I thought I would not disturb you.

We have had some snow already, but it is all gone, but again today it is snowing a little, but soon the snow which will last three or four months will be falling and the long winter will come. I do hope that there isn't a bad storm this year like there were last year.

Christmas will soon be here, and we will all have to get busy, or all of our preparing for Christmas will be on us all at once, and all of us have many relatives and friends to think of them.

And Harold Pernie got the prize of the boys? Well he was sure lucky, wasn't he? Which girl got the prize? I never tried, as I knew I wouldn't of been the lucky girl anyway. But I don't suppose I should lose confidence in myself so quick, anyway before I try at least. Should I?

Wonder why Eathel Fay Sharp never writes. I never see any of her letters in the corner, nor I don't hear from her anymore. The last time I heard from her, she said her father was sick, and was in the hospital, and I do hope he gained his health back again.

I used to write to that invalid boy, who was fourteen years old, and Uncle Ned ask us all to send him birthday cards for his birthday, but I lost his name and address, so I don't know where to write to, if anyone knows who I mean and knows his name and address, it will accommodate me very much if I could know his address, as I always like to write an invalid person, who is always still, and never has much joy.

Mr. Ford has a logging camp about three and one-half miles south of Sidnaw, and there is about ninety men, if not more ,working there. It is just like a little town. There are electric lights in the camps and running water which is cold and hot. Early this spring they built three private houses for Mr. and Mrs. Ford, their son and his wife and another man and his wife, but they never came up at all.

I have written many times before, so this time I am only giving my description, and where I live and see if they can guess who I am by my description for I have given my description lots of times before.

Well I am a girl about five feet tall, weigh one hundred and ten pounds, have brown hair, light brown eyes and am light complexioned. Now see if you can guess who I am. Will ring off hoping to hear from some other boys and girls, and those who guess who I am will receive a very long letter from me. So Goodbye. Your niece and cousin.—"Guess," Sidnaw, Mich.

Dear Uncle Ned—Well at last, I did get my letter started. I have been busy, every night studying my lesson. I go to school every day and we are going to have a box social and entertainment the 18th of this month, so we practice every day. Then we don't have every study, but sometimes we have some extra classes the next day. We have a very nice school teacher this year, we all like her very well. I am in the eighth grade. I have one brother and one sister. My brother goes to school every day, he is 8 years old, and is in the second grade.—Esther Mahn, Mt. Clemens, Mich.

Dear Uncle Ned—I am a boy 9 years old. My birthday is the 12th of July. I go to school. I am in the 4th grade. I have a little sister, she is in the 2nd grade at school. She is 7 years old. We live on a 40-acre farm. We have 4 little pigs, 1 big pig, 2 horses, 2 cows, 1 heifer, 1 calf. For pets I have 4 cats and 2 rabbits. We had a Hallowe'en social at our school. For our supper we had coffee, pumpkin pie and sandwiches. We had a witch's well. I got a sack of popcorn and my sister got a holder. The day before Thanksgiving will be my Grandma's birthday and maybe I will go out there. Maybe she will have duck for dinner. Goodbye Uncle Ned.—Carrel Culbert, Jonesville, Mich.

Dear Uncle Ned—I am a farmer boy and I am twelve years old and in the sixth grade at school. For pets I have a cat called "Crook," he is about 18 inches long and about 17 inches high. I live on a forty-acre farm. We have five milking cows and six steers, five heifers, four big pigs and six little pigs. I like farming very much. We also have about one hundred chickens. I am sending in a Thanksgiving poem. Your nephew—Stanley Rescoe, R. 3, Tawas City, Mich.

Dear Uncle Ned—How are you these fine days? It has been nice and rainy here to-day. I live four and one-half miles east of Union City, and four and one-half miles west of Sherwood. I live on a 160-acre farm. It is quite lonesome here in the summer when I am not in school. I go to the Smith school and I am in the 8th grade. We have organized a sewing club and a handicraft club in our school. I wish some of the boys and girls would write to me. You tell them to maybe they would do it quicker for you than they would for me. There are no girls of my age that live near me. The nearest is two miles from here. Last summer I worked in the onion patch so as to keep from getting lonesome. The pets I have are two kittens and one dog. There is 22 pupils in our school. Well I will close with hopes of hearing from somebody before long. From your friend, Wilma Olmstead, Sherwood, Michigan.

P. S.—I hope somebody uses this address before long.

—I am sure you would make many friends through the Childrens Hour, Wilma. Perhaps you will receive so many letters you will not be able to answer them all.—Uncle Ned.

Dear Uncle Ned—I seen your contest in the paper about how to win a Christmas present so I thought I'd try. I think the present will be a school outfit. I will try and write a Christmas story.

It was the night before Christmas. It was very stormy. Everybody was waiting for Santa to come. Mary wanted a dolly, Johnnie wanted a sleigh, and baby wanted a bowl of bread and milk. Soon they heard the sleigh bells jingle.. Everybody was so happy. Soon they heard somebody running up the steps and then down again. Mother opened the door and in fell the toys. Just what they wanted; Mary a doll, John a sleigh, baby a bowl of milk and all kinds of candy. Everybody was very happy. I will close from your niece.—Dorothy Werner, R. No. 1., Fowler, Michigan.

Uncle Rube Spinach Says:

WHAT DO YOU THINK?

YOU know I've been lookin' at this sheet of paper, all white an' clean an' wonderin' why I should blot it up with anything I might think of.

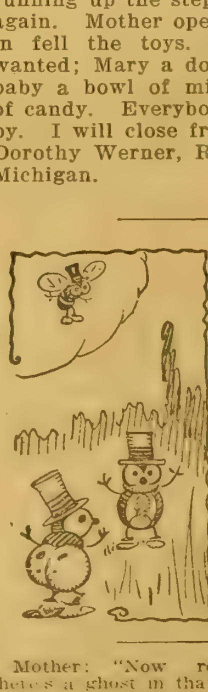
Well, I'm jest wonderin' now 'bout the light wine an' beer stuff—you know its bein' agitated quite a bit. Some of the wets sez we must have our nips now an' then, or oftener—they sez "give us light wine an' beer an' we'll do away with bootleggin'." Nice little theory ain't it now?

Light wine an' beer means goin' back to the old time drunken business. What do you think would happen if any or every driver of an automobile could step in an' have a few drinks of beer or light(?) wines? With accidents running into thousands in this country now what would it be if it was wet? Let's not ever be carried away by anything 'at pretends to put liquor back into our country. Liquor never made a man of anyone. It is the most degradin' thing the world ever knew. It has separated families, parted husbands and wives, stunted children, it has caused more trouble than all the wars this world has ever knew of. An' yet there are some people that would have this damnable thing put back an' have it here in this, our state, the greatest an' best state in the whole world.

An' now who is it 'at's always agitatin' light wine and beer? Yes, who is it? Why my dear friends, don't you know it's the big whisky dealers, the men who would take the shoes off'n your babies to put money in their pockets. It's the men who would rob you an' I of our manhood, take away our families, do anything to get our money. Boys, girls, everybody, look out for this. Light wine and beer H—. It's the open door to the old saloon. It's a step, between an' that's all.'Member the Volstead Act. It's purty good ain't it now? You know we used to have liquor laws, they were in force for more 'n fifty years. Did they reg'late the liquor business? Did they! Not on your life. Just give the Volstead law fifty years an' see what it does. Well, just give it a little time that's all!

But folks remember this: The saddest time an' the most dangerous time you'll ever see is when the Volstead law is changed an' light wine an' beer opens the door for all the damnable stuff that follows.

This letter is getting a little bit long so I'll stop. Cordially yours—UNCLE RUBE.



THEY ALWAYS DO

What happened to Mr. Bug?

He invested in Mr. Bee's honey stock and got stung.

Mother: "Now remember, Johnny, there's a ghost in that dark closet where I keep the cake."

Johnny: "Funny you never blame the ghost when there's any cake missing; it's always me."

THE STORAGE BATTERY

(Continued from page 6)

should be avoided. Keep the water always about one-half inch above the top of the plates. It is a good practice to inspect the battery every week. Avoid the use of hard water. Purchase a hygrometer, expressly made for testing the strength of the electrolyte.

This instrument when properly used will give the correct reading. A fully charged cell should test 1.280 to 1.300. A voltage about 2.8. On the terminal posts of every battery may be found voltage signs. Positive (X) and negative (—). Leads from the generator should always be connected the proper way (X) of the generator to (X) of the battery, (—) of the generator to (—) of the battery. If for any reason you are doubtful of the proper connection when replacing a battery, apply the following test. Immerse the leads from the generator into a glass of strong salt water. The negative (—) lead is readily determined by the bubbles issuing around that terminal.

When charging a battery, charge it at its rate; this may be found on the manufacturer's name plate. With suitable resistance batteries may be charged from lighting circuit. Alternating current may be used only in connection with a rectifier. Always keep battery clean and dry. Don't place tools on a battery, this produces a direct short circuit. The small holes in the vent caps should be always open. Smear lead terminals with vaseline to counteract corrossion. Keep it fully charged at all times. Don't allow impurities to reach the cells. If the gravity of any cell shows a marked falling off relative to the rest of the cells, promptly investigate the cause and correct it. Keep terminals tight. Don't overwork it by too frequent and unnecessary use of the starter. With proper care the battery should last as long as the rest of the equipment.—C. M. Labunski, Macomb County, Mich.

FINANCIAL NEEDS DISCUSSED AT U. P. MEETING

(Continued from page 3.)

every acre of tillable land should be classified according to the adaptability of the soil therein; second, the regulation of land and real estate dealers, to the end that land should be represented and sold "as is," and, third, a strict, practical policy of follow-up for the new settler, assuring him, within reasonable limitations, of the assistance of the various co-operative agencies within the state, after his settlement upon the land.

President Friday again addressed the bankers and agricultural men at the evening meeting held in the Marquette Club, talking on the subject of "costs." Michigan's noted economist reviewed the industrial history of the country for the past several years, emphasizing conditions and situations which have affected prices and caused such wide fluctuations. His talk was received enthusiastically and the discussion which followed, participated in by the bankers, lumbermen, agricultural men, and other business men present, was decidedly instructive and interesting.

Summing up the day's conference, it seemed to be the sense and opinion of the speakers and delegates alike, that although there are instances of misused credit on the part of farmers, the extension of financial assistance on the part of the bankers is, nevertheless, a matter of vital importance in the agricultural development of the state of Michigan particularly as applied to the cutover regions.

During the evening discussion following President Friday's talk, A. M. Anderson, Cashier of the State Bank of Ewen, sighted several instances growing out of his experience in the fertile Ontonagon Valley where credit has been the deciding factor in the success of the farmer, and similar opinions were given by other bankers whose work has brought them in direct touch with rural conditions.

After all, however, the best thing about the Marquette meeting as viewed from the outside, was the fact that there is a live interest and genuine concern in upper Michigan's greatest natural asset—her soils and her climate.

President Friday gave the bankers and business men something to think about when he declared that the farmer not only represents more than 60% of the purchasing power of the nation, but that statistics for the past decade prove conclusively that industry progresses only insofar as does agriculture. There it is again—the relation of producer to consumer—of agriculture to industry.

It's satisfying to note that at last the farmer is coming into his own, and, if the spirit of Marquette's meeting proves out, "his own" should be something decidedly to his advantage.—L. D. Tucker.

SWEDISH INVENTOR HAS NEW OIL LIGHT

Claims Whiter and Much Cheaper Light Than Electric or Gas

Edison enabled us to enjoy the benefits of electric light, Count Welsbach's mantle made it possible to have the incadescent gas light, but it remained for a Swedish engineer named Johnson, now living in Chicago, to devise a lamp that would burn ordinary, everyday kerosene oil and produce a light said by the many scientists who have seen it to be whiter than electric. The lamp is as simple to operate as the old style oil lamp, burns without odor, smoke or noise and is proving a sensation where the oil light is needed.

Mr. Johnson offers to send a lamp on ten days' free trial and will even give one to the first user in each locality who will help introduce it. A letter addressed to F. V. Johnson, 609 W. Lake St., Chicago, will bring full particulars about this wonderful new lamp. He has an interesting offer, too.—(Adv.)

SECOND WEEK INTERNATIONAL EGG LAYING CONTEST

THE second week of the International Egg Laying Contest being conducted at the Michigan Agricultural College, East Lansing, ended November 14th with considerable increase in production. New birds were starting and the others are becoming more acclimated and settling down to more regular laying.

The Leghorns hold first place to date for total production. Mr. Shaw's pen No. 76 has a small lead with 86 eggs, 6 eggs above Mr. Taylor's pen. Pen No. 58 with a total production of 79 eggs. Mr. Keyes, pen No. 62 ties with Alfred TerHaar's pen No 79 with production of 72 eggs.

The heavy breeds are increasing gradually. Mr. Dennison's pen again leads with a total of 58 eggs. Mrs. Finkbiner is again in second place with 39 eggs. Brummer's Poultry Farm is close up with 37. A new breed appears on our list when Mr Smith's White Rocks finished this week with a total of 35 eggs. The Wyandotte section gives first place to Mr. Sinks' pen No. 25, and second to Hollis's Pen No. 28. The Rhode Island Red pens maintain the same order as in last week's report. Five pens still have no eggs to their credit. The contest average is very satisfactory, the production for the week being 28.9 per cent.

Leading pens in the principal breeds are as follows:

Plymouth Rocks

H. E. Dennison, (Barred) East Lansing, Mich., 58 eggs; Mrs. C. D. Finkbiner, (Barred) Clinton, Mich., 39 eggs; Brummer's Poultry Farm, (Barred) Holland, Mich., 37 eggs; Clyde Smith, (White) Niles, Mich.

Wyandottes

F. W. Sinks, Farmington, Mich., 49 eggs; Clyde Hollis, Hudsonville, Mich., 47 eggs.

Anconas

A. R. Van Raatle, Zeeland, Mich., 32 eggs; C. M. Beckwith, Milford, Mich., 38 eggs.

Rhode Island Reds

Leon O. Dunning, Delton, Mich., 51 eggs; Mrs. E. S. Travis, Vicksburg, Mich., 36 eggs.

White Leghorns

Elmer E. Shaw, South Haven, Mich., 86 eggs; E. D. Taylor, Kalamazoo, Mich., 80 eggs; W. A. Down, Washington, Mich., 79; J. W. Keyes, Owosso, Mich., 72; Alfred TeerHaar, Hudsonville, Mich., 72.

(Editor's Note—A report of the first week of the contest is published on page 20 of this issue.)

Rheumatism
A Remarkable Home Treatment Given by One Who Had It

In the year 1893 I was attacked by Muscular and Sub-Acute Rheumatism. I suffered as only those who are thus afflicted know for over three years. I tried remedy after remedy, but such relief as I obtained was only temporary. Finally, I found a treatment that cured me completely and such a pitiful condition has never returned. I have given it to a number who were terribly afflicted, even bedridden, some of them seventy to eighty years old, and the results were the same as in my own case.

I want every sufferer from any form of muscular and sub-acute (swelling at the joints) rheumatism to try the great value of my improved "Home Treatment" for its remarkable healing power. Don't send a cent; simply mail your name and address, and I will send it free to try. After you have used it, and it has proven itself to be that long-looked for means of getting rid of such forms of rheumatism, you may send the price of it, One Dollar, but understand I do not want your money unless you are perfectly satisfied to send it. Isn't that fair? Why suffer any longer, when relief is thus offered you free. Don't delay. Write today.

MARK H. JACKSON
265J Durston Bldg., Syracuse, N. Y.
Mr. Jackson is responsible. Above statement true.

CURED HIS RUPTURE

I was badly ruptured while lifting a trunk several years ago. Doctors said my only hope of cure was an operation. Trusses did me no good. Finally I got hold of something that quickly and completely cured me. Years have passed and the rupture has never returned, although I am doing hard work as a carpenter. There was no operation, no lost time, no trouble. I have nothing to sell, but will give full information about how you may find a complete cure without operation, if you write to me, Eugene M. Pullen, Carpenter, 210J Marcellus Avenue, Manasquan, N. J. Better cut out this notice and show it to any others who are ruptured—you may save a life or at least stop the misery of ruture and the worry and danger of an operation.

Don't Wear a Truss

We Guarantee Your Comfort with every Brooks' Appliance. New discovery. Wonderful. No obnoxious springs or pads. Automatic Air Cushions. Binds and draws the broken parts together as you would a broken limb. No salves. No plasters. No lies. Durable, cheap. Sent on trial to prove it. Never on sale in stores, as every Appliance is made to order, the proper size and shape of Air Cushion depending on the nature of each case. Beware of imitations. Look for trade-mark bearing portrait and signature of C. E. Brooks which appears on every Appliance. None other genuine. Full information and booklet sent free in plain, sealed envelope.

DAIRY and LIVESTOCK

DON'T TRUST THE BULL

FARMERS who keep bulls might learn from tiger trainers a valuable lesson that, if put into practice, would make them better life insurance risks. No man trusts a tiger until it is dead. A bull, although he uses an entirely different method, can do just as much damage as any animal in the zoo or in the jungle. He is more vicious and treacherous than most of them, and with such a reputation no man should trust him for a minute, no matter what his record for good behavior has been. "Mean" bulls perhaps have killed fewer men than those considered safe.

There are few rural neighborhoods without a list of tragedies and near tragedies resulting from putting trust in "perfectly safe" animals. Only a few weeks ago an employee of the United States Department of Agriculture, visiting in New York State, was so badly injured by a dairy bull that he died a short time later. The owner led out the animal, always considered gentle, to have his picture taken. Without warning the animal knocked down his owner and then gored the department employee who had rushed to the man's assistance.

Had this bull been led on a staff attached to the ring in his nose the tragedy could not have happened. Better still, it might have been kept in a pen so arranged that handling would not have been necessary at all. Plans for constructing safe bull pens may be obtained from the Department of Agriculture, Washington, D. C.

Every farmer who owns a bull would do well to put up this warning in his barn: Don't Trust The Bull.

LOW AVERAGE AT WEST MICHIGAN SALE

THE West Michigan Holstein Breeders' Association held its annual October consignment sale the 18th of last month, at the West Michigan Fair grounds, Grand Rapids. Sixty-seven head of high grade Holstein cattle were sold at the sale for a total of $7,611. The high average of the day was $234, this being the average for five bulls, one year or over. The top price was $350. Two bulls sold for this amount each, one a yearling bred by H. E. Rising of Woodland and the other a six-months-old calf from a 30-lb. cow consigned by M. Ossemwarde of Ada. Thirty head of cows averaged over $130 each, 12 yearlings over $88, 16 calves $52, and 4 bull calves $115. Among the consignors at this sale were: Cutler Farms, Wayland; J. B. Gargett, Elm Hall; Edward F. Heft, Sparta; H. L. Smith, Shiloh; W. R. Harper & Sons, Middleville; Clinton Jones, Bradley; O. F. Fischer, Caledonia; F. B. Howard, Ionia; Henry Scholten, Holland; G. C. Allen, Grand Rapids; R. M. & F. Spencer, Caledonia; David Falconer, Stockville; C. Boven, Holland; H. M. Willard & Sons, Grand Rapids; Newton Brothers, Freeport; H. H. Barnum, of Woodland; L. J. Mathews, Hastings; Lewis F. Rush, Clarksville.

IS O. I. C. SWINE ASSOCIATION BREAKING UP?

I understand through a neighbor that the State Boys and Girls Club leader reports the O. I. C. Breeders' Association to be broken up. As I am a breeder of O. I. C. hogs, I want to know if the above report is a fact, and have your answer printed in the M. B. F.—N. R. P., Wolverine, Mich.

—I have had no information to the effect that the O I. C. Swine Breeders' Association was to be broken up. There is no question but what the Chester White and O. I. C. hogs are one and the same breed. In fact, the United States Supreme Court has ruled that they are and, if I understood the matter correctly, there is a court decision restraining the O. I. C. Record Association from advertising the O. I. C. as a separate and distinct breed as compared with the Chester White. There is no question but what the trouble between these two assicoations has done a great deal to retard the development of the white hog and these two associations should certainly be consolidated for the good of the breed and the convenience of the men handling the hogs.

I would not by any means buy an O. I. C. hog without it was eligible to registration in the Chester White Record, nor would I at the present time buy a Chester White hog without it was also eligible to registration in the O. I. C. Record Association.—Geo. A. Brown, Professor of Animal Husbandry, M .A. C.

PLAIN FACTS ABOUT THE JERSEY COW

I AM submitting for your consideration a few "plain facts."

Nearly every occupation of today is well advertised which is very proper.

Please do not confuse the term "advertise." Only a short time ago while witnessing a baptismal service I heard a little boy ask:

"Mama, what are they going to do?"

"They are going to baptize those people," she answered.

The child misunderstanding her put another question:

"Well, when are you going to get advertised?"

I repeat that nearly every walk of life is placed before the public in an interesting manner but there is one side of dairying which is not given as much attention as it should be.

Among the important dairy breeds in this county I find the Guernsey, Holstein and Jersey.

According to the figures of S. P. Sexton, our county cow tester, the high cow for last year was a Holstein.

She, a three-year-old, produced 511.2 lbs. fat in the association year with a feed cost of $89.52. The cow was fed and milked four times daily.

The next high cow belonged to the Jerseys and produced 499 lbs. fat. (in same length of time) costing $74.42. She did this at the age of five years with ordinary farm care and only two milkings daily.

The last of the three highest was a Guernsey of five years. She gave 498.4 lbs. fat which cost $108.32. She also was given common care and milked but twice daily.

A group of 7 Jersey herds, computing 65 cows, shows an average production of 6,290 lbs. of milk and 334 lbs. fat with an average milk test of 5.3%.

This group produced fat at $1.10 per cwt., and in comparison with the high herds of Guernseys and Holsteins they have produced fat more cheaply.

The Jersey breeders of this county have organized under the name "Kalamazoo Jersey Cattle Club" and can furnish more information concerning this breed. If you desire to know address Mrs. L. J. Bradley, Augusta, Mich.

—This is an interesting comparison. We are always pleased to receive the results obtained in cow-testing associations and will publish all such facts which members or testers care to send in.—Editor.

VETERINARY DEPARTMENT

WEANING PIGS

I have four pigs one month old. What is the proper age to wean those pigs? I want to feed them for market and keep the mother for brood sow. What kind of feed would you suggest? Is ground rye better than oats?—A. E., Applegate, Mich.

—Pigs should not be weaned before they are eight weeks of age, unless it is desired to rebreed the sow at once, in which case they must be weaned at from six to seven weeks of age. In either case the pigs should be started on feed in a creep to which the sow does not have access, at about four weeks of age. In this way they will learn to eat and will not obtain any setback at weaning time.

Neither ground rye, nor oats alone would make a satisfactory feed for young pigs, the ground rye not being especially palatable and the oats containing rather too much fibre. A combination of about two-thirds rye and one-third oats with the hulls sifted out of the oats, until the pigs are close to three months of age would make a good grain feed for them. Along with this, about two pounds skim milk should be fed with each pound of the grain to balance the ration. If milk is not available, about one pound of oil meal for each seven pounds of the rye and oats, or one pound of tankage for each twelve pounds of the rye and oats would give a well balanced ration.

After the pigs have reached a weight of around sixty to seventy-five pounds, cooked cull beans could make up half of the ration to excellent advantage.—Geo. A. Brown, Professor of Animal Husbandry, M. A. C.

COW A DANGER TO OTHERS IN HERD

I have a cow which aborted two months early and the veterinarian expects contagious abortion. Is it necessary or advisable to sell her for beef? Is her milk fit for us? Is it dangerous to other cattle to keep her on the farm?—G. M. F., Fowlerville, Michigan.

—If this cow aborted as a result of infectious abcrtion she is a danger to other susceptible cattle in the herd. The time of greatest danger of such an animal is the few days immediately preceding and following abortion, consequenttly it is questionable if the danger would lower at this time by selling her for beef. We have no reason to belive that milk from cattle affected with infectious abortion is unfit for human cousnmption.—E. T. Hollman, Asso. Professor of Animal Path., M. A. C.

TAKE DOG TO VETERINARIAN

—I wish you would advise me as to my hound. He is two years old and for the last month hasn't had much appetite; his eyes are dull, hair is dead looking, and seems to have no tied up.—J. C., Otsego, Mich.

From the little history given it would be impossible for me to make any kind of a diagnosis. The dog may be suffering from any one of several diseases and to try to make a diagnosis without first having had an opportunity to examine the dog would be purely guess work. Better take your dog to a good veterinarian at once and have him prescribe treatment.—John P. Hulton, Associate Professor of Surgery and Medicine, M. A. C.

RATIONS FOR DRAFT HORSES, BROOD MARES AND COLTS

EXPERIMENTAL and demonstration work by the University of Missouri College of Agriculture shows—

That draft horses averaging in weight approximately 1600 pounds and which did 4.8 hours work a day average farm work required an average daily ration of 14.91 of grain and 17.12 pounds of timothy hay.

That brood mares may be used efficiently for farm work but the yearly feed required by them is 26 per cent greater than the cost of reed for a gelding or "dry" mares doing the same work.

That brood mares working and nursing foals required 47 per cent more grain and 32 per cent more hay daily during the suckling period than dry mares.

That foals during the suckling period consumed an average daily ration of 3.85 pounds of grain and 1.35 pounds of hay, in addition to their mother's milk.

That draft colts consumed an average daily ration of 6.68 pounds of grain, 7.42 pounds of hay daily from weaning time until they were turned in pasture in the spring, a period of 219 days, during which time they gained 330 pounds and weighed at the close of the period 836 pounds.

That it required 4.40 pounds of grain and 4.83 pounds of hay to produce one pound of gain on draft colts from weaning time until turned on pasture the next spring.

That in using a grain ration composed of 2 parts corn, 2 parts oats, 1 part bran, it required 10.46 bushels of corn, 18.30 bushels of oats and 292.9 pounds of bran, to keep draft colts in good growing condition from weaning time until they were turned on pasture.

That 15 pounds of corn silage, 8 pounds oat straw, fed with 8 pounds of grain is a satisfactory ration for horses doing light work during the winter months.

SURVEY OF WOOL MARKET SHOWS OUTLOOK GOOD

(Continued from page 4)

3,151,888,000 pounds in the five years 1909 to 1913, a decline of nearly 17 per cent. The reduction is due to a loss in the world sheep population which will take time to build up again. World wool production in 1921 expressed in millions of pounds are given in the compilation referred to compared with the pre-war average is shown in the following table:

	Average 1909-1913	1921
North America	332	249
South America	587	461
Europe	845	694
Asia	273	228
Africa	210	177
Ociana	904	799
Total	3152	2608

According to this table decreases have taken place all over the world.

World wool production in 1922 is still an unknown quantity as only a few trade reports have been made public. These show increases in Australia and in British South Africa, but a decrease in Argentina about as large as the combined increase of the other two countries. The clip in the United States probably was smaller than last year although the latter was the smallest since 1900. Altogether there is nothing to suggest any material increases in world wool production in 1922.

6. Large stocks of wool which accumulated in the southern hemisphere during the war are gradually being distributed. Holdings of the British Australian Wool Realization Association has handled these stocks for Australia and New Zealand were only 1,212,000 bales of 330 pounds each on August 31 compared with 2,708,554 bales a year ago and the amount of free wool in those countries is no larger than on the same date last year. In short, world cousumption has been outrunning production in the last twelve to eighteen months so that supplies nearly everywhere have been reduced. Some of the surplus countries have fairly large holdings but stocks in importing countries are light so that the total is not considered excessive. European manufacturing countries are utilizing wool much more rapidly than they were in 1920 and early 1921 when the rate was below normal. They are buying freely in British and Colonial wool auctions as well as in other primary markets where prices show an upward trend in spite of only moderate purchases by the United States. Altogether, the decrease in world wool production appears to more than offset any decrease in wool consuming capacity resulting from the financial status of Europe. —By Department of Research, American Farm Bureau Federation.

SLAUGHTERING AND CURING MEATS ON THE FARM

(Continued from page 9)

cod to meet the portion first fisted. Split out the tendons between the dew claws and the hock, and tie the two legs together. The sheep is now ready to be hung up.

But first remove the front toes. Cut about an inch above the dew claws and break the front feet back. If it is a lamb, be sure to leave the significant straight joint.

With the sheep hung up, split the pelt from front to rear, through the midline and fist away the pelt, working down over the back toward the neck. It may be necessary to use the knife around the tail. When the neck is reached, cut off the head with the pelt at the atlas joint. Fold up the pelt to keep it clean on the inside.

Begin removing the entrails by cutting around the rectum and letting it drop down inside. Open the carcass by cutting straight down the belly, from cod to breastbone, taking care not to puncture the intestines by running two fingers along the inside as a protective guide.

Remove all the abdominal organs except the kidneys, being sure to get the bladder. Then cut the diaphragm and remove the heart, lungs and diaphragm together. Wipe all arts clean with a cloth wrung out of hot water, double up the front legs and slip a little cord, found by cutting into the fleshy part of the forearm, over the ankle joints.

OVER NINE FEET SNOW FELL IN SIX MONTHS

THE winter of 1879-80 was a mild one, with but little snow falling and the weather permitting farmers to clear land and to plow and drag their fields during every month. The winter of 1880-81 made up for lost time, commencing October 17, 1880, when four inches of snow fell and from that date until April 15th, the last day it snowed, there was 30 days in which it fell, the fall being 13 inches on two days—November 6 and the following January 31st. The total fall for the winter of six months was 116 inches.

The record was kept by Jacob Smith, a boy staying with Samuel Rinehart of plutocratic Porter that winter. It is doubtful if there has been as severe a winter here since. —National Democrat, Cassopolis, Mich.

GOVERNMENT BULLETINS OF INTEERST IN DECEMBER

A SMALL list of Farmers' Bulletins and Circulars of general interest during December are given below. Copies may be obtained free by addressing the Division of publications, United States Department of Agriculture, Washington, D. C. Specify number and name and whether Farmers' Bulletins or Department Circular.

Farmers' Bulletin; 477, Sorghum Sirup Manufacture; 662, Sample Trap Nest for Poultry; 702, Rabbits in Relation to Trees and Crops; 828, Farm Reservoirs; 847, Potato Storage Houses; 970, Sweet Potato Storage; 1100, Co-operative Marketing, Woodland Products; 1114, Common Poultry Diseases; 1116, The Selection and Care of Poultry Breeding Stock; 1288, Game Laws for 1922; 1293, Law Relating to Fur Animals, 1922.

Department Circular; 148, The Farm Woman's Problem; 149, Co-operative Cane-Sirup Canning; Producing Sirup of Uniform Quality.

"I've got to keep step with the times," writes Joe Lear,
"Please credit subscription ahead for a year."

Barren Cows Can Be Made Profitable

Don't send them to the butcher. They can be made to raise calves and produce milk in paying quantity. Barrenness simply means that the cow's genital organs are too weak to function properly.

Kow-Kare, the great cow medicine, acts directly on these organs and the digestion, correcting the serious disorder. D. B. Thomas, Knightville, Utah, writes us:

"I had a valuable Jersey cow eight years old that had had seven calves. Something went wrong with her after her last calf came, so that for two years she failed to become with calf. Fed her some of your Kow-Kare last Jan. and she was all right the first serving, and long before I had given her the whole package of your Kow-Kare that I purchased."

Mrs. Harvey Ray, Homer, Ill., writes: "The registered Shorthorn cow I wrote you about last year, and which I treated for Barrenness, under your directions, dropped a fine Bull calf Jan. 2nd. Less than one can of Kow-Kare did the work."

Hundreds of others tell us every year of making valuable producers from cows that seemed hopelessly barren.

COW BOOK FREE

KOW-KARE
DAIRY ASSOCIATION CO.
THE HOME COW DOCTOR

Kow-Kare is equally valuable in treating Abortion, Retained Afterbirth, Scouring, Bunches. Milk Fever and Lost Appetite. Thousands of dairymen use Kow-Kare one week each month to keep up the milk yield during the winter months.

Let us mail you, free, our valuable 32-page book. "The Home Cow Doctor." Kow-Kare is sold by feed dealers, general stores and druggists. We will send either the $1.25 or 65c size prepaid if your dealer is not supplied.

Poultry for Profit

COMB OF ANCONAS OR LEGHORN MALE

I wish to know if Ancona and Leghorn roosters have the same number of points on their combs, and what is the number for a thoroughbred.—J. S., Carsonville, Mich.

—The Standard of Perfection requires the comb of the Leghorn or Ancona male bird to have five serrations or points. For an additional point a cut of .5 is made in scoring. In addition to the number of points other things are considered. The comb should not follow the head very closely nor should it be very large and beefy. The comb also should be free from marks which are indentations in the front of the comb.

The novice is liable to place too much emphasis on the comb, sacrificing both body type and color pattern for this minor point.—E. C. Foremad, Associate Professor of Poultry Husbandry, M. A. C.

FEEDING SUNFLOWER SEEDS TO HENS

Please tell me how sunflower seeds should be fed to laying hens and in what amounts.—P. M., Bay Port, Mich.

—I might say that they are an excellent feed for birds during moult and could be fed at that time up to 20 per cent of the scratch feed.—C. M. Ferguson, Extension Specialists, M. A. C.

FATTENING POULTRY ON THE FARM

FATTENING poultry not only increase the size ,but improves the quality of the flesh. There is the same difference between a fattened chicken and an unfattened one as there is between corn-fed steers and range cattle. The market pays from three to seven cents per pound more for fattened poultry than for unfattened. This means a difference of from 15 to 35 cents on a five-pound chicken.

Chickens make best gains when about three or four months old. A cockerel will gain one pound in two weeks. Any of the meat or general purpose breeds makes economical gains.

It is profitable for farmers to fatten the poultry they have to sell, if they make provision for doing it properly and have a good market. Chickens make the best gains if confined in a crate or fattening pen and kept where it is cool and dark.

Equal parts of corn meal and bran mixed to a thin batter with sour milk or buttermilk makes a good fattening ration. Feed three times a day. Give little the first day; after that give all that will be eaten in 20 minutes. It is usually not profitable to keep poultry in the fattening more than two weeks.

EGG LAYING CONTEST UNDER WAY

THE First Annual Michigan International Egg Laying Contest got under way November 1st with 95 pens in place. Pen No. 88 arrived late in the week and four other pens entered have not yet arrived at the Contest grounds. The contest promises to be one of international interest with one pen from each of the following states: New York, Washington, Missouri, Rhode Island, Tennessee, Connecticut, California, Indiana and Ohio. Two pens from Oregon, two from New Jersey and four Canadian pens, three from Ontario and one from Quebec. Michigan poultrymen occupy the remainder with 83 pens entered. The management has been disappointed in the cancellation of two pens from England which would have added interest in the results.

The breeds are well represented with White Leghorns in the majority with 52 pens. Barred Rocks second with 18 pens. White Wyandottes occupy 9; Anconas, 7; Rhode Island Reds, 6; Brown Leghorns, 2, and one pen each of Buff Leghorns, Buff Rocks, Buff Wyandottes, Black Minorcas and Black Orpingtons.

Eighty-five of the pens got into action during the first seven days. Only 4 pens had all ten birds in production. Ten hens in all produced 6 eggs each during the first week.

Shaw's pen from South Haven have a small lead for the week with a production of 43 eggs, 4 eggs over Down's pen. Taylor's pen are close third, being only one egg behind the second pen. TerHaar's pen No. 79 are fourth with 36 eggs.

The Leghorns have a heavier production for the first week. Pens in this section, however, show considerable more maturity than the pens of the heaver breeds.

Leading pens of 10 birds each are as follows:

Plymouth Rocks

H. E. Dennison, (Barred) East Lansing, Michigan. 27 eggs.

Mrs. C. D. Finkbiner, (Barred) Clinton, Michigan, 20 eggs.

Wyandottes

Clyde Hollis, Hudsonville, Michigan. 23 eggs.

F. S. Sinks, Farmington, Michigan, 20 eggs.

Rhode Island Reds

L. O. Dunning, Delton, Michigan, 23 eggs.

Mrs. E. S. Travis, Vicksburg, Michigan, 15 eggs.

White Leghorns

Elmer E. Shaw, South Haven, Michigan, 43 eggs.

W. A. Down, Washington, Michigan, 39 eggs.

E. D. Taylor, Kalamazoo, Michigan, 38 eggs.

Alfred TerHaar, Hudsonville, Michigan, 36 eggs.

HOUSING TURKEYS IN WINTER

FREQUENTLY we hear the question, "How can I house my turkeys in winter?"

In answering this question there are several important things involved:

1. The natural characteristics of the turkey.
2. Other poultry on the farm.
3. Sanitation and disease prevention.

The turkey is not fully domesticated as yet and still holds many of its natural wild characteristics which must be considered. Turkeys have not been raised in confinement except at the expense of vitality and size. They are seclusive and stealthy. They have the power to withstand much cold if dry, clean and healthy, with plenty of fresh air.

Turkeys should not be housed with other poultry; one or the other will suffer, perhaps both. Difference in characteristics, habits, feed, sanitation and disease tendencies are the difficulties. These can all be overcome in one plan.

If turkeys are worth raising, and we know they are when farmers can sell from $400.00 to $1,800.00 worth in a single season, they are worth raising right. A shed closed tight on the north, west and east sides and the south side left open except for a 1-inch wire neting to keep the turkeys in and other birds out is a convenient shelter for turkeys in winter. On the inside it is well to have curtains of muslin or burlap so arranged as to be lowered in extreme weather.

It will be well to have the shed arranged with the low side to the south and with the door preferably at the east end. This plan gives plenty of shelter, will be dry, should be kept clean and sanitary, and will provide plenty of fresh air.

In summer it can be used, if desired for developing growing chicks or even for a summer laying or breeding house.—Dakota Farmer.

The per catia consumption of eggs in the United States, according to the Department of Agriculture, is half an egg each day.

FRUIT and ORCHARD

EDITED BY FRANK D. WELLS

NOTES AND COMMENTS

There is always a call for the old varieties of apples. The Rhode Island Greening is always in demand, so is the Spy. The highly colored Jonathan and King David may catch the eye and go for fancy fruit, but they do not take the place of the kinds that grew in the orchard on the old homestead.

There are never too many apples, but they are never all in the right place. They may not be worth gathering in one place, while in another they are scarcely to be had at all. Auto trucks and good roads are doing much to relieve this condition, but it is only a beginning. The parcel post is helping. But the flying machine will come to the rescue.

* * *

Unsprayed trees are object lessons this year. Their wormy, scabby fruit is in marked contrast to that of orchards which have received proper care. It becomes more evident with every year that it is "spray or surrender."

* * *

One tree in a peach orchard was not sprayed for leaf curl last spring. The leaves soon dropped. The tree was full of blossoms, but did not mature a peach. The sprayed trees kept their foliage and in September were loaded down with fruit. The moral is easly seen.

* * *

The huckleberry looks well for the future, so does the elderberry. In a few years they should have an established place among the cultivated fruits. Now won't somebody take the wild blackberry in hand and give us something with a flavor? This is a question that hundreds of consumers are asking.

* * *

If the raspberries are infected with anthranose, the young canes should be sprayed at least twice during the summer. When they have grown about a foot, spray them with Bordeaux. This should keep the disease in check, unless the canes are badly infected. The disease kills the bark in spots, the result being that the canes are weak and the fruit undersized, perheps ripening prematurely, or drying up. Canes badly affected should not be used for propagation.

* * *

There are several diseases new to Michigan which have recently been brought to the injury of the cane fruit. They should receive attention, as they are a menace to raspberry culture. The fruit has not been plentiful for severl years, and there is anxiety lest it become still more scarce. If your canes look diseased, write at once describing the conditions, to the State Orchard Inspector, Department of Agriculture, Lansing, Michigan. If the diseases are to be checked it is the utmost with the government officials.

COLLECTION BOX

PROMPT SETTLEMENT

I received a letter from — just the day before I received your card stating that they would accept the machine for refund less expressage, which is satisfactory of course, and the machine is now packed and ready for shipment tomorrow morning. As soon as I receive settlement I will let you know and I want you to see the letter they sent me. I can't thank you enough for your kindness in this matter and I am very truly yours, Mae E. Johnson, Kent Co., Mich.

SOON GOT GOODS

I received a card asking if I had come to a settlement with the — Store Co., claim No. 955. It did not take long after the Business Farmer took hold of the matter before I received the goods. I wish to thank you for the aid you gave me. My only regret is that I did not write before.—A. S. W., Tawas City, Mich.

The bin in which potatoes are to be stored should be clean. It should be thoroughly swept and if there has been trouble with rot in it before, it is best to disinfect it.

FUR DEPARTMENT

Edited by A. R. HARDING, America's Foremost Author and Trapper

QUESTIONS INVITED

(Continued from Nov. 11th issue)

HARVESTING THE FUR CROP

THE skunk, as a rule, is a very stupid animal, and traps set without any covering have been known to make a catch. Traps, however, had best be covered for there is no telling what animal may come along and if the trap is properly set and covered a catch is apt to be made. Foxes, mink, coon and other animals have been caught in skunk sets, so it pays to make all sets carefully. Where there is fur bearers, larger than skunk, it is well to use a trap large enough to hold whatever happens to step on the treaddle.

Den sets should be made just far enough in so that dogs will not get caught, and also out of the way of stock, if near residence. Remove enough earth, so that when the trap is carefully covered, will be level with the balance of the surroundings. Place fastening back as far as length of chain will permit. Extension chains, about 27 inches long, and selling at about $1.50 a dozen are now made. Trappers should carry a few to use when regular chain is not of sufficient length. This is done so that when a catch is made it is not apt to get into the den, but will nine times out of ten, pull the fastening away from the den—just as the trapper figured.

If the mouth of the den and immediate surroundings has leaves, cover trap and chain with leaves; if grass use grass. In other words cover with same material so as not to arouse the suspicion of the animal. One of the secrets of trapping is to make a set and leave everything apparently as it was before. Do not get covering to heavy—just enough to conceal the trap. If end, or long-spring style of trap is used, turn the spring to one side so that the animal will not step on spring.

Dens that show hair and dropping signs, are as a rule, splendid places to set. Such signs are more apt to be seen at the beginning of the trapping season than later. If the game is still living there and the nights are favorable for its moving, the chances are good for a catch.

In setting traps as well as looking at them after the set is made, care should be taken and as little sign made as possible. If there is much disturbance, such as ground tracked up, leaves moved, entrance to den partly blocked, etc., the game may become suspicious. If mouth of den is too large it may be lessenend by pushing a stick or two into the earth just beyond the trap. These sets are largely for land animals.

Fox, wolf and wildcat do not frequent dens except when the young are born and are being raised, so that few are trapped at dens when the fur is prime. This is especially true of fox and wolf; wildcat frequent dens somewhat more. These animals are sometimes caught at the carcasses of animals and fowls while others are decoyed to sets or caught at blind sets, which means setting traps in their trails, without bait. Such sets must be carefully placed and skillfully covered.

The "cubby set" is much used throughout Michigan, especially the Northern half of the Lower Peninsula and all of the Upper Peninsula, The "cubby" is made in various ways and sizes. For Mink it is often made by driving stakes close together forming a circle about 18 inches in diameter, with an opening next the water of a few inches, where trap is set. Bait is placed in center and may be rabbit, fowl or any fresh piece of flesh.

Many trappers make or build "cubbies" out of rock and chunks and for mink the size is about fifteen inches deep and six or eight wide with end towards the water open and where trap is set. This type cubby is covered and is not apt to be molested by birds. Fish are also used for bait.

A very good mink set can be made along a small stream where mink are using by driving stakes close together, leaving an opening of a few inches, where trap is placed. Other likely places are under bridges, old roots and overhanging banks. Where the bank is steep with only a few inches between the bank and water, is another good place, especially if there are tracks. If the passage is too wide, a rock, chunk or stakes (old sticks) so driven as to guide the game into the trap adds to the sureness of a catch.

Mink, especially the males, are great wanderers, often traveling several miles in a night. In fact they are on the go from dark to dawn often, and when daylight overtakes them they will hole up for the day. A mink, however, is not apt to go more than a mile or two from where born and raised other than at mating season when they go much farther. Mink seek the outlet of tile ditches and where such empty into streams is an ideal place. Set in about two inches of water. The trap should be covered but if the running water is so swift that this is impossible make the set anyway. A stone is placed a few inches from mouth of the tile will sometimes check swiftness of water so that coverng will stay on.

Dens along the banks of streams ponds and lakes are always good places to set for mink. Muskrat dens and other holes near the water are generally explored by wandering mink and traps set at dens that are evidently not much used, often result in catches. The nature of the mink is to explore all dens. Some trappers, before trapping season, dig dens at the edge of the water, where traps are set when fur primes up. These artificial dens are about 18 inches deep.

Old drift piles along streams are good places to catch mink for they wander and hunt over such pretty thoroughly. Bait here can be used to advantage by placing in a pen or "cubby" as already described. Still another good set can be made by placing two logs about six inches apart and another on top. These should be either near the water or by some drift pile. A trap set at either end may fool some passing mink.

Some years ago when making the rounds with a trapper up in Iron county. I recall that he had a mink at either end of such a set. The two traps were over six feet apart and about the middle the trapper had fastened a bait of fish. Both mink were dead and drowned. The traps had not been looked at for three days. I think the catch was six mink that day and four the following. This trapper had out some forty traps for mink covering a line of more than twenty miles. His catch was about forty mink every season at that time.

Perhaps something more about the mink in the Upper Peninsula will be of interest. I have written to the locality where I was with the old trapper some ten years ago and find that there are far fewer mink there now than then and trappers more plentiful. These mink were not large compared with the Central Ohio mink, they would not be more than medium size, but owing to their dark color and fine fur, they are worth somewhat more than Ohio mink. Few mink of Northern Michigan weigh as much as 3 pounds while Ohio, Indiana, or Illinois weigh 3 1-3 to as much as four pounds.

Michigan long has been one of the good muskrat states but during the past few years, since this fur has become so high, they have been much reduced in numbers in all parts of the state. Dealers and buyers classify this article as spring, winter, fall and kitts. Spring are those caught say from about February 10 to April; winter, December and January; fall, November; kitts are young muskrat—less than half the size of grown.

(Continued in Dec. 9th issue.)

"There never was a time when there was more need, more necessity for those who can teach people by the voice of the word and through the journals of our country than the present."—Vice President Calvin Coolidge.

FREE to trappers

HERE'S something for YOU Mr. Trapper and Fur Shipper—something very important to YOU. Raw fur prices are high this season, so get all the furs you can, BUT to get the most money for your furs, you must be accurately posted on market conditions and market prices. Make this your biggest season by reading "The Shubert Shipper" regularly. It costs you nothing—it's FREE—and it will make money for you. It's the greatest publication of its kind in the world. It quotes highest authentic market prices and contains market information that you cannot afford to be without.

Write SHUBERT Today

"The Shubert Shipper" will put you in position to sell your furs at the highest prices at all times—you will always know just what prices your furs should command. Isn't such information worth money to you? The market reports published in "The Shubert Shipper" are always based on true facts concerning conditions existing in all the fur markets of the world. It also contains pictures of fur-bearing animals in beautiful colors. Just sign and mail the coupon below and a copy will come to you by next mail. You need it. Don't be without it.

MARKET FLASHES

TRADE AND MARKET REVIEW

THOSE who expected the election of several Democratic Senators to disturb the even trend of business improvement are doomed to disappointment. In the days of yore Big Business was supposed to be the protecting arms of the Republican party and whenever anything happened to its darling, it flew into a terrible rage, and raised havoc with things in general. But those days have gone, and in their stead has come a more intelligent citizenry and a more intelligent partisanship which seems some good in people and things of a Different political complexion. A change in the political garments of the administration no longer gives business a headache or a fever.

Despite the fact that winter is just outside the door and many coal bins are empty, the nation at large is in a pretty healthy and cheerful condition. Many of them are in bad shape but not as bad as they have been at other times. Dire predictions are made as to what will happen to agriculture unless relief comes soon. Pres. Howard of A. F. B. F. declares farmers are headed straight for the abyss of bankruptcy and the only thing that can save them are more credits. Potato growers are suffering the worst of all because of the general demoralization of their market.

The general trend of commodity prices is upwards. This is true of nearly all farm products with the exception of potatoes. Shoes, clothing and farm utensils show an inclination to advance. Indeed, some goods are higher now than 30 days ago. It begins to appear that the prices of farm products and other commodities will never reach that happy pre-war balance which Prof. Friday was promising us some time ago.

WHEAT

Developments in the wheat market the past fortnight prove our statement of two weeks ago that the bull movement in wheat was not over. As a matter of fact, some people are beginning to wonder if it will be over until another crop is harvested. For the trend is slowly, but surely upward, and nothing seems to stem it. Export business is good, milling demand is brisk, and the speculators are eager to buy. With such a condition prevailing, how can there be lower prices? Every effort of the bears to check the advance has met with failure. We no longer dare to question the accuracy of Mr. Foster's prediction that we would see $1.50 wheat by January 1st, for it surely looks that way.

Prices

Detroit—No. 2 red, $1.36; No. 2 white and No. 2 mixed, $1.34.

Chicago—No. 2 hard, $1.22@ $1.22 7-8; No. 2 red, $1.30 1-2.

Prices one year ago—Detroit, No. 2 red, $1.25; No. 2 white $1.22.

CORN

Corn markets with the exception of Chicago are firm and active although prices in most cases are no higher than they were a week ago. A great deal of feeding is being done throughout the west and the greater part of the grain is rapidly going into consumption. During the past week buyers on the markets have been plentiful with prices at present levels but as soon as there was any movement of prices upward the purchasers disappeared. Receipts are moderate and dealers expect them to be smaller this week owing to unsettled weather. Shipping demand is reported slow.

Prices

Detroit—No. 2 yellow, 79c; No. 3 yellow, 78c; No. 4 yellow 77c; No. 5 yellow 75c.

Chicago—No. 2 mixed 73 1-4@ 73 1-2.

Prices one year ago—Detroit, No. 3 yellow 53c; No. 4 yellow 51c.

MARKET SUMMARY

All grains active after recent advances. Wheat reaches top price of season. Beans firm. Eggs in demand. Poultry higher and active for holiday trade. Hay wanted at better prices. Cattle steady. Hogs weak and lower in some cases. Sheep strong to higher. Provisions higher in sympathy with grains. Market outlook encouraging for farmer.

(Note: The above summarized information was received **AFTER** the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press —Editor.)

OATS

Oats are taking the course we have confidently expected they would in sympathy with wheat. New high points for the season were recorded last week for December and May delivery. Receipts were larger last week at nearly all points.

Prices

Detroit—No. 2 white 49 1-2c; No. 3 white 48c; No. 4 white 46 1-2c.

Chicago—No. 1 white 45 3-4c; No. 2 white 45 1-2 @ 46 1-2c.

Prices one year ago—Detroit, No. 2 white 39c; No. 3 white 36c; No. 4 white 31 1-2c.

RYE

Rye is in big demand for export and advances in price were noted on all markets last week. It looks like we are going to have another opportunity to say, "We told you so." We stated last week we were bullish on rye and expected to see the price go to $1.25 within the next three months. Chicago dealers are all of the opinion that rye will reach $1 in the near future. There is nothing to prevent it from going higher and much that would cause it to. Germany is one of the leading buyers of rye in the market at present and is taking large quantities because of the financial saving compared with wheat. It is freely predicted that the entire surplus of rye will soon be disposed of. Gains in price at Detroit last week amounted to 4c.

Prices

Detroit—Cash No. 2, 93c.

Chicago—Cash No. 2, 92 @ 92½c.

Prices one year ago—Detroit, No. 2, 84c.

POTATOES

We want to weep when we write of the potato market. We wish there were something we could say to comfort the farmers whose soul livlihood is wrapped up in his potato crop. Many have written and asked for a personal opinion on the market, which we cannot give. It looks to us as though potatoes cannot go lower, but it looked the same way thirty days ago when they were 10 to 20 cents higher than they are now. There are two important factors which the potato grower should remember. One of them is, that an enormous amount of potatoes have been taken to market. Farmers who sell at retail to nearby cities have been particularly anxious to get rid of their holdings. Likewise a great number of potatoes have been wasted. Hundreds of thousands of bushels have not been dug. What effect this waste will have on the final reckoning we do not know, but they lend strength to the hope that higher prices may develop before the coming of spring. Those who can afford to hold their crop are holding; most of the others have sold. If a reaction does not develop by midwinter it will be a very strange thing.

Prices

Detroit—$1.05 per cwt.

Prices one year ago—Detroit, $1.-

Chicago—80c @ 95c per cwt.

BEANS

According to the propaganda of the sugar manufacturers the farmers up in the Thumb are cussing themselves for planting more beans this year than sugar beets, for, according to the story, sugar beets are proving a more profitable crop than beans this year. We'd like to hear from some of our bean growers on that subject. The story sounds very fishy. Beans are a better buy today at $6 a cwt., than sugar at $7. The chances are ten to one that beans will go at least 25 per cent higher before another crop, but if sugar advances in any such proportions as that it will be long after the factories have settled with the farmers.

Prices

Detroit, C. H. P., $6.75 per cwt.

Prices one year ago—Detroit, C. H. P. $4.30

HAY

Hay markets are quite firm although some declines in prices took place last week due to heavy receipts and lack of demand. Owing to bad condition of roads country loadings have been restricted at many points and as a result several markets have barely had sufficient hay to take care of the demand. Such a condition existed at Chicago and prices advanced the latter part of the week.

Prices

Detroit—No. 1 Timothy $17 @ $17.50; light standard $16.50; light mixed $16.50 @ $17.

Chicago—No. 1 Timothy $22 @ $24; No. 1 light clover mixed $21 @ $22; No. 1 clover mixed $19 @ $21.

Prices one year ago—Detroit, standard timothy $18 @ $19.

WEEKLY MARKETGRAM

U. S. Bureau Agricultural Economics

Washington, D. C., for the week ending November 18, 1922.

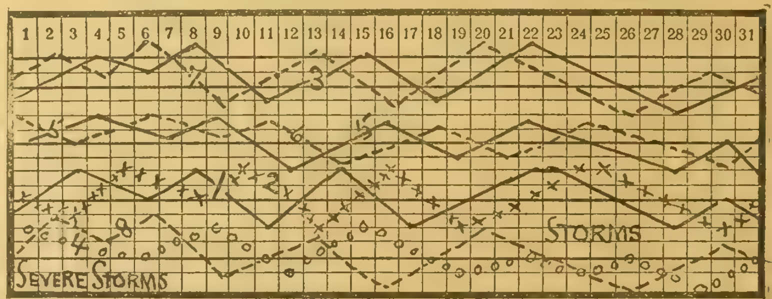
Live Stock and Meats—Compared with a week ago, Chicago hog prices ranged from 20-50 cents lower. Strictly good to prime beef steers steady to strong, others unevenly 25 to 50 cents lower; Better grades beef cows and heifers, stockers and feeders in between grades beef cows and lower grades butcher heifers mostly 25 cents lower; Bulls 10 to 15 cents higher; Veal calves largely $1 lower. Fat Lambs steady to shade lower; Yearlings and feeding lambs steady, sheep strong to, 50 cents higher. On Nov. 18, Chicago hog prices were 5 cents to 10 cents lower than Fridays average. Cattle, sheep and lambs practically unchanged. Nov. 18 Chicago prices: Hogs, top, $8.20. Bulk of sales $7.80-$8.10; Medium and good beef steers $6.90-$11.75; Butcher cows and heifers $3.40-$10.50; Feeder steers $5.25-$5.75; Light and medium weight veal calves $8-$9.75; Fat lambs $13-$14.75; Feeding lambs $12.25-$14.25; Yearlngs $9.75-$13.25; Fat ewes $5.50-$8. Stocker and feeder shipments from 12 important markets during the week ending Nov. 10 were: Cattle and calves 154,735, hogs 12,921; Sheep 173,401. In eastern wholesale fresh meat markets beef was steady with prices of a week ago, veal and mutton firm to $1 higher and lambs $1-$3 higher. Pork loins weak to $1 lower. Nov. 18 prices good grade meats: Beef $14-$18; Veal $13-$16; Lamb $23-$28; Mutton $12-$16; Light pork loins $17-$20, Heavy loins $15-$19.

Dairy Products—Butter markets however ruled steady to firm during the week with prices practically unchanged except at Chicago where

THE WEATHER FOR NEXT WEEK

As forecasted by W. T. Foster for The Michigan Business Farmer

FOSTER'S WEATHER CHART FOR DEC 1922



Straight, heavy, horizontal lines represent normal temperatures, which is the average of same days of the year for forty years. Crooked lines above normal lines mean warmer; below, cooler; that marked 1 is for section 1, north of latitude 47, between meridian 90 and Rockies crest—2 for section 2 on my section map is for east of meridian 90, north of latitude 47—3, between latitudes 39 and 47 and between meridian 90 and Rockies crest—4, east of meridian 90, between latitudes 39 and 47—5, south of latitude 39, between meridian 90 and Rockies crest—6, east of meridian 90, south of latitude 39—7, north of latitude 43½, west of Rockies crest—8, south of latitude 43½ to Mexican line and west of Rockies crest.

Washington, Nov. 24, 1922—One of the greatest storm periods within a year will occur during the week centering on Christmas day. In that great storm all the radical causes—and then some—that terminated in that destructive tornado in the middle southwest Nov. 4, will be combined in the besom of destruction that will sweep the country during the holidays. The principal cause centers on Christmas day, but as there will be five causes from December 23 to 26 the exact date and place where and when the great storm will break cannot be determined. The great destroyers are of the same nature as a thunder storm, with clouds rushing toward a center armed with their thunder bolts. Neither can the kind of storm now be determined; much depends on where it strikes. It may be a blizzard or a flood, a tornado or a hurricane. The season suggests a great winter storm, with the piercing arrows of the blizzard in one section and the balmy days of an autumnal Indian summer in another. But prepare for great weather extremes during the Christmas holidays.

Michigan—Most severe storms and most precipitation near Nov. 29; normal precipitation. Highest temperatures Dec. 1-9; lowest 5.

All indictions are that first week of December will be unusually warm with more than usual rain, followed by very bad, cold, stormy weather, inclined toward blizzards. There are so many great magnets, planets, concerned in that great storm period that I will not be able to get the exact dates. Better get your outdoor affairs arranged before end of November, although you may get some good weather first few days of December. When that great storm breaks you will need some shelter. Some good weather is expected between this great storm period and the bad storms of the Christmas holidays.

Michigan State Farm Bureau

Produce Exchange

"The only produce commission house in Detroit owned and controlled by farmers."

Works for interest of the producer at all times.

Well-trained, experienced salesmen in all departments.

Products Handled

We are handling to advantage, poultry, eggs, apples and other fruits, potatoes, celery, onions, carrots, cabbage, rutabagas, purple top turnips and other vegetables.

Increase Net Returns

By shipping to us through your local Co-op. in carload lots. Carload shipments save you extra charges that go transportation companies on less than carlot shipments. They also enable us to divert when other markets would net more than Detroit's.

We Need Poultry to Supply our Holiday Trade

To get highest available Detroit prices see your local Farm Bureau or Co-op. Manager for particulars on how to make shipments of Chickens, Turkeys, Geese, Ducks, and dressed Veals, Hogs and Eggs.

Sales and returns usually made within 24 hours, thus avoiding shrinkage.

Farm Bureau Produce Exchange

2729-2731 Russell St.,
Detroit, Mich.

Phone Cadillac 2270

Producers who are unable to ship through a Co-op should write us for information on how this service may be obtained.

under a shortage advances amounting to about 2 cents have occurred. Both fresh and storage butter moving freely. Closing prices, 92 score butter: New York 50c; Phila. 51c; Boston 49c; Chicago 50 1-2c. Cheese prices were unsettled during the week with demand slightly improved and a slight gain in prices on some styles. There is more demand for held cheese; Production of fresh cheese decreasing. Cheese prices at Wisconsin primary markets Nov 17: Flats 24 1-2c; Twins 24 1-4c; Daisies and Longhorns 24 1-2c; Square prints 25 1-4c.

MISCELLANEOUS MARKET QUOTATIONS

Detroit, Monday, November 20th.

EGGS—Fresh, current receipts, 40@45c; fresh, candled and graded, 45c@52c; refrigerator firsts, 26@28c per dozen.

HONEY—Comb, 23@25c per lb.

CELERY—Michigan 20@30c per doz; square, $1@$1.25

DRESSED HOGS—90 to 100 lbs., 13c.; 130 to 160 lbs., 11@12c.

CHESTNUTS—33@35c.

CABBAGE—Home grown $12@$16 per ton.

POP CORN—4 1-2@5c; Little Buster, 7 1-2@8c per lb.

ONIONS—$1.65@$1.75 per sack of 100 lbs; Spanish $.215@$2.65 per crate.

DRESSED CALVES—Choice, 14@16c; medium, 12@14c; large coarse, 7@12 per lb.

LIVE POULTRY—Best spring, 22@23c; medium, 19@20c; leghorns, 14@17c; large fat hens, 23@24c; medium hens, 20@22c; small hens, 14c; old roosters, 15c; geese, 22@23c; large ducks 22@24c; small ducks, 18@21c; turkeys, 38@40c per lb.

WOOL—Delaine unwashed, 54@55c; fine unwashed, 48@49c; ½ blood unwashed, 51@52c; 3-8 blood unwashed, 51@52c; 1-4 blood unwashed, 50c.

Chicago

APPLES—Dealers report a fairly active demand for sound and large apples. The unfavorable weather curtailed the movement but, in spite of this, prices were maintained. Heavy supplies were offered of all varieties. Dealers feel that, at present prices, an enormous consumptive demand should develop. They are realizing that the supplies of really high grade apples are not as abundant as was formerly thought. Well posted apple men here feel that, when good, brisk apple-eating weather arrives, an enormous consumptive demand will develop, due to the apple advertising.

Extra fancy Jonathans sold $2.25; Winter Bananas, $2@$2.25; Rome Beauties, $2.25; Delicious, $3@3.25; Wageners, $1; fancy of all varieties, 25c lower; C grade stock, 50@75c lower. In bbls.: Jonathans, @$6; Greenings, $5; Northern Spices, $5@6; Grimes Golden, $5; Kings, $4.50; Michigan 20 oz., $4.50@4.75; Baldwins, $4.25@4.50; orchard run, $1@2 lower. In bulk: Greenings, $1.25@1.50; Ben Davis, $1@1.25; Baldwins, $1.50; hand picked Jonathans, $2.50.

CELERY—Improved demand was noted owing to the approach of Thanksgiving. Better grades were wanted. Kalamazoo, $1; Kalamazoo flats, 50@60c.

CABBAGE—Just fair demand for medium sized heads. Colo., $1.50; fancy, 85c; large crates, $1; fancy home-grown, 50@60c.

ONIONS—Just fair demand. Supplies were plentiful. Indiana yellow, $1.50@1.75; white, $3; Utah yellow, $1.25@1.50; Spanish, $4@4.50; half cases, $2.25@2.50.

WOOL

Duller trade, but steady to firm prices, mark the wool trade in the midwest at present. Stock of native wools are virtually exhausted, so that holders are less inclined to sell and movement is not large. With dwindling stocks, the price tendency is upward, but relatively few sales are reported, on account of the low stocks on hand. On account of small volume of sales, many of the quotations are more or less nominal, but dealers are of the opinion that if they had the wool to sell they could get these or even better prices.

ITALY BUYS GRAIN FROM U. S.

IN reply to questions regarding the use of corn in Italy, the American Consul General at Genoa answers as follows: "In so far as known to the American Consul General at Genoa nothing is being done in Italy by the United States Government or by private agencies to popularize or increase the use of American corn either as a food product for people or grain supply for stock. Since the beginning of the year 1922 the importation of grain has been free from any Government control and at the present time there are no taxes on imported grain so that the prices of the home product and the imported product are very nearly the same. The largest amount of grain imported into Italy originates in the United States."

AMERICAN CORN TO GERMANY

OF the 16,000,00 bushels of corn imported into Germany (January-August), nearly 14,000,000 bushels or 85 per cent had its origin in the United States. During the same time Germany imported 16,500,000 bushels of wheat, 38 per cent of which came from the United States and 50 per cent from Argentina according to a report received from Assistant Trade Commissioner, D. L. Breed, October 7, 1922.

Do Not Miss The Aricultural and Business Survey---A New Feature

FREE

A Yearly Subscription to the Detroit Times—America's Fastest Growing Newspaper

THRU A

SPECIAL CLUB OFFER

Made to R. F. D. Residents of Michigan by the

DETROIT TIMES

The regular Rural subscription rate is $4.00 a year---but for the next (30) thirty days The Detroit Times will accept yearly Special Club Subscriptions at the Bargain Price of $3.00

THE TIMES Policy is fearless and independent truth-telling

Its purpose is to tell ALL the news, and to give MORE AND BETTER features than any other Michigan newspaper.

THE TIMES is the ONLY paper in Detroit carrying the dispatches of COSMOPOLITAN NEWS SERVICE—which includes the most complete financial and business record of each day, and the ONLY paper in Detroit carrying the B. C. FORBES column—an interpretation of the changing aspects of business and commerce.

THE TIMES is the ONLY paper in Detroit carrying TWO PAGES OF COMICS every day in the week! The "million dollar comic page" of THE TIMES was famous all over Michigan. Now this daily carload of fun has been DOUBLED in volume.

THE TIMES cannot be compared with for its interesting and entertaining presentation of the day's news—Circulation now in excess of 160,000 daily and still growing.

SPORTS—It has become firmly established in the minds of sport followers that THE TIMES is in truth "the sporting authority of Michigan." Two pages every day with up-to-the-minute sport news, pictures and cartoons.

MAGAZINE PAGES—The other day a SECOND magazine page was added to THE TIMES. Here are to be found the delicately beautiful Nell Brinkley drawings, the world's greatest fiction, the Beatrice Fairfax articles, and a wealth of features that appeal particularly to women readers.

"TODAY"—Mr Brisbane's daily column of comment on world events—easily the most interesting printed feature in the world today! If you don't "read Brisbane" every day you are missing the richest opportunity for information and entertainment ever offered—compared by famous thinkers in value to a college education.

PICTURES—The world is combed to get pictures for THE TIMES. Nowhere else will you find such a lavish use of photographs to illustrate what is new and interesting in modern life.

Above all else, THE DETROIT TIMES is an independent newspaper, bound by no partisan political obligations, dedicated to the protection of the people's rights, and earnestly striving to record accurately the happenings of each day, and to interpret them honestly FOR YOU.

A Special Club Offer has been arranged thru which any R. F. D. resident in Michigan may secure a year's subscription to the Detroit Times FREE.

Simpty take yearly subscriptions at the reduced rate of $3.00 from three (3) friends or neighbors---this club of three (3) together with $9.00 in cash entitles you to year's subscription without cost.

Think it over carefully, this is the equivalent of

4 Yearly Subscriptions on a total payment of **$9.00**

Why not take advantage of this unprecedented offer---secure your club of 3 subscribers now---then fill in the blank on back of enclosed letter and mail it together with $9.00 to The Detroit Times.

Most News---Best Features---Less Cost

THE DETROIT TIMES, DETROIT, MICH.

DON'T FORGET This Special Club Offer is open to R. F. D. Residents Only and positively expires JANUARY 10th, 1923

Will Gasoline Tax Solve the Highway Problem?

Horatio S. Earle, "Good-Roads" Earle, the Pioneer Fighter for Improved Highways in Michigan says, "A One Mill Tax on Property is More Equitable"

> **"My pocket book says put 10 cents a gallon tax on gasoline: but my sense of justice says put a one mill tax on my property to maintain the highway budget."—Horatio S. Earle.**

HOW shall we maintain the highway budget? By a one mill tax on all property of the State of Michigan. Then the Highway Department will not have to go to every session of the Legislature and beg for money. We take care of the University of Michigan in that way to educate the rich; and then you propose to exempt the rich from paying taxes on their property to build and repair the roads that make it easy to get to church, school, library, and last, but not least, to your neighbor's sitting room and dinner table.

If there be those who do not want to pay taxes on their property then let them sell or give it away.

Every specific tax is a robbery; it exempts some from paying their share of the cost of running the state, and it robs others to do it for them. The corporation tax robs the small corporation, and to that extent exempts the large corporation. If Henry Ford paid the same rate of corporation tax that the small corporation does, he would pay ten times as much as he now has to pay, so the Legislature that enacted that law was working for Henry Ford, but was not on his payroll.

Toll roads again proposed, instead of collecting at the toll gate, collect at the gasoline tank; going back to pioneer times. One man centuries ago won fame for himself by leading the Israelites out of the wilderness; now we have a plan to lead us back into the toll road woods. There is not one iota of justice in a gasoline tax, for instance: take the man who works for Henry Ford and who will use one gallon a day; he will pay one cent tax, while Henry Ford who will possibly use five gallons per day and pay five cents tax. Yet Henry Ford is worth one million times as much as the man who pays one-fifth as much taxes to maintain the highway budget as does Henry Ford. This is nothing less than class legislation, taxing the poor and exempting the rich.

A gasoline tax collecting department will have to be instituted where scores of poltical proteges, who are not wanted at home will secure positions at the expense of the poor who have to pay them greater salaries than the poor get for their services. I cannot blame those who are working for the gasoline tax, for they know that it will relieve some manufacturers of Michigan and place the burden which they should be willing to share onto the automobile industry. I say this burden would be placed on the industry, because whatever hurts your customer in the end hurts the producer.

I do not say this for my own personal benefit, for I own sufficient property in the State, so that it would be much to the benefit of my own pocketbook to place a tax of ten cents per gallon on gasoline and so reduce the taxes which I have to pay, and which I am willing to pay on my own property. But you say the poor farmer is the one whom we are trying to relieve; that is your excuse, but not the real reason, and you know it. I am a farmer and I own five times as much farm land as does the average farmer, and I pay fifty times as much taxes as the average farmer pays, yet I protest against robbing the poor to relieve me of my just share of the expense of running the State, and I consider the roads as second only to the schools of the State. I do not favor relieving me of my share of the taxes and make the men pay them who work for me. I'll pay my own.

Ninety per cent of the automobiles of the City of Detroit do ninety per cent of their running on Detroit pavements, toward the building and repairing of which the State does not contribute one dollar; yet you propose to tax them for wearing out the roads.

Seventy-five per cent of the truck hauling of the state is done over city pavements; yet you propose to tax them for wearing out the roads. Who is making the most money on the load that is being hauled by the truck, the truckman, or the producer and the consumer?

I am always looking for woodchucks in the affairs of Government, and I can see the railroad woodchuck in this proposition, using the farmer as an excuse to make hauling more expensive so that they can get back the short hauling to do, which they never did and never will handle to the satisfaction of the shippers.

They contend that the roads being built by the taxpayers and given to the truckman over which to haul without cost is a hardship for the poor farmers, when they mean themselves; but they never say a word about how that every town through which their railroad runs bonded for enough to build the railroad thru that town; they think that was so long ago that it has been forgotten. But if they can get exhorbitant taxes levied onto the truck industry, created by robber freight rates, and—"the people be damned" policy of Wm. H. Vanderbilt, that their rates will be satisfactory.

One in every three of the adult population of Michigan owns some kind of an automobile, and let me predict that the old saying "the goblins'll get you if you don't watch out" will be changed to read "the automobile will get you if you enact a gasoline tax," and if you do they will elect the next Legislature and the next Governor, and they will repeal the gasoline tax, and place a one mill tax on the statute books of the State which will give to the State Highway Department six million yearly, and which, with the automobile license money, will be sufficient, with the National aid, which we will get to take care of the highway budget without turmoil every two years about it.

"Let well enough alone," is what I think the State better do, put no more taxes onto the automobileists who are already paying five per cent, or double the tax on anything else except booze, and the bootlegger collects that and invests it in real estate and you propose to exempt him from paying back some of the profits he has made. It would be as sensible to tax the school marms for the expense fo running the schools, as to tax the men who work for me, runnng my businesses, and the truck owner is working for me when he is hauling my product to the consumer.

Who is making the most money,—the truck man or me? Exempt the cement manufacturer and tax the truck owner who hauls the cement to the road. Exempt the gravel producer and tax the truck owner who hauls the gravel to the road. Which of these is the best able to pay the taxes to maintain the highway budget?

Remember that the most costly roads to build are those built of concrete (Portland cement concrete, or asphalt concrete)' and the least expensive to repair; also, that one sharp-shod horse going over these kinds of roads does more damage than one thousand automibiles; yet you say we are going to tax the ones that wear out the roads. In reality you are exempting the horse owner and taxing the city's automobiles, the widow's washing machine, the farmer's pumping system, the farmer's tractor, the clothes-cleaning establishments, motor boats, aeroplanes, and hundreds of other things that never touch the roads.

Away! Away with all this foolishness! Place a one-mill tax on all real estate and personal property of the State and maintain the highway budget. I challenge the gasoline tax advocates to go to the legislature and ask them to submit two propositions to the voters at the April election: One—the gasoline tax. The other,—a one-mill tax on all property of the State to maintain the highway budget, and, as goes election, so goes Earle.

Editor's Note—This is not a "private fight," anyone can get in who will furnish facts. This support of improved highways is a big issue and The Business Farmer will continue to print both sides, so that the farmer may decide for himself.

Dr. Friday Sets the Price of Milk at $3 for December

DR DAVID FRIDAY, president of the Michigan Agricultural College, at East Lansing on last Friday handed down his decision as to the price which distributors in the Detroit area should pay the producer for his milk during the month of December and thus raised the price to the consumer one cent per quart.

Under the ruling made by Dr. Friday, producers will receive an increase of 40c a hundred pounds and distributors are authorized to add the increase to the retail price, advancing the retail price from 13 to 14 cents a quart. The producers who have been receiving $2.60 a hundred pounds, demanded $3.20, and Dr. Friday's decision gives them $3, an increase of 40 cents a hundred pounds.

Offered to Give $2.75

When representatives of the producers and distributors gathered in Detroit last Wednesday to agree on the price, the producers said that increased costs made an advance in the wholesale price necessary, and asked that the price be raised to $3.20. The distributors refused to agree to this demand, and offered to pay $2.75, and not raise the price of milk to the consumer.

The producers rejected the increase offered, insisted upon the $3.20 price, and named a committee composed of N. P. Hull, of Lansing, president of the Michigan Milk Producers' Association, and C. E. Gittins, attorney, of Detroit, to meet with the committee of distributors composed of W. J. Kennedy, of the Detroit Creamery Company, and Lee Henry, of the John Schlaff Creamery Company, Detroit, to settle the controversey.

Dr. Friday Chosen

The two committees could not agree, and Dr. Friday was unanimously chosen as arbiter, with authority to fix the price.

Dr. Friday, in reporting his decision, said that all dairy commodities have increased in price, and cited the fact that the retail price of milk recently has been increased to 14 cents a quart in New York, Cleveland and other large cities. A shortage of milk, which always prevails at this season of the year, was given by Dr. Frday as the chief reason for authorizing the increase.

"There is no question but that the farmers are entitled to more money for the milk," Dr. Friday said. "They have it coming. The question is whether the dealers can pay the increase without raising the retail price.

"They claim they can't. There is no way of knowing whether the spread between their price to the farmer and the price to the consumer is too great wthout an investigation of the business and an examination of their books. Pending such an investigation, I favored the increase. It seemed the only way to give the farmer more money.

"There are 46 quarts in each 100 pounds of milk. The increase of 1 cent will yield 46 cents. Of this the farmer will receive 40 cents, and the driver of the milk wagon 6 cents.

Boost is Justified

"Because of the increase in the Detroit demand. and the normal shortage at this time of the year, the boost in price is justified on strictly economic grounds.

"If the spread between the farmtrs' price and that paid by the consumer is too great, then the increased retail price is unfair. The dealers and farmers plan to investigate this, and Prof. King and myself may do the job. Prof. King, a graduate of the University of Michigan, fixed the milk price for Philadelphia.

"If we do it, and we find the price too high, then it will be decreased the first of the year."

Dr. Friday estimates that the boost of 1 cent a quart will mean $90,000 to the farmers for December.

* * *

The Business Farmer believes that Dr. Friday made a manifestly fair decision in view of the fact that the milk price in other cities of equal magnitude has been set at 14c for the month of December. We assume that he means by this that the producers in the New York, Cleveland and other large city areas are receiving $3 per hundred for their milk which costs the consumer 14c a quart, if not, then there would be just cause for dissatisfaction on the part of our milk producers.

"The Truth About Henry Ford"

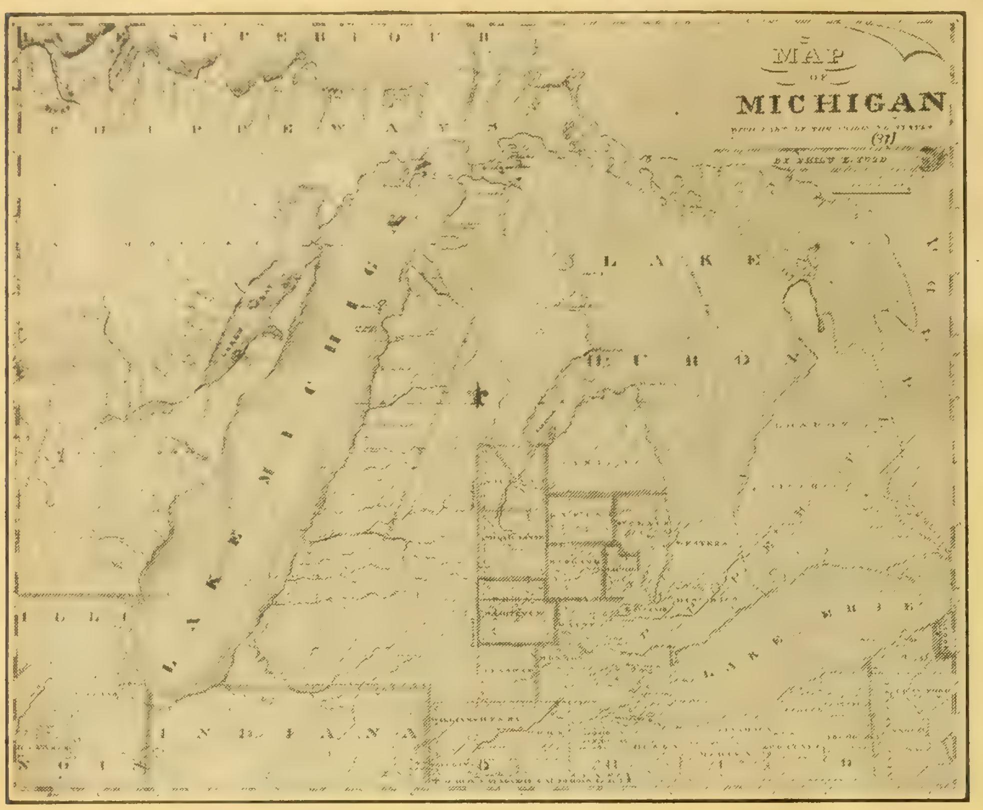
The Complete and Authentic Life History of Michigan's most interesting citizen *begins in our next issue—see page 8.*

Historical Background of Michigan Agriculture

First Publication of a Short, Clean, Historical Outline of Rural Life in Michigan

By PROF. L. A. CHASE

Head of Department of History, Northern State Normal School, Marquette, Michigan.



Reproduction of an old map, of Michigan Territory in 1824, when only the counties of Monroe, Lenawee, Wayne, Washtenaw, Macomb, Oakland, Shiawassee, St. Clair, Lapeer, Saginaw and Sanilac had been surveyed. Note the surveyor's curious conception of the balance of Michigan and Chippeways (the Upper Peninsula.) Photographed at the Michigan State Library, Lansing, especially for the Business Farmer.

MICHIGAN agriculture and rural life began in an environment of forest, lake and stream, of climatic and soil conditions, that have deeply influenced the course of their development from first to last. Much of the southern portion of the state bore a forest cover of hardwoods—beech, maple, elm, oak, hickory, ash and other characteristic trees of this latitude—while to the northward, especially beyond the line of Saginaw Bay and Grand River, was the great pinery of the state, dominating the sandy ridges and occasionally taking possession of areas of clay where, by all rules, the species had no right to be. Still farther north, in the Upper Peninsula, hardwoods and pines alternated and sometimes commingled, even to the Lake Superior shore. The first farmers of the state had the option of taking possession of land on one of the rather numerous small prairies, or "oak openings" which were characteristic features of the South Michigan landscape, due, chiefly, it is believed to the practice among the Indians of periodically burning over considerable tracts to drive out the game. Some settlers, however, were attracted to the areas densely forest-covered, on a theory that, where such a splendid growth of trees had taken place, there the soil must be superior in quality; and after a generation or so, only forested lands were left and must be entered upon and cleared if farms were to replace the forest primeval.

The pioneer fiercely assailed the forest since it stood between him and those products of the soil upon which his existence mainly depended. With axe and flame the warfare was waged year after year, and the forest slowly but surely receded and became only a memory save where the farm woodlot preserved it in miniature for such services as it might render or just for sentiment's sake. The passing of the great forest is not pleasant to think upon, yet the forest had to go if agriculture and a vigorous rural life were to exist in Michigan.

Nevertheless, the pioneer's welfare was closely associated with the forest. The forest yielded building material and fuel. It restrained the fierce blasts of winter. It tempered the heat of summer. It steadied the flow of streams and gave logs and timbers for the construction of mill-dams that would afford power for the operation of grist-mills to grind the farmers grain and saw-mills that turned logs into lumber. Many articles of household use and many implements used on the farm came mainly out of the forest. Short logs, hollowed out, served as sap-buckets and other containers, and longer logs similarly treated made troughs and conduits. two wooden rods joined by a thong made a flail that threashed the farmer's grain, while handles of all sorts were almost ready made on demand. Stools, and tables, beds and whatever furniture the rude conditions of pioneering required, with little fashioning,— were derived from the same source. The farm-house itself, rose log upon log, with floors of puncheons and roofs of shakes, with doors hung on wooden hinges and fastened with a wooden latch, with wooden chimney chinked with clay,—the whole building held together with wooden pegs and pins, without a nail, a bolt or screw or anything else wrought of metal,—the gift of the forest. A little searching in the forest revealed some shape of branch or tree-trunk that, with little improvement, would serve as neck-yoke or whiffle-tree, an "A"-drag or plow-beam, well-pole or sled-runner. A disc cut from the end of a well-rounded log on occasion served as wagon-wheel and the entire log as a land-roller. With some skill, staves for barrels, buckets and kegs, with the hoops that were to bind them together, were wrought at home on winter evenings. The characteristic excellence of each species of tree were known and determined the uses to which each was put. If the forest gave the pioneer farmer of Michigan a battle for existence that the prairie farmer was able to avoid, the forest also rendered many indispensable services, for even the people of the western prairie were glad to import at considerable expense forest products from Michigan, but they lacked the convenience of having a forest close by to draw upon for their necessities.

The forest also provided food in many forms. The sugar maple thrives in all sections of the state—close to Lake Superior and close to the southern boundary and in much of the region between these extremes. The Indians drew largely upon this storehouse of sweetness and the whites were quick to follow their example. In hollow trees colonies of bees laid up great stores of honey, highly appreciated by man and beast alike. Some trees, like tamarack and pines, exuded gums and pitch that were prized for medicinal as well as gustatory qualities. Medicinal herbs of many sorts were procured from the forest. The native fruits were of many kinds: The wild cherry, plum, apple and grape; raspberry, strawberry, huckleberry, cranberry, wintergreen and thimbleberry (properly the "salmon-berry or white-flowered raspberry"), the elderberry; the nuts of the walnut, butternut, beech, hickory and hazel; while the watered areas carried wild rice and mint. Wild animals fit for food, abounded in the forest—even to a greater extent, it is claimed, in the second-growth of the forest than in the forest primeval because of the better cover thereby afforded. The red-deer, the rabbit and squirrel, the partridge, pigeon and wild turkey, water fowl and fish in profusion were available to the frontier settler of Michigan; while his domestic stock got nutriment from the same source. In time of drought the brush was good to browse upon and in winter the tops of felled trees were quite as serviceable. Pigs were fed on the mast of the forest floor, although it is said that they did not always fatten thereon. It used to be said in Lenawee County that these mast-fed pigs were so thin that it became necessary to tie knots in their tails to keep them from slipping out between the rails of the fences. All in all, the forest, vast and lonely, even threatening and appalling as it seemed to be, conferred upon the early farmers of Michigan many favors, if also many days of toil.

Forest Fires of Value

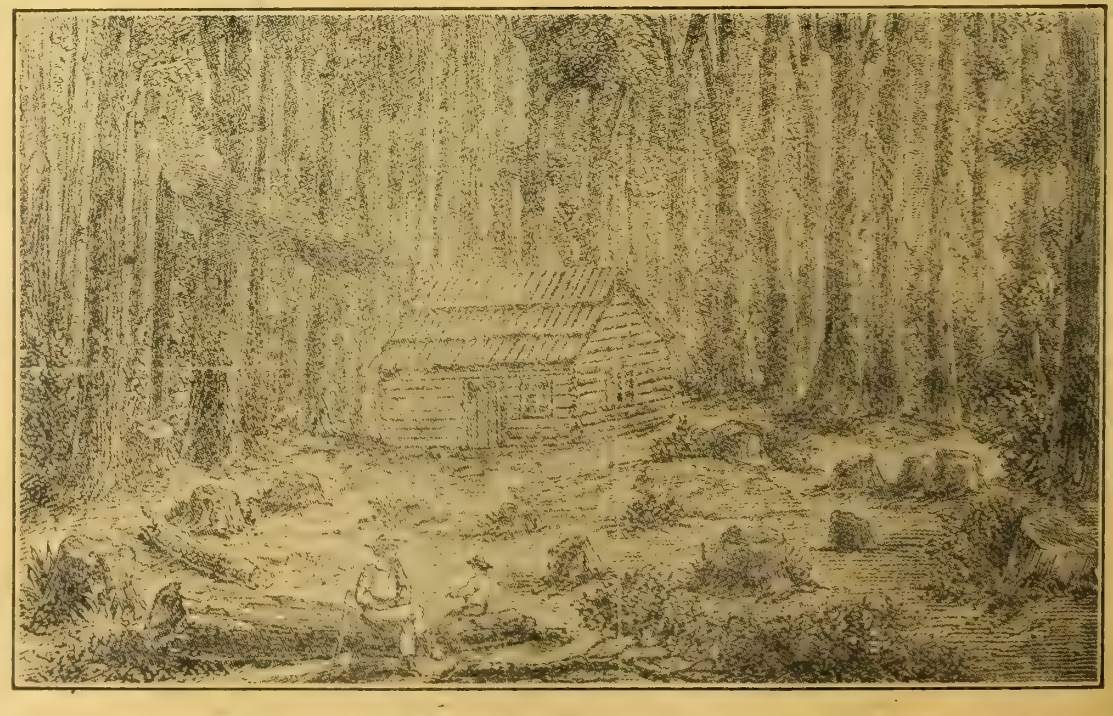
Even in its ashes it bestowed its benefits. They stimulated the productivity of the soil for a time, and they yielded lye and saleratus useful in the manufacture of soap and in cookery. The forest afforded work to part time farmers, needing an immediate money income from employment as a lumberman or from the sale of forest products, and its presence led to the establishment of wood-using factories for the manufacture within the state of agricultural machinery and implements. Between forest and farm in Michigan, there has always been a very intimate relationship. The forest litter deposited on the surface of the land gave humus to the soil, at points otherwise too light and sandy to be favorable to vegetation, and the removal of this litter and humus by fire has been doubtless a potent cause in rendering certain portions of the state unfit for agriculture. The abundant vegetation partly decomposed, collected in the water courses and in the beds of lakes, gave the state those areas of muck and peat lands that have strongly influenced agriculture in particular portions of Michigan.

Natural Waterways

The waterways were also of some importance in early agriculture. There are occassional references to farm products going by river to market in sections where road or railroad transportation was not yet available, and even now there are isolated farming communities along the shores of the Great Lakes, which make use of boats rather than wagon or car for getting their marketable commodities to outside shipping points. In the pioneer period, swamps and marshes often proved formidable obstacles for interior travel and communication, and because of them, we frequently come upon accounts of the manifold trials and tribulations which beset all those whose business would not permit them to remain at home. In distance and in traveling-time mills and markets were usually far away and often the better part of a week was required in making the return journey. Oxen very likely hauled the loads of wheat and flour, of lumber and such human freight as chose to ride under conditions, where to walk or go forward on horseback might be the lesser of the two evils. Streams were for the most part unbridged and fords were worth knowing about.

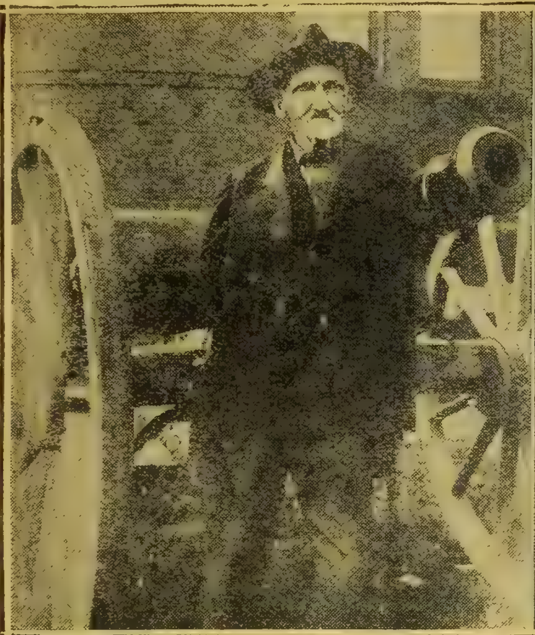
The marshlands begat mosquitoes which were troublesome enough on their own account, but they also

(Continued on page 16)



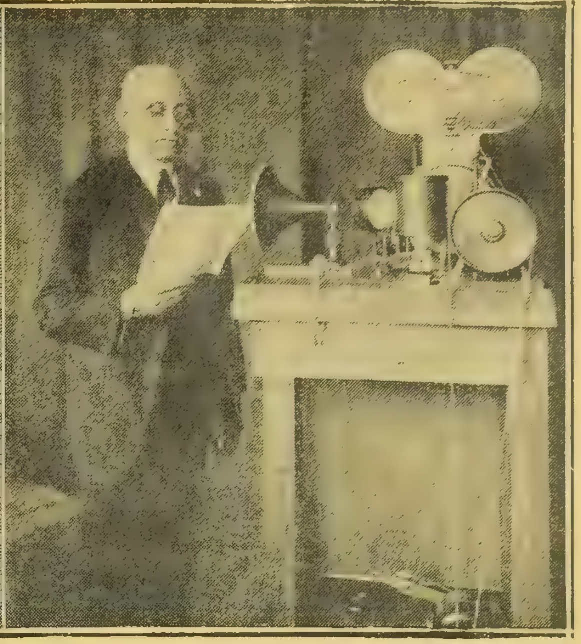
Typical pioneer clearing in heavy timber, 1834. "The farm-house itself, rose log upon log, with floors of puncheons and roofs of shakes, with doors hung on wooden hinges and fastened with a wooden latch, with wooden chimney chinked with clay—the whole building held together with wooden pegs and pins, without a nail, a bolt or screw or anything else wrought of metal,—the gift of the forest." And the house was only a small part of what the pioneer received from the forest.

PICTURES FROM FAR AND NEAR



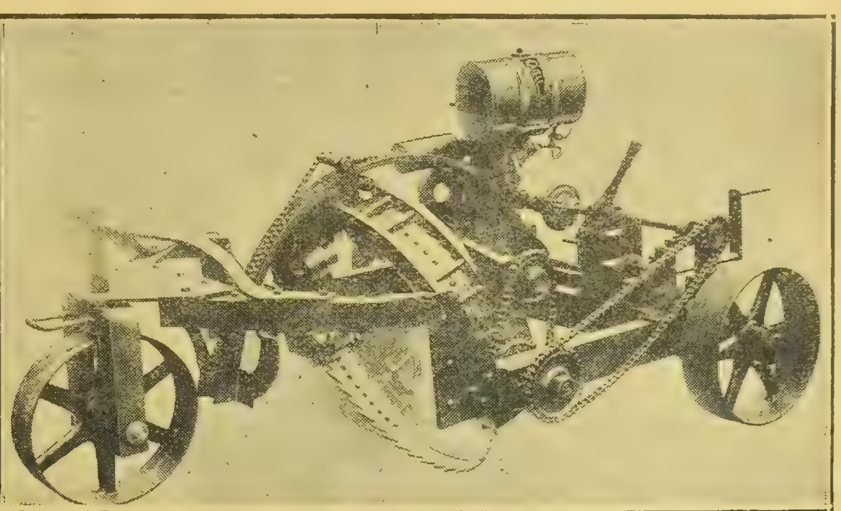
Discovers cannon on which he carved his initials during Civil War. Frederick W. Call of Eastport, Maine, 78 year old Civil veteran, carved his initials on a cannon over 55 years ago. He never expected to see the cannon again but one of the relics of the Rebellion was donated to Eastport and he discovered his initials on it.

The domino lady of Vienna. Every few weeks Vienna offers a new beauty for the world's approval. This time it is Mlle. Anslag who rules society of Vienna with a smile. Mlle. is not only beautiful, her friends declare, but charming and winsome as well. One look at her picture is enough to convince anyone that they are right.



Have your voice photographed. Charles A. Hoxie of the General Electric Co., is shown here with his his new invention with which the human voice can be photographed and reproduced, not as a picture, but as the actual sound of the voice itself. It is known as the Pallo-Photo-Phone and will be used to make talking movies a successful reality.

This lady makes toys from tin cans. Miss Dora Forster of New York City. probably has the world's most curious hobby as well as perhaps the most charming one. A jewelry worker by trade she has applied the skill gained at her delicate work in fashioning queer toys of every imaginable design from clocks to tiny locomotives complete in every particular, out of discarded cans and other receptacles of pliable metal. Her work has been so out of the ordinary that it has caused considerable comment at several large art exhibits. She is making a clock above.



A new idea in plowing. Lytle S. Adams of Webster Groves, Mo., is the inventor of a new tractor-drawn device that stirs the ground to a depth of 16 inches and makes possible its preparation for seeding at an increditable speed. The new type of plow substitutes for the straight cutting movement of the old fashioned plow, the rotary movement of the auger. The difference is comparable to that of trying to pull a circular saw through a log by main strength and letting that saw make its way through easily by revolving and cutting its own path.

War's greatest hero receives $10,000 gift. Through the kindness and charity of the theatre going public in and around New York, Sgt. Samuel Woodfill. greatest hero of the World War, who came to New York to take part in Armistice Day exercises, was presented with a gift of $10,000 in cash, insurance and a paid up mortgage on his home, at the Palace Theatre, New York, where he attended a Memorial service.

"Gen. Blucher" buried with military honors. True he was only a dog, but "Gen. Blucher" was one of the outstanding heroes of the World War. The war veteran survived shot and shell only to die from the scratch of a stick. The dog, a surrendered German, and later a member of the American forces at Verdun, is being mourned by the men of the 27th New York Division as a "friend and soldier." The police dog was the pet of the 106th field Artillery and for four years the companion of Captain Henry G. Montgomery. He was buried with all military honors.

Makes love to image of wife who left him. Louis Vitalo a shoemaker of West End, Boston, Mass., sits all day in his shop, singing and pegging away at his bench, and seated directly opposite him in a chair, fully clothed, is an image of his erring wife, who deserted him seven years ago. On that image which he fashioned with his own hands, he has lavished the love and affection of a devoted husband, hoping that some day she will return.

"CREEPING JENNY"

BY KATE DOUGLAS WIGGINS

Author of "Rebbecca of Sunnybook Farm"

Copyright, 1922, by Doubleday, Page & Co. Published by Special Arrangement with The Wheeler Synd., Inc.

Here is a Complete Christmas Short Story

SO good that you ought to read it some evening when the whole family can gather around the hearth and enjoy it together. It will help you to catch step once more with the Christmas Spirit and make you enjoy it more than ever this year.

There are lots of "Creeping Jennies," perhaps not with the same physical misfortune, but with handicaps just as great, hearts just as big and maybe heavier, "right in the corner where you are!"

Let's find a "Creeping Jenny" and give her a Merry Christmas!

JENNY LANE lived in a shabby little farmhouse on the BZack Nippin' Road that led from Riverboro to Moderation Village. The house was small and compact and as neat as wax inside, for there Jenny was Master of her fate and Captain of her soul.

Outside, alas, things were different. There was only the shell of a former stable; the shed was tumbling down, and, when rain descended in anything worse than gentle showers, Jenny's "indoors" looked like asyndicate of milk pans, the leaks were so many and the dripping of water continuous.

It had been that way for three years, ever since the autumn that her mother had died; and her father, who had followed his wife in everything, followed her to the grave a month later.

His last words to his daughter had been: "I'm sorry to leave you alone, Jenny, but I'd feel better if only I'd left you shingled. Your mother and me was laying up and laying up ever since we got married. We bought the house and field, paid off the mortgage and gave you good schooling. We are furnished up as well as most o' the neighbors, but when your mother's health got slim and my strength begun to fail, we couldn't seem to get any farther than meat, drink and clothes for the three of us. The buildings couldn't be kept up, that was the long and short of it."

"I know, I know, Father. Haven't I seen how hard you tried."

"Now I'm on my death-bed," said the old man. "There's money enough in the bank to buy the shingles, but God knows whether you can afford to hire a man to put 'em on, labor's so scarce and so high.

"Don't worry, Father! I don't want your last days troubled with fears about me and the roof. I'm twenty-two and I can earn my living somehow, somewhere!"

" 'Tisn't so easy to earn your living and keep your buildings shingled too!" sigher her father.

"Maybe not, but I'll do it, in the course of time!" said Jenny stoutly. "I've heard enough, all my life, about shingles; also about clapboards and paint. There isn't a young man in the neighborhood that I'd want to go to church with, but if one of them ever chance to ask me to have him, I'd say, 'Shingle the house and I'll say yes!' "

The girl's father smiled in spite of his pain as he whispered: "Don't be too easy when it comes to bargainin, Jenny! Stipulate first quality cedar shingles, him to buy 'em as well as put 'em on! You're worth it!"

"I shall never have a chance to 'stiperlate,' " thought Jenny, as she went to the kitchen to make gruel; and, as a matter of fact, although Jenny was good to look upon, and had an acre of timber land that would bring in something fifteen years later, no lovelorn swain had offered to take her and her leaky house for better, for worse.

Later on there were other reasons why Jenny had no opportunity to "stiperlate." The anxious and dreary months went on relentlessly after her father's death, when new misfortunes descended upon her—an accident—unskillful treatment, too long delayed—finally, the loss of a foot—a crutch—eternal lameness. No wonder, as she dragged herself about the house and little garden before she had had time to accustom herself to her infirmity, that Riverboro sympathetically called her "Creeping Jenny." Her nearest neighbor, Mrs. Day, a widow, lived within easy walking distance (it seemed longer when you limped!), and the village itself was only a quarter of a mile away, so she did not lack of an occasionl call, the offer of an errand or message, and often a drive to church, made wretched by the difficulty of mounting and descending the wagon, with the added mortification of limping into a rear pew.

Still she kept things together, sewing, crocheting, knitting, sending braided and drawn-in rugs to Boston, selling the butter from the one cow's milk and the hay from the eight-acre field.

She got "Pollyanna" from the village library and read it faithfully, but she was rebellious and it did her no good. She allowed to herself grudgingly that if she had lost a hand instead of a foot she couldn't have earned her living; but she never got to the point of being grateful that it was a foot, not a hand; she was unregenerate and wanted both.

* * *

It was late November now, and even at the end of the month there was a hint of Indian summer in the air, though a soft rain had been falling for many hours. Jenny's side door stood open; there was a pale flicker of sun now and then and she was in the pantry wondering if she could venture to take away some of the milk-pans that dotted the kitchen floor, all of them a third full of drippings from the ceiling.

She heard the swinging of the garden gate and a knock made her take her crutch and limp to the kitchen door.

A good-looking young man, fairly well clad, with his left sleeve hanging in a strange sort of stiffness, raised a shabby felt hat with his right hand and asked:

"Is this Miss Jenny Tane?"

"Yes, sir.'

"They told me at the station you were minus a man and might have a few days' work for me."

"Everybody in Riverboro is minus a man, and everybody needs a little help. There's plenty to do her for I live alone, but I have a little money to spend on keeping up the place."

The young man glanced in the door with a boyish sort of informality and asked: "Do you keep a dairy farm?"

Jenny laughed outright, and kept on laughing as she answered: "No wonder you asked, but I shouldn't set milk on the floor and it's water in the pans. It's a water farm!"

The laughter was mutual now, and the audacious youth, moving to the lower step and glancing upward, said: "I see you're a little shy on shingles?"

"Just a trifle, but I'm long on milk pans!"

"They told me you were a first-class farmer, but—er—a little handicapped on the outside work."

Jenny leaned against the doorframe and stroked her crutch with a smile.

"Footicaped would be a better word," she said. "Are you a stranger in Riverboro? Won't you rest a moment? Make your way through the milk pans to the rocking chair. I do need a little help in getting my winter wood in."

"You'll require a lot of wood unless you get a tight roof over your head," said the stranger. "I'm a Western farmer's son, or at least I was; but my mother and father died while I was in France and I'm alone in the world."

"France?" echoed Jenny, with a new glance in her eye and a new tone in her voice.

"Yes, but we'll cut that out! I landed in Boston, and ever since I've been kind of 'adventuring' till I got my peace legs' on."

"You couldn't have come to a worse place than Riverboro. There hasn't been an adventure here in a hundred years."

"I don't know about that! I've only been in town half an hour and I've seen a water farm and a lady that runs it to the Queen's taste!"

Jenny laughed again; the sweetest, most tuneful laugh in the world; one that she seldom used nowadays, but had kept over from her long-ago youth. What a droll stranger! and how much more interesting he would be in the intervals of sawing and spliting wood, than old George Gibson.

It is too ridiculous that you should have seen the milk pans and noticed the shingles. I am going to have the roof fixed next spring if I live. Father saved up money for the stock, but—but, I had to use it in a long illness."

"Yes, yes!" interrupted the stranger. "It beats all how that runs through life! You save up money for shingles and then you can't get enough more to put 'em on."

"I'm nearly ready for the second time," Jenny's tone was cheerful and incisive, "but I don't think I have quite enough to pay for labor. Besides, you couldn't, I mean you wouldn't—shingle—could you?"

"Sure I would, and could! You're strong on the subjunctive, aren't you! You've noticed I'm handicapped (I don't have to invent a word, it's all right for my case!). But just you wait and see what I can do with the substitute presented me by the U. S. A.! I'm going to have something more stylish later on, but I don't believe it will serve me any better; you see it's only my left arm!"

Jenny stopped her ears.

"Don't tell me you've read 'Pollyanna' and are glad it isn't you right!"

"Sure I'm glad! Who wouldn't be? Who's Pollyanna?"

"She's a girl in a book who's always glad that things aren't any worse."

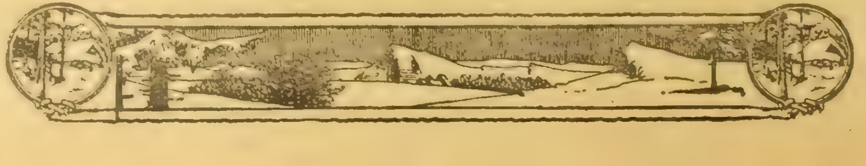
"All right for Polly! More power to her elbow! Now I'm by no means dead broke and I've got back-pay coming to me from Washington, when they get around to it. But I want to train myself to work at anything that comes. If I can't make good I'll go to a vocational school, but I want to harden myself first."

"My roof in November would be a good place for that!" said Jenny contemplatively. "What wages do you ask?"

"Half of what the other men get around here, because I'm not a skilled worker at present Now if you've got a ladder on the premises I can get up and tear off the old shingles while you negotiate for the new ones. Going to buy first quality cedars?"

Jenny grew red and then white, for memory flashed back, and by an odd trick she remembered her father's injunction to "stiperlate," a word that was to be used in far more romantic circumstances.

"Can't manage first quality; seconds will have to do," she said, with some embarrassment.



"O. K. I've had nothing but 'seconds' all my life. Sometimes I wonder I didn't have a second wife."

"Why didn't you?" The question suddenly popped out of Jenny's mouth without any warning.

"Because I never had a first! Ha! ha!" (He certainly was the most unusual man she had ever met and the most informal on the occasion of a first call. She felt as if she'd been to high-school and singing-school and dancing-school with him.)

The stranger rose from his chair. "I'll 'lime' the 'seconds' for you myself to save expense. Want me to get them for you, since I know a shingle when I see it and maybe you don't? I'll go in to the village, get a boarding place, and come back after lunch for a half-day's work."

"Thank you—that will be very kind."

"I'll pick up the milk pans and empty 'em for you, first. Poor old things! They don't know they're going out of business! Let me look at your ladder, please. A man that works with a woman's farming implements ought to carry a big life insurance!"

Jenny laughed again, joyously. Then, entirely forgetting decorum, she wiped her eyes with her apron and said, "If I only knew what your wages were going to be I'd raise them, you are so funny! The ladder is in the shed. I think it's all right."

He looked about the shed in amazement at its cleanliness and order. "Holy Moses!" he thought, "does that little creature sweep and scrub this place and pile up this wood and kindling, skipping about on a crutch? And us great husky lubbers getting 'order of merit' for doing our duty by the country. Wonder if Miss Jenny Lane's had any medals handed out to her? She can have mine when I get well enough acquainted to give it to her."

Jenny followed him out to the shed.

"Is the ladder quite safe?" she asked.

"Safe as a meeting-house."

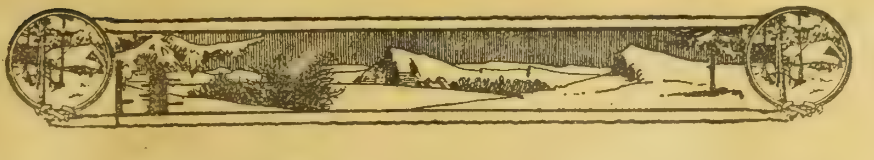
"Then, as you go to the village, you'll see twin boys hanging over the gate at the next house. Mrs. Day's. Ask the red-haired freckled one (his name is Alfinso) if he'll come up this afternoon and help you, for five cent. He'll hold the ladder, pick up the shingles or commit any crime if you just tell him that Jenny'll have fresh doughnuts for you and him at supper-time. Don't ask Alfonso, the dark-haired twin; he doesn't like work and doesn't like doughnuts."

"Well," said the stranger, wiping his hand on a potato sack, "I wasn't in the Salvation Army belt when they were distributing doughnuts to the boys and my mouth is fairly watering for one. My name's Rufus Holt, of Lawrence, Kansas." Here he held out his hand which Jenny took, stunned by the suddenness of his action. "I'm your hired man till this roof is fixed. You look to me like a grand little boss. I'll be back in an hour and I hope I don't get Alfinso and Alfonso mixed!"

* * *

"Creeping Jenny" has a method all its own of making its way upward and onward, silently, smoothly under and over, betwixt and between obstacles. The slender little green vine climbs, not so much with strength, as with swiftness and grace, and accomplishes it growth in a miraculously short space of time. You can leave your garden rake against the barn door some warm night, and next morning Jenny will have crept up to the top of the handle, leaned over and flung down a few fragrant blossoms here and there just to give you a hint of Nature's magic.

By a like process and another sort of magic, Jenny Lane crept into Rufus Holt's heart, which was a big lonesome one, howling with emptiness, at the time he began shingling her house. They came to know more of each other as the days went by. He and she, with Alfinso, ate luncheon together on the shed bench so



that the day's labor need not be delayed by a trip to the village for Rufus. (At least that is what he said, and she said, and Alfinso said, and Mrs. Day said, and nobody doubted it but the post-mistress.)

Alfinso, whose pay had now been increased to ten cents a day, was the most faithful of "gooseberries," but even he sometimes wandered away to the wood-pile to work on a motor that he was constructing, to be used in connection with the power of an old alarm clock.

At such time Rufus and Jenny would walk together before she gathered up the dishes. She allowed him a pipe, and when she attempted to rise and go to the kitchen he would say: "Take your 'nooning,' Miss Jenny, same as the rest of us. The minute you drop your housework you take out your needle."

"I've had to be busy to keep from thinking, these last two years," she said quietly arranging the knives and forks for clearing away. "Now I'm afraid of getting idle, for what with company to lunch, the sound of hammer or saw all day, and the smell of paint all night, it seems as if Boston couldn't be any gayer than my little house."

Rufus liked to watch the dimple come and go in Jenny's cheek, a dimple that had enjoyed little use till lately; he also admired the whiteness of her neck that rose out of the the long eyelashes that too often lay on her cheek and hid her brown eyes. He often tried to say something that would bring a quick upward glance full of fun or understanding. As for his talk, no words can tell what it was to the girl who had spent hundreds of long, silent, lonely days, feeling her youth slipping by, a tragedy without a single witness.

"Where were you last Christmas, Miss Jenny Wren? Rufus asked between pipe-puffs, after lunching gloriously on shoulder-of-motton stew. (He had always called her Miss Jenny Wren after the first week.)

"Here of course!" she said smiling "I was born here, lived here and probably will die here. All the rooms but the kitchen had icicles hanging from the ceilings and window frames. The parlor looked like that famous cave in Kentucky with stalactites in the roof. There had been a bilzzard on the twenty-third and I couldn't go to the church Christmas tree. It was nearly as bad the Christmas before. I've never celebrated Christmas Day, except to plant a little hemlock twig in a flower pot and hang Mother's and Father's pictures on it."

"Jehosophat!" ejaculated Rufus. "It wasn't so bad as that in the trenches where I was. Plenty of company—of one sort and another. I declare women always have the hardest of it in this old world, somehow. Trenches and over-the-tops were exciting compared to what you've gone through. They were life! A man generally has life and adventure with his hard knocks; but women are always saving, scrimping, doing without, suffering, nursing, burying, paying other people's burdens. Rotten luck, being a woman!" and he knocked the ashes from his pipe furiously.

"I never thought of it that way," said Jenny serenely. "I have my one burden, but it's my own, nobody else's!"

"Say, if I'm hereabouts to help, suppose you give a kind of a house-warming this year; some sort of a make-shift Christmas and show off the shingles! Hey?"

"Who would come?" cried Jenny. "And how would I compete with the church Christmas? Besides you are going to Boston."

"I haven't decided about Boston yet." (Jenny's heart leaped in her mouth and stopped her breath.) "As for the company, Mrs. Day could come, Alfinso and Alfonso (hateful little beggar, Alfonso!), Mrs. Strout, who boards me; and there's the station master that advised me to come to you for a job, and the man I bought the shingles of, and the store-keeper we owe for nails—that's quite a good crowd! You put in a few lady friends and I believe we could frame up a party that would make Boston look dull. Whats' the matter with the parson? Why couldn't he come. You're in his parish, aren't you?"

Jenny swayed to and fro with mirth. The point of view was to fresh, so young, so unlike Riverboro. "You don't know how funny you are!" she exclaimed. "The minister calls twice a year, but always in summer."

"Tell him to make it once and come Christmas Eve!" said Rufus, imperturbably. "Tell him your leaks are stopped and you'll show him a wounded soldier who did the shingling. 'Feature' me, don't you know? Tell him you'll have my Medal of Honor on the marble-top table."

"You've never shown it to me," said Jenny, softly.

"It's in Boston with my best clothes. Besides I've told you all about it. There happened to be a lot of fellows about when I was up against a hard job and they told on me. The boys didn't all have that luck or the U. S. A. couldn't have turned out medals enough to go around. Now it's time to work again. You think about that Christmas party before I buy my ticket to Boston. I'm going to patch up that bad place by the chimney," and Rufus went out the shed door and mounted the ladder.

Oh! the terrors of that high ladder and that sloping roof to Jenny, from the very beginning! With a white, knit cape over her shoulders and a white scarf tied around her head, she used to limp to some unseen point of advantage and watch Rufus with her heart in her mouth, lest he should slip and lose his hold. Sometimes he would catch her at her post, and looking down, think that her face looked like a love-apple, all pinky red and creamy white. And the warm glow of having someone down below caring a little whether he slipped—he, Rufus Holt, a down-and-outer!

He never did make a misstep, for he was a very demon of ingenuity and skill in using his one arm.

"Brave, clever, good, big-hearted!" sang Jenny's heart from the ground.

"Plucky, cheery, sweet and sound!" sang the heart of Rufus from the roof—but neither of them said anything in words.

Mrs. Day said considerable, but she liked Jenny Lane and stood up for her when the postmistress said there was more in that shingling business that met the eye.

"I don't see anything wrong in it." Mrs. Day maintained stoutly. "Jenny's roof would have fallen in on her if she hadn't shingled this fall. It looks like Providence to me."

"He's so slow at it that it looks like courting to me," observed the postmistress while scanning the morning's postcards to see if anything interesting was likely to happen in the neighborhood.

"Alfinso thinks the world of Mr. Holt, and he's getting ten cents a day now. It's true Alfonso takes three of it away from him every night. He says five is due to him because he's a twin, but he only takes three cents because he don't do any work."

"Alfonso's goin' to make a good business man when he grows up," said the postmistress.

It was half-past four in the afternoon but in the short December days it was nearly as dark as mid-night.

A cheerful fire snapped in Jenny's highly-polished kitchen stove. . The yellow-painted floor with its braided rugs reflected the light of the kerosene lamp, the cat was asleep in the rocking-chair with the cretonne cushion, and Jenny sat by the table making out a crochet pattern from a magazine in front of her. She had changed into her afternoon dress of brown cashmere with pongee collar and cuffs and apron, so that she looked more than ever like Jenny Wren, Rufus Holt thought, as he came in from the tool-house with a lantern.

"Alfinso is splitting and piling his kindling," he said. "He wants me to wait and go long home with him. Alfonso told him there's a ghost between here and the corner. Gracious! Can any parlor in the world beat a kitchen for comfort when it's rigged out and kept like yours! 'No, puss, I wouldn't have you move for the world, even if you offered to! I'll take a wooden chair!"

"The cat is spoiled," said Jenny. "And you look tired. You ought not to be doing rough work or you won't get to be yourself again."

"I'm myself, right enough: in fact I never was so much myself since I was born. I'm not tired; the sight if you and this kitchen rests me clean through to the bone"

Jenny changed color ,but studied the crochet pattern with renewed care.

"I don't miss my arm any more," Rufus continued, playing with her thread. "I've learned to do without it. I never thought I should, but I have with the help from a lady friend. I never was bitter about it like some. When you come to think of it, Miss Jenny Wren, it's wonderful how Almighty God has given us two of a kind in most things—on the outside, anyway. As to the inside furniture, the doctors have shown us how to get along without most of that. If we'd been started out with one eye, one ear, one arm and one leg, where would we have been nowadays?"

"We've only one nose and one mouth ," objected Jenny.

"And how would we have looked with two?" laughed Rufus. "But that's not to the point. The house is finished, Jenny Wren ,and what would you think of buying a few second-hand boards and letting me make the cow-shed more comfortable for winter?"

This moment had to come. Jenny had been reading it for days, There was a pause, then: "I'm going to sell the cow," she stammered.

Rufus looked surprised. "Are you troubled about the price of feed, or afraid the winter work will be too much for you? That's why I'd like to make a better place for her and patch up the piece of shed you have to walk through to get to her—after I leave. It's a wonderful season but it's the eighteenth of December and snow must be coming along soon."

There was another moment of silence, then Jenny spoke recklessly. "You see, Mr. Holt, we've gone on from one thing to another for three weeks, because the leaky roof ruined the house in so many ways ,and there's never been a man to help, since father died. We've patched the flooring, put in new door sills and weather strips on the windows, papered the sitting-room and plastered the kitchen ceiling—and all the time I've known I was goin too far. I paid you fifteen dollars the first week, but it wasn't half what you earned and you gave me back three for lunches. Then you wouldn't take the last two-weeks' wages because I was buying bricks and lumber and you said we could settle up when the work was finished. . . I can't let it run on, Mr. Holt, I can't! I'm not in want; I've something in the bank and my hay-field more than pays for my winter fuel; but I have to be careful, and the house is so nice and cozy now it would be self-indulgent to do more. I'd better sell the cow. You're as kind and generous as you can be, but you are a stranger after all, and I have no claim on you."

Rufus gave her a long, searching look.

"You honestly feel I'm a stranger, do you?"

"Well, I—I don't exactly feel that you are, I only know it. My mind tells me so."

"It's funny!" said Rufus. "Now—I feel like a partner, not a stranger."

Jenny clutched at the saving word. "You have been the best of partners," she acknowledged, straightforwardly.

"Oh, no! Not the best! I'm capable of being a heap better partner than I have been. Now stop crocheting, listen to me, and don't speak till I get through. . . In the first place, do you like me?"

Jenny flared at this.

"Why do you ask a questin like that? You know that nobody could help liking you! You know you're as sunshiny and thoughtful as you can be, and as for being interesting and funny and unlike anybody else in the world, you know well enough you're that; so why do you ask such foolish questions only to hear yourself praised?"

Rufus made a sudden movement and then subsided again into his chair.

"That's satisfactory, so far as it goes," he said calmly, "Though it doesn't go far enough to suit me. There are things I've got to say to you, and when they're over, we need never speak of them again. I haven't any home, nor any people but a married brother in Kansas, whose wife and four children I've never see. He always worked the farm and it fell to him as was right. I got a little money from my father, earned more at my trade in Chicago and saved it. Then I went across with the other boys. You don't really know anything about me except what I tell you, but I've got a clean record to show the neighbors, and I swear to God there's nothing wrong with me except that I've got one arm instead of two. When I came down this road from the station three weeks ago I took a good look at you, skimming around with your crutch, and swinging your right foot off the ground."

"Don't!" cried Jenny, covering her eyes.

Rufus put his big hand over her little ones and wiped the tears away with her crochet work. "I've got to show how I feel about you, and then I'll ask what you think of me," he explained. "I said to myself that day: 'Here's a chance to help somebody that's had to bear what I have.' They told me at the station you needed some work done, so I just plunged in, made good, and got the job. But I had no idea of falling in love with you, Jenny; that's your fault not mine. I want to marry you but I don't know how you feel about it."

"I don't want to be pitied and married just to be helped," said Jenny stubbornly. "After my accident I just made up my mind I would never marry."

"Why?" asked Rufus.

"You know why," Jenny answered.

"Then the reason you don't want to marry me shows me that I had no right to ask you, isn't that so?"

"No, it isn't; it's different with a woman. Besides, I do want to marry you, but I won't.

Rufus moved a little nearer. "Jenny, we've each got a minus sign against us—there's no getting over that; but Holy Moses! you're hung all over so thick with plus signs that your minus doesn't show up at all! Your face, your eyes, your hair, your voice, your disposition, your spunk, your common sense—all plus! The trouble is with me. There would be times when a girl might blush if she had a one-armed husband!"

"Blush? If she did she ought to be struck by lightning!" and Jenny's eyes flashed.

Rufus caught her hands. "Jenny, Jenny, be true with me, speak straight out! Do I seem a little short of a full man? How do you see me in your secret heart?"

Jenny rose to her feet under a kind of spell that made him rise to meet her. She leaned against him and said: "I see you whole, and strong and precious and splendid, Rufus!"

Rufus held her close, drying his secret tears on her hair.

"Oh, you little brick!" he whispered. "You darling, winsome little brick! Would you mind kissing me?"

"Not in the least!" she answered, and was proceeding to do it with all her heart when Alfinso entered with a huge armful of kindling, which he dropped into the woodbox with such force that the house shook.

"Alfinso, you dropped something. I heard you distinctly." Rufus was cool and collected as he put Jenny back in her chair. "Now I've some news for you. Jenny and I are going to be married on Christmas Eve and your family are invited. Will

The Truth About Henry Ford

— BY —

S. T. BUSHNELL

An intimate story of which the author says: "From Mrs. Henry Ford I secured most of the data." It gives for the first time the inside story of "The Peace Ship." "Mr. Ford's Senatorial Campaign." "The Chicago Tribune Libel Suit."

The Most Talked-About and Authentic Book on Michigan's foremost World-Citizen ever written will appear, beginning in the December 23rd issue of

The Michigan
BUSINESS FARMER
The Only Farm Paper Owned and Edited in Michigan!

Renew now so you will not miss any of this great story!

Current Agricultural News

DOELLE ATTENDS CONFERENCE ON GRAIN RUST

JAMES NICOL of Grand Haven, president of the State Farm Bureau Federation; J. A. Doelle, state commissioner of agriculture, and Walter F. Ruddy, state leader of the federal barberry eradication forces, represented Michigan at the second annual meeting of the Conference for the Prevention of Grain Rust, held on Nov. 14 at St. Paul.

They were among the 75 delegates from thirteen north central states to vote unanimously for the resolution urging Congress to appropriate $500,000 for the continuation of the war on the common barberry bush next year and recommend that the various spring wheat states participate in the campaign in proportion to the seriousness of their individual rust problems.

NEW PLAN FOR SOLVING AGRICULTURAL PROBLEMS

THE Commodity Council Plan is is the name given to a new way of handling certain of the big agricultural problems by the United States Department of Agriculture. In the past different phases of a crop situation, for instance, have been handled separately by the various bureaus and offices. The new plan which recently has been put into operation brings all the various persons interested in the problem together into a council where each may present his views and where a definite inclusive policy may be decided upon.

Already councils have been called to discuss the cotton and potato situations and recommendations have been made for action that would be beneficial in view of present conditions. Department men who are specialists in the culture of the crops, in soils, diseases, pests, grading, and marketing each contributed to the final recommendations. From time other commodity councils will be called to take up problems that are troubling the producers of various other crops and live stock.

CLEMENCEAU TO ADDRESS FARMERS

GEORGES CLEMENCEAU, the "Tiger" of France, will address the opening session of the fourth annual convention of the American Farm Bureau Federation in Chicago on December 11, France's war premier declares that he will arrange his itinerary in order to meet the potent body of public opinion represented in the world's largest body of organized farmers—the American Farm Bureau.

Mr. Clemenceau will speak on the topic, "The Farmer as a World Citizen." It is expected that he will develop the international aspect of the farmer's problems. How the American farmer may develop a freer market for his huge surpluses in the nations of Europe will be explained by the distinguished President of the Peace Conference.

SUGAR CARDS REAPPEAR IN GERMANY

ON December 1, sugar cards, discontinued some two years ago, were reintroduced in Germany and factories deliver sugar only to authorized wholesale dealers who in turn distribute it to the retailers of specified districts. Only the organized wholesale trade and the cooperatively organized consumers will be permitted to traffic in sugar and all dealings are subject to rigid control.

ENDORSE LAND CERTIFICATION

FULL endorsement of the Land Certification of the State Department of Agriculture was given by a conference of real estate dealers, railroad agents, and development bureau secretaries, at a meeting held in Lansing on November 27, where the plan was discussed in detail. The chief elements of the proposed legislation involved the creation of a list of certified dealers. They will agree to deal exclusively in lands surveyed under the direction of the State Department of Agriculture at their own expense and lands will be classified as agricultural and non-agricultural, to be sold on the basis of this survey. The idea of land certification was developed to engender the confidence of the prospective settler in Michigan's good farm lands and to make it difficult to sell what is manifestly non-agricultural land for agricultural purposes. The certification plan involves a penalty of felony for violation.

A COOPERATIVE CREAMERY WITH NEARLY A THOUSAND PATRONS

ONE of the largest cooperative creamery organizations in the United States, is the claim made by J. R. Murphy, Manager of the Danish Creamery Association, Fresno, California, in his last annual report to the stockholders. The association has nearly one thousand patrons scattered over a territory of fifty miles wide by one hundred miles long. Twenty-five trucks are required to haul the cream to the two plants. More than 8,000 pounds of butter made daily and, as every pound brings a premium of one cent because of the "Danish Creamery" brand under which it is sold, the "velvet" amounts to more than $80 a day for a year of 365 days—$30.000 a year. Not only do the Danish Creamery patrons get the one cent a pound premium but they get a royalty of 65c a thousand pounds on high grade butter manufactured by affiliated creameries and sold through a central marketing agency under the Danish creamery brand. The association was organized in 1895 and the same butter maker has been employed for seventeen years.

AUSTRIANS LIKE AMERICAN HONEY

A GOOD market in Austria awaits American exporters of honey, says Consul Foster, Vienna, is the report to the Department of Commerce. The preferred varieties are dark-colored strained honey of acacia and linden flavors, packed in glass jars containing about one quart, one pint, or one-half pint. The Austrian Republic can not produce enough to supply its need. From July 1 the retail price of honey rose from 18 cents per kilogram to 54 cents per kilogram on September 30.

FOURTH WEEK OF EGG LAYING CONTEST

THE first four weekly period of the International Egg Laying Contest at East Lansing ended November 28th, with the White Leghorns finishing in advance but giving the honors for the last week's production to the heavy birds. Several birds are showing some moult particularly among the lighter breeds. Three birds have put in a perfect week's work with 7 eggs each. Mr. Shaw's pen from South Haven had a narrow escape when it topped the list for the first month with a production of 166 eggs with E. D. Taylor's pen from Kalamazoo just one egg behind. Third place is held by Hansen's pen from Oregon with 154 eggs and the Hollywood Poultry Farm from Washington tying with Thompson's pen for fourth place with 144 eggs.

In the Barred Rock class Dennison's pen No. 9 has an easy lead with 133 eggs. Brummer's Poultry Farm is second with 123 and also second for the week with 43 eggs. Kent's pen from New York is only one egg behind Brummer's for the week and is third to date with a total of 114 eggs. Christophel's pen No. 16 is fourth with 110 eggs. In the Wyandotte class Evergreen Poultry Farm finishes one egg ahead of Sinks pen which has been leading up to this week. They also claim the honor for high pen for the week. Murphy's pen is third with 99 eggs and Hollis fourth with 95.

Van Raalte heads the Ancona class with 76 eggs to date. Dunning's Reds have a comfortable lead finishing with 110 eggs to date. The College Reds hold second and Mrs. Travis's pen third with a production of 83 eggs.

RIGHT OF TEACHER TO PUNISH CHILD

The teacher in our district keeps the children in at recess and noon for offense. To-day she gave them 18 minutes to learn the words of a song. Some of them could not sing it so she gave them no recess and only 25 minutes lunch time. One boy has stayed in since Sept. 28 to Nov. 15 and she said he'll have till the 30th because he would not apologize for some little thing. For whispering they stay in eight days and the same for listening, or talkng to them at recess. Our school director said she has no right to do so. Is this so or not and can she make them stay after school or four o'clock for being tardy?—P. G., Ludington, Michigan.

—The statute remains silent with reference to the type of punishment that may be ministered by the teacher. The law does not give the school board any authority to make and enforce suitable rules governing the external affairs of the school. You will find this provision in section 17 given on page 37 of the General School Laws for 1921. The Supreme Court has rendered a decision that the teacher has delegated perental control over the children while under her jurisdiction and that she has authority to administer any reasonable punishment.

Conditions might arise where in the teacher's judgement the appropriate type of punishment would be to keep a child in at recess or after school. It seems to me that the character of the offenses as well as the temperament of the child should govern in determining the punishment. If a child is tardy on account of having played along the road, it might seem advisable to ask him to stay after school and make up the time. In this case, the child has the alternative of escaping the punishment by being on time.

No teacher would have a right to treat a child in a brutal manner or in such a way as to cause permanent physical injury. The type of punishment that might be adapted to one individual child would not be suited to another, so one must know the individual child and as I see it no general rule can be given with reference to this matter.—B. J. Ford, Department of Public Instruction.

MORTGAGE AGAINST HOGS

A year ago last July or August I bought two hogs. Since then I have killed the hogs and find that there was a mortgage against the hogs. I paid for them and still have in my possession bill of sale signed by the party in the presence of a lawyer. Will you please tell me if I am compelled to pay for the hogs again?—F. C. M., Curran, Michigan.

—If the mortgage was properly filed you would be liable for the value of the hogs not exceeding the amount of the mortgage. You might be able to make the mortgagor pay for selling you the mortgaged property, unless the bill of sale you received contained the statement that the sale was subject to the mortgage.—Legal Editor.

COST OF TILING 160 ACRES OF MUCK

Can you give me some idea of cost of tiling 160 acres of muck land. Have direct outlet into dredge ditch. Muck not deep, eighty acres spotted with clay and sandy loam.—H. A. S. Capac, Michigan.

—Ordinarily, muck land which is underlaid with clay will require practically the same sort of drainage as clay land because after the muck has been drained it will settle and work into the clay so there will be practically not much left after a few years of cultivation. I would suggest that this be drained about 4 rods apart. If, however, you have 2 feet of muck it might be drained 5 rods apart. The tile should be laid at least 3 feet deep and better 3½ feet if you have 2 feet of muck because the muck will settle at least a foot leaving your tile only 2½ feet underground. I am assuming that the tile in this case will be laid in the clay subsoil. If the tile are spaced 4 rods apart it will take approximately 600 tile per acre.

If soft clay tile are used, they will probably cost delivered at your station about $35 per thousand. The glazed tile would cost around $45 per thousand. This would mean that it will cost for tile—$21 to $27 per acre. The digging should be done around 50 cents a rod, which will cost $20 per acre where the tile are spaced 4 rods apart. I am assuming in making these calculations that you wish this farm thoroughly drained so that it will be suitable for nearly all kinds of crops, espcially cultivated crops. If the muck land is merely intended for hay it might be possible to get satisfactory drainage by spacing the tile drains 10 rods apart. The upland will cost practically the same as the low land when tiled 4 rods apart. The drains on high ground, however, should not be put more than 2½ feet deep.—O. E. Robey, Extension Specialist in Drainage, M. A. C.

SECURE COPY OF RULES

I bought a boiler and it had been used. It was a portable boiler but the wheels have been taken off. It is ten miles from where I wish to use it. I have been told I must have the boiler inspected before I move or use it. If so, to whom must I apply for inspection? I wish to run a small saw for cutting lumber on my farm.—E. J. B., Petoskey, Michigan.

—A law was passed in 1917 providing for the appointment of a board of boiler inspectors. I do not know who was appointed. I think that if you would write Hon. C. J. DeLand, Secretary of State, and ask him for the rules of the board authorized by Act 174, of the Public Acts of 1917, he may be able to send it to you or tell you where you can get it.—Legal Editor.

WHAT RENTER MUST DO

If owner of farm rents his farm to B and the owner has all the tools and horses and lets renter use them for nothing, also the feed for horses, and all seed for farm, and this farm rented one half of crops to renter and half to owner, does the owner have to take care of his part? For instance we have to haul our potatoes ourselves, and have to husk and haul corn. We dug and picked our potatoes ourselves. Does the renter have to do this for us?—P. J., Boyne City, Michigan.

—What the renter is to do is usually placed in the lease and if so incorporated it would control; but if the lease simply provides that renter is to do all the work I would be of the opinion he would have to husk the corn, dig potatoes and haul potatoes, and all the work the owner would have to do if he did not rent the farm.—Legal Editor.

CANNOT REMOVE FAMILY FROM NEIGBORHOOD

In our community we have a very undesirable colored family. They uphold their children in all kinds of stealing, window breaking and such. They allow their children to have firearms and threaten other children as they wish. What are the steps necessary to have them move from the country? Who should I go and see? Mrs. A. P., Flushing, Michigan.

—You would have to proceed against them the same as other children. You would need to make a complaint for any of the things you enumerate and if the children are old enough have them punished. If they are not old enough have the police officer, truant officer, or sheriff's office take charge of the matter. The better way would be for such persons as are interested to place the matter before the prosecuting attorney or county agent and ask them to assist you. You would have no right to ask them to be removed from the community. You have no right to unload your burdens upon some other community but endeavor to have them obey the law in your community.—Legal Editor.

SPEED OF TRUCKS ON HIGHWAY

I would like to know the law concerning the speed of loaded and empty trucks.—H. D. B., North Branch, Mich.

—I call your attention to Section 14, of Act 132 of the Public Acts of 1917, which limits the rate of speed of motor trucks according to the size of the tire in the following manner:

2 inch tire, single 20 miles per hour, double 18 miles per hour; 2½ inch tire, single 20 miles per hour, double 18 miles per hour; 3 inch tire, single 20 miles, double 18 miles; 3½ inch tire, single 20 miles, double 16 miles; 4 inch tire, single 18 miles, double 14 miles; 5 inch tire, single 16 miles, double 13 miles; 6 inch tire, single 14 miles, double 12 miles; 7 inch tire, single 12 miles, double 10 miles.

The above is the only specific limitation placed on the rate of speed of trucks and trailers aside from the general limitation of all motor vehicles, which is a maximum speed of 35 miles per hour.—State Highway Dept.

CANCELLED CHECK IS RECEIPT

Six years ago I left Iowa for Michigan, paying all debts except one to a doctor for $6.50. I later paid it and received check back, after that the doctor tried to get another payment through another company. Can he collect it?—H. H., Rudyard, Michigan.

—If you paid the doctor in full by check and have the returned check endorsed by him you would not be obliged to pay the debt again. The cancelled check is evidence of the payment.—Legal Editor.

NEIGHBOR NOT OBLIGED TO DRAIN OFF WATER

In case water drowns out my grain does my neighbor have to take care of the water in case there is no other run for the water but through his farm, and there is lots of fall?—N. N. F., Glennis, Michigan.

—You would be obliged to take all the water that comes upon your farm just as it would come in a state of nature. Your neighbor would have no right to gather the water in ditches and cast it upon your farm in unusual quantities nor at unusual times. Neither would you have the right to ditch your farm and throw the water from your farm onto your neighbor below in unusual quantities or at unusual times. You can fill in any sags on your farm without harm to your neighbor below but you would not have the right to ditch. The only way to get such draining is to have a public ditch constructed into which you may drain your farm and others to the same.—Legal Editor.

WHO PAYS THRESH BILL?

Who should pay the threshing bill in this case? I as second party, rented a farm for one year, first party to furnish everything to carry on farming, and I do all the manual labor and give first party two thirds and the first party keeps all the straw.—F. O., Sherman, Mich.

—I would say that in order to answer the above question more detail should be given, thus making it clear what the status is.

The customary rule is to divide expenses such as threshing in the same proportion as receipts. In this case the landlord would stand two-thirds of the threshing bill. However, as he is securing all the straw there should be an adjustment for his share of the straw. Such items as these should be agreed upon when the contract is made, thus avoiding misunderstandings later.—F. T. Riddell, Farm Management Demonstrator, M. A. C.

HOW TO FILE CLAIM

On July 28th 1922 I had a valuable cow killed by a train two miles north of Homer on Lansing branch of N. Y. Central. She got through the company's fence and was killed on their ground. The section boss filled out a blank and he had me get appraisers to sign it. The station agent said that was all that was necessary. Now I find this was not a claim but simply a report for the section boss to keep. I have just written the Chicago claim agent. Am I on the right course?—E. S. C., Homer, Michigan.

—I would make out a claim for the damage caused you and keep a copy and file a copy with the claim agent of the railroad at your nearest station and if not paid soon I would employ a lawyer to assist me in collecting it. I have known railroad companies to delay and annoy a claimant to discourage the making of claims. It would be fair to allow them some time to investigate their liability but it is unreasonable to take months and even over one year to compensate a person if the company is liable for the damage. The railroad company is not necessarily liable just from the mere fact the cow was killed on their track. I would believe that you would be money ahead if you employed some one who knew how to get the damage if you are entitled to it.—Legal Editor.

MAKING VINEGAR

Would you plase tell me, does any kind of apples make vinegar, or is there anything you put into cider to make good vinegar?—Reader.

—All kinds of apples do not make good cider. However any apple that produces a juice with a sufficient amount of sugar present to make a four per cent alcohol will make vinegar.

We furnish a vinegar yeast culture at the rate of twenty-five cents each for the purpose of starting the alcholic fermentation, the first step of the vinegar making process. We likewise furnish a vinegar bacteria culture for the purpose of controlling the acetic acid fermentation. These cultures are sufficient for one barrel two-thirds full of vinegar stock.—R. L. Tweed, Res. Asst in Bacteriology, M. A. C.

SELL SUBJECT TO MORTGAGE

If C sells his farm to B and takes mortgage on the farm, can B sell it to C and oblige A to leave mortgage on farm without A agreeing to such? Mortgage is due in five years from date.—D. M., Hudsonville, Michigan.

—B may sell the farm at any time subject to the mortgage. A cannot require the payment of the mortgage until it is due regardless of who owns the farm.—Legal Editor.

PURCHASER OF WHEAT LIABLE

My neighbor bought wheat from me a year ago last September. I asked him to pay for same in two weeks. I sold the grain as it was, uncleaned, for the market price then. He has not yet paid me. I also sold it under condition, if I got a higher price for my wheat when I sold the balance I had, he was to pay me that price. Since selling him the wheat the price raised to $1.30, and that is what I sold the balance for. I have no papers to show for any of this. Could I make him pay interest on this money since he agreed to pay me in full?—Mrs. M. B., Merrill, Mich.

—The purchaser of the wheat would be liable for interest if he did not pay for it at the date agreed upon.—Legal Editor.

NOT LIABLE FOR DAMAGES

If a man hired to work on a farm by the day, month, or year should accidentally or through his carelessness be injured, is the man whom he is employed by liable for damages under the Compensation Law of Michigan?—J. W. K., Orleans, Mich.

— Section 5424 of the C. L. 1915 is as follows:

"The provisions of Section 1, shall not apply to actions to recover damages for personal injuries sustained by household domestic servants and farm laborers."—Legal Editor.

MIGHT RECOVER MONEY

If a son sends for his mother to live here and buys half the house and he and she live together, and the mother does the biggest share, furnishes house with almost everything, does all the work, he was to provide help and didn't do so for ten years and now wants to get rid of her after using her money, could he do it and wouldn't he have to pay her for his board and use of things, his washing, mending for ten years. He owes $100 interest on money. Could that be collected, how much could she collect a week if any and could she for ten years?—Mrs. M. H. M., Akron, Mich.

—The mother might recover for anything the son has promised to pay; but services rendered by the mother and son living together is presumed to be gratuitous. The promise to pay or do certain things may be inforced one against another. Section 5191 and following provides that a child may be compelled to support and care for a parent and the poor board may enforce it.—Legal Editor.

DOES FLY BITE?

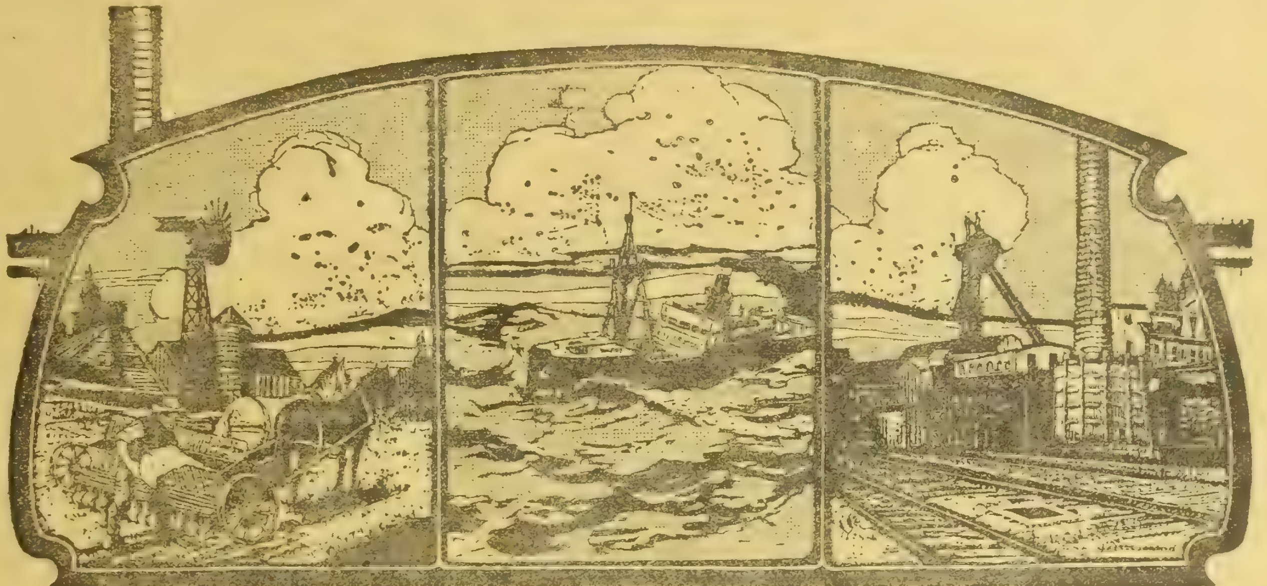
Am writing you in regard to an argument which arose between two persons, as to whether flies (the common house fly) bites or not. I am very anxious to learn what you can tell me on this subject. If they do not bite why does it seem as if they do?—Miss E. G., Kewadin, Mich.

—As to whether the common house fly bites or not, I quote from "Flies and Diseases" by Graham Smith: "The common house fly is called MuscaDomestica. Stomoxys Calcitrans, the stable fly or biting house fly, is about the same size as the house fly and is very frequently mistaken for it. It is more stoutly built and may be distinguished by the appearance of its proboscis which is modified into an awl-like structure adapted for piercing and sucking. It is commonly mistaken for the common house fly which is, therefore, often accused of biting."—Michigan Department of Health.

CHILD WOULD GET NOTHING

I am married and have four nice children. The oldest girl, 8 years old, now, is not my husband's right child. Her father died when she was three weeks old. When she was a year old, I married again. She goes to school now and uses her step father's name. He has no papers to show she can use his name. I and my second husband own a nice farm and have a joint deed. In case I should die, would this child get as much as the rest of them, and has she just as much right as the rest, or would it be better if my husband would adopt her as his own, or doesn't it matter so long as she uses his name?—A. H. M., Saginaw, Michigan.

—If you should die first and the farm is in the joint name of yourself and husband the child by your first husband would inherit nothing from the farm. It would all belong to your husband. He could give the child what he wanted to but the law would give it nothing unless he adopts the child by legal adoption. The mere keeping the child and treating it as his own would give no right of inheritance but if he would adopt the child it would then share equally with the other children in his property as well as yours. It would be better to have a legal adoption made out.—Legal Editor.



ASK FOR POTASH

The present conditions in the business of the farmer and in the fertilizer industry call for serious thought. Both are going through a readjustment period, with its hardships and doubts.

The farmer may well ask whether he is using the most profitable fertilizer. The fertilizer salesman may well inquire whether he is selling the kind that will do the farmer the most good, and lead to larger sales in the future.

During the war America could not get Potash, and the use of acid phosphate increased. Central Europe could not get phosphates, and the use of Potash Salts increased. Today plenty of Potash can be had at less than pre-war prices. Now is the right time to restore the balance by using more Potash in the fertilizer formulas than the average amount used before, 5 to 10 per cent.

Crops take from the soil very much more Potash than phosphoric acid. On any soil where Potash has been profitable it is not unreasonable now to use at least as much Potash as phosphoric acid. Ask the fertilizer agent for prices on this kind of goods, and rebuild your soil while Potash is cheap.

Recently it has been shown that a lack of available magnesia causes serious injury to important crops on some soils. German Kainit and Manure Salts furnish this soluble magnesia without extra cost.

SYNOPSIS

JOANNE GRAY is one of the passengers on the train that connects "The Horde" with the civilized world. For eighteen hours she has been riding steadily bound for Tete Jaune Cache, the home of "The Horde", where she has no friends and all will be strange to her. The train stops at a town composed of several tents and learning that the train will not leave for two hours she goes in search of food and a bath. She is directed to "Bill's Shack" and it is here where she meets Bill Quade, who not only owns and operates "Bill's Shack" but is also leader of the lawless men of the town. Quade says he has a room she can rent and that he will show it to her. As they pass of the room a newcomer enters the doorway leading off the street. The newcomer is John Aldous, a well known novelist. He sees the strange girl enter the place and believes she has made a mistake and as he stands in the doorway his eyes rest upon the curtained doorway through which the girl and Quade have passed. In but a moment the girl steps out her face flaming and eyes flashing. Quade follows her apologetically. He starts to offer the girl some money but before he can do so Aldous steps to the girl's side and floors Quade with a terrific blow. Aldous hurries the girl away from the scene to the home of friends. He then asks the girl to be his guest at supper in his cabin. She accepts. Joanne tells Aldous she is going to Tete Jaune to find her husband, Mortimer FitzHugh. Aldous decides to go with her to protect her from Quade and his partner at Tete Juane, Culver Rann. Aldous believes FitzHugh is dead and locates a friend who declares he has seen the grave.

(Continued from Nov. 25 issue)

SHE smiled at the amazement which had gathered in his face. A soft light shone in her eyes.

"I guess Mrs. Otto has been like a mother to that poor little boy," she explained. "When you and Mr. Stevens went up to buy the outfit this morning Jimmy ran over to tell her the news. We were all there—at breakfast. He was so excited he could scarcely breathe. But it came out, and he ran back to camp before you came because he thought you wouldn't want me to know. Wasn't that funny? He told me so when I walked a little way up the path with him."

"The little reprobate!" chuckled Aldous. "He's the best publicity man I ever had, Lady Gray. I did want you to know about this, and I wanted it to come to you in just this way, so that I wouldn't be compelled to tell you myself of the big and noble act I have done. It was my hope and desire that you, thru someone else, would learn of it, and come to understand me more fully what a generous and splendid biped I am. I even plotted to give this child of Stevns' a silver dollar if he would get the news to you in some one of his innocent ways. He's done it. And he couldn't have done it better—even for a dollar. Ah, here we are at the cabin. Will you excuse me while I pick up a few things that I want to take on to Tete Jaune with me?"

Between the two trees close to the cabin he had built a seat, and here he left Joanne. He was gone scarcely five minutes when he reappeared with a small pack-sack over his shoulders, locked the door, and rejoined her.

"You see it isn't much of a task for me to move," he said, as they turned back in the direction of the Ottos'. "I'll wash the dishes when I come back next October."

"Five months!" gasped Joanne, counting on her fingers. "John Aldous, do you mean——"

"I do," he nodded emphatically. "I frequently leave dishes unwashed for quite a spell at a time. That's the one unpleasant thing about this sort of life—washing dishes. It's not so bad in the rainy season, but it's fierce during a dry spell. When it rains I put the dishes out on a flat rock, dirty side up, and the good Lord does the scrubbing."

He looked at Joanne, face and eyes aglow with the happiness that was sweeping in a mighty tumult within him. Half an hour had worked transformation in Joanne. There was no longer a trace of anguish or of fear in her eyes. Their purity and limpid beauty made him think of the rock violets that grew high up in the mountains. Her lips and cheeks were flushed, and the soft pressure of her hand again resting on his arm filled him with the exquisite thrill of possession and joy. He did not speak of Tete Juane again until they reached the Otto tent-house, and then only to assure her that he would call for her half an hour before the train was ready to leave.

As soon as possible after that he went to the telegraph office and sent a long message to McDonald. Among other things he told him to prepare their cabin for a lady guest. He knew this would shock the old mountain wanderer, but he also knew that Donald would follow his instructions in spite of whatever alarm he might have. There were other women at Tete Jaune, the wives of men he knew, to whom he might have taken Joanne. Under the conditions, however, he believed his own cabin would be her best refuge, at least for a day or so. In that time he could take someone into his confidence, probably Blackton and his wife. In fact, as he thought the circumtances over, he saw the necessity of confiding in the Blacktons that very night.

He left the station, growing a bit nervous. Was it right to take Joanne to his cabin at all? He had a tremendous desire to do so, chiefly on account of Quade. The cabin was a quarter of a mile in the bush, and he was positive if Joanne was there that Quade, and perhaps Culver Rann, would come nosing about. This would give him the opportunity of putting into execution a plan which he had already arranged for himself and old McDonald. On the other hand, was this arrangement fair to Joanne, even though it gave him the chance to square up accounts with Quade?

He stopped abruptly, and faced the station. All at once there swept upon him a realization of how blind he had been, and what a fool he had almost made of himself. Blackton was one of the contractors who were working miracles in the mountains. He was a friend who would fight for him if necessary. Mrs. Blackton, who preferred to be on the firing line with her husband than in her luxurious city home, was the leader of all that was decent and womanly in Tete Jaune. Why not have these friends meet them at the train and take Joanne direct to their house? Such recognition and friendship would mean everything to Joanne. To take her to his cabin would mean——

Inwardly he swore at himself as he hurried back to the station, and his face burned hotly as he thought of the chance of such a blunder on his part would have given Quade and Culver Rann to circulate the stories with which they layed their scoundrelly game. He sent another longer telegram. This time it was to Blackton.

He ate dinner with Stevens, who had his new outfit ready for the mountains. It was two o'clock before he brought Joanne to the station. She was dressed now as he had first seen her when she entered Quade's place. A veil covered her face. Through the gray film of it he caught the soft warm glow of her eyes and the shimmer of gold-brown tendrils of her hair. And he knew why she wore that veil. It set his heart beating swiftly—the fact that she was trying to hide from all eyes but his own a beauty so pure and wonderful that it made her uncomfortable when under the staring gaze of the Horde

The hand that rested on his arm pressed closer to his side as they walked up the station platform, and under his breath he laughed softly and joyously as he felt the thrill of it. He spoke no word. Not until they were in their seat in the coach did Joanne look at him after that pressure of her hand, and then she did not speak. But in the veiled glow of her eyes there was something that told him she understood—a light that was wonderfully gentle and sweet. And yet, without words, she asked him to keep within his soul the things that were pounding madly there for speech.

As the train rolled on and the babble of voices about them joined the crunching rumble of the wheels, he wanted to lean close to her and tell her how the few hours had changed the world for him And then, for a moment, her eyes turned to him again, and he knew that it would be a sacrelige to give voice to things he wanted to say. For many minutes he was silent, gazing with her upon the wild panorama of mountain beauty as it drifted past the car window. A loud voice two seats ahead of them proclaimed that they were about to make Templeton's Curve. This man was talking to his companion.

"They shot up a hundred thousand pounds of black powder an' dynamite to make way for two hundred feet of steel on that curve," he explained in a voice heard all over the car. "They say you could hear the explosion fifty miles away. Jack Templeton was near-sighted, an' he didn't see a rock coming down on him that was half as big as a house. I helped scrape up what was left of 'im an' we planted him at this end of the curve. It's been Templeton's Curve ever since. You'll see his grave—with a slab over it!"

It was there almost as he spoke, marked by a white-painted cross in a circle of whitewashed stones. John Aldous felt a sudden shier pass thru his companion. She turned from the window. Through her veil he saw her lips tighten. Until he left the car half an hour later the man in the second seat ahead talked of Templeton's grave and a dozen other graves along the right of way.

He was a rock-hog, and a specialist on the subject of graves. Inwardly Aldous cursed him roundly. He cursed him all the way to Tete Jaune, for to him he attributed the change that had again came over Joanne.

This change she could only partly conceal from him under her veil. She asked him many questions about Tete Jaune and the Blacktons, and tried to take an interest in the scenery they were passing. In spite of this he could see that she was becoming more and more nervous as they progressed toward the end of their journey. He felt the slow dampening of his own joy, the deadening clutch of yesterday at his heart. Twice she lifted her veil for a moment and he saw she was pale and the tense lines had gathered about her mouth again. There was something almost haggard in her look the second time.

In the early dusk of evening they arrived at Tete Jaune. Aldous waited until the car had emptied itself before he rose from his seat. Joanne's hand clutched his arm as they walked down the aisle. He felt the fierce pressure of her fingers in his flesh. On the car platform they paused for a moment, and he felt her throbbing beside him. She had taken her hand from his arm, and he turned suddenly. She had raised her veil. Her face was dead white. And she was staring out over the sea of faces under them in a strange questing way, and her breath came from between her slightly parted lips as if she had been running. Amazed for the moment, John Aldous did not move. Somewhere in that crowd Joanne expected to find a face she knew! The truth struck him dumb—made him inert and lifeless. He, too, stared as if in a trance. And then, suddenly, every drop of blood in his body blazed into fierce life.

In the glow of one of the station lamps stood a group of men. The faces of all were turned toward them. One he recognized—a bloated, leering face grinning devilishly at them. It was Quade!

A low, frightened cry broke from Joanne's lips, and he knew that she too, had seen him. But it was not Quade that she had looked for. It was not his face that she had expected to see nor because of him that she had lifted her veil for the mob!

He stepped down from the car and gave her his hand. Her fingers clutched his convulsively. And they were cold as the fingers of the dead.

CHAPTER X

A moment later some one came through the crowd, and called Aldous by name. It was Blackton. His thin, genial face with its little spiked moustache rose above the sea of heads about him, and as he came he grinned a welcome.

"A beastly mob!" he exclaimed, as he gripped his friend's hand. "I'm sorry I couldn't bring my wife nearer than the back platform."

Aldous turned to Joanne. He was still half in a daze. His heart was choking him with its swift and excited beating. Even as he introduced her to Blackton the voice kept crying in his brain that she had expected to find someone in this crowd whom she knew. For a space it was as if the Joanne whom he had known had slipped away from him. She had told him about the grave, but this other she had kept from him. Something that was almost anger surged up in him. His face bore marks of the strain as he watched her greet Blackton. In an instant, it seemed to him, she had regained a part of her composure. Blackton saw nothing but the haggard lines about her eyes and the deep pallor in her face, which he ascribed to fatigue.

"You're tired, Miss Gray," he said. "It's a killing ride up from Miette these days. If we can get through this mob we'll have supper in fifteen minutes!"

With a word to Aldous he began worming his long, lean body ahead of them. An instant Joanne's face was very close to Aldous' so close that he felt her breath, and a tendril of her hair touched his lips. In that instant her eyes looked into his steadily, and he felt rush over him a sudden shame. If she was seeking and expecting, it was to him more than ever that she was now looking for protection. The haunting trouble in her eyes, their entreaty, their shining faith in him told him that, and he was glad that she had not seen his sudden fear and suspicion. She clung more closely to him as they followed Blackton. Her little fingers held his arm as if she were afraid some force might tear him from her. He saw that she was looking quickly at the faces about them with that same questing mystery in her search.

At the thin outer edge of the crowd Blackton dropped back beside them. A few steps more and they came to the end of the platform, where a buckboard was waiting in the dim light of one of the station lamps. Blackton introduced Joanne, and assisted her into the seat beside his wife.

"We'll leave you ladies to become acquainted while we rustle the baggage," he said. "Got the checks, Aldous?"

Joanne had given Aldous two checks on the train, and he handed them to Blackton. Together they made their way to the baggage-room.

"Thought Miss Gray would have some luggage, so I had one of my men come with another team," he explained. "We won't have to wait. I'll give him the checks."

Before they returned to the buckboard, Aldous halted his friend.

"I couldn't say much in that telegram," he said. "If Miss Gray wasn't tired and unstrung I'd let her explain. I want you to tell Mrs. Blackton that she has come to Tete Jaune on a rather unpleasant mission, old man. Nothing less than to attend to the grave of a—a near relative."

"I regret that—I regret it very much," replied Blackton, flinging away the match he had lighted without touching his cigar. "I had guessed that something was wrong. She's welcome at our place, Aldous—for as long as she remains in Tete Jaune. Perhaps I knew this relative. If I can assist you or—her—"

"He died before the steel came," said Aldous. "FitzHugh was his name. Old Donald and I are going to take her to the grave. Miss Gray is an old friend of mine," he lied boldly. "We want to start at dawn. Will that be too much trouble for you and your wife?"

(Continued on page 23.)

UPPER PENINSULA NOTES

Sound Death Knell for Scrub Cows

A CAMPAIGN to eliminate 3,000 inefficient cows throughout the upper peninsula of Michigan will begin January 1st of next year. The actual work will be carried on largely through the medium of the cow testing association which have already been organized in Dickinson, Gogebic, Iron, Delta and Marquette counties.

The scrubs will be replaced with high-producing grade animals, having an average record of 8,000 pounds of milk annually. The county agents say this is vital, in view of the fact that the average milk production, per cow, in the state of Michigan today is but 4,000 pounds.

* * *

To Place Certified Seed

Another feature of the ensuing year's program will be the placing of 50,000 certified seed potatoes among the farmers of the upper peninsula of Michigan.

Most of the certified tubers will be procured from the upper Michigan territory, and re-distributed to a picked group of farmers. The two types to be emphasized in the campaign are the Petosky Russet and the Green Mountain. J. W. Weston, potato expert for the Michigan Agricultural College, will be directly in charge of this campaign.

"We are going to try to inculcate into the minds of the farmers that it is not more potatoes, but better potatoes, that we want in upper Michigan," Mr. Weston declared.

* * *

Other Features

Poultry culling is another agricultural phase in upper Michigan which will receive the attention of the agriculture college, in the near future. An effort will be made, during the ensuing year, to cull out every non-producing hen in the upper peninsula, replacing the inefficient birds with producers, wherever possible. E. C. Forman, of the Michigan Agrucultural College will direct the work.

Next year's schedule also calls for fruit tree pruning and spraying demonstrations. In addition, crop tests for better varieties will be carried on in every county in the peninsula, and the effort will also be made to promote the more general planting of clover and alfalfa, in place of much of the timothy now grown.

More handicraft, pig and poultry clubs are also included in the program. Considerable interest has already been aroused in this work which has been carried on, among the boys and girls of upper Michigan during the past year, by A. G. Kottunen, leader of boys' and girls' clubs for upper Michigan.

* * *

To Encourage Dairying

It was announced during the county agents meeting that the agricultural college will, in the near future, detail a dairy expert to the upper Michigan territory. It will be his sole duty to encourage advanced dairying, largely through the medium of pure-bred live-stock. His first duty will be the organization of cow-testing associations in the counties which have not, as yet, taken up this work.

LAND CLEARING PROGRAM

A DEFINITE program for the land clearing campaign throughout the Upper Peninsula of Michigan has been arranged by Harry F. Livingston, Land Clearing Specialist for the Michigan Agricultural College, according to a recent announcement from the office of the M. A. C. Extension Department at Marquette.

In order that the peninsula may be more efficiently served in this campaign, Mr. Livingston has divided this section into two districts. A. J. MacAdams, who was in charge of the dynamite work with the land clearing train which conducted thirty eight schools of instruction in upper Michigan this year, will direct the work in the western half of the peninsula. George Amundson, who accompanied Cloverland's Land Clearing Train, will direct the activities in the eastern section of the peninsula.

The winter campaign calls for a series of meetings in both districts with the view of determining the individual problems of each section.

"The fact that this year we will be able to conduct at least ten meetings in every county makes it possible for the land clearing forces to bring their information nearer to the farmer" declared Mr. Livingston in discussing the program for the ensuing year. "The carload system of buying explosives will be discussed at these meetings and it is confidently expected that all explosives which the farmers of upper Michigan will use during the ensuing year will be obtained for them in carload quantity. This means a saving to the farmer of from 25 per cent to 40 per cent of the usual costs for explosives."

Plans for the 1923 land clearing are also under way. According to Mr. Livingston, the schools during the coming year will differ from those held during 1922 in that the train will consist of a caravan of trucks rather than railway trains. This system, it is believed, will be a decided improvement over the railway system, permitting a more ready access to the districts in which the schools will be held, and will eliminate the necessity of the train being limited entirely to the rights of way. Both MacAdams and Amundson are experienced in the land clearing work, the former being a graduate from the University of Wisconsin and. considered one of the best dynamite men in the country; and the latter recognized for his work in Ashland county, Wisconsin, two years ago, where he directed similar activities with remarkable results.

Regarding the actual results achieved this year thus far, with Upper Michigan's land clearing campaign, there is every indication, according to Mr. Livingston, that the 60,000 cleared acres which he predicted at the opening of the session will be achieved.

OREGON MANUFACTURERS BOOST FARM COOPERATIVES

THE Oregon Chamber of Commerce has broken the record for manufacturers' organizations by declaring for cooperative marketing. With the spectacle before them of bankruptcy, starvation, and an actual dwindling of the farm population at an alarming rate, the Chamber of Commerce has established a fund of $150,000 to be used in support of the existing cooperative institutions and to aid in developing others.

The Oregon grain and fruit marketing cooperatives, which are famous throughout the country for their efficient service, have done much to cut out the middleman's profit on grain selling and to give the farmer the benefit of his toil. Prosperous farmers mean a prosperous state, and it is a hopeful sign that the business men of Oregon have at last come to realize that cooperation by safeguarding the interests of the farmer also benefits them.

COURT AGAIN DECLARES M. S. F. B. DUES COLLECTIBLE

MICHIGAN State Farm Bureau membership dues for 1920, 1921 and 1922 have again been declared legally collectible by the courts. Verdict in favor of the State Farm Bureau was given by a jury at Centerville, St. Joseph county, Nov. 13 after 30 minutes deliberatin following a three days battle in Justice Ashley's court, remarkable in the fact that five of Southern Michigan's most prominent attorneys were interested in the case.

The Bureau sued to collect $20 delinquent dues owed by John E. Davis of Constantine. The Farm Bureau attorneys won their case on the straight collectibility of the membership checks and the services rendered by the Farm Bureau in the three year period just closing. The Farm Bureau charged in open court that interests hostile to the Farm Bureau are stirring up delinquent membership dues suits in an effort to discredit the Farm Bureau organization. It is believed that the Centerville case may be appealed. an event which may be regarded as significant of the Farm Bureau charges.

Messers Harry Howard of Kalamazoo, Glenn Cowell of Coldwater and J. P. Sloan of Centerville were the attorneys for the Farm Bureau. Elmer Palmer of Coldwater and Geo. Arnold of Three Rivers represented the defendants.

Have a
Quick-Lite
in Your Home
this Christmas!

Here's An Economical Gift No Christmas gift will bring greater cheer and happiness than a Coleman Quick-Lite Lamp. And you'll find it such a practical, economical and beautiful gift! It will delight and benefit every member of your family—at a cost of only about a penny a night! Mother, "Dad" and the kiddies will enjoy its wonderful 300 candle power brilliance. Not only at Christmas time, but throughout the coming years, the soft sun-like brilliance will protect your eyes—and keep strong and young the eyes of your loved ones—the children. As an extra gift for "Son" or "Dad"—get a Quick-Lite Lantern!

Use This Lamp 10 Evenings Write today for our Special "10-Day Visit" Plan. This liberal plan puts the Quick-Lite on your table to add immeasurable radiance and cheer to the holiday season. Send the attached Coupon. Simply mention the name of your nearest hardware store or general merchant. Make this Christmas your happiest one. Send Coupon--*Now*

THE COLEMAN LAMP CO.
Desk M. B. 81 — Chicago, Ill.

Coleman Quick-Lite
"The Sunshine of the Night"

Two Lights Needed in Every Home!

The Quick-Lite Lamp
- —is 300 candle power—20 times brighter than an old style oil lamp at one-third the cost.
- —is easy to keep clean—no wicks to trim, no dirty chimneys to wash, no soot, no smoke, no dripping oil.
- —can be used all over the house.
- —is economical—gives over 40 hours brilliant service per gallon of fuel used.
- —is beautiful—handsomely designed and elegantly finished.

The Quick-Light Lantern
- —is built to operate just like the Quick-Lite Lamp—gives same 300 candle power brilliancy.
- —is just the thing for night hauling, harvesting, ditching, road grading, camping, fishing, hunting, auto-touring, etc.
- —won't blow out in the wildest storm.

THE COLEMAN LAMP CO.,
Desk M. B. 81—Chicago, Ill.

EARN BIG MONEY
LEARN THE AUTOMOBILE BUSINESS
—the world's greatest industry. [illegible]

Make $2000 to $10,000 Yearly

[illegible] Nelson (N. Y.) took our course [illegible] now has [illegible] men working for him; Tirb (Mich.) gets [illegible] per week; Wolf (Iowa) [illegible] making about $75.00 weekly in business of his own; Anderson (Mich.) made $300 per [illegible] in garage of his own. Hundreds more like these in our files.

Complete Course—Endorsed by Big Auto Factories
Every branch of the auto business is taught.—construction, [illegible], upkeep, and repair of autos, tractors, trucks, [illegible] plants, and gasengines. We teach [illegible] experience on each machine. No guess work. Student visits auto factories, meet executives and service men, and learn factory methods right where 75% of automobiles are made. In fact, the big auto factories helped to outline our Courses and heartily endorse our School. M.S.A.S. training is complete, practical and profitable. IT PAYS TO LEARN THEM M.S.A.S. WAY.

DETROIT THE HEART OF THE AUTO INDUSTRY

Special Courses In Battery Repairing, Tire Repairing, Brazing, Welding and Machine Shop Practice. All teaching done by actual practice.

Good Positions Await Our Graduates
Factories, garages and service stations continually ask for our graduates. Positions offer good pay with excellent opportunities for advancement, or go into business for yourself.

RADIO DEPARTMENT

EDITED BY J. HERBERT FERRIS

RADIO EDITOR WILL COME TO YOUR NEIGHBORHOOD

THERE are many farmers who needs radio in their business of being business farmers not only for the financial returns to them but for the really good things they will receive through it, bringing pleasure to their families and to the sick as well as the hired help. It will help keep the family at home, it will ease the burden of caring for the sick and will bring the church, school, state and government departments right to the very door of those that can not or could not go to these very same places.

We know of the interest in radio among the farmers and to assist them and take one more step to prove that we are "The Farm Paper of Service" the radio editor will spend an evening with any group of farmers and their families in the state at their request giving them an evening of entertainment by radio and at the same time demonstrate to them the "workings" of the set. And the only cost to them will be the travelling expenses, board and lodging for the night.

If Grangers, Farm Bureau, Gleaners, Farmers' Clubs or any collective group of farmers will arrange for a hall and will pay the actual traveling expenses and supply him with board and lodging for one night the radio editor will give a demonstration that from the amusement point alone will be worth many times the cost. Please write us at least one month in advance of date you desire to hold the meeting so arrangements can be made. And in case the editor is all ready engaged for some other gathering we will have ample time to advise you. Also give all the information possible in your first letter so that we may give you an intelligent reply at once.—Editor.

REGENERATIVE RECEIVING SET

IN describing a regenerative receiving set, it is well to understand what is meant by regenerative, and what the advantage of such a set really is to the user and whether it is better than a plain receiving set. In describing such a set we will make our language as simple as possible and not technical.

To generate means to make or create and to re-generate means to remake or make over again or create over again that which has already been made or created. Then a regenerative receiving set would be one that made over again the same signal that it first received, and this is exactly what such a set does. In doing this we not only get the original signals that we receive but by having them repeated by the same set into and thru itself we get the signals much louder, and so we can either receive messages from a greater distance or we will receive them louder.

A plain receiving set will operate on a crystal or vacuum tube detector, but a regenerative set requires a vacuum tube detector and unless you intend to make such detector or buy one, do not go to the trouble or expense of making a regenerative set as you will not be able to use it.

The very fact that in this set one re-generates his signals, means that the adjustment is a little more difficult than with an ordinary set, but when patience and a little practice have made you familiar with your set you will get results that you can not possibly get otherwise. Right here let us again emphasize and a good ground.

Mr. Frank H. Jones of Tuinucum, Cuba, has heard 16 different broadcasting stations that were over 1,000 miles away, and 4 of these were over 1,500 miles away, this was done with a vacuum tube detector and a regenerative receiver. This shows what can be done but does not mean that you or I will do just exactly as well, but with care we should do half as well and if we can do half as well as Mr. Jones did we will hear all the news, music and market reports that we wish to hear.

To make a regenerative receiving set the following articles will be needed, the screws binding posts, etc., you can get anywhere and in some cases do without, all depending upon how fancilly you mount your set or whether you just assemble your different parts all on a plain table top where they can all be seen.

One (1) Vario-coupler, having a range between 150 to 500 meters.

Two (2) variometers ,having the same range as the vario-coupler. (The wave length range can vary somewhat as each maker has a slightly different wave length range for his own instrument.)

Ten (10) brass contact points.

One (1) rotary switch lever.)

These two items go with the vario-coupler, and are only needed if you buy the vario-coupler unmounted.

A board to mount them on apanel for looks and a table or shelf to set them on completes the regenerative receiver.

Now to assemble them you must be careful, follow each wire connection thru, and then make the connection. Study the chart of symbols given in one of our articles so that you are sure all connections are corrections are correct and then you will know that you can receive messages from long distances.

One of the variometers we call the "grid variometer" and the other variometer we call the "plate variometer" this is because we use one of these variometers to tune the plate circuit of the vacuum tube detector and the other to tune the grid circuit of the same detector.

In making a drawing we often run our lines which represent wires very close together and very straight, making sharp turns and looking as tho it would be difficult to actually run wires just so. It is better not to have connecting wires run parallell more than necessary, and so far as being straight or turning at right angles the best method is to make all connections as short as possible, letting no wires touch that cross over each other and if possible where connections are shown between 3 or more points using one wire for all and not several wires, leting the wire run from one point to the other, pass under the screw, and on to the next.

One can make the vario-couplers and variometers, but such good ones are now on the market and cost from $3.00 to $6.00 each that much better results can be had with less labor if you will purchase these parts. A complete regenerative receiver(without detector) costs on the market today from $25 to $75 and by buying the three parts one can be made that will do just as good work, for $10 to $20.

Major Armstrong, the inventor of the regenerative circuits has just perfected another circuit which he and with this circuit using 2 vacuum tubes and the necessary parts, he can get signals as loud as can be had on one tube with regenerative receiver and 8 steps of amplifiers. This will mean that in the course of another few years we will be enabled to hear all the stations over the entire world without much difficulty. But don't wait for this to come as you are going to miss much this coming winter and spring that will mean dollars and pleasure to you if you are not listening-in to the many voices in the air right now or as soon as you can make or buy a receiving set.

How to make a variometer and vario-coupler will be described shortly, but first we must cover one and two-step amplifiers, and then we will take up the making of the different items that some will want to make and not buy.

* * *

Right here I want to emphasize the fact that to obtain the most out of radio in our rural communities and in the farm home, it must be done by co-operation.

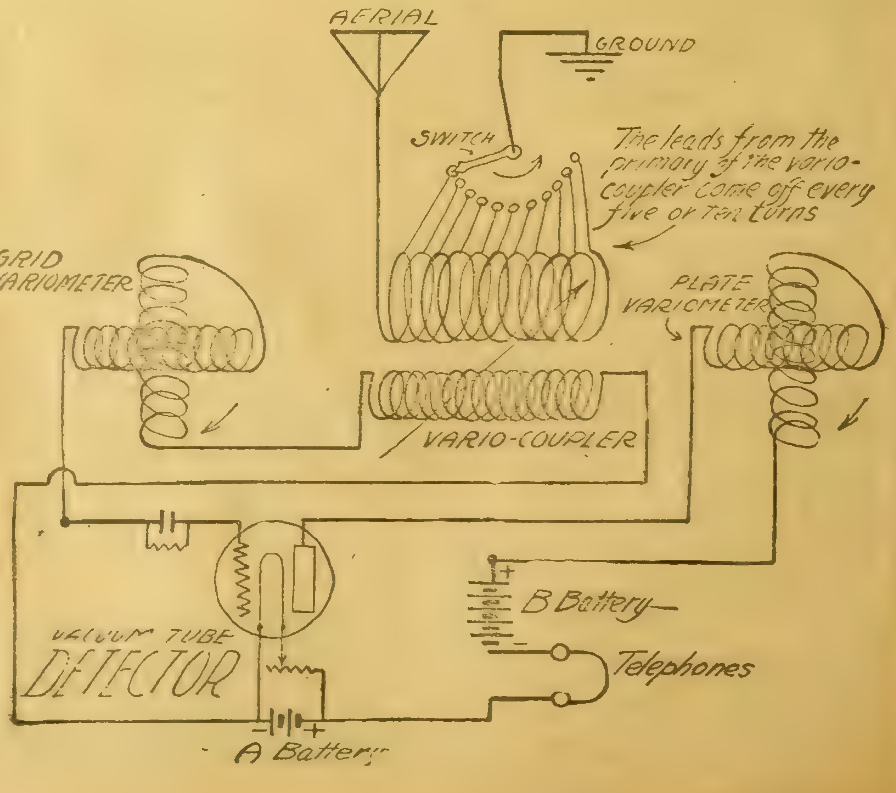
In the home the entire family will wish to hear the music and entertainments and father the market reports ,and to son will be given the "job" of making a receiving set and expect him to produce from some old wire, a wooden box and some odds and ends a dandy receiving set, and if he fails the whole family will say that there is nothing to radio. But if you will help, mother with a little butter and egg money, sister with a little of her berry picking money and brother and father with a little of the pork or potato or corn money you can buy a set that will bring the best of the world's music to you, the latest news, weather and market reports and keep you right in touch with the big things of life. Something that will do you good, entertain you and your friends and keep your children at home.

In the community, the church, the Grange, the Gleaners, the Masons or any organization should get together and get a radio set that will be of benefit to the whole community in this way the expense can be reduced to each individual and yet enjoyed by all. Have you wanted to hear the President of the United States talk to you? Then go to your lodge, club or church and hear him. He talks over the wireless now and then.

Get together in this, you can enjoy it collectively really better than individually and why not share or help share with your neighbor part of the good things that you can have so simply and at such a little expense.

* * *

In shipping some Bartlett pears and Damson plums this fall I watched the Chicago markets as given by KYW, the Westinghouse station at Chicago, and the net profits on two shipments, above what most of my neighbors received, paid for my receiving set. This shows what can be done, not on fruit alone but on live stock, or dressed meats, grain or anything that the farmers raise or ship.



SHIP TO

FUR DEPARTMENT

EDITED BY A. R. HARDING
America's Foremost Author and Trapper
QUESTIONS ANSWERED

HARVESTING THE FUR CROP

(Continued from Nov. 25th Issue)

MUSKRAT are still the most plentiful of the Michigan fur bearers and at prices ruling the past three seasons value of the catch is much more than that of either skunk or mink. Muskrat breed twice each season—some say three times. Muskrat furs are used imitate seal and other high-priced furs.

Early in the season muskrat are rather easily caught, yet after a few have been taken, they become somewhat shy of uncovered traps. Many trappers use rubber boots, wadeing along the shore, claiming that their tracks scare the rats when conspicuous, in the mud, along the shore. If a boat can be used it is best, as sets can bemade where otherwise they could not.

Traps of the No. 1 and No. 115X, long spring type, and No. 1 of the Blake and Jump, Kangaroo, Oneida and Coil spring, or under spring type, are correct sizes to use. Some experienced trappers, however, use larger traps, claiming that they drown quicker. The trap, regardless of size, should be staked as far out in the water as chain will permit, and the trap set near shore in about two or three inches of water. Where the paths are leading from one lake, pond or swamp to another, or paths, leading up the bank, no bait is required. Bait should be used with sets made where there is but little sign. Corn, apple, potato, pumpkin and parsnip are all muskrat bait. Corn shelled and scattered about the trap or the other baits cut up and placed a foot or so beyond the trap will usually entice the animal to trap.

Bunches of cat tail and other weeds or grass showing where muskrat have been feeding are fair places to set. Boards and logs placed near houses sometimes make good places to set as muskrat enjoy resting and eating on them. Traps baited at such places are pretty sure to catch.

Some believe that muskrat gnaw their feet and legs off when caught. Such is not the case. If caught in a stiff spring trap breaking the bone ,they are very apt to get away by twisting about. The flesh and hide of the front foot and leg is tender. The hind foot and leg is larger and tougher and for this reason it is best to make the catch by the hind leg when possible. It is for this purpose that traps should be set about three or four inches deep. In swimming to shore or feeding places the front feet are apt to pass over the trap.

The weasel which turns white during the winter months for some years has been selling, according to size, from about 25 cents to $1.00 or more for very best, largest and pure white. The smallest size trap will easily hold this animal so that the No. O is much used. Weasel will be found along old stone fences, hedges, brush piles, etc. They are easily trapped and sets at small "cubbies" are probably as good a method for catching as any. They are fond of flesh and the bloodier the better. Keep this in mind when setting and baiting for this animal.

There is no open season on beaver until 1925 so no need to explain methods of trapping this fur bearer. There are now very few marten in the state so that trapping methods about all of the fur bearers, other than otter, has been explained. Otter are now quite scarce throughout the state yet there are some in all of the Upper Pneinsula and an occasional one still in several parts of the Lower Peninsula. Some eight years ago when trout fishing I chanced upon an otter slide in Gogebec County. I wrote a trapper friend, then in that county, and he caught three near and at the slide that season.

Otter are great rovers and may wander from a certain locality ten, fifteen or more miles and be away for weeks. Otter are very shy animals and frequent streams that are brushy and as little used by man

Tag Your Furs to SHUBERT
BIG MONEY SPEEDY RETURNS

IF it's BIG MONEY you're looking for—*tag your furs to* "SHUBERT" *and quit worrying.* You'll get every penny that's in your furs and you'll get your money in a hurry. We have been satisfying fur shippers all over North America for more than thirty-nine years. Surely such a splendid record ought to mean something to you. A "SHUBERT TAG ENVELOPE" on your shipment assures you of

Highest Prices—You'll be paid the highest price the market will justify—not on one skin or a few skins—but on each and every skin you ship us.

Speedy Returns—You'll get your money in a hurry. We aim to mail check same day furs are received. We have many letters in our files from fur shippers who say "SHUBERT" returns *are the promptest in the world.*

Honest Grading—Every skin you ship us will be graded carefully and correctly by an expert—according to the quality and condition of the fur and size of the skin.

No Risk—You take no risk whatever when you ship your furs to "SHUBERT" under the terms of "THE SHUBERT GUARANTEE," for we've got to satisfy you *and we will.*

Don't delay another minute. Quick action means big money for you. Hurry in a shipment.

HISTORICAL BACKGROUND OF MICHIGAN AGRICULTURE

(Continued from page 4)

conveyed malaria, commonly called the "shakes" or "ague," which none escaped and which sapped the vitality of the pioneer and gave a bad reputation to the country which produced it. The pioneer, untaught by modern science, did not associate malaria with the mosquito, but he was aware that it lurked about the damp, water-soaked low-lands, and he surmised it had something to do with the "miasma' that afflicted the atmosphere in such regions. Early Michigan, because of the conditions that are here described, got a rather bad reputation in the East, and it was early officially declared that very little of the territory was fit for human habitation. The difficulties were exaggerated, but even so, establishing a farming community in the primeval wilderness was hard enough at best. The forest, dense and lofty which crowded round the settler's clearing, impeded air-drainage and hence favored unseasonable frosts, particularly in low places. It isolated farmstead from farmstead and made life lonely in the extreme, so that the settler sought every occassion for breaking away and seeking the company of his fellows even at great distances from home. The battle with the trees, and after them the stumps—some of them enormous in size and well-nigh indestructible, was grueling labor for both man and beast at a time when high explosives, mechanical stump-pullers and tractors were not yet at the disposal of the pioneer, as they are today. If accident or disease prostrated the settler, hospital care did not exist the medical care was difficult to secure—sometimes appalling so. Such amusements as there were, must be also home-made, and were all the more eagerly engaged in for being obtained with difficulty. They were spelling-downs and debating at the school-house, husking and quilting bees, raisings and camp-meetings. They helped to lighten up the hardships and trials of pioneering, but one seldom finds in the recollections of pioneer life by those who shared it, any longing for the return of the "good old days" which did not leave many impressions save those of toil and privation.

The Indians

The first farmers of Michigan were the Indians. A number of Algonquin tribes dwelt within the borders of the territory now comprised in Michigan—Chippewas in the north, with Ottawas and Menominees in close proximity to them, and with the Chippewas and Pottawatomies mainly in the south. The Indian "garden-beds" attracted the notice of the early settlers, although just what these were, is still a matter of some doubt. In Michigan the signs of these "garden-beds" have been mostly obliterated. They are better preserved in the neighboring state of Wisconsin. In a small way Michigan Indians grew Indian or "squaw" corn, with some vegetables, such as pumpkins. This primitive Indian corn—small kernels each surrounded in its own particular husk, clustered together as a small ear, that would now be called a "nubbing"—is still occasionally grown largely for curiousity's sake, although it is thought that it may have some value for breeding purposes because of its quick maturity. As one should expect, Indian agriculture, was unmethodical and of slight importance, as the pioneers testify and as is indicated by the frequent famines from which the Indians suffered. Forest and stream were the normal sources of the Indian's food, and while game was his chief article of diet, he produced maple-sugar in large quantities apparently, although the manner of its manufacture did not recommend it to the nicer palates of the whites. The lakes and marshes carried wild rice in both peninsulas, but this was not very nutritious, and the red man was prone to swap his winter's store for a drink of rum. Even yet implements of stone or copper are occasionally dug up in various portions of the state that presumably once served some agricultural purpose for the Indian, particularly the Indian's squaw. The man of the family was not eager for labor of this sort.

The first white farmers in Michigan were the French. The French also were more at home in the forest or on the water courses than in the tilled field; but their farmsteads did appear close together, chiefly in the southeastern corner of Michigan usually reaching from the waterside of Lake Erie or Lake St. Clair, or the rivers flowing into these lakes, and well back into the country. The water frontage was narrow—often less than sixty rods,—thus bringing these sociable folk into close neighborliness and giving everyone a chance at the watery thoroughfare that abutted on the farm.

These French people were from Canada and presumably were brought hither at first mainly by the fur trade. In this trade Mackinac, Sault Ste. Marie and Detroit were points of major importance, but trading posts appeared at strategic points in the interior, one of the best known being that of Campeau on the Saginaw River. The trade was at times very profitable, and efforts were made to control it as a monopoly both on the part of the French and English. For many years the fur trade was very much more important than agriculture, and its history remains full of interest and romance; and, although it is now carried on in a fashion quite unlike the ways of Henry, of Campeau, of Johnson, of Williams, and other well-remembered traders of the golden age of the trade—French English and American,—the Michigan fur trade is still of considerable importance, the annual catch being still estimated at one million dollars in value or more.

Easterners Come to Mchigan

If the French were the first farmers that settled in the state, they were greatly out-numbered after the completion of the Erie Canal, by the people from New England and New York, who made their way by this new waterway in very large numbers to Michigan. The Erie Canal was finished and opened for traffic in 1825. Five years later there dwelt within the present limits of Michigan less than 30,000 people, which still included a considerable number of French descent. Ten years later there were about 212,000 inhabitants in Michigan,—largely of Yankee stock—aggressive, ambitious, restless, and mainly agricultural. Reaching Michigan mainly by boat, they pushed into the interior. From Detroit, Monroe or Toledo, filling up first the counties of Wayne, Washtenaw and Oakland, and then moving on into the valley of the Grand, the St. Joseph and the Kalamazoo, and other streams, taking up such lands as the surface indications suggested were suitable for farming, and placing their villages where water-power or transportation possiblilities indicated a good site. These New Englanders and New Yorkers were mainly of British descent, were trained in the democracy of the town meeting, were Protestant and Puritanical, while the French were Roman Catholic and not accustomed to self-government or much interested in it. Just as their ancestors in New England and western New York had reared their dwellings on the frontier, exposed to the hardships of pioneering and exposed to the hazards that lurked in the forest close by from the assaults of wild men and wild beasts, so these American pioneers of Michigan built their frontier cabins and cleared their fields without taking much account of trials, dangers or the lonely circumstances of their existence, but they were fit instruments for home-building and commonwealth building. We are not surprised that with their coming came a demand for greater self-government and that this demand carried Michigan into the Union as a state in 1837.

With the influx of eastern Americans, there came shortly immigrants from the old world many of whom took to agriculture. Germans arrived very early apparently chiefly from the Rhineland—industrious, thrifty, hardworking. They began to arrive even before the Revolution of 1848 drove many out in search of greater liberty. Land was dear in Germany and for many, quite unattainable. It was cheap in Michigan and probably better in quality in the southern counties. It would cost perhaps $200 or more per acre in the Fatherland, while such good land in Michigan sold for $1.25 an acre. The raw material for building a wilderness home was cheap, if anything, too abundant. Some of these German farmers settled in religious communities, such as the Mennonites and Moraviaus. Soon the Dutch from Holland in the late '40's sought new homes by the Lake Michigan shore in consequence of religious difficulties which had arisen in the mother country. Then came Scandinavians, Bohemians, and other European stocks—all good material out of which to build a hardy rural life; and there was even a considerable settlement of negro farmers in the south—composed of freed or escaped slaves. Mining attracted Fins to the Lake Superior country, and many of these later became farmers, and as farmers, the Finns constitute one of the most important racial elements in the northern peninsula today. They are not numerous outside of these counties which border on Lake Superior. Scandinavians, Germans, French and other European stocks also have established themselves in the agricultural northland.

The Surveying

The land of Michigan, out of which 196,447 farms of the state have been carved, at the outset belonged to the Indians, who, as we have seen, made very little use of it for agriculture. The United States got possession of this land through treaties with the Indians, such as that in 1807 which ceded territory in the region of Detroit, the treaty of 1819 ceding the Saginaw region, of 1821 ceding the land south of the Grand River, of 1836 ceding the northern portion of the Lower Peninsula and the eastern portion of the Upper Peninsula. Before farms could be located and described, it was necessary to survey them. The surveys were carried out by the General Land Office of the United States. This survey was begun in Michigan in 1826. In accordance with the plan of land surveys adopted by the old Confederation Congress in 1785, a base line and meridian line was run east and west, and north and south throughout the state. Townships were laid out six miles square and numbered with reference to their relationship to the baseline and meridian line. The townships were divided into thirty-six sections and numbered—the section in the northeast corner being number 1. Quarterposts were set eqi-distant from the section corners. Local surveyors could then run the boundry lines of farms being located with reference to their postion in the section (as "the northeast one-fourth," commonly written "NE¼"). It is true that there are not a few farms in Michigan still described by the antiquated and inaccurate method of "meets and bounds," but the official United States Surveys are regarded as the preferable form of description.

When land was surveyed it could be purchased at the United States Land Office of the district. Land offices were located at various points in Michigan, but as much of the land owned by the United States was disposed of, all land office business was eventually centered at Marquette where is now the only U. S. land office in the state, quite capable of handling all the business connected with the some 73,000 acres of land which the United States still holds in Michigan. Considerable tracts of land were also given by the United States to the state, in aid of education and internal improvements—for the construction of canals, roads and railroads; and a part of these grants now form a portion of the farm lands of the state. After the passage of the United States homestead law of 1862, individuals could acquire free lands on homestead entry, and the state itself now holds considerable tracts of land also subject to homestead entry. Much of such lands were acquired by the state because of the failure of owners to pay taxes assessed against them, and presumably these lands are still dear at any price and are not desirable for farming purposes even if acquired without a money payment. It is one of the problems in which the state ought to be interested, just what should be done with the lands which the state and the United States still possess.

(Continued in an early issue.)

MICHIGAN CROPS

SOWING ALFALFA

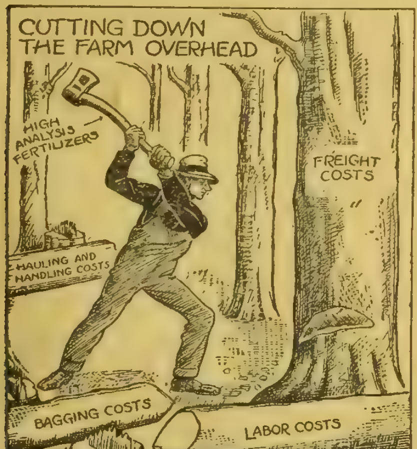
I am thinking about sowing a piece of alfalfa next spring. Have never had any experience with alfalfa but have been advised I can sow with oats. Please give me any information you have regarding the planting of this crop. Also what do you think of orchard grass for pasture? —E. K., Clare County, Mich.

—Alfalfa requires a well prepared seed bed, plentifully supplied with lime and having good drainage. Many farmers are having success sowing alfalfa with oats as a companion crop, although as a rule barley is a better crop to use in place of oats, as it is not so leafy and does not make such a heavy drain on the water content of the soil. In any case you should not use over one bushel of oats or barley to the acre, and if it is the first time alfalfa has been sown it would be better to use only two or three pecks. You should have the land fall plowed for the best success with alfalfa seeded with oats or barley.

The seed bed should be good and firm. If the land is very weedy, or if it has not been fall plowed it would probably be better to cultivate thoroughly until the first of June and then seed the alfalfa alone some time during that month.

For the best success with alfalfa in Michigan a hardy variety such as Grimm, Baltic, or Cossack should be used, and in any case northern-grown seed.

Orchard grass has a wide adaptability but is not to be considered in preference to our other common pasture grasses as a general rule, except on light land or hilly. It grows rather coarse on rich land but on rough infertile land it does not make such a luxuriant growth and it makes a useful mixture for pasture on this type of soil. It is a perennial and I think should be used more on some of our rough land as a part of a permanent pasture mixture.—J. W. N.



CUTTING DOWN THE FARM OVERHEAD

FREIGHT COSTS
HAULING AND HANDLING COSTS
BAGGING COSTS
LABOR COSTS
Tyson

PEAT HAS LOW FERTILIZER VALUE

PEAT, in recent years widely advertised as a fertilizer is not to be compared with stable manure or with mineral fertilizers as a means of increasing crop production. This is the essence of a statement that has just been made by the United States Department of Agriculture as a result of many investiagtions on the subject.

Special processes, such as the "bacterization" of peat, occasionally are alleged to give it unusual fertilizing powers, but tests have not substantiated these claims. An English investigator of few years ago reported good results with the use of "bacterized" peat, but experience in this country has not supported his theory. No laboratory process for the "bacterization" of past has been discovered which materially improves it for fertilizer.

The peat or "humus" that has been marketed in this country as a fertilizer or plant stimulant has shown a decided lack of uniformity, but this is to be expected when it is known that peat deposits are the slow accumulations of layers of plant material of different kinds. The rather high percentage of nitrogen occasionally found in peat and muck is due not to the presence of available nitrogen, but the accumulation of nitrogeneous material that is not available for the use of plants, the more suluble substances having been lost. A well decomposed layer of peat has in it very little available plant food of any kind.

Some kinds of peat are very useful for stable litter and for composting. While peat is too bulky and too poor in available plant food to serve as a substitute for manure or mineral fertilizers, certain kinds of peat appear to be suitable in the growing of specialized crops or as potting soil in greenhouses. In the manufacture of mixed fertilizers the use of peat as a conditioner, as well as a filler, appears to have been satisfactory to the mixer. Several varieties of peat and muck soil are farmed, frequently showing high productivity for many kinds of truck crops or as grass land. Any peat deposits, however, are agriculturally unsatisfactory, and some peats contain substances distinctly injurious to plants.

Exports of corn during each of the first three months of 1922 were larger than during any month of 1921 according to the United States Department of Agriculture.

Uncle Rube Spinach Says:

IT'S ALL OVER NOW!

JEST a little bit ago Paris said skirts must go down—they must be longer. For a short time actresses an' a few others wore 'em longer. Some of the young fashion women put 'em down to the shoe bottoms an' reformers an' ol' ladies, ol' maids without any reason for wearin' 'em short, all hollered 'at it wuz good 'an glorious—'at our women would be clothed agin in a proper form. It looked like things wuz goin' to be—but how long did it last? You know it wuz short-lived—very short—our young women who have every good reason for wearin' their skirts short ain't goin 'to hide the reasons by wearin' 'em long.

An' when you stop to think of the comfort of the short ones—no matter what other reasons they may have, then do you blame 'em for wantin' 'em short?

Now you nor I think for a moment that young women wear short skirts to advertize what they've got. We can tell by size'n 'em up 'bout what's there—it's 'cause they want comfort in walkin', in gettin' onto street cars—for a hundred different things—never to let the world know they have nice calves—cause the world knows that already.

But the ol' fogies—the reformers, the ol' maids will continue to holler 'bout the short skirts—they are immodest. disgraceful an' every thing. An' yet did you ever notice that the reformers, ol' maids, widows an' even ol' women follow the styles as closely as the bobbed haired flappers or any other style followers?

An' the young men are no better. Watch 'em an' see—every style—clothes, cut of hair, mustache, eyebrows—anything, you'll find 'em in it. An' if fashion said fer the young men to powder their nose they'd do it—yes they'd powder their face an' wear short pants an' be monkeys if fashion said so.

And do you know it took 'bout a million years 'cordin' to Darwin's theory for man to elevate from the monkey but it takes a woman about three minutes to put him back in the class from which Darwin sez he sprung.

Oh, well, fashion has her victims—women has hers—men, well, I guess they have 'bout what they can get—never gettin' much of any place—jest ploddin' along—an' I guess at's 'bout all. Cordially yours
UNCLE RUBE.

Bigger Yields With Less Work

The Roller-Bearing International Manure Spreader Is a Money Maker

THE BASIS of profitable farming is a fertile soil. In farming, as in other businesses, there are poor years and good ones, but the farmer who keeps up the productivity of his soil will forge ahead.

No method of maintaining soil fertility has proved so efficient as the proper application of barnyard manure. It is a foresighted policy to build up crop yields with an International Roller-Bearing Manure Spreader. Put manure on your fields finely, evenly, uniformly, and economically; the extra fertility will in a short time pay for the International spreader.

Note again these features in International construction: 1. Roller bearings at seven points. 2. Power delivered from both wheels. 3. Double ratchet drive with six feed speeds. 4. Short-turn front axle—no pole whipping. 5. Rear wheels track with front wheels. 6. Tight bottom. 7. Two beaters and wide-spread spiral. 8. All-steel main frame.

ONE DOLLAR PER YEAR

The date following your name on the address label shows when your subscription expires. In renewing kindly send this label to avoid mistakes. Remit by check, draft, money-order or registered letter; stamps and currency are at your risk. We acknowledge by first-class mail every dollar received.

Adevertising Rates: 45c per agate line. 14 lines to the column inch, 772 lines to the page. Flat rates.

Live Stock and Auction Sale Advertising: We offer special low rates to reputable breeders of live stock and poultry; write us.

RELIABLE ADVERTISERS

We will not knowingly accept the advertising of any person or firm who we do not believe to be thoroughly honest and reliable. Should any reader have any cause for complaint against any advertiser in these columns, the publisher would appreciate an immediate letter bringing all facts to light. In every case when writing say: "I saw your advertisement in The Michigan Business Farmer!" It will guarantee honest dealing

Entered as second-class matter, at post-office. Mt. Clemens, Mich.

"The Farm Paper of Service"

A NEW FEATURE ADDED

THE Business Farmer is proud indeed to present on page 29 of this issue the first complete Agricultural and Business Review in detail, ever to our knowledge printed in an American farm paper. It is presented by special arrangement with the Department of Research of the American Farm Bureau and is but another department of service which that worthy organization is extending to the farming business.

This page summary will be found to contain the comparisons on every line of business or production in which the business farmer is interested. It boils down into the smallest possible space, information which could be spread into volumes. It answers in actual figures and by comparisons with the previous month, previous year and prewar years, practically every conceivable question that may arise in your study of farm markets or market conditions.

We hope every earnest farmer will study this page and thus learn to use it. It will appear regularly in the last issue of every month and will. we believe, further prove that The Business Farmer is what its readers have come to call it: "The Farm Paper of Service!"

A MILK-FED MELON

THE Detroit Creamery Company cut a big fat, juicy melon the other day. It was a melon which the dairymen helped to grow but they didn't share in its distribution. The melon was a 50 per cent stock dividend to all stockholders of record December 8th. Every person who owned ten shares of the stock now has fifteen without the investment of a single additional penny.

To be able to cut a melon in times when so many business enterprises, including farming, are struggling for a bare existence is a distinct tribute to the business sagacity of the melon cutters. It may at the same time be a perfectly legal and moral operation. In this particular case it represents inordinate profits which under more equitaable conditions would have gone in part to the dairymen who produced the milk from the sale of which the profits accrued.

These profits were earned by entirely approved methods. The creamery company paid the farmers the price which had previously been agreed upon. No farmer was coerced into selling his product at thet price and no advantage presumably was taken of him in the matter of weight and test. The milk was sold to the consumer at a price previously advertised, and all presumably containing the legal amount of butter-fat. At no stage in the distribution of this milk was there a single transaction, so far as the average eye is able to percieve, which would not meet with the requirements of the most exacting statutes.

The secret of this company's profit-making lies in the fact that the company controlled every large item of cost entering into the purchase and sale of the product. It told the farmer what it would pay him for his milk. It told its wagon drivers and factory help what it would pay them for their labor. It told the consumer what he would have to pay for the product when set down at his door-step. All the way from cow to consumer that product was virtually under the control of the creamery corporation.

Why? Lack of competition. If there were actual competition in the creamery business in Michigan the Detroit Creamery Company would not be able to pay out a $2,000,000 stock dividend and annual cash dividends of 12 and 14 per cent. They would have to bargain with farmers for their product or the farmers might sell it to their competitors at a better price. But the Detroit Creamery Company has successfully met all competition and therefore controls the supply and the market in the Detroit area and to a certain extent outside that area.

The Business Farmer has always believed that the farmers themselves should furnish the competition so badly needed in the Detroit area. This melon slicing job has not caused us to change our mind.

PAINTING THE LILY

IN discussing the milk price, W. L. Watson, secretary of the Detroit Milk Bottle Exchange, said: "We do not want to raise the price of milk to the public just before Christmas holiday season when it would work a real hardship. A little while ago the farmers flooded us with milk. Now they are a little short with the supply and we think they are holding it back to force an increase in price. We have only the interest of the public at heart. We do not want higher milk prices."

That was a nice little speech to be sure. All who read it in the Detroit daily papers must have instantly said, "Those wicked farmers are trying to starve us with their high prices. If it wasn't for the creamery companies there's no telling where milk prices would go." But the poor ignorant consumer doesn't know that the dairymen haven't declared a dividend in a "dog's age," while the big creamery companies declare 'em every three months.

TAX EXEMPT?

JOHN DUVAL DODGE, son of the late John Dodge, one of the millionaire brothers who built their fortunes in a few years out of the manufacture of automobiles, is protesting against the payment of any personal tax. An amount, said at the time to have been two millions of dollars, was handed the young Dodge just about a year ago and since that time he has been in the public eye more or less frequently. Now he does not claim that he spent the two million, but rather that he has invested it all in tax-exempt bonds and federal certificates of indebtedness.

* * * *

Tax-exempt bonds are just about as fool-proof a form of investment as any one could ever hope to own. It seems a little strange to some of us, however, that industry and sweaty labor should continue to be taxed beyond all reason, when retired capitalists or fat estates can boast of tax-exempt securities, which good year and bad, bring in a golden stream of profit, to their owners. We do not boast of being economists, but we wonder if this seeming injustice is necessary. There must be another way out and the man who finds it need not be called a "radical" either!

OUR NAVAL RESERVE IS THE KEY

RIGHT now the thing that is "rocking-the-boat" at Washington is the ship subsidy. Our experiment in ship-owning has been mighty expensive and now various plans are brought forth to solve the problem. Most everyone agrees, however, that it would be a shame to lose the investment we have made or to see the American flag again a strange sight at sea. There is such a thing as "putting-up-a-good-front," even if it does cost something.

The Business Farmer would like to suggest a plan that, so far, we have seen no sponsors for, yet for the life of us, it seems practical, and economical. It is the coordinaton of the navy with the merchant marine. It would make every man in the pay of the Unted States navy from Admiral to Seaman, second class, a worker on the merchant ships which fly the American flag. Whether the government operated these ships or they were operated by private corporations, on one of the plans suggested, would be imiaterial. The important thing would be that in times of peace we would have a great many thousand navy men actually at sea operating our merchant ships in every port in the world, yet ready for instant call in case of trouble.

It would give every man on an American merchant ship a rating in the Naval Reserve of the United States Navy, and he would be partly paid by the navy. This would equalize the wages paid by the ship operator (whether government or private) in competition with the lower wages paid on English, German and French ships. There are literally hundreds of thousands of young men in this country, between 18 and 25, who would be anxious and willing to serve, say, a two year enlistment in the navy of their country, if they were assured that after a very brief land training, they would go to sea immediately as ordinary seamen, on merchant ships visiting the foreign ports of the world.

A rotation could easily be arranged whereby both officers and men would have certain months of actual naval training on battleships and with guns, but the greater part of their time would be spent at sea and in the actual operation of ships which is, after all, the most important consideration when war comes.

The situation today is; that we have a great "standing" navy, including single battleships with crews of a thousand or more men, "standing-by," like firemen in a firehouse, waiting for the alarm. That is alright, but when war comes, this great body of men is only a skeleton of the number actually needed for naval service. So smooth working organizations are broken up into hundreds of units, while volunteer "gobs" are hurriedly enlisted, most of whom have never felt salt-water under their feet. On the other hand, today, we have a great merchant marine with hundreds of ships of every size, from the giant "Leviathan" down, which some say unless the ship subsidy bill is passed, must lie at their wharves while the commerce of the greatest nation in the world is carried on ships that fly the flags of foreign nations.

Cannot these two great similar propositions be welded into one?

At an actual saving, it would seem possible for the United States of America to make her naval strength greater through efficiency and her merchant marine the envy of the rest of the world.

Can it be that we are the first to suggest this seemingly apparent solution?

WHO CAN AFFORD WAR?

BEFORE the war, the national debt of the United States was $1,038,546,000 and today is is $23,922,000,000, Frances national debt was $6,346,129,000, now it is $23,350,000,000, while Great Britians has increased from $2,485,818,000 before the war to $37,910,000,000 today!

That is the price these nations paid for war.

The total monetary loss, alone, of all the nations in the World War, mounts up to a figure that is simply inconceivable, it staggers even the imagination. Some of this money the winners expect to gouge out of the losers. How much? Your guess is as good as anyone elses. Probably it is going to bring about a combination which will include Russia; they will say, "rather than pay what we cannot pay, we will fight you again!"

It is a shame that wars can be fought on credit. If it were a case of "pay as you enter," there is not a nation on the face of this earth that could get by the conductor.

And that would be a blessing to all people!

"Stop my paper on expiration" says F. C. Lee, Thompsonville, "Potatoes are 15c here!" Yes, friend Lee, and they probably would always be 15c, if it were not for serious minded men and loyal farmers who know that the way to right a wrong is to fight it out. The ostrich sticks its head in the sand when surrounded by danger! The human ostrich among farmers harangues his wife, says all farm organizations are run by grafters and stops his farm paper! Thus having cut off the three sources from which aid would come, he goes back where he belongs, which is not in the farming business.

If you farmers are not satisfied with the appointment of James Couzens, as senator to fill the unexpired term of Truman Newberry, it is because they do not know the man nor his record. We believe that before a year from date the Senator from Michigan will have made an enviable record in the senate and that among his best friends at home will be our farmers.

With 17 out of 24 farm products advanced in price over a month previous, as shown in the Agricultural & Business Situation, on page 29 of this issue, it would appear that the farmer can begin to catch a glimpse of the silver lining, for which we have all been looking, hoping and praying!

You who have wanted to read the Truth about Henry Ford, will be delighted with our announcement in this issue that we have secured the rights to reprint this famous book exclusively in The Business Farmer beginning next issue.

What the Neighbors Say

FOR BETTER ROADS BUT TAXES ARE HIGH ENOUGH NOW

I THINK H. L. V., Ottawa County is right about the gasoline tax as there are a great many men that have cars that do not pay any tax, only their license, and they travel the roads more than the average taxpayer because they have nothing to keep them at home.

The dealers of every county should pay to the county a certain per cent, say 50, to go direct to the county roads and the rest to the state to be divided equally among the counties for the state roads.

I am for better roads but just now the taxes are about high enough. The license is all right as it is.

Most of the tractors and engines sold now use coal oil so the farmer would not be taxed for them. What do you say?—M: B. D., Isabelle County, Michigan.

FORD FOR PRESIDENT

I WANT to write a little verse,
I hope you'll print it too,
And so impress the universe
With us poor farmer's view.
The M. B. F. is everywhere
And everybody reads it
So if a little space you'll spare
To give our views to them as needs it.
We want Mr. Henry Ford
In the Presidential chair
And we'll thank you Business Farmer
If you'll help us put him there.
Now if you think this verse is snappy
Enough to put in print
You'll make us very happy
And we'll say you done your stint.
Next presidential election get out and vote
Ever last woman and man
And please remember you'll get our goat
If you make him an also-ran.
Now Mr. Harding, he's all right
A good man in the chair
But Henry wants to get in the fight
And we want to help him there.
We'll back Mr. Harding right to the end,
He's a mighty good man,I'll swear.
But Henry's been the working man's friend
And we want him in the chair.
—Fred Packer, R. 1, Fosters, Mich.

ARE WE ECONOMICALLY BLIND

IN your issue of October 28th is a communication from Luman Klink, Eaton County, headed "Let's Fix Our Price."

Brother Klink, in common with most farmers reaalize there is something that makes farming unprofitable that is beyond the power of the individual farmer to remedy. In other words the farmers' problem has become social. The Editor's answer to the effect that education and cooperation would eventually solve the farmers' economic difficulties is sound. Cooperation worth while must be preceded by and accompanied with education.

A number sufficiently large to make cooperation powerful enough to emancipate the farmer from economic serfdom must be of one mind. They must know what is wrong; and why it is so; and what it is necessary to do to set it right.

The question naturally arises as to where the farmers are to secure the educational essential to their industrial emancipation. Those who purport to be leaders of thought among the farmers should first secure the information called education; and as a result of that education formulate a program sufficiently extensive, the carrying out of which would enable the farmers to remove every parasite off their backs. And I hereby request the Editor of "The Michigan Business Farmer" to at once start educating himself in economics so that he can outline a program that will solidify the farmers of the nation.

Farmers have been led by the economically blind long enough. How can the farmers whose lives are devoted to physical toil do the necessary mental work incident to a sound program if such mental work is too difficult for the editors of our farm journals and the professors of our agricultural colleges?

Last evening I listened to a lecture by a man with a national reputation as an orator. A portion of his address was devoted to the deplorable condition of the forty per cent of our population engaged in farming, for which condition he attributed high freight rates. Most of us are old enough to remember when freight rates were low and we have not forgotten that the condition of the farmers was relatively the same then as now. Any economist knows that if farm products were carried on the railroads free of all charge that the farmers under existing conditions would not benefit thereby.

Last Labor Day I listened to an address by an M. A. C. professor in which he recommended the improving of the dairy cattle as a means of making farming more profitable. Of course we will agree that the improvement of anything is very desirable; but any economist knows that if every cow in this country was as good as the one now having the highest record, that such a desirable condition would only result in the lowering of the price of butterfat to about the point of production, and would not, under existing conditions, benefit the farmers of the country one farthing.

The study of social economy has taught me that the "fixing" of the price of farm products by the farmer would only result in increasing the cost of other commodities to a point that would more than offset the additional amount the farmer received as a result of his price "fixing."

Farmers are wealth producers who are tricked into surrendering a large portion of their wealth to those who produce nothing of value. The trick consists of making the farmers believe that they can profit by a profit system. Farmers not being economists are unable to see that since they pay more profit on the commodities they buy than they receive on what they sell that the so-called profit they receive is more than wiped out by the profit they pay, hence farmers in general do not on the average make any profit. I am aware that any one who points out that the profit system is what keeps the farmer poor is at once labeled as a socialist. But the only sure test by which one can tell any progressive thinker from a socialist is by asking him to state his remedy.

The socialist will tell you that the remedy lies in voting the socialist ticket. The writer is of the opinion that intellgent cooperation based on an understanding of social economy will emancipate the wealth producers of the nation. If I am right then the Socialist Party is not needed. If I am wrong there are no doubt a number of your numerous readers that can set me right. I am a student of economy that is anxious to get further enlightenment; and for that reason I am anxious to have the Editor and others to point out the faults in my position. Let us have a real educational debate in these columns.

I am working on a program to be based on a scientific understanding of social economy that will point the way to industrial emancipation for the wealth producing class; and I am anxious for the assistance of the Editor and readers of "The Michigan Business Farmer."--Joseph Warnock, Presque Isle, Michigan.

—The editor has an open mind and is anxious to receive all suggestions for the improvement of agriculture. He is conceited enough to believe that he is already qualified to "outline a program" which if carried out would benefit agriculture, but he refrains from offering a guarantee that this program would "solidify the farmers of the nation." Just now there are all kinds of brands of self-styled "farm-leaders," each of whom has his pet solution for the agricultural problem. But there are really few of sound business judgement and versed in economics who are at heart in sympathy with the farmers' problems. It has been my observation that an academic training is of little value unless one's sympathies are with the work which one undertakes. Before we can "solidify" the farmers on any program we must first "solidify" those who think they represent the farmer. And this is not an easy thing to do. For they hold many divergent opinions, and each is jealous of the other. We find too many so-called "economists" disagreeing among themselves as to which is the best way to proceed to raise agriculture to the plane of other lines of business. The great problem today as always is to get the farmers thinking and acting in unison, for as you say any program for improving their status must have their loyal support. You have offered a number of interesting suggestions. Let us hear from you again. —Editor.

Special Announcement!

THE MICHIGAN BUSINESS FARMER will continue to publish every-other Saturday, maintaining all departments and the full editorial service, which has made it invaluable to its readers, until a general readjustment of agricultural conditions is apparent.

We believe there is not an active farmer who will not approve of this policy to protect **the only paper now owned and edited in Michigan.**

During this indefinate period, **we will accept new or renewal subscriptions at One Dollar for Two Years ($1 for 2 years), or $1 for Two One Year subscriptions, one of which must be a new subscriber.** A net saving to our readers of 50%, which will be our contribution to a lowered cost of living for the farmers of Michigan and the nearby states.

You, who have watched The Michigan Business Farmer climb in five years to a position where it reaches nearly 70,000 farm homes, will welcome this opportunity to renew your subscription at a saving and multiply its strength to help you by acquainting your friends and neighbors with this new subscription offer.

Can we count on you to add one more name before the New Year?

Remember, our sole purpose is to be of genuine service, independent of any party, corporation or political aspirants control and the kind of farmers we call Business Farmers, will stand by us, because they cannot be "hood-winked!"

Publisher.

(We acknowledge every remittance received with a receipt by first class mail)

THE MICHIGAN BUSINESS FARMER,
Mt. Clemens, Michigan

(1) For $1 enclosed you will enter or renew my subscription for 2 years:

My Name.. R. F. D. No.....................

P. O.. State.....................

(If you are renewing kindly send address label from recent issue)

(2) For $1 enclosed renew my own subscription as above 1 year and add the following new subscribers name paid-in-full for 1 year:

New Name.. R. F. D. No.....................

P. O.. State.....................

If you wish Christmas card sent New Subscriber mark X here ( )

PUBLISHER'S DESK

Dear Mr. Slocum: I am a reader of M. B. F. and have taken it for years and like it better as it grows older. I have 2½ shares of stock in the Whitney Tractor Company and you will see by the enclosed circulars from E. McNeal & Co., stock brokers in Chicago, that they offer me 100 shares of Mid-Continent Development Company stock for payment of $10 conversion costs, plus $2 conversion expense. It is an oil company you will see by the circulars attached. Tell me what to do.—W. V. K., Tuscola County.
